Do our readers appreciate what is the effect of these sudden changes of price? We raise, say, from ten to thirteen million bales of cotton annually, worth fifty dollars a bale at the ten-cent price. The bulk of the cotton of the world, the good middling cotton, is grown in our Southern States. The fall of a cent a pound means five dollars a bale, fifty million dollars. This is too large a value to let be made the gamble of a roulette game. The life of business depends on the safe steadiness of prices. The ruin of farmers, of mill men, of operatives by the many millions all over the world is effected by this atrocity. Suddenly the price of cotton falls to seven cents; planters are in distress. It rises to seventeen cents; the mill men stop work.

It is not to be wondered at that gamblers should try to corrupt the officers of the Bureau and purchase advance information with which to beat the market. Gamblers have a peculiar system of morals. The Senator who defined an honest politician as one who stayed sold when he had been bought set too high a

standard for the gamblers. They can see nothing discreditable in bribing an officer. It is only smart, something to be admired, to be proud of. To be sure the poor wretch who sells to them is despised, but their act is quite *en regle*. To cheat and lie and bribe is their business, for it is downright gambling, on the basis of the ethics of gambling, whether at Dick Canfield's palace, or at Jerome Park, or in a common policy shop, or in the Cotton Exchange—and most of the Stock Exchange business is no better.

So what should be done, as it seems to some honest cotton merchants, after Holmes has been punished, if some law can be found to reach him, is for the Agricultural Bureau to leave prophecy to the Weather Bureau, which gives its indications every day. Let it make the most careful investigation possible of the number of acres planted and of the condition of the crops at the time in the States from Texas to Kentucky, and report it as fast as it can get the facts, and then let it leave the business of estimates to the men who deal in "futures." Don't wait until some grand, anxiously awaited prophecy shall smash the market and possibly disarrange business the world over. Financial prosperity does not ride on whirlwinds.

The Yellow Fever Outlook

ALREADY the wisdom of asking the United States Marine Hospital Service to take charge of the yellow fever situation is manifest. The actual danger has not been much decreased as yet, but confidence has been restored and there is now no doubt of the pursuance of the systematic sanitary measures needed for the arrest of the infection. It must not be forgotten that the conditions in Havana just before the first great victory over the disease was won were much more discouraging than those reported at any time from New Orleans during the present epidemic. Tho the United States authorities had worked a revolution in the cleansing of the city of Havana, yellow fever raged so desperately there that more than one-half the Governor-General's staff were carried off by the disease in one season. The Cubans began

to say, and apparently with reason, that the Americans might understand their own sanitary conditions, but they could not be expected to comprehend Yellow Jack. Mere cleaning, tho to a high degree, seemed to be of no avail. Then came the recognition of the mosquito theory of the distribution of the disease and the enforcement of regulations that would prevent mosquitoes from becoming infected by yellow fever patients. It was not long after this before the end of yellow fever was in sight in Havana, tho the disease had existed continuously there ever since the original occupation of the city by the Spaniards.

Indeed, it seems not unlikely that the present acute yellow fever situation will eventually work good rather than harm to the gulf coast, tho, of course, at the present time it is bringing about serious business disturbance as well as sad loss of life. There has been a tendency in some of the Southern States, especially among the older sanitary authorities, not to place entire confidence in the mosquito theory of the distribution of yellow fever. Physicians who were in attendance at the meeting of the American Medical Association held in New Orleans two years ago will remember that some of the important papers read at that meeting expressed doubts as to the completeness of the protection afforded a city's inhabitants by merely taking care that the mosquitoes should not contract yellow fever. It is not surprising that men who all their lives had taught and insisted on the necessity for the segregation of all persons who had associated with the diseased and the burning of all clothing and bedding that had been in contact with them, because they might convey the germs of the disease, could not be brought all at once to consider that all these quarantine regulations were utterly without reason and the mosquito constituted the only means by which the germ of the disease could be carried from one person to another.

This is now, however, the accepted teaching of the best authorities in yellow fever. Dr. John Guiteras, who was for so many years the United States Government expert in yellow fever, and probably knows the disease better than any one else in this country, after living for

the last five years in Havana is very ready to emphasize his conviction that the mosquito theory of the distribution of yellow fever is the only tenable doctrine in the matter and that its practical application is accountable for the absence of the disease from Havana in recent years. Ordinary quarantine regulations, then, with regard to clothing and other suspected fomites have no more sense for justification than with regard to malaria, a disease which is now universally conceded to be transmitted by means of mosquitoes and in no other way.

Once there has been a thorough enforcement of the regulations with regard to the reporting of yellow fever cases, and their protection in such a way as to prevent the approach of mosquitoes, there will be no further cases in New Orleans. The Marine Hospital Service accomplished this at Havana under less favorable circumstances and without the co-operation that the citizens of New Orleans are now so ready to give. It will not be an easy matter to segregate all the foci of the disease. It will be even more difficult in New Orleans than in Havana to keep down the number of mosquitoes responsible for the transmission of yellow fever. Owing to the system of collecting water from the roofs of buildings and allowing it to be stored in open receptacles of various kinds, so common in the city, there are many very favorable breeding places for the special form of mosquito, the *stegomyia*, which is alone responsible for the distribution of yellow fever. The eradication of these breeding places would have been accomplished long before this if there had been complete confidence on the part of the New Orleans sanitary authorities in the exclusively mosquito-borne character of the disease. This eradication should have been at least well begun nearly three years ago. The failure to set about it seriously must now be paid for so dearly.

When, as will inevitably be the case, success shall crown the efforts of the Marine Hospital Service in the present yellow fever situation in New Orleans all the cities on the gulf coast will be brought to the realization that their preservation from the plague of yellow

fever, with its attendant mortality and heavy financial loss, depends entirely on their readiness and ability to keep themselves free from the breeding places of this mosquito. The sanitary work required for this will do much in other ways to improve the health of these more or less tropical towns. As a result it is very probable that this will be the last serious epidemic of yellow fever that our country at least shall be called upon to battle with. Instead of the hopeless waiting until the natural forces of frost and cold come to moderate the disease science is now able to take hold of the situation with firmness and assurance and we can confidently look for its control within a comparatively short period.

Summer Music

IN most of the larger American cities which make any pretensions at all to musical culture such pretensions and culture alike take a summer-long vacation. Tho the winter nights, and the days, too, may be filled with music, with the coming of the spring flowers the musicians silently steal away. In the good old summertime the only thing left to us is the military, or, as it is commonly called in this country, the "brass" band, which discourses for the most part only the cheap and trivial trash known as "popular music." Why is this so? Surely there are no valid and sufficient reasons for such a state of affairs at this late day when in the winter season America has come to be known as one of the most musical of nations and the one that pays more than any other for the best music, the best singers, the best players, the best conductors.

Ever since 1865, when the late Theodore Thomas gave his first series of summer concerts in the old Belvedere Lion Park, at 110th Street, sporadic attempts have been made to provide New York with orchestral music in summer. But with the exception of the Thomas concerts of the late 60's and early 70's, and those conducted by the lamented Anton Seidl twenty years later, none of these attempts was conspicuous for success, artistically or financially. And other leading American cities have had similar experiences. Why? If summer-night

orchestral concerts could be made to "pay" forty years ago (and they did pay), why are they not profitable now?

The answer is: They are—when the same essentials are present that made them successful then. Those prime essentials are a first-class conductor and first-class programs, or, at least, a conductor who is competent to make and interpret first-class programs. Mr. Walter Damrosch's brief season of only three weeks in New York last spring demonstrated this anew, and we are glad to note that his endeavors in this direction of good summer concerts have recently met with gratifying success in Chicago.

In the fascinating "Musical Autobiography" of Theodore Thomas, recently published, one of the most interesting things to the observer of the progress of music in America is the record of how steadfastly that sturdy pioneer adhered to his principles when conducting hot-weather concerts no less than in the more "serious" winter season. A brief study of his remarkable series of summer-night programs shows how he repeated the music of the masters over and over again alongside of the light stuff, until the people found that the light stuff did not stand repetition, but that the music of a Beethoven had a message for each listener.

Now the work of Theodore Thomas was not for naught. The public has not gone backward. Its musical taste to-day is better than it ever was. Those who realize music's true worth and meaning are willing to listen and eager to pay for the privilege of listening to the best music—in summer as well as winter—only it must be the best. The great majority of music lovers who support the winter orchestral concerts have to stay in town most of the summer. Those who are able to get off to green fields are gone for only a week or two, or a month at most. Why should not this dullest time of all the year in our cities be made more attractive by means of good orchestral concerts?

It is not meant by this that the summer programs should be identical with those of the winter concerts. There are surprisingly large quantities of good music by the most inspired composers which is seldom or never heard at those winter

concerts — scores, yes, hundreds, of dainty, graceful, delightful little things by Mozart, Beethoven, Schubert, Schumann, Mendelssohn, Liszt, Rubinstein, Tchaikoffsky, Bizet, Delibes, Dvorak, Goldmark, Grieg, MacDowell. The charming symphonies of Raff have been practically banished from our concert rooms in recent years, but they make capital summer music and they are worth listening to. A series of nothing but Beethoven symphonies would be wofully monotonous. We do not want that any more than we want a series made up of nothing but Strauss waltzes. But give us a good admixture of the two, together with the music of such masters as we have hurriedly mentioned and plenty of excerpts from Wagner, and leave "rag-time" and all sentimental slush to the brass bands, the hurdy-gurdies and the graphophones.

In Germany, notwithstanding that it is the most musical of all countries, the lot of the poor orchestral player is far worse than it is here; is so bad, in fact, that a movement is afoot to remedy it by the municipalization of orchestras. Cologne, Düsseldorf, Aachen, Freiburg and Leipzig have already taken this step, the musicians becoming communal employees entitled to pensions. It is expected that the Kaim Orchestra of Munich, the Berlin Philharmonic and the Konzertverein of Vienna will eventually come under municipal control, and Cologne, it is said, will soon be able to support two town orchestras, one for concerts and another for opera. In Italy also there is a similar movement. The Government of Rome last year replaced the municipal military band with an orchestra, which gives free concerts, and at certain times may be employed by operatic managers. Inasmuch as cities create and control parks and educational institutions, why, it is asked, should they not foster high-class musical entertainments, which wean people from vulgar music and the demoralizing places where it is played?

In America, where the conditions are so totally different, where the best orchestras are endowed by the gifts of rich men or by popular subscription, there seems to be no need of municipalization—at any rate for winter concerts. Yet each of our larger cities might find it

profitable to subsidize a good orchestra for hot-weather concerts. Many American towns and cities provide free band concerts in their parks every summer, at a cost of many thousands of dollars. This summer New York City is paying out \$51,024 of the taxpayers' money for such band concerts in the parks, and a further sum almost as large for similar band concerts on the recreation piers—a total of between \$90,000 and \$100,000 spent on the lightest music, purely for the amusement of the people. There is no doubt that a certain amount of popular amusement at municipal expense is a good thing. But why not devote some of this money toward a subsidy for good orchestral concerts in a park or other convenient place, perhaps charging a merely nominal admission fee, and thus provide something of uplift as well as amusement? It seems to us that the experiment would be decidedly worth trying. It would be necessary, of course, for its success to keep the control of the orchestra out of the clutches of politicians; but if that is possible with an art museum why not with an orchestra?

Religious Intermarriage

It is a more serious question that agitates the Parsis of Bombay now than that which troubled them a few years ago, when they sought the advice of distinguished Avestan scholars in Europe and America as to whether their worship of fire would forbid them to smoke cigars. Now it is a question of marriage outside the faith. A cousin of the late distinguished Parsi merchant and philanthropist, Mr. Jamsetjee N. Yata, married a French woman. To be sure, she first confessed conversion to Zoroastrianism and was invested with the sacred thread, but it raised a storm in the little community and native and foreign savants were consulted. The experts reported that conversion to the faith was not disallowed by the Zend Avesta. But the further question arose as to its social bearings, and it was decided that, looking to the social and religious condition of the community, the admission of converts was unwise and that no convert should be admitted to the fire temple or other rites, or have part in the benefits of

religious funds. This is a pretty stiff rule, altho adopted by a popular vote with the greatest enthusiasm. We suppose it was feared that there might be a rush of converts to get the financial benefits of a rich community, just as white men became Indians by marrying a Choctaw wife, and that thus the Zoroastrian spirit and religion would be lost. Similarly Jews and Catholics in this country discourage intermarriage, for they say that the children will be lost, if not the offending parent. In the case of the rich Parsis there is a certain advantage in maintaining what used to be the policy of the Massachusetts Democrats in the days when frequently there was a Democratic President, to keep the party "conveniently small," so that the offices might go around.

Villages of Liberty

That committee of three archbishops appointed over a year ago to study the problem of the duty of the Catholic Church to the negroes in the South has not been hurrying its report. A letter from a priest interested in this work appeared not long ago in a Kansas City paper, written from Langston, Okla., signed "J. A.," which we take to be the initials of Father Anciaux, of the Holy Family College at Langston, and formerly a missionary to the negroes at Lynchburg, Va., and who, we believe, was the author of the Latin pamphlet addressed to the Pope on the subject which so astonished and pained His Holiness. In this letter "J. A." reminds the archbishops that it was faithfully promised that a serious inquiry should be made into the state of affairs of all the colored missions in the South, and that all the missionaries should have the opportunity to be heard, and that rules with obligatory force should be issued, and he asked why no word has been heard of inquiry, statistics or decrees. "Who has caused the delay?" he asks; "who has put a stick in the wheel?" The last place where we should have looked for an answer is in a Paris journal of diplomacy, but it is there that we find it announced from Rome that the Pope is about to found in Central Africa fifteen villages where individual liberty shall be respected—the Ethiopianism, we judge, which they are

so afraid of in South Africa. These villages will each be under the patronage of an American diocese. Thus there will be a "Village of Liberty of New York," another of Minnesota and another of Quebec. This is the result of the visit to this country and Canada of Monsignor Coccolo, Director of the Anti-Slavery League. But this result, a sort of Colonization Society, can hardly be the end of the archbishops' investigation; only a side issue. It is at home, not in Africa, that the main question awaits solution.

In a trenchant article last week Dr. Wright complains that there is no suitable provision for the study of the cause and cure of disease. Dr. Osler has said the same thing, that hospitals have no proper corps of resident physicians who shall have time to investigate and make advances in medical science. Our hospitals are not properly equipped for the purpose, and some of them are shamefully under manned. We know a small hospital for consumptives in this city where several patients are received every day, but where there is no resident physician and the visiting physician comes late in the afternoon. But the patients have spiritual treatment. On the right hand side of the entrance are set up in a frame the staring words, "Eternity! Eternity! Eternity! Prepare for Eternity!" It must be soothing for the newcomers.

The report has reached Paris from New York that the \$150,000,000 loan which was floated in this country by Kühn, Loeb & Co., the New York National Bank and the Bank of Montreal, representing so heavily the Standard Oil interests, is to be protected by the right to exploit the oil fields of the island of Sakhalin. There are a plenty of other reasons why it should be a matter of honor with the Japanese to hold Sakhalin, not to speak of its very valuable coal mines and fisheries, and if the oil fields pan out valuable we are confident that an Oil Trust will have to do sharp financiering to get the better of the Japanese on the ground.

It is a rather pretty scheme by which some of the wise heads in the army

would have Congress create a reserve of 140,000 men for the regular army, not in active service, but who could be called on in a sudden emergency, discharged soldiers and others, and all at an expense of \$320,000 annually. But who can believe that those scattered and ever scattering men could ever be gathered in time of need? We have the militia, and that is enough. Let Great Britain worry over the creation of armies; our strength is in the arts of peace. Let us take up reciprocity and the tariff.

The State of Iowa need not be concerned over the failure to increase her population in the past five years, unless it can be proved that the birth rate is abnormally low. She has enough people for a great State, and has doubtless sent a goodly number of prosperous families to buy larger farms in the wheat fields of Western Canada, where they supply the best element in our neighbor's population. And she has so many good people that she can spare a few.

It is a pleasure to hear our admirable Boston Methodist contemporary talk about the duty of speaking out courageously. And this reminds us that we have not yet seen any comment from it, or any other Methodist paper, on the case of Professor Mitchell, of the Boston University, whose re-election in the School of Divinity the bishops have failed to confirm.

Women must wear hats in the Canterbury Cathedral, or they cannot worship there. What nonsense! It seems to be a lingering tradition from the exegesis of the passage that women "must have power on their heads because of the angels," that is veils, that is hats.

Now that Ambassador Conger has resigned his position at Mexico some of the papers will have it that Assistant Secretary Loomis will be his successor. Before nominating him the President would have to consider the likelihood of his confirmation.

Insurance

The Equitable's Answer to the State Suit

THE Equitable Life Assurance Society of the United States, through its attorney, Wallace Macfarlane, has sent to Attorney-General Julius M. Mayer its answer to the suit pending against it by the State and against each of its individual officers and directors holding office prior to Paul Morton's representation in the society's affairs. From this document it appears that the individual defendants are held to be blameworthy. They are regarded by the society as responsible for the Mercantile Trust loan of \$685,000, as well as for the Depew transaction, neither of which, it is claimed by it, ever came before its Board of Directors. The company holds that James W. Alexander had knowledge of these things, as did also Thomas D. Jordan, Henry C. Deming, and possibly a few of the other individual defendants, whom it is now impossible to identify. Certain admissions are made in connection with the charge that the society maintained excessive deposits of money in favored banks and trust companies in which officers of the society were stockholders. Excessive and improper pensions are also admitted, but all these things are said to be under investigation with the idea of punishing those responsible for the irregularities set forth in the complaint and of securing reimbursement to the society for the losses arising because of them. Some of the improper pensions, it appears, have already been cut off or greatly reduced. The concluding paragraph of the society's answer contains the following significant paragraph, viz.:

"Wherefore this defendant joins in the prayer of the plaintiff in this action, and thereupon submits its rights and interests in the matters in question to the judgment of the court."

The Life Insurance Company. By William Alexander. D. Appleton & Co. \$1.50.

NOTWITHSTANDING the enormous growth during recent years of the insurance principle both at home and abroad there still remain many people by whom life insurance and its many important applications to daily life are either not understood at all or are understood but vaguely. To all such persons the present book by Mr. Alexander must be very valuable. A very superficial reading of the volume will be enough to show that life insurance has become a mighty force the influence of which grows day by day. When we realize that an army of more than three hundred thousand men and women are selling it we are incidentally prepared to better understand its importance. The author in his exposition of the manner in which insurance principles are applied in practice has hit upon the happy idea of building up an imaginary but illustrative company. The more carefully the book is read and studied the more apparent will it become that life insurance is strictly scientific. The mortality tables in use are figured so accurately that there is no resort at any time to "guesswork." The various items entering into life insurance are expounded with intelligence and perspicuity, so that any one who will may understand. The theory of annuities is considered. A chapter is given to the reserve. Another is concerned with the surplus. The fallacies of assessment insurance are pointed out. The hypothetical company is presented and its problems are made to pass in review. We catch comprehensive glimpses as we read of the agent and his province. The business of life insurance begins to take on system and science in the place of confusion and chance. The modern life insurance company stands at last revealed and good advice is given as to the selection of a company with which to insure. The Alexander book is a good and exceedingly informing volume to read on the subject of life insurance.

Financial

A Worthy Financial Record

WHEN Col. Jacob L. Greene died on March 29th last it was very generally supposed that his estate would be worth not less than a million dollars. This estimate was based upon the fact that Colonel Greene had been President of the Connecticut Mutual Life Insurance Company at Hartford, Conn., for twenty-seven years. He had been in supreme control of this great company. Not only were the assets of the company in his hands, but the same was true of its income and the investments that had to be made by the Connecticut Mutual.

Under similar circumstances other men have availed themselves of the manifold opportunities that such a trusteeship of other people's wealth necessarily affords for obtaining personal riches. Many instances will occur to many of those who read these lines where men in similar positions have in a comparatively short time possessed themselves of enormous wealth. They have built residences that were little less than palaces. They have bought yachts, automobiles and private cars. They have figured in society. Their influence has extended into Wall Street and they have been powerful factors in the money market. All these things might easily have been Colonel Greene's if he had but stretched forth his hand and taken them. But he had, it would seem, other and rarer ideals. He held to the old-fashioned idea that money was not the only thing worth having in the world. He regarded himself as merely a trustee for other people, and considered that as such a trustee it was his duty to give his energy, his time and his talent to their business and contented himself with the moderate salary paid him for his services. He administered his trust economically. He paid close attention to details, but he figured in no syndicates for the purchase of bonds to be sold to his own company at an advance over the market. His name was not in the Directory of Directors in connection with a number of subsidiary and allied financial companies. He was not interested in fancy dress balls, and never gave any. His salary was not

one hundred thousand dollars per annum with perquisites. According to modern standards he died poor, as his estate as announced last week amounts in total to only about \$50,000. Yet his was a worthy financial record.

THERE is a considerable demand for money in the South at the present time in anticipation of the approaching movement of the cotton crop. Southern banks in certain instances are rediscounting commercial paper and even borrowing on this account. Settlement funds arising from cotton sales will be available by the latter part of September.

.... Dispatches from Philadelphia contain the announcement that the Pennsylvania Railroad Company has in contemplation the purchase of 5,000 steel freight cars in addition to 12,500 similar cars for which orders were placed during the early part of the present year. The new contract calls for an expenditure of something like \$5,000,000 and is indicative of confidence on the part of the "Pennsy" in the continuance of present prosperous conditions.

.... Robert Bayles, who for forty-three years has been connected with the Market and Fulton National Bank of this city as Cashier, President and Vice-President, resigned last week as an officer and Director, owing to ill health. In consideration of his long and efficient service the Directors have unanimously conferred upon Mr. Bayles the distinction of President Emeritus by his election to that office for life. Alexander Gilbert continues as President.

.... Dividends announced:

Louisiana & Arkansas R'y, Coupon No. 6, 5 per cent., payable September 1st.

United States Leather Co., Preferred, \$1.50 per share, payable October 2d.

Central States Leather Co., Preferred, \$1.75 per share, payable October 2d.

American Chicle Co., Common, 1 per cent., payable September 14th.

Iowa Central R'way, Coupons, 4 per cent., payable September 1st.

Minn. & St. Louis R'way, Coupons, 4 per cent., payable September 1st.

The Independent

VOL. LIX NEW YORK, THURSDAY, SEPTEMBER 7, 1905 No. 2962

Survey of the World

Political Events

Governor Douglas, the Democratic Governor of Massachusetts, and the wealthy shoe manufacturer of Brockton, who is on the most kindly terms with the union workmen, absolutely refuses to run again for Governor. He had previously indicated his disinclination to be a candidate, owing to the unwillingness of his family, who have no desire for political publicity. He is reported as having said that his wife was afraid that if he were elected again as Governor he would be nominated and elected President, and that would be most unwelcome. In his final declination he gives as his reasons the state of his health and the desire of his family that he retire. The Democratic leaders are greatly disappointed.—In this city fusion of nearly all the various organizations against Tammany was assured by a meeting of their representatives last Thursday. District Attorney Jerome was the candidate principally urged, but the Municipal Ownership League strongly opposed his nomination on the ground that he was not favorable to ownership. But Mr. Cutting, who headed the Citizens' Union delegation, reported that while he could not assure Mr. Jerome's consent to be a candidate, he had positive information that he was in favor of municipal ownership, which seems to be the basis on which the fusion against Tammany is to stand. But the Municipal League people were not satisfied, and no conclusion was reached, and an adjournment was had till Thursday of this week, with the intention to bring in other minor political organizations. Meanwhile Mr. Jerome has given in his final answer that he will not be a candidate for Mayor, as he prefers to run again as District Attorney.

His success in carrying on the work of this position has been remarkable.—The resignation of Francis B. Loomis as First Assistant Secretary of State was accepted by the President last Monday, and his successor, Robert Bacon, was appointed. Mr. Bacon is prominent in New York financial circles, was a former member of the banking firm of J. P. Morgan & Co., and was a classmate at Harvard of President Roosevelt. He is a particular friend of Secretary Root, and it is said that he will take his place in Washington with Mr. Root's active assumption of his duties. The resignation of Mr. Loomis was put in Mr. Roosevelt's hands a month ago, and Mr. Loomis made public announcement of it a week ago. He says that private business will soon take him abroad. No plans are announced for his taking an official position. He is preparing a complete statement in vindication of the public charges affecting his conduct in Venezuela, especially as related to a long series of letters between J. A. Radcliffe, C. L. Kurtz and Mr. Loomis, published in *The New York Herald*. These letters show that Mr. Loomis was selected by these gentlemen to be appointed Minister to Venezuela that he might carry out their plans for concessions under the Manoa claim for the Orinoco company.

Reform in Philadelphia

The exposure of the frauds which have secured such phenomenal Republican majorities in Philadelphia have stirred the people to an extent never felt before, and on Monday and Tuesday of this week the voters turned out to see that under the new registration their names and votes should be properly re-

corded. This movement started a year ago, when the Democratic chairman ordered a complete canvass of the city to be made by the workers of his organization. This was followed by startling disclosures and prosecutions, and it seemed to be proved that the Republican machine had placed full 85,000 fictitious names on the official registry, which were used to manufacture majorities by stuffed ballot boxes. It is stated:

"Sworn evidence in possession of the Committee of Seventy establishes the fact that no less than sixty-five thousand bogus ballots were cast at the municipal election held in February last, and there is evidence in the possession of District Attorney Bell proving that dead men, infants, girls, boys, dogs, cats and peanuts were voted and counted.

"Men are now in jail who permitted ballots to be deposited in the boxes in bundles. It was proved before Magistrate Gorman that in one division all of the official ballots were in the boxes before noon on election day and that all voters who appeared at the polls later in the day were tricked into casting sample ballots, which, of course, were not counted."

There are 1,109 election precincts in Philadelphia. In one precinct the Assessor, who is now in jail, put 777 names on the official register, when only 102 voters live in the division. In this particular division the Republican majority usually equaled the total population. The plan of casting the bogus vote was described to Edward E. Abrams, a special agent of the Committee of Seventy, by an active participant in the frauds, as follows:

"We start out with two good men inside and a strong crowd outside. One of the men figures as the assessor. The other is our judge in the booth. These come or go just as a certain policeman directs. Besides this pair we have two respectable persons to do our vouching. We have to have these, as we must poll about three hundred and fifty to three hundred and seventy-five votes, and it makes things look good to have respectable men to swear them in. We really have one hundred and fifty voters in the division. At the last election, if I remember rightly, we turned in 364 votes."

Minor Items

The famous Subway Tavern Company has closed out its business, and transferred its interests to W. A. Skidmore, who was in charge of the restaurant department of the Sub-

way Tavern, and who will henceforth run it "on business principles," like any regular saloon. Joseph Johnson, Jr., was president of the company, and he with other directors prominent in reform work, such as R. Fulton Cutting, Herbert Parsons and Dr. E. R. L. Gould, went to the brewery to make the transfer of the property. Mr. Johnson said in an interview:

"The experiment has failed. A year's work has shown that beyond any question. The tavern was conducted exactly on the lines originally laid down, and it has not succeeded. Perhaps it has failed because it was conducted on these lines.

"But whatever may have been the reason, we have lost money, and after a fair trial for a full year, we have decided to quit. In so doing, there is only one thing which we desire to make plain. We have not been forced by the brewing interests to go out of business. On the contrary, we came to them and told them of our intention, and introduced them to Mr. Skidmore as a possible customer. The Subway Tavern Company bought its beer here under certain arrangements, but it and it alone was the proprietor of the Subway Tavern."

—The Common Council of Atlanta has presented its apologies to Chicago and other cities for the conduct of Mayor Woodward at the American Municipal League banquet at Toledo. They say, among other things:

"Whereas, He appeared upon the floor of the convention in a state of partial intoxication, and,

"Whereas, His conduct was such as to bring discredit upon himself, to outrage the sentiment and spirit of our people and to do incalculable injury to the city of Atlanta, be it

"Resolved, That regret be tendered to the American Municipal League on account of the 'spectacle' which the Mayor made of himself; that the Mayor's attitude toward the city of Chicago and the boorish manner in which he treated Mayor Dunne are heartily deplored and condemned, and that regret for his 'unseemly and unpardonable conduct' be expressed to the city of Toledo."

Mayor Woodward admits he drank beer, but declares he was not drunk, and defends what he said about Chicago.—At Greenville, Ohio, Prof. A. Baldwin was giving an exhibition of a balloon ascension, when the six sticks of dynamite which he took up with him exploded and he and his balloon at a height of 1,500 feet were blown absolutely to atoms.—

The fever conditions in New Orleans continue favorable, and the outbreak is under control; but the conditions are no better elsewhere, so that along the river there is much fever. In the settlement of Leeville there are 475 people, of whom 175 were ill of fever, twice as many cases as in all New Orleans. The five deaths reported in New Orleans last Monday are an insignificant number compared with the 72 deaths and 212 new cases reported on the corresponding day in that city in 1878. Thus far there have been 292 deaths, against 1,246 in 1878. Governor Jelks, of Alabama, has spoken for national control of quarantine, and the newspapers generally approve, which is quite a new step in acceptance of federal interference with States' rights. While much is being done to screen cisterns and destroy mosquitoes, the chief reliance is on screening the patients themselves so that mosquitoes will not be infected.—The total valuation of taxable real and personal estate in the city of New York is \$5,912,144,227, a net increase of \$271,601,570 over 1904.—It is now pretty well settled that there will be no extra session of Congress this fall.—Senator Depew has issued a letter of defense of his conduct in relation to the Depew Improvement Company, and its debt of \$293,850.82 has been paid to the Equitable Life Assurance Company.—Mr. Carnegie will be installed Lord Rector of St. Andrew's University, Edinburgh, October 17th for the coming year; and it is announced that at that time the degree of Doctor of Law will be conferred on Mr. Carnegie, Whitelaw Reid and Charlemagne Tower, American Ambassador at Berlin; Bishop Potter, President Butler, of Columbia University, and Rev. William J. Holland, Director of the Carnegie Museum.

The Eclipse

Most of the observers of the total solar eclipse August 30th report excellent conditions. The American astronomers, under Prof. H. J. Hussey, of the Lick Observatory, were at Assuan, in Upper Egypt. They successfully performed their complete program for the observation of the eclipse. Eight plates were exposed for the intermercurial planets and a com-

posite battery of four telescopes was used. One plate was exposed for the general coronal spectrum. Rear-Admiral Chester was in charge of a special expedition under our Navy Department, and reports that the observations taken in Spain were perfect in every respect. An American expedition in Algeria had splendid weather. On account of the period of solar activity the corona was not very extensive, but evenly distributed, and brilliant red protuberances of hydrogen were seen at the beginning and end of the period of totality. A full set of photographs was taken. Sir Norman Lockyer was in charge of a British expedition which was taken by a naval vessel to the port of Philippeville, in Algiers; but the authorities would not allow the cruiser to anchor there, and accordingly they went to the island of Majorca, where the conditions were so bad that they had but indifferent success. Another English expedition, under Prof. Hugh Callendar, had little better success in Spain, because of the clouds. But in Tripoli, Tunis and Algiers other expeditions report fine success. Among the observations thus far reported the shadow bands were especially fine; Baily's beads not seen; the corona evenly developed, with no long streamers.

The Panama Engineers

The Advisory Board of Engineers upon Plans for the Panama Canal, consisting of American and foreign experts, held their first meeting in Washington in the offices of the Canal Commission on September 1st. Chairman Shonts, of the Commission, laid before them pamphlets containing the additional data derived from surveys and the experience of last year in excavating the Culebra cut, and various suggestions for modifications in the original plans. The most important question to be decided is whether a sea-level canal is practicable and, if so, whether it should be constructed as such now, or first as a lock canal and afterward cut down. Even with a sea-level canal a tide lock will be necessary at the Panama end. The question of the dimension of the lock chambers is also a difficult one to decide because of the rapid increase in the size of

vessels. Chairman Shonts concludes his letter to the board with the words:

"It is needless to say that the Commission desired not only your opinion upon these plans, but upon any variation of them, or upon any entirely different plan which may suggest itself to you. It requests your views as to what plan it is most expedient, all things considered, for the United States to follow in the completion of the Panama Canal."

The membership of the Advisory Board is as follows: Henry Hunter, nominated by the British Government; M. Adolphe Guérard, nominated by the French Government; Herr Eugene Tincauser, nominated by the German Government; Herr J. W. Welcker, nominated by the Government of the Netherlands; M. L. Quellenec, consulting engineer of the Suez Canal; Gen. George W. Davis, U. S. A., retired; Alfred Doble, chief engineer of the Pennsylvania Railroad; William Barclay Parsons, formerly of the New York Rapid Transit Commission; Prof. William H. Burr, of Columbia University; Frederick P. Stearns, of Boston; Gen. Henry L. Abbott, U. S. A., retired; Joseph Ripley, engineer of the Sault Ste. Marie Canal, and Isham Randolph, engineer of the Chicago Drainage Canal. The board will visit Panama the last of the month, when the Canal Commission meets there.

The Peace of Portsmouth

The long diplomatic struggle between the envoys of Russia and Japan came to a sudden and very unexpected end through concessions by Japan in the questions of indemnity and Sakhalin. When the envoys reassembled on the morning of August 29th Baron Komura offered half of the island for \$600,000,000, the estimated expenses of war on the side of the Japanese. Mr. Witte again stated that Russia would not pay a cent of indemnity in any form whatever. Baron Komura then offered to waive the claim of indemnity and to compromise on the division of Sakhalin. This was at once accepted by Mr. Witte, and the announcement was sent out to the world that an agreement had been reached. As Mr. Witte came out of the conference room at Kittery he pronounced the magic word "Peace," and kissed his colleague,

Baron Rosen, and members of his suite on both cheeks, and as his big red automobile approached the Hotel Wentworth he was received with cheers from the correspondents and guests. From the jubilant expressions of the Russians and the downcast faces of the Japanese one would have supposed that the latter instead of the former had been defeated. The Japanese concession was only made upon receiving direct instructions from the Government after a long conference of the Cabinet and the four elder statesmen, veterans of the Revolution of 1868, Marquis Ito, Count Inouye, Count Matsugata and Marquis Yamagata, in the presence of the Mikado. Baron Kaneko's presence in New York during the war, which caused much speculation, is now explained. He was an unofficial representative of the Mikado and the intermediary between President Roosevelt and the Japanese envoys at Portsmouth in his efforts to bring about peace. Immediately upon coming to an agreement the plenipotentiaries set themselves to the task of arranging the details of the treaty, which was drawn up by Professor Martens, one of the foremost authorities of the world upon international law, on the part of the Russians, and Mr. Dennison on the part of the Japanese. The process of writing out the treaty was a slow one, as it had to be prepared in a French original and an English copy, and the Japanese showed great solicitude over the phraseology. An engrossing clerk was brought from Washington to write out copies, but to prevent any possibility of the violation of secrecy the envoys decided to have the work done by their clerks. Mr. Rojestvensky writing the French and Mr. Adachi the English. The treaty will go into effect upon its signature by the Mikado and the Czar without waiting for the exchange of the copies, the French Minister at Tokyo and the American Ambassador at St. Petersburg conveying the notifications of the approval of the two emperors. The treaty will not be made public until then, if at all. Its main provisions are, however, pretty well known. Japan gains all the points she insisted upon before the war and half of Sakhalin besides. She has also practically annexed Korea. Exactly what will be her power in Manchuria will

depend upon what agreement she can make with China. At the conclusion of the war with China ten years ago the southern part of Manchuria was ceded to her, but Russia, France and Germany compelled her to give it up. Now she is under obligation to evacuate Manchuria simultaneously with the Russians and restore it to China. The Japanese will have control of the Chinese Eastern Railroad running north from Port Arthur just as far as they have now possession of it—that is, as far as Kwang-Cheng-Tse Pass, just south of the branch line to Kirin. Russia is to pay China \$75,000,000 for the Chinese interests in that part of the railroad which is conveyed to Japan. This money may be paid over by China to Japan in case the latter does not retain the railroad. The railroad from Kwang-Cheng-Tse to Harbin is to remain in Russian control, and both Japan and Russia will have the right to maintain a limited number of railroad guards for its protection against the bandits. All the property of the Russian Government in Dalny and Port Arthur, consisting of the very substantial stone buildings, docks, etc., will be transferred to Japan. The Yalu timber concessions, the direct cause of the war, will go to Japan, and by the consent of China, which Russia will endeavor to secure, the lease of the Liao-Tung peninsula, including Port Arthur and Dalny, will be made over to Japan. Until a commercial treaty is arranged both countries will have the same commercial rights as the most favored nation. Both Japan and Russia are to withdraw all troops from Manchuria within 18 months after the signing of the treaty. The southern half of the island of Sakhalin below the fiftieth parallel will belong to Japan, as it did before 1875. The boundary is to be marked by a mixed commission, consisting of one Russian, one Japanese, one French and one American engineer. No military forces are to be allowed on Sakhalin and no part of it is to be fortified. La Perouse Strait, between Sakhalin and Yezo, the outlet of Vladivostok, is to be free and unfortified. Japanese fishermen are to have the same rights as Russian along the Siberian coast from the Tumen River, north of Korea, to

Bering Strait. Each Power will be reimbursed for the money expended in the care of prisoners, but since the Japanese prisoners are few Russia will have to pay much the larger sum. The treaty was signed by the plenipotentiaries, Count Serge Witte and Baron Roman Rosen on the part of Russia and Baron Juturo Komura and Mr. Kogoro Takahira on the part of Japan, in the new Naval Stores Building of the Navy Yard at Kittery, Maine, on the afternoon of Tuesday, September 5th, in the presence of Assistant Secretary Peirce, representing the President; Governor McLane, of New Hampshire, the Mayor of Portsmouth; Admiral Mead and Commodore Winslow.

The Reception of the Peace News

The announcement of peace was received everywhere with great rejoicing except in the two countries most concerned. In Japan the popular indignation against the Government for thus relinquishing part of the fruits of victory in order to secure peace is outspoken and extremely bitter. In Russia it is viewed from the standpoint of party interests, and none of the papers except the recognized organs of Mr. Witte join in the general chorus of praise for the diplomatic triumph of Russia's senior envoy in wresting such important concessions from a victorious enemy. The war party in Russia feel that the treaty is humiliating, and the officers in the field deplore the stopping of the war at a time when, as they assert, General Linevitch was ready to overwhelm Marshal Oyama. The Russian Liberals fear lest the movement for political reform will be checked now that the danger of war is past. All Europe gives President Roosevelt great credit for bringing about peace, and he has received thousands of telegrams of congratulation from the highest quarters. The Czar sent his thanks at once upon the announcement of the agreement and the Mikado four days later.

"PRESIDENT ROOSEVELT:

"Accept my congratulations and warmest thanks for having brought the peace negotiations to a successful conclusion, owing to your personal energetic efforts. My country will

gratefully recognize the great part you have played in the Portsmouth peace conference.

"NICHOLAS."

"TOKYO, September 3d.

"*The President:* I have received with gratification your message of congratulation conveyed through our plenipotentiaries and thank you warmly for it. To your disinterested and unremitting efforts in the interest of peace and humanity I attach the high value which is their due and assure you of my grateful appreciation of the distinguished part you have taken in the establishment of peace based upon principles essential to the permanent welfare and tranquillity of the Far East. MUTSUHITO."

President Loubet and the Emperor William sent similar messages.

A Second Peace Congress

The invitations to the first Peace Congress at The Hague were sent out by the Czar of Russia. A circular note suggesting a second Peace Congress at The Hague was sent out by President Roosevelt last year, and responses were then received from all the Governments that were signatory to The Hague agreement. The President and Secretary Hay reported in a published note that Austria-Hungary, Denmark, France, Germany, Great Britain, Italy, Luxemburg, Mexico, The Netherlands, Portugal, Rumania, Spain, Sweden and Norway, Switzerland and Belgium agreed to participate. So did Japan, with the reservation that the present war is not to be taken up. Russia alone refused to accept so long as the war was going on. Now that peace is assured the President will soon provide that the Government of the Netherlands shall send out the formal invitation to The Hague. In the meantime there have been exchanges between the Powers concerning the scope of the conference and the questions which should be taken into consideration when it finally assembled. The war has furnished many points to be considered. Secretary Hay's note to the Powers, giving the answers received, contained the assurance which is now to be soon carried into effect. He said:

"Altho the prospect of an early convocation of an august assembly of representatives of the nations in the interests of peace and harmony among them is deferred for the time be-

ing, it may be regarded as assured as soon as the interested Powers are in a position to agree upon a date and place of meeting and to join in the formation of a general plan for discussion."

The Canton-Hankau Railroad

The stockholders of the American-Chinese Development

Company met in Jersey City August 28th and voted to sell the concession for the railroad from Hankau to Canton to the Chinese Government for \$6,750,000. This was the most important concession ever obtained by Americans in China, and the fact that it has been in our hands for several years without being utilized and is now relinquished is a serious blow to American prestige in China. Mr. J. Pierpont Morgan, who has the controlling interest in it, has twice in the last month been called to Sagamore Hill to consult with the President, who was desirous that the concession should be held if possible. In the present attitude of the Chinese Government, which, indeed, had already officially canceled the contract at the request of native merchants, the patriotic feeling, which finds expression in the boycott of American goods, has caused the organization of rich and powerful Chinese bankers, merchants and officials to protect national interests by developing their own resources without foreign capital or aid. Consequently no more franchises will be granted to foreigners and those that have been granted will be revoked as far as possible. It is commonly believed that Japanese influences have had much to do with the anti-foreign movement and that in many of their undertakings the Chinese will be assisted by the Japanese. The Canton-Hankau Railroad is to be 800 miles long and will open up one of the richest regions of China. Only 22 miles of the road has been built since the concession has been under American control.

An Epidemic of Cholera

The appearance of a number of cases of Asiatic cholera in Prussia, Poland and Austria causes apprehension lest the epidemic should become as serious as that of 1892, and the

health authorities are enforcing a rigid quarantine in Germany and other countries. The disease seems to have made its way as usual from Arabia and Persia through the Caspian and the Caucasus and to have spread along the Volga, Bug, Vistula and other rivers. Russian emigrants bound for this country brought it to Hamburg. Up to September 2d there have been 66 cases and 23 deaths. The authorities have put a stop to all emigration and the Hamburg American line sails without steerage passengers. All emigrants are kept at quarantine for six days, as the disease develops in five. Cholera is reported in some of the barracks in West Prussia and the military maneuvers have been countermanded on account of it. In some Prussian cities the schools have been closed. It is officially denied by the Russian Government that there is any cholera in Russian Poland, altho it is positive that the disease was brought down the Vistula by the raftsmen, and four deaths have been reported by way of Warsaw. From all parts of Germany sections of the alimentary canal of persons who die under circumstances suggesting cholera are sent to the Institute of Infectious Diseases for microscopical examination, and reports are made within twelve hours. Prof. Elie Metchnikoff, the head of the Pasteur Institute in Paris, expresses the belief that the precautions taken by the German authorities to prevent the spread of the disease are effective and that there will be no general epidemic.—In Manila the cholera is spreading among the natives and two cases have appeared among the American troops. The total number of cases treated at Manila since the outbreak is 40, with 25 deaths.

France and Morocco

The Sultan of Morocco has yielded to the French demands in so far as to release Bou Mzian el Miliani, the Algerian merchant who was arrested at Gharb, but he refuses to apologize for the arrest or make reparation. On the contrary, he still insists that as Defender of the Faith-

ful he has jurisdiction over all Mohammedans in Morocco whatever their nationality. The French Government is now thoroughly aroused to the importance of maintaining her prestige, for she has 6,000,000 Mohammedans in her African colonies and cannot afford to be put in a position of not being able to defend her own subjects. Accordingly she has given an ultimatum to the Sultan, stating that the release of the Algerian is not sufficient and demanding in addition that an indemnity be paid, that the Kaid who made the arrest be dismissed and that a public apology be made for the outrage. The fact that Count von Tattenbach, the German Minister at Fez, under instructions from Chancellor von Bülow, urged the Sultan to release the Algerian is the cause of greater irritation to the French, as it is another indication of the growing power of Germany in Morocco. But the arrangements between the two Powers for the international conference on the Moroccan question are said to have been completed satisfactorily to both parties, and nothing remains to settle but the place and date. The German papers talk of the conciliation of France by cancellation of the loan of \$2,500,000 obtained from Berlin bankers in violation of the pledge made to France by the Sultan only a few months ago when he borrowed \$12,000,000 from that country on condition of not applying to any other country for loans in the future. The Sultan is, however, spending the money and has ordered a consignment of Circassian ladies from Constantinople and a troupe of dancers from Egypt.—Brigands are so numerous and daring in the vicinity of Tangier that no Europeans dare live in the suburbs of Tangier, for the tribe of Angeras is trying to kidnap some foreigners to hold for ransom after the manner of Raisuli, with whom they are in constant feud. The Angeras recently raided three villages under Raisuli's authority near Tangier and carried off large herds of cattle and sheep. Raisuli pursued with a band of his followers and several men were killed and wounded in the resulting skirmish.

Philip Vasilyevich's Story

BY MAXIM GORKY

[Either on account of lack of evidence or because of the protests of literary men and societies throughout the world, Maxim Gorky has at last been released from prison, and he will not be prosecuted on the charge of conspiring to overthrow the Russian Government. It is not to be expected that his recent experiences in the hands of the police will modify the appropriateness of the pseudonym under which he writes, Gorky, "the Bitter One."—EDITOR.]

I WAS sitting in the town park on a bench under the trees, the wind shook angrily the black, wet branches over my head and, tearing off the last leaves, carried them away down the hill to the wide, turbid river, and the river exhaled damp, cold breaths toward the sky.

Beyond the river, in the yellow velvet of withered grass, a small lake was glimmering; the dull autumn sky reflected itself in it mournfully; the pale disk of the moon was wasting away in the sky. The sun had long set behind the dark wall of the distant forest and the purple strip of the setting sun, amidst the thick, dark-blue clouds, seemed like a stream of fire in the mountain straits.

"Listen!" said some one, softly, near me.

I turned around; a tall, poorly dressed young man stood near my bench. The noise of the trees had drowned his footsteps and I did not hear when he came over to me.

"Give me something to buy bread with!" he continued, lowering his voice. He bent down his head, retreated a step, but did not remove his hat. I liked this. I silently thrust my hand into my pocket.

"Not much!" he said to me quickly, and lifted his head proudly. "You think I'm a beggar? No; I'm simply out of work. I'm hungry. Do you believe me?"

"I do," said I.

His face had prominent cheek bones, his large, soft-gray eyes sunk deep beneath his high forehead.

"Thank you," he replied morosely, taking the money with his long hand, which was trembling from cold or shame.

"Thank you. Now I'll go to eat.

I got up and went together with him. There was something I liked in him; he aroused my curiosity; there—I asked him:

"Could I, perhaps, be of more service to you?"

"Find work for me!" he exclaimed, quickly. "Can you?"

"I'll try."

"I am longing for work, just as I am longing for bread," he said, walking beside me. "It is hard for me and I am ashamed to beg. I can work; but there are more people in this town than there is

work, as everywhere else," and he smiled.

"What's your name?" I asked.

"Platon Bagrov. You see I am a peasant. I went through a village school, I studied well and the teacher loved me very much. She succeeded in persuading an old landowner to send me to the gymnasium."

There were large, dark spots under his eyes. His gristly nose, with a small hump, was red from cold. The youth put his hands into the pockets of his old trousers, bent his spine and twitched his shoulders for cold. His thin coat, but-

MAXIM GORKY

toned up to his throat; his high, outworn boots and his old rumpled hat made him look like a street organ grinder. He spoke calmly, without any sadness or complaint in his voice, and it seemed as tho he himself was listening to his words and was verifying them.

"I stayed four years at the gymnasium; when I was in the second class my mother died—she lost her way in the fields and was frozen to death—my father died before that, and when I was promoted to the fourth class the old landowner died. Her heirs did not care to pay for me any longer and I had to leave the gymnasium. Here my education ended."

At this point a lady passing us jostled him; he quickly tossed his head back, glanced at her, raised his hand to his hat and said in a dull voice:

"Excuse me!"

The lady went past us without glancing at him. He closed his lips tightly and said, smiling:

"How people are accustomed to jostling one another, as tho it were nothing to jostle."

We came to a tavern and seated ourselves by a little table in the corner of a small room which was densely filled with tobacco smoke; I ordered some beer for myself, and he, while waiting for something to eat, continued his story in an undertone, looking about on all sides:

"At first I lived with one of the watchmen of the gymnasium, then he placed me in a grocer's shop as an errand boy, but my master turned out to be a drunkard and a bully, so I left him."

The waiter put a plate of bread on the table. Platon immediately took a piece of it, but his hand trembled strangely; he cast a quick glance at me, put the bread back on the plate, and went on, with lowered head:

"I was fourteen years at the time; now I am nineteen; two years from now I must serve in the army. During those years I have seen a great deal. I lived in different cities, I worked for a plumber, for a gardener, I was an errand boy in the office of a certain Southern newspaper, I was fishing in the Sea of Azof, I was also by the Caspian Sea; I have experienced a great deal. I have seen, I

have reflected upon, life, and, do you know, life is poorly constructed."

The waiter brought a bowl which was filled with something thick and strong odored. Platon sniffed the air deeply and ravenously, moved the bowl with both hands closer to himself and, without interrupting his narration, began to pour the soup out into the plate.

"I am very fond of reading and I have a rule to spend one-third of my earnings on books. After I have read the book I sell it, of course. I always feel sorry about this, but how can I drag the books with me? I don't like to live long in one place. I want to see as much as possible, I want to be educated, to understand everything."

"To be educated is a beautiful desire, but it seems to me that it is necessary to stay long in one place for that. However, eat," I said, noticing how his nostrils expanded scenting the smell of the food. He smiled and began to eat, vainly attempting to conceal from me his hungry greediness.

It was somewhat strange to hear his simple words, in which rang a certain unseizable rhythm and profound seriousness, which was rather unbecoming to the youth of the man. He was somewhat showing off by his smooth speech, and it was obvious that he was endeavoring to convince me of his intelligence. Now, as I observed the acute rapacity with which he was eating, I tried not to look at him, so as not to confuse him, and, thinking of him, I was examining the room.

In the opposite corner sat a telegraphist, with his cap moved up to the back of his head. He leaned his chest heavily on the table and scrutinized sternly the bottle of vodka which stood before him. Big black flies were flying around over him, filling the air with a discontented and disturbing buzz. They now lost themselves amidst the dust-covered leaves of the flowers on the windows, and now with a swing struck bluntly against the window panes. A suffocating smell of tobacco, sour cabbage, geranium and of vodka filled the room.

A tall, pimple-faced man entered, seated himself by the little table opposite

the telegraphist, silently filled a glass with vodka, drank it, then he licked around his red mustache carefully, and asked in a basso:

"How are you?"

The telegraphist threw himself back in his chair, struck the table with the palm of his hand, and replied, angrily:

"I am in such a mood that I feel like smashing window panes!"

"Make a complaint," advised the red-headed man, pouring out more vodka.

"The devil! Everybody's complaining. But who pays attention?"

Platon glanced at me and said in a low voice:

"I don't drink, but I am very fond of sitting in taverns. It's interesting. You can always hear peculiar words. You can catch an idea."

"It is all ugly and tedious," I remarked. "If you are fond of reading then you ought to read more, for in books you will find more valuable ideas than in taverns; isn't it so?"

"Y-yes, of course," he assented, hesitating awhile for some reason or other; and, after a pause, added: "Altho, do you know, you may sometimes find even in ugly words the same idea which you read in a book. Then you believe the book all the more and the people seem better, wiser."

"Have you had any intelligent people among your acquaintances?" I asked.

"Yes, when I worked in the newspaper office. The contributors treated me well. They used to give me books. And then I had another acquaintance in Rostov; he is a carpenter, and a very intelligent man; he has a whole library," said Platon, slowly.

He became somewhat dizzy from his meal and it seemed that he felt sleepy; his eyes grew dim. I got up, gave him my address, told him to come up to my house on the next day and extended my hand to him. He shook it firmly and said simply, with a nod:

"Thank you."

I noticed that he was not affected by my attitude toward him, and, tho, of course, I expected no gratitude, yet I was not much pleased with this indifference or whatever it was. We are all obliged to appreciate mutual favors

done to another; this is essential to social life.

It was already dark when I came out on the street. A long row of lanterns glimmering stretched itself into the darkness, the wind was blowing and the lights were trembling.

"He must feel cold in his light coat," I thought of Platon Bagrov.

* * * * *

I succeeded in finding for Platon a position as porter in the house of an acquaintance of mine, a very amiable old man, who had given up lecturing at the university several years ago and who now lived modestly and quietly, busying himself with investigating a certain parasite of wheat.

His house was small and charming; it stood on the outskirts of the city, and in the summer, surrounded as it was on all sides by old linden trees, and sinking in thick waves of acacia and lilacs, it looked out of a sea of verdure like a hospitable, quiet and clean island.

The professor had a daughter, a young girl with blue eyes and with ringing laughter. She played the piano fairly well, she painted, read belles-letters, and always wore white dresses; these were becoming to her even as the white bark is becoming to the birch. She was always surrounded by friends who were just as refined as she was. Students, well-bred youths, carried away by their love of art, used to visit the professor's home frequently. It was noisy and lively every evening in the room of the lower story; the young people played, argued, read poetry, danced, and the old professor sat somewhere in a corner, and, stroking his gray beard, smiled at the merriment of the youths. Everything was simple, cheerful and pleasant.

I used to come up to the house frequently, and I met Platon every time. Now his face had become fuller, the dark circles disappeared from around his eyes, he wore a heavy black waistcoat on top of a colored shirt, black, loose trousers and high leather boots. It must have been his desire to impress himself upon people by this rather unusual costume. Tall and bony, he was stiff in his movements. His dark, short hair was somewhat curly, his eyes had a meditative,

calm look, and there was something striking about his face, with its prominent cheek bones.

Meeting me in the house he would bow his head to me affably and silently; he was tactful; he never addressed me in the presence of the host or hostess, evidently feeling that he might thus place me and himself in an awkward position. But when I met him in the yard alone I used to shake hands with him and start a conversation.

"Well, how do you like it here, Platon?"

"Fairly well," he would reply, good-naturedly. "I haven't as much leisure as I expected to have, but I find time for reading, nevertheless. I think that I will gain a great deal of good in this house. To see a great deal, to feel, to work, to think a great deal, that is life! Isn't it so?"

"Yes, yes!" I said, approvingly, admiring his enthusiasm. "And, above all, read more good books. Well, and how do you like the master and the young lady?"

"They seem to be fine people. The mere fact that they don't quarrel and that they are in general polite with their domestics is a blessing in itself. It is something rare to find. The young lady is amusing. She runs around, screams, makes wry faces. She's always so clean, just like a fondled little pig."

I didn't like this opinion about Lidia Alekseyevna. The negative relation of servants to their masters is perfectly natural, but Platon was half-intelligent, and he should have known that by this attitude of his toward the mistress of the house he lowered himself to the psychology of the kitchen maids. I said nothing to him with regard to this, and he went on, smiling:

"But she's a fine girl, nevertheless. She's kind, amiable, and, altho capricious, she treats the servants well. Sometimes she chides the chambermaid, but that isn't offensive; it is rather childish."

"She's only one year younger than you," I remarked.

"That's nothing," he replied, calmly. "Years are not alike. Time should be measured by the number and nature of impressions. What has she seen and what does she know?"

He liked to boast of his experience of life. I grew tired of this, too. And, besides, I had a reason for not believing him. I noticed several times that when Lidia Alekseyevna walked past the porter his hand rose to his cap with suspicious quickness, his head bowed to her submissively, and he bent himself together so comically and awkwardly, as tho fearing to frighten the girl by his long figure, which was like a poorly built tower; he was so monstrously awkward and big compared with the young mistress of the house. I did not understand the meaning of these salutes, but Lidochka noticed them; the ridiculous in a man is most easily accessible to the eye of woman.

Thus the cheerful young girl directed her attention to the porter; she smiled to him kindly, occasionally she granted him a few insignificant words, and once, when he was chopping wood, she even asked him whether he was not tired.

One day she somehow asked me to tell her once more the story of my meeting with Platon. I complied with her wish and said in conclusion:

"He is too self-confident, considering himself an exceptional individual, in my opinion; he is apt to take God knows what into his head!"

She paid no attention to my words.

"He's a queer fellow," she said pensively, smiling. "He's so comical, so tall; and he's forever philosophizing there, in the kitchen. And they all make sport of him on this account."

Then she told me that the servants of the house considered Platon as a half-idiot because he did not make love to the chambermaids and did not sit in front of the gates on holidays eating sunflower seeds, but was forever reading books.

In the eyes of the cook and the chambermaids his behavior was not at all becoming to a porter; he spoke very much, and incomprehensibly; he sermonized to them, and his speeches irritated the people in the kitchen.

"We ought to advise him to take up the examinations for teacher and let him go to the country to enlighten the people," I said.

"Yes," assented Lidia Alekseyevna, "that would be better for him. Here he is out of place."

And evidently from this moment on she began to pay closer attention to Platon; of course, not because she expected to discover in him a fairy tale prince in disguise, but she was simply curious to find out how the man who sweeps the yard of her house feels and reasons.

Spring was setting in; the rooks coming home. The loud croaking of the busy birds resounded unceasingly all day long in the old linden trees, over the roof of the house.

I noticed that Platon's eyes looked somewhat strangely; they looked far away beyond the things that were near him, as tho they were persistently searching for something indispensable to him, but did not find it, and, widening with surprise, they smiled a sad smile. He became taciturn and disconcerted in his movements. One quiet night in April, as he was locking the gates behind me, he asked me in a low voice:

"May I come up to you to-morrow?"

"Please," I said, "come between five and six. Good night! Between five and six."

He came exactly at the appointed hour; he was dressed as usual in his waistcoat; he smiled to me confusedly and seated himself heavily by the table.

I began to speak of the books he had read, but this apparently did not interest him; he answered absent-mindedly, unwillingly, and gazed with melancholy eyes somewhere over my head or through my face. Sadness was not becoming to his physiognomy, with prominent cheek bones, and there was something ludicrous about it.

"How are you getting along?" I asked.

"I am not feeling well. I feel ill at ease in that house. It is such a good, pure house, and the people are sensible, kind; I thought that near them I would set myself right, that I would learn a great deal. But it doesn't work. My mind does not grasp anything. A certain anguish seizes on me. And I have even started to write verses; really I have."

He glanced at me confusedly and asked in a low voice:

"Does it seem to you funny?"

"No, not at all," I said, reassuring

him. "Read the verses to me; would you care to?"

He nodded his head; his sad eyes smiled; he put his elbows on the table, lowered his shaggy head upon them and began to read abruptly, in a dull voice:

"Night has come. I'm sitting by the window. The garden is asleep. Gloom and silence reign supreme. I gaze into the darkness mute. And suddenly my soul cries out: 'Wherefore am I distressed with pain? Wherefore?'"

His verses smelt of cheap tobacco, his boots of tar; the waistcoat was worn out at the sleeves, there were some buttons missing at the collar, and I saw that the veins on Platon's neck were beating painfully fast. He sat motionless, and, staring at the table, read on:

"There is no answer for my soul anywhere. . . . All is clothed around me in a stifling gloom. . . . The earth's asleep, the moist air is mute, only my heart is beating loud. . . . Oh, wherefore does she always laugh? Wherefore?"

He became silent, lifted his head, and his eyebrows were raised interrogatively.

"Well, how is it?" he asked.

I felt sorry for the young fellow and I wanted to turn his lyric into a jest.

"No good," I said, smiling. "It's necessary either that both should laugh or that both should cry. That would have been better. Have you any more verses with you?"

"Yes," he said, in a low voice, and again lowering his head he began to read slowly and mournfully:

"Farewell! My soul is filled with grief. . . . As before, I am alone again. . . . And again my life is dark. Good-by, my dear light of mine! . . . Farewell! Farewell! I have set my sail. . . . I stand sadly at the helm. And the playful sea-gulls' voices, and the strips of the white foam. All—by which the world bids me farewell. . . . Good-by!"

His dull voice rang monotonously and it somehow reminded me of the reading of the Psalter over the dead. He fell silent for awhile, glanced at me, and, heaving a sigh, went on:

"The distant sea is threatening me with misery, and the worm of sorrow gnaws my soul, and the gray billow howls sternly. . . .

But the sea with all its waves can never wash you out of my heart. . . . Farewell!"

He became silent and sat motionless. I felt ill at ease and awkward. I was afraid that he might begin to cry, and I did not know how to help him. Upon reflection I decided to act like a surgeon, to cut off the unnecessary part at once. I rose, walked over to him and, placing my hand on his shoulder, asked:

"Are you in love?"

"Yes, of course," he said, in a low voice.

"Who is she, the chambermaid, Feklusha?"

He raised his eyebrows with surprise and replied calmly:

"Lidia Alekseyevna herself."

I knew it, of course, but I never expected that he would tell it to me so frankly, and I did not want to hear it from his lips. It was somewhat unpleasant to me and very ridiculous.

"Listen, my dear," I said as seriously and gently as I could; "you must understand that this is amusing."

"Amusing!" he exclaimed, in a low voice, and his eyes opened wide with astonishment.

"Yes, of course," I said. "It is simply difficult for me to speak to you seriously."

"Why?" He repeated his stifled exclamation.

"Just think of it; you are nineteen years old. Well, say that you have seen something, that you know something, but are you her equal? She's an intelligent girl, with refined tastes. Everything that's coarse is organically repulsive to her. But, besides, that isn't the question. Such a combination as you and she is a matter of absolute impossibility. Being a rather sensible man, you should have felt this impossibility yourself. That should be felt!"

"And yet I do not feel it," said he, softly but obstinately, and then asked in the same tone:

"Am I not a man like all men?"

I shrugged my shoulders and began to speak to him again, while he looked at me with his gray eyes; stubbornness was reflected in them and I felt that my words produced no effect on him.

"And, besides everything," I said,

stepping aside from Platon, "I know that Lidia Alekseyevna loves me."

He rose from his chair slowly, closed his lips firmly, and, stooping, he went away, forgetting to give me his hand.

As I escorted him I felt that I must seriously interfere with this amusing but unpleasant affair.

* * * * *

On the very next day, toward evening, I came to Lidia Alekseyevna and told her cautiously, so as not to make the matter appear too ridiculous, but at the same time quite seriously, that it would be better for her to stop paying attention to the porter.

"Why?" she asked, surprised. "He is so amusing. Do you know it is very interesting to speak with him. Sometimes his stories, notwithstanding their crudity, are so touching. And they depict so vividly the life of the common people. Why, then, O despot, must I not speak to him?"

Then I told her plainly that Platon was in love with her and that first love, whatever it may be, formulates the heart of a man for all his life. She shuddered with aversion, her eyes became round with surprise, her cheeks flushed brightly, and, offended and confused and agitated, she began to run about in the room.

"How does he dare?" she exclaimed, disconcerted. "He! He always has such perspiring hands. And they're so red. And his ears are also red. But how is it that I didn't guess it myself? How funny it is! I feel sorry for him. And this is so bad, so rude. You say he composed verses?"

"And I think they're not bad, either," I remarked.

"Oh, what a queer fellow! But how is it that I didn't notice it myself? Really this is interesting. A democrat in love. It's a romance! Ah, my God! but what is to be done with him now, Philip Vasilyevich? It is necessary to dismiss him, isn't it?"

"Not now by any means," I advised. "Why offend a man since it can be managed without offending him? It is, of course, necessary to dismiss him, but it must be done cautiously, not at once. Wait a little."

"But I should like to see his verses, anyway," she said, thoughtfully.

Later I regretted sincerely and bitterly that I gave her such advice, losing sight of Lidochka's childish light-mindedness.

I left the city on the next day, and two or three days later everybody in the house knew that the porter was in love with the young lady. As I learned later, lively, and I must say wicked, scenes took place there.

"Platon!" Lidochka would call.

Platon would come.

"Do you love me?" she asked, tenderly.

"Yes!" replied the porter, firmly.

"Very much?"

"Yes!" he repeated.

"And if I were to ask for something," Lidochka said softly and mysteriously, pensively surveying his face with its prominent cheek bones, "you would do everything for me, wouldn't you, Platon?"

"Everything!" replied the porter with unshaken confidence.

"Well, if that's the case," she continued, smiling triumphantly; "if that's the case, my dear Platon—"

Her face became sad and she concluded with a deep sigh:

"—put up the samovar!"

And a merry smile beamed in her eyes.

He would go, with drooping head, and put up the samovar; his cheek bones grew ever sharper and sharper, and his eyes sunk ever deeper and deeper under his forehead.

Sometimes Lidochka, after cross-examining as to the power of his love, would make him wash her mud-covered rubber shoes, or would send him to take away a note to her friend, and whatever she asked of him she always dragged in his love; she always spoke with him in the name of his love.

In the evening when the visitors came together she called in Platon, made him read his verses, and he read, with bowed head, not looking at any one. The people praised him, smiling; he bowed, and his face was motionless, as tho chiseled out of stone. Lidochka would say to the guests in his presence:

"They are not bad, are they? Worse verses than these are sometimes printed. These are not clever, but they are sin-

cere. I know that the poet is really in love and hopelessly so! The prejudices of society and the cold heart of her whose praises he is singing stand in his way toward happiness."

I find that she treated the youth imprudently and with undeserved wickedness. It seems to me that his love offended her self-respect and she avenged herself on the poor fellow for this. But then no one treated him any better. The old professor was a good-natured man, who loved all insects with the love of a sage, yet even he found pleasure in jesting at the youth's expense.

"Listen, poet!" he would say. "I earnestly request you not to put so much manure on the asparagus beds. I have told you more than once about it, but you're forever forgetting. And I'll remain without asparagus if the thing will go on so badly. However, I am not angry; I understand your position. He-he-he! It draws you to Arcadia. Well? It's legitimate. In childhood a man is sick with measles and with scarlet fever; in youth he falls in love, writes verses and dreams of heroic exploits. It's a waste of time—of little use to life. But, anyway, it is better than the prudence of old age!"

The professor always spoke at length and his eloquence was rather tedious, but he liked it.

The servants also poked fun at him; they, of course, were simpler and ruder in their jokes. And all jests were apparently well aimed, for the target was so big. But Lidochka was more inventive than all; I cannot conceal this, and, of course, I don't approve it.

In the evening, while the moon was shining, she would seat herself in a beautiful and thoughtful pose by the open window and would tell her girl friends loudly that love knows no obstacles, that to love there are neither nobles nor peasants, there's only the man, the beloved. And Platon heard it.

Then she called him, gazed coldly and indifferently into his face and made him do something for her.

She played sad tunes, tenderly touching the soul of the lover by the soft, caressing accords; she sang sweet, tender songs, in which rang the anticipation of caresses and yearning for the beloved.

And all this she did in such a manner that the porter should see and hear and feel it.

One day he came over to her in the garden and said:

"Why do you laugh at me? Don't make sport of me; you ought not to do it. What's there to laugh at if I love you? I'll leave the city soon. I wish to remember you as kind and gentle. Don't torture me!"

His face was gray, his eyebrows lowered and between a stern wrinkle was formed. He spoke in a low voice, and stood motionless, but Lidochka was frightened by something she noticed about him, and she ran away without saying a word to him.

And on the next day she could not deny herself the pleasure of torturing him a little more; she called him into the house and made him read verses before two of her girl friends. The verses were about a young, strong oak; one of its branches had touched the face of a queen and the queen gave orders to cut down the oak. The verses were clumsy; the young ladies smiled as they listened to them.

Soon the affair came to an end. One day I received a telegram from Lidochka.

"Please come immediately. Misfortune happened Platon. Lida."

She met me, disconcerted, pale, half sick.

"Do you know? He shot himself!"

"Is that possible?" I exclaimed.

"Yes, yes! There you have it!" she said, running about in the room, nervously. "And you are to blame for it—you!"

"I?"

"Of course! We should have dismissed him then, at once, and you advised not to do it! There, now! Poor man! I pity him."

Tears glistened in her eyes; it was evident that she had not slept the night before and that she had been crying.

"If I knew that he was really—in earnest—I would not have allowed myself to trifle with him," she said, putting her handkerchief to her face and quivering. "They say he's still alive. Go over to see him! I can't; I'll go later. Papa is so upset. And everybody feels

sorry for him. For he was so original!"

Child! Even now she spoke of him as of a broken toy.

I immediately started for the hospital and on the way thought sadly of Platon. He had seemed to me so sturdy and firm and here at the first collision with life he was overthrown and shattered. And I could not understand in Platon this lack of perseverance which is quite clear in a cultured man who leads a nervous life.

He lay on his back; his face was yellow, bloodless, covered with wrinkles; his eyes had grown dim, they had become enormously big, and grief and pain stood in them motionlessly. His teeth were set together firmly and his cheek bones protruded in sharp angles. His long, sinewy hand was weakly hanging down from the cot, touching the ground with his fingers. He stared for a long time into my face with a wide-eyed, painful look and maintained silence. Finally, out of breath for weakness, he muttered to me through his teeth with an effort, in a creaking voice:

"Ask them! I have worked for them, so as to make their life more comfortable and clean. Why have they crippled me? Ask them!"

And his eyes closed slowly. I lifted his hand, put it on my knees and said gently:

"There was no crime in this, my friend; this is an error, a misunderstanding. One should not judge people so severely. You'll recover and all this will be cleared up. You know that they are good people."

He quietly withdrew his hand from my knees and it rolled off again to the floor weakly. Without opening his eyes he said:

"I have some books left there. Send them to Rostov, to the carpenter Yevsey Skryabin. Don't forget!"

"Very well, I'll attend to it."

Taking out my notebook I jotted down his request and the address of the carpenter, while Platon lay motionless. There was a dull rattle in his chest and the large, dark in place of his eyes made his face look dead.

I looked at him, maintaining silence, and I felt uncomfortable to stay there and uncomfortable to leave.

At last he opened his eyes and, noticing me, whispered:

"Go away!"

"Good-by!" said I, again lifting his hand and pressing it. He did not respond either by a sound or by a motion of the hand.

Slowly, with an unpleasant, cutting sensation in my heart, I left the ward and when I came out into the corridor I heard Platon's hoarse voice:

"Nurse! Don't let anybody in to me."

He evidently must have thought that Lidochka might come.

And that night he died.

Fulfilling my promise, I sent off to Rostov the books he left behind. I

learned from the servants that he had burned his copy books with his verses in the stove, but among his books I came upon a sheet of note paper covered with scribbling; the following lines, full of youthful pathos, were written upon it in a quick hand:

"Slowly and patiently I was ascending from the bottom of life to you, to its summit, and I looked at everything on my way with the eyes of a scout going to the promised land."

I took the leaf for myself as a memento of Platon; recently, while looking over the papers on my table, I found it and recalled the youth. And here I have told the story as well as I could.

The Presumption of Black Mink

BY CHARLES G. D. ROBERTS

[This new animal story of Mr. Roberts's is a worthy addition to those he has given to the world in "The Kindred of the Wild," "The Heart of the Ancient Wood," and many others.—EDITOR.]

WHEN the big Red Fox of Ring-waak found that his slim mate had presented him with a litter of six blind, red puppies he felt no vehement paternal enthusiasm.

He considered the new arrivals rather a bore than otherwise, tho he knew they were tremendously important or his mate would not devote herself to them as she did. He established himself on a dry and sheltered ledge just above the den, where he could keep an eye upon its occupants; and if any peril had threatened them he would have fought to his last gasp in defense of the helpless and apparently useless sprawlers. For several days, however, he had little time to rest at home and ponder the situation, because his mate devoted herself so closely to her new duties that he had to do the hunting for both. It was a long way down into the neighboring valley and the chicken yards which he had come to regard as safe objects of attack, and it chanced that at this season there was a scarcity of rabbits about the ridge. So it came about that Red Fox found himself more strenuously occupied than he

had ever been before at any point in his career. At this busy time the fortune of the wilds flung upon him one of his most unpleasant adventures.

One day when he was hunting, not very successfully, down beside the still half frozen dead-waters, it happened that a little way up the stream a large mink started to trail a rabbit. The mink had been feeding for a time altogether on frogs and fish, and was just now smitten with a craving for red blood. He had just missed catching the rabbit at his first rush, and then, in an obstinate rage at his failure, he had settled down to the chase of the fleet quarry.

For a little the rabbit's tremendous, bounding leaps had all the advantage. But soon she began to tire. She ran around in a circle, and as soon as her trail began to wheel her cunning pursuer, knowing just what she would do, cut across the curve and almost intercepted her. At this narrow escape her poor little heart came near to stopping with terror as well as with astonishment at the appearance of the dark, snaky foe in this unexpected quarter. She ran on

down the bank of the dead-water, with the mink not ten yards behind her. Her terrified eyes, absorbed in the doom that followed, failed to note the form of Red Fox darting across her path just ahead.

Under ordinary circumstances an ordinary fox would have discreetly ignored both pursued and pursuer, avoiding a dangerous quarrel; for the predatory wild folks, as a rule, do not like to fight unnecessarily. But Red Fox was utterly scornful of any mink as an antagonist, and he was in a hurry. His hunting was not for fun, but for business. Precedents and vested rights were of small concern to him. Crouching in a mass of dead brown fern he waited for the rabbit to come up. Then a straight, darting rush and the fugitive was caught right in the air, in the middle of one of her wild leaps. One despairing squeal and her neck was bitten through. Then, throwing her over his shoulder, Red Fox started homeward with his easy prize, never deigning to cast a look toward the baffled pursuer.

But in this arrogant confidence, for once, he made a mistake. The big black mink was no coward, and his keen little eyes went red with rage at this insult and injury combined. It was presumption, of course, for him to think of matching himself against the great master fox, feared all through the Ringwaak regions for his strength and craft. But his eyes were now like two glowing points of garnet, and prudence had been burned out of his brain. After a half-second's pause he darted like a snake behind Red Fox and bit him through the hind leg.

In wrath and amazement Red Fox dropped his burden and turned upon this presumptuous assailant. But the mink, with one of his lightning-like springs, was already eight or ten feet away, crouching and waiting. Red Fox covered the distance at one bound, but when he alighted the mink was not there. The snaky, black figure, belly to the ground, was crouching eight or ten feet away, eying him with a fixed malevolence. Again, and yet again, Red Fox sprang at him, only to be evaded again and again with the like ease. At last he too crouched flat, eying his foe with keen curiosity for a good half minute. Then with great deliberation he arose, picked

up the dead rabbit, and once more started homeward with the prize.

He had not gone a dozen steps when again, like a swift and deadly shadow, the mink closed in behind him and gave him a terrible, punishing bite in the other hind leg, above the second joint. Had he been less heavily muscled this attack might have hamstrung him. This time, however, he was on the alert. He wheeled savagely, under the rabbit's body as it were, so that he seemed to throw the latter over his head. But again he was too late. The black assailant was beyond reach of his jaws, again crouching and waiting and menacing.

This time Red Fox felt a sense of injury added to his wrath. That last bite hurt him badly. He followed up the mink in a long, steady rush, but the latter was too quick for him, too supple in dodging, and after having chased him for about a hundred yards he gave up the vain effort. Wheeling abruptly, he ran back to the subject of the quarrel where it lay sprawling and bloody on the brown earth. And the mink followed him, not five feet behind his heels.

Now Red Fox was puzzled as he had never before been puzzled in all his life. He could not catch his too active foe. He could not carry off the prize and expose himself in so doing to those dangerous assaults in the rear. And he could not acknowledge defeat by relinquishing the prey. Placing one positive forepaw on the rabbit's body he turned and glared at the mink with eyes narrowed to a slit and a sharp staccato snarl. He was threatening before he knew what he threatened, but he knew he was going to do something. The mink, nothing daunted, crouched again, in readiness for whatever that something might be.

At length Red Fox's sagacious brain decided to simulate defeat in the hope of luring the foe to closer quarters. The anger died out of his eyes, his tail and the fur of his neck drooped dejectedly, and he became the very picture of cowed abasement as he slowly turned away from the prize and slunk off. Instantly the mink, content with his victory, darted forward and began to feast upon the rabbit's blood. Like Lightning Red Fox whipped about and was back between two breaths. But the mink had not been

fooled at all. There he was, ten feet away, glaring red, but licking his narrow jaws, with all his wits about him. Red Fox once more had the prize under his paws, but he was no nearer knowing what to do with it. In a sudden outburst of fury he rushed upon the mink to hunt him down by tiring him out.

For a good five minutes the mad chase went on, up the bank, through the bushes, over rocks and stumps, through the deep woods, but never more than forty or fifty yards distant from the dead rabbit. The mink kept always some ten or fifteen feet ahead of his furious pursuer and felt quite at ease as to the outcome, because aware that he had the brook at hand as a safe refuge in case of need. If he should find himself getting winded he would take to the open water or dive under the lingering ice, where Red Fox would be quite incapable of following him. What the end would have been will never be told, for while neither showed any sign of tiring or yielding there came a strange intervention. A black bear came lumbering briskly out of the nearest thicket and, without so much as an apology to either Red Fox or the mink, helped himself to the rabbit, which he tore to pieces and began to devour with every evidence of good appetite.

The chase stopped short, while both the mink and Red Fox glared indignant-ly at the giant intruder. Then Red Fox, philosophically concluding that the fight was off, as there was nothing left to fight for, trotted quietly away through the underbrush to seek other game. Time was too precious for him to think of wasting it in a fruitless quarrel.

But the big black mink, as it chanced, was of a different way of thinking. He had wanted that rabbit, which he had earned by clever trailing and persistent chase. He would have had it had not Red Fox insolently interfered. Now the rabbit was beyond his reach forever, the bear's great jaws making short work of it. His rage against Red Fox blazed up with fresh heat and he had no longer any thought but vengeance.

Following cautiously and at some distance he waited till Red Fox had apparently dismissed him from his mind. Then he slipped up behind once more and repeated the old attack, springing

back, however, more swiftly than before, because his antagonist was no longer hampered with a burden. This time Red Fox was thoroughly startled. He flashed about and made his spring; but, as he expected, he was again too late. His vindictive and implacable little enemy was crouching there as before, just out of reach, his strong tail twitching, his eyes like savage flame. Red Fox was bothered. He sat up on his haunches and gazed at the mink contemplatively. He wanted to hunt, not to fight. And that last bite hurt worst of all.

Presently he made up his mind what to do. He got up and once more trotted away, but this time he limped painfully, as if one leg was so injured as to be almost useless, and he kept looking backward deprecatingly over his shoulder. Swelling with vindictive triumph the mink grew less wary and followed closer, awaiting the chance for another attack. Upon this Red Fox broke into a feeble run, limping terribly. And closer still came the mink, feeling that revenge was now close at hand. At last, in passing through a rough, tangled thicket of little bushes and dead weeds, Red Fox stumbled and fell. In a flash the mink was upon him and reached for his throat.

At this instant, however, Red Fox's faintness and feebleness fell from him and the mink's teeth never gained his throat. They met, indeed, savagely and punishingly enough, near the upper joint of his foreshoulder. But the next moment his long jaws closed over his assailant's slim, black loins, closed and crunched together inexorably. For a second or two the mink writhed and snapped, twisting like a snake. Then, as the long, white teeth came together through his backbone, he straightened himself out convulsively and fell together like a wet rag. Red Fox shook him fiercely for a minute or two, till assured that he was dead past all shamming, then threw him over his shoulder, as he had done the rabbit, and started for the den on the ridge. Tough, stringy, hard-fibered mink meat was not like rabbit meat, of course, but there was a good lot of it, and his mate, with those six little ones tugging at her breast, was not in a mood to be over dainty.

NEW YORK CITY.

Can Life Be Produced by Radium?

BY SIR WILLIAM RAMSAY.

[Sir William Ramsay, K.C.B., F.R.S., professor of chemistry in University College, London, is one of the foremost authorities of the world on inorganic chemistry. In collaboration with Lord Rayleigh he discovered argon in the air, and later a series of similar inert gases. For this work he received the Nobel Prize of \$40,000 and from the Smithsonian Institution the Hodgkin Prize of \$10,000. Last year he visited this country to speak at the Congress of Arts and Sciences. On June 20th the scientific world was startled by the sensational announcement that a momentous discovery concerning the origin of life had been made by an English scientist. Working experimentally at the famous Cavendish Laboratory in Cambridge, Mr. John Butler Burke, a young man in the prime of life, and practically on the threshold of what promises to be a distinguished career, succeeded in producing cultures bearing all the semblance of vitality by means of placing sterilized bouillon and radium together in a test tube. With great modesty Mr. Burke claimed no more, in making his discovery public, than the possibility of his experiment having led to the generation of something which "suggested vitality." At the same time he made the interesting and significant admission that if his conclusions and those of the scientists who had examined them were correct they fitted in exactly with the definition of life which Herbert Spencer framed. The leading authorities in Great Britain were immediately consulted on the value of Mr. Burke's extraordinary achievement. In the absence of any opportunity of checking Mr. Burke's experimental work by personal observation, most of them naturally exhibited a considerable reticence in expressing a definite opinion. Lord Avebury stated the view that judgment should be suspended; Sir Oliver Lodge made the interesting admission that "people must not be surprised if something is done in the laboratory which may be properly considered to be of the nature of spontaneous generation." Sir William Ramsay cautiously remarked, when asked for his opinion off-hand, "There may or there may not be something in it." Finally Mr. Burke was constrained, in *Nature* and in the *London Daily Chronicle*, to explain his experiment and its results at length. It was these detailed statements that induced Sir William Ramsay to write the interesting and valuable scientific criticism which is printed below.—EDITOR.]

SIR WILLIAM RAMSAY

THE recent letters to *Nature* by Mr. John Burke, working in the Cavendish Laboratory at Cambridge, have drawn renewed attention to the problem of the origin of life. Ever since Pasteur's discovery of the ubiquity of microbe spores and of Tyndall's proof that if means are taken to kill the mi-

crobes present and exclude their spores in a suitable medium, such as infusion of hay or "bouillon"—a kind of beef tea—no organic growths would be formed, the question has lain dormant. Dr. Bastian, it is true, has contended, and still contends, that the same spore does not always produce the same organism, but I doubt if even he would maintain now that life spontaneously

arises in carefully sterilized liquids. The balance of evidence against such a supposition is now immeasurably strong. It has become a commonplace that liquids in which minute organisms termed microbes can flourish and increase may be purified from such organisms by heating for a longer or shorter time to a relatively high temperature, and that if protected from the ingress of microbes or their spores by a plug of cotton wool or by a long, narrow tube they manifest no sign of life, however long they are kept.

It was, therefore, with a certain incredulity that the scientific world received Mr. Burke's communication, which, it must be confessed, was modestly put forward, and, as appears from his second letter to *Nature*, only after "taking the opinions of various men of science," and after "demonstrating the growths to many people at the Cavendish and Pathological Laboratories." We must, therefore, suppose that it was by the advice of these authorities that his most interesting letter was published. He proceeds to say:

"Some critics have suggested that these forms I have observed may be identified with

the curious bodies obtained by Quincke, Lehmann, Schenck, Leduc and others in recent times and by Rainey and Crosse more than half a century ago; but I do not think—at least, so far as I can at present judge—that there is sufficient reason for so classifying them together."

It may be explained that the "bodies" above mentioned are produced in some cases by crystallization in gum-like solutions or are due to phenomena allied to surface-tension, a familiar effect of which is the blowing of a soap bubble.

Mr. Burke made use of, as a medium, a sterilized broth, or bouillon, rendered semi-solid by the addition of gelatine. On this he sprinkled a minute trace of a salt of radium. After some time microscopic growths appeared, which increased in size, and, apparently, budded, but which, remarkable to say, were soluble in water. I wish in what follows to indicate how it may be possible that these growths have been produced, tho, not having seen Mr. Burke's "organisms," I do not wish to dogmatize. Professor Rutherford and Mr. Soddy some years ago discovered that the power of discharging an electroscope possessed by compounds of radium and thorium was due to the evolution of a gas, to which the name "emanation" was applied. It may be mentioned in passing that in all probability the source of this gas is not in thorium compounds, but in a much more active substance, contained in perhaps all, or almost all, specimens of commercial thorium, a substance to which the name "radiothorium" has been given, many hundred thousand times more "active" (*i.e.*, more capable of discharging an electroscope) than crude thorium, as recently discovered by Dr. Hahn, working in the laboratory of University College. Messrs. Rutherford and Soddy discovered that these gases, or emanations, were condensable at a low temperature, probably to solid bodies; that their life was a comparatively short one; that half the life period of the radium emanation was little over four and a half days, and that the thorium emanation would be half gone in somewhat under a minute. Rutherford has continued investigating the products of change of the radium emanation, but these, altho of great interest, do not immediately bear on our subject.

About two years ago Mr. Soddy and I isolated the emanation from radium, separated it from other gases, measured the volume of a quantity produced in a given time from a known weight of radium bromide and found that, like other gases, it obeyed Boyle's law—that is, by raising the pressure the volume decreased correspondingly. It is thus an undoubted gas. We also succeeded in showing that when it is left in a tube confined by mercury its volume decreases, until after about a month it has almost wholly disappeared. On heating the tube which had contained it a new gas appeared, apparently having been absorbed by the glass walls of the tube which had contained the emanation. That gas was recognized by its spectrum as identical with helium, one of the rare gases of the atmosphere.

During the decomposition of the emanation into helium and other products much heat is evolved, as was shown by Professor Rutherford; it had been shown before by the Curies that radium continually gives off heat, and Rutherford proved that by far the major part of the heat was due to the spontaneous change undergone by the emanation. Now this energy need not all be manifested as heat; some, at least, may appear as chemical action. A solution of the emanation in water decomposes the water in which it is dissolved into its constituent gases, oxygen and hydrogen. And the rate at which the water is decomposed keeps pace with the rate at which the emanation changes—that is, at the beginning, when the emanation is fresh and there is comparatively much present, the amount of gases evolved is comparatively great; and as the emanation diminishes so the decomposition decreases, less gas being produced in a given time.

The solution of this gas in water has the curious property of coagulating white of egg or albumen. What is the precise nature of the change produced is unknown. Hence if kept in a liquid containing albumen it forms, no doubt, ultra-microscopic cells, for the gas produced is liberated in molecules, or, it may be, even in atoms. Some solution, injected under the skin of a living being, surrounds itself with a sack, or bag, the

walls of which are thick and hard and are absorbed only slowly by the living organism. These phenomena require further study, and I regret to say that I have not had an opportunity of examining them more thoroughly, tho I hope to do so.

Now, to come back to Mr. Burke's experiments: A possible explanation appears to me to be suggested by some of the facts which I have adduced. Mr. Burke made use of solid radium bromide in fine powder. He sprinkled a few minute grains on a gelatine broth medium, possibly somewhat soft, so that the granules would sink slowly below the surface. Once there they would dissolve in and decompose the water, liberating oxygen and hydrogen, together with emanations, which would remain mixed with these gases. The gases would form minute bubbles, probably of microscopic dimensions, and the coagulating action of the emanation on the albumen of the liquor would surround each with a skin, so that the product would appear like a cell; its contents, however, would be gas, or, rather, a mixture of the gases oxygen and hydrogen. The emanation, inclosed in such a sack, would still decompose water, for enough would diffuse through the walls of the sack, which, moreover, would naturally be moist. The accumulation of more gas would almost certainly burst the walls of the cell, and almost equally certainly in one or two places. Through the cracks more gas would issue, carrying with it the emanation, and with it the property of coagulating the walls of a fresh cell. The result of the original bubble would resemble a yeast cell, and the second cell a bud, or perhaps more than one, if the original cell happened to burst. This process would necessarily be repeated as long as the radium con-

tinued to evolve emanation, which would be for the best part of a thousand years. The "life," therefore, would be a long one, and the "budding" would impress itself on an observer as equally continuous with that of a living organism.

I am surprised to learn from Mr. Burke's first letter that the "organisms" appear to dissolve in water. The emanation does not coagulate or apparently affect gelatine, for I have tried and found that it does not; indeed, it was not to be expected. Is it possible that the gelatine is pushed away to form the cell-wall, leaving the albumen as a partial content of the cell, along with gas? The latter would, doubtless, diffuse through the cell-wall of coagulated albumen and dissolve in and mix up with the water. On placing the apparent "organism" in water the gelatine, too, would be extracted, and the cell would seem to disappear, the wall being excessively thin. It would be interesting to learn if Mr. Burke has attempted to stain his "organisms" with the usual dyes used by microscopists. It is possible that the coagulated albumen would take the stain better than the uncoagulated matter and that the structure would thus be revealed.

As I said before, I have no desire to dogmatize. The supposition that the pouring of energy in some form into matter similar to that of which living organisms are made, and which serves as sufficient food for actual living organisms, might conceivably result in the production of life is a very attractive one. But one is bound to be skeptical, and the explanation which I have ventured to suggest appears to me to be sufficient to meet the case. But no one will rejoice more than I if it should ultimately prove to be inadequate.

LONDON, ENGLAND.

With Southern Sun

BY HERVEY WHITE

[Mr. White's acquaintance with Mexico, the scene of this as of several others of his short stories, dates from 1890, when he left the University of Kansas, where he was a student, to accompany the expedition of Dr. Carl Lumholtz into unexplored parts of that country. He has written of Chicago settlement life in "Differences," and Italy and Utah furnish the scene for some of the stories in "When Eve Was Not Created." In "Noll and the Fairies" he has given a fanciful presentation of the childhood of Oliver Goldsmith.—EDITOR.]

SHE had spent her life in the old town of Salem, with the exception of the last four years in college, and, presto! she was speeding toward the mountains! Mexico! The deserts of Sonora! Her family had said it was impractical; aunts and cousins had gone so far as to say absurd! But her mother had been willing, and her father, it would add to his comfort as well. Mr. Osgood was a mining engineer and Mabel was the favorite of his daughters. Why not, when his trips were often lonely, why not seek relief in a companion? At all events she was sitting at his side, speeding away in the Western Continental. She was enjoying her freedom, that was certain—enjoying it frankly and fully. Throb, throb went the swiftly moving car-wheels as the pulsating rails fled behind them. She was free from the confinements of her home, the straight, the established New England. The great West was taking her into its arms.

Her father made much matter with his paper and pretended it all ordinary and usual. "Wait till the time comes for excitement," he said once in reply to some enthusiasm. "Wait till you are on the back of a mule and rounding a high pass in the Sierras. Then there will be time to catch your breath where the precipice falls a good half mile beneath you. One little misstep of your mule and you are hurled into ten minutes of vacant daylight. Now this train life is altogether stupid. Better fill up the monotony with your Spanish. I should like to brighten up my own a little bit. It will do me good to make myself your teacher."

It was breath catching, she admitted, when she came to it, that journey across

the barren, desert mountains. Five days they traveled through the sunshine from the time they left the desolate, lonely station. The remotest valleys were not so lonely as the railroad where they left it in the alkali dust of desert. It had been stretching and extending for two days with no hope, when they stopped, of any respite. The water tanks and the station and the roundhouse were but gasps of the civilization left behind them. She was glad to go away and leave them stranded while the snorting, steaming engine was still undaunted. Some time perhaps it would return for her, if she could trust to her father and the company's schedules. But just now she liked the desert uncontaminated, for she did not mind the simple village Indian people, the men running behind the mules, screaming in some foreign, weird, undulating language that her father said was very good Castilian, tho it did not remind her in the slightest of the grammar, her friend and companion for five days.

In the end came the saffron dry grassed valley with the winding stream fringed with familiar trees. Old sycamores and willows, how she loved them, and the cottonwoods, the cousins to her poplars. On the hillside piled the grim dumps of the mine, but she would dwell and live her life down in the village. Her father took her into one of the low, cool houses and introduced her to the widow Figueroa. In the evening came the widow's son Juan.

He was two and twenty, he was poetic, he was wonderful; dark eyes with a flash of opal fire. She did not know an Indian could be beautiful, and yet he told her laughingly he was an Indian. His mother, a white haired, gracious lit-

tle woman, said they had pure blood from the nobles of Castile. But Juan stuck to it they were Indians. He said this with proud tossing of the head. The tossing made his curls leap up like flames, black flames, such as are graven on old armor. "What beautiful teeth you have!" thought Mabel, but her Spanish was all bound up in her grammar. She confined herself to "Yes, sir," and "Thank you." And then Juan laughed and looked into her eyes. "You speak Spanish? You understand?" he asked slowly. "I will teach you," and these words were in the grammar. But his eyes, his eyes, they were not even mentioned; no more were the delicate tracings of his features. He was clean shaven save for a shadowed upper lip and the fine lines played about his mouth and eyes. A beauty so perfect, so delicate she could but marvel at and watch for many days.

Her father being much of his time in the mountains (it was a question of opening new mines farther back), she was left entirely to the family Figueroa, to her Spanish and the simple village life. He had been right in thinking she would find a source of amusement. She was from the first so fatally amused! But the outward life went on monotonously, simply; each day a repetition of the preceding ones. A breakfast of coffee and meal cakes in the morning, then a walk out in the village to the market. She was always in the company of the widow, for she learned it was not the custom for a girl to walk unattended in the village, and instinctively she adopted all she saw. Juan need only so much as widen his big eyes and her choice was made accordingly in an instant. The two walked around the little plaza and the widow selected and bartered among the peppers. The chief comestibles seemed to be the different peppers as they hung in brilliant red and green festoons. There was meat, but the widow's brother was the butcher. It was explained that his trade would fall to Juan. Don Pancho was getting porpoiselike and portly and in time would be ready for retirement. Even now Juan was driving in the cattle and assisting—it was horrible!—at the slaughter. Then he came home and taught her

Spanish and she listened, she trembled, and stammered blunderingly the words. His eyes, his voice, his hands, were like sweet music. She studied at her Spanish day and night.

At noon they had the chief meal of the day. It was spread out on the matting on the floor in the middle of the long, cool living room they always dwelt in. With the kitchen and the cooking Mabel was also familiar—the white stone stove, with polished brass and copper pots, where the widow moved like a priestess at an altar. Indeed, the stove, being set in an arched recess, with a Madonna and pink baby overhanging it, was not unlike an old shrine by a wayside in some far away tho Christian foreign land. On the first day and always with her father the two sat at a table for their dinner. But when Mabel saw the family on the matting, the white tablecloth spread spotless in the center, she asked to sit with them as was their custom and to be allowed to share from off their board. They protested, they said it was not fitting, and they yielded in an enthusiasm of delight. Don Pancho and his daughter were of the family; brown, shy little Carlotta with her brother. There was also an old man, a great uncle, and always Juan with the gleaming teeth and eyes. He sat so gracefully with crossed legs at the head and dispensed so graciously and hospitably the viands; if he knew that his legs showed to advantage, that his arms and hands as well were satisfactory, what matter that his little vanity should move him? He was dressed neatly always, almost gayly; the brown buckskin trousers were well fitting, the short brown jacket was agleam with silver braid. As for shirt, it was the whitest of soft linen, and the throat, bare and quivering, rising from it was as live and supple as a sapling's stem. Juan laughed, Juan talked, Juan made love; only not to Mabel Osgood as she sat there. She was revered like the Madonna who hung in honored place against the wall. It was to the village girls who happened in from time to time, always with their mothers, aunts or married sisters, and who, one and all, hung trembling on his glances as he talked, half grave, half gay, to their mammas.

Occasionally he would pause in some jocularity and look about for a light for his cigaret. Then the girl, ever watchful, would run to him, holding up the little dish of burning charcoal. He would take it from her, half indifferently, puff the smoke out, but always in his "Thank you" on returning it there would be that shooting glance into her eyes. Soft wounded doe, what need had she of arrows? Perchance his fingers would touch hers in blundering cunning and then what thrills would quiver through her happiness! And Mabel Osgood was jealous, even jealous—jealous of an Indian village maiden because a butcher boy was coquetting with her.

In the afternoon, close following the siesta, during which the fellow had flung himself down carelessly, often in the shade of the courtyard, where the orange trees were crowded thick together, she had seen him lying once like some Apollo, his drowsing, beauteous head upon his arm, the wavering, soft flicker of fringed eyelids, the childish smile of sweetness on his lips. In the afternoon he would come to teach her Spanish, formally, reverently, with his mother always present, the little white-haired mother giving assistance, sitting on the floor on a white goat-skin rug, puffing daintily at her after siesta cigaret. And Juan, sitting gravely, so very gravely, going through the list of new words of the lesson. He could read, he could write, this accomplished fellow, tho he seldom did either one except for show. And she, a college graduate from New England, positively admiring him because he even knew. These lessons were the wonder time, the climax, unless that was in the evening later on. They walked out into the plaza in the twilight, when the wondrous desert blue was in the air. Far off the dreaming mountains were like jewels, and the thrumming of guitars was near at hand. Of love, only love, were the moaning folk songs, long drawn, in falsetto minor key.

One day they were sitting in the courtyard, she busy with writing out her exercises, when the widow was called away for some duty and the two were left together quite alone. Juan also rose out of respect for the Spanish custom

and was about to excuse himself for the moment, when she looked at him and begged him to remain; she wished his help in correcting her sentences. He could not disobey the Señorita and sat down in the chair she placed beside her. In his eyes this was wrong, could not be countenanced, and yet the Señorita had commanded. He was awkward, embarrassed and almost trembling with confusion. Mabel understood, but was determined. She would not concede to every silly custom. What harm could come in sitting here together in the full daylight of the afternoon in so public a place as the kitchen garden, with his mother able to see them through the window? None the less the sentences went on stumblingly. There was too much of consciousness and restraint. In her own nervousness she let the papers slip from her fingers and the wind sent them flying over the ground. They both stooped to recover the paper nearest them, both relieved that the situation was thus over, but in their haste to get the papers their hands came together; for a flash she felt the fondness of his fingers. The fingers were doubtless accustomed by long flirtations with the village girls to seek out other fingers in swift contact, and she, Mabel Osgood, like the Indian girls, was whirled away in the ecstasy of passion. Juan apologized; now there was no doubt about his trembling; he was shaken to the inmost center of his being. Almost on his knees he begged her pardon—his shame, his sin, had crushed him to the ground. And yet she understood he, too, was wild with inward singing. He, too, knew love as bred by tropic suns. Fortunately the widow returned at that moment and together the three picked up the scattered papers. Juan soon rode away to the mountains, leaving word that he would be absent several days. His mother said he had gone out to buy cattle; she was herself somewhat distraught and overwrought. Perhaps Juan had said some word to her, or perhaps she saw as Northern mothers do.

In those days that followed Mabel Osgood walked out alone, more alone than she had ever been before in her life. Her father was in the interior, in the mountains; he would not return for

a week, but even if he had been with her to advise her she would still, she felt, be alone as she was now. The widow protested and the village people wondered, but it was the great American's daughter, and they shrugged their shoulders and spoke to her with respect. After all, it was the custom of her country, tho the black-laced matrons cast a jealous eye. "These foreign innovations," they said suspiciously, "will be the ruin of our daughters, that is clear." None the less Mabel Osgood walked alone and sat staring across the sun space of the plaza.

What she saw was her own life from its inception—her childhood, her girlhood, her education—and then her future in this Mexican mud village, the wife of Juan Figueroa, the butcher; perhaps even the neglected wife in time; for there might come in her years of growing older a day when he would still laugh to young eyes. Even now he was not what her people would call virtuous. The Spanish standards were as different for the men as they were for the young girls and the matrons. But she would love him and remain loyal to the end. He was kind and she could not forget traditions. Her Puritanism, or New Englandism, as she put it, was as strong as his Latin disposition. She would make her life work in this village, she would be as a sister of mercy here among them.

She thought of the crooked, dismal little streets, mud streets and mud houses to make them, of the impoverished, ignorant, improvident Indians, who when asked to undertake the slightest effort invariably responded, "To-morrow." She thought of the gloomy church, half in ruins, the musty smell of grandeur still lingering about it with the incense, the tawdry bedressed and bedizened waxen saints that were such an outrage to the dimness of old pictures; she thought of the fat selfishness of the priest and the blind and fetish worship of the women, and still she did not falter, did not waver, in her hopes to reinstate and re-establish. For—and she looked now toward the ruins of the monastery—did not the Jesuit fathers once build a civilization of this people? Was there not material here that was

capable of improvement? She had walked out among the ruins of old gardens, of the fields and long disused irrigating ditches; everywhere was desert now and ruin, and the water ran in waste along the river. But she told herself some new force would come, would reorganize and build anew among them. Why might not the butcher's wife make a start? The leading lady, the rich American of the village. It might be she would lack the power of religious enthusiasm, but could not love, human love, go far in service? She sat staring out across the sunshine, and the dreams of noble ancestors were around her.

For three days she considered and waited. Then Juan Figueroa came back. He looked worn, as if he had endured a fierce battle, but calm, like one who has conquered, tho with heavy loss and little sense of joy. To-morrow her father would return and would soon set out homeward, toward the railroad. She, Mabel Osgood, would remain behind, if success should but crown her great decision. She knew she would have a struggle with Juan, as great, if not greater, than with her father. But she held all her strength amassed and ready and she would overpower them both with the first shock. So it came that she spoke to Juan softly. "In the evening at the dusk I will walk alone down by the river, at the place where the women do their washing by the great cottonwood. I want you to meet me there alone, for there is much that is serious I must tell you." The look that came over his face might make one doubt if his victory had been a great one. There was the look of a beaten dog in his pleading eyes, a dog that suffers love for a cruel master. He did not think to marvel at the fluency of her Spanish, he did not remember that for many days to come. But he came, he was waiting by the river, where the water swirled and flashed the glance of stars.

She had said it would be she who would make the declaration. She had humbled herself even to that. But as she came to him his man's right took it up, and he knelt down in the sands with sighs and moaning. "I love you! I love you!" he kept saying. "It is wicked! It is wicked! but, oh, I love

you!" He would not touch the flutter of her garments, his reverence was so lastingly upon him, but he could touch and kiss the sands whereon she trod. "I love you! I worship, I adore you!"

She reached out to touch his head, but it crouched lower; he would not so much as let her touch his hand.

"I will marry you," she said, very calmly. "I will marry you and stay with you always."

"No, no; it cannot be!" he said, still crouching lower. "It cannot be! never! never! never!" The waste of desert sands was in his voice, wide lands whereon the flowers would never blossom.

Since he would not rise to her, she knelt to him. She swept her fingers lightly across his hair, very lightly, but his whole man's strength and frame began to quiver, till she was frightened at her act and ceased. She sat looking out across the river toward the purple, tremulous darkness of the distance. In time she began to speak to him steadily. To speak all the things she had thought of. She told him it was her life work, her mission; that her love for him had pointed out the way. In time he, too, had lifted up his head and sat looking out with her into the future. He did not offer to touch her or look toward her, but his quivering limbs grew slowly firm and still. It might be as she said; there was hope for him. So the Holy Virgin may have talked to Joseph.

"To-morrow my father is returning," she was saying toward the end; "I will go to him when he comes and explain. I will not go back with him across the mountains."

But again his man's rights gave him courage. "It is I who will speak to your father." Nor would he have it any other way. She saw that it was impossible to move him.

* * * * *

The next day when Mr. Osgood returned he was surprised that his daughter did not greet him. She was visiting in the village, the widow said; she would come home later in the evening. While sitting at his coffee after the siesta Juan Figueroa asked to speak to him. Mr. Osgood had never noticed Juan was so handsome. There was a fine, manly

frankness about him that might foretell a clever manager of undertakings in the mines. There was also a dreamy visioning in his eyes. Mr. Osgood had never been so powerfully drawn to a Mexican. It was his habit and his principle to stand up for them as a people. He said otherwise he would have no right to work among them. As he listened to the steady music of the Spanish it came over him that this youth loved his daughter. He gathered later that his daughter also loved him, that she had already promised to marry him. All of this Mr. Osgood heard through. He even pitied the pleading youth that he must wound, that he must smile upon and stab then in the heart. To see him, like a cowering, gentle dog, and yet a dog that is fearless of all fighting. The bravest are the ones afraid of love. Mr. Osgood was a man of understanding.

He waited till the even sounds had ceased and then began in quiet, kindest language. He was sorry; it was a beautiful little romance, and of course a boy like him could hardly comprehend. He explained how his daughter was of another life, of her position, her wealth, her education. He showed how such a marriage could never be, in his kindest, his most practical conversation. Juan was expecting anger and was ready to meet it, but kindness was too much, too overwhelming. In the end he had made an agreement; he would go away, leaving a letter. On the morrow Mr. Osgood would go home and take with him, what else?—his helpless daughter. They clasped hands on the compact, held them clasped, and the young man was more firm than was the old one. He wrote the letter, kissed his mother and rode away, and there was not one little lingering look he cast behind him. Not one memento carried next his heart. The gallop of his horse was like low singing.

That night when Mabel Osgood came home the widow came to her with the letter. The poor woman had been crying, her eyes were red and swollen with long weeping. Mabel Osgood knew already of her fate, that her mission was but the mirage of the desert. She took the letter down to the river and sat beneath the cottonwood to read it. Even

now she was proud of the firm writing, the flourish and the shading of the capitals; it was signed, too, with his flourish at the end, the scroll and points beneath, Juan Figueroa.

"Respected lady:" it began.

"I have talked with your honored father and as a result I am going away. I have promised him I will not return

until I hear from him at the railroad that you are with him. Then I will come back to my mother and take me a wife from one of my people. I invoke now the saints' blessings on your head and bid you farewell; good-by forever."

She sat looking down into the stream. The next day she was riding toward the mountains.

WOODSTOCK, N. Y.

To Death—Greeting

BY HARRIET F. BLODGETT

A FAIR good-morrow, Death! we send thee greeting,
 My playmate Life and I;
 Serene thou waitest for the hour of meeting,
 While we two loiter by.
 The sunny highway, where each roadside blossom
 Waves welcome as we pass,
 And where the heart that beats within our bosom
 Makes answer to the grass,
 Which whispers soft: "Come over! oh! come over
 Where lush the cowslips grow,
 Where laughs the daisy and where blush the clover—
 Come over!" and we go.

Like children go we to the greening meadow
 To riot in the sun,
 To play and wanton with the shine and shadow,
 Until, the daylight done,
 We wander on through gloom enchanted places,
 All in a silence deep,
 And feel upon the fever of our faces
 The cooling touch of Sleep,
 Who woos us, with a loving voice and tender,
 To linger by her side
 In the fair country, wrapped about with splendor,
 Where only dreams abide.

Oh! Life and I, what games we play together
 Of joy and grief and love!
 We pluck the sweets that grow in summer weather,
 We know the thorns thereof.
 We wander on o'er hill and plain and hollow—
 But ever on our way
 One path we take, and follow, follow, follow
 To where thou art to-day.
 Therefore, O Death! to thee a word of greeting,
 Where, at the journey's end,
 Serene thou waitest for the hour of meeting—
 We keep the tryst, my friend.

Tin Vases and Candlesticks

Arts and Crafts in Europe

BY CLARA RUGE

[Those who became interested in the national characteristics manifested in the house furnishings and decorations exhibited by European nations at St. Louis will appreciate this survey of the present conditions of the arts and crafts movement in the different countries.—EDITOR.]

More and more the conviction takes root that not only Sculpture, Painting and Architecture, the so-called "fine arts," but also "applied arts," have to range among the highest

taste of collectors or the popular prestige for foreign and imported goods very often brings objects intended for the needs of one nation into the possession of members of another, whose people do not know the proper use and only employ them as ornaments or parts of a collection.

manifestations of the human mind and soul. Why should an object like a vase, a rug or a piece of furniture, if embodying fine qualities in color and form, producing an artistic impression, not

But the usefulness should not be disregarded. In applied arts a great deal of the beauty depends on the fitness for the purpose. Everybody knows that in architecture the style and the forms must always harmonize with the purpose of the building. Wooden columns are vulgar, and a building decorated with pillars must equally be of earnest character and built of stone. But a light Swiss summer chalet decorated with wood carvings and showing stained woods instead of wall paper is of exquisite taste.

be specified as a work of art, even if that object has also some practical use and is not intended merely to be looked at? Because objects of applied arts are really more connected with daily life in the home, they are even more destined to elevate the general artistic taste than works of fine arts. For the same reasons works of applied arts will to a higher degree express the characteristic national differences than painting or statuary.

To be sure commerce distributes objects of art among all nations, and the

The revival of the Renaissance in furniture, ceramics, etc., which took place on the European Continent in the seventies of the last century, influenced through some of the best artists—especially Hans Makart in Vienna—surrounded once more the people with objects of genuine beauty, and the home became permeated with an artistic atmosphere.

Still the shrines and cases did not quite suit modern needs, and the many carvings were a burden to the housewife of our dusty cities, where railroads,

Sweden

Bronzes

factories, etc., create an atmosphere of which the people of the fifteenth or sixteenth century had no perception.

in reviving English applied arts, which show, like English art, altogether a pure, virginal character. We never find any frivolous attempts. English art never appeals to the senses. But we also never discover bewilderingly genial features, striking individualistic or excessive decorations. It is only natural that while Walter Crane's highest aim consists in

Denmark.

Th. Madsen, Designer

The complicated forms of the Renaissance became burdensome and demanded a contrast.

The change came from England. We find William Morris at the head of a movement for simple forms of objects in accordance with a modern mind. Walter Crane also aided greatly

Denmark.

A. Hensch, Designer

bringing arts and crafts in accordance with the space, the material and the modern use, still the pure youthful character of these new English art objects has tended to a certain archaicism.

never taken deep roots, but those historic styles, in which the French had been the leaders—Rococo, Empire, Baroque—still reigned in applied arts. The Baroque had even in Germany, to-

France.

Fountain Hand Basin Representing the Earth and the Waves.—Max Blondat, Designer

The pre-Raphaelite mind is dominating in the English arts and crafts.

But now the stimulus was given, other nations took it up and created new movements, new styles, embodying the individual spirit of each nation. In France the new *régime* of the Renaissance had

ward the end of the last century, through French influence, partly crowded out the Renaissance. But not long before the close of the century the "*Art nouveau*" sprang into life in France, at once affecting all the branches of the applied arts and thus creating an en-

tirely new home, new kinds of ornaments.

The ground elements of this new art are essentially as follows: The wavy line, the light, soft tints, the woodwork and each material showing its own beauty. The human forms, mostly the forms of women, are used a great deal in ceramics. These are also adapted to the decorative character, with the long-stretched line dominant. Pottery is often mixed with metal and enamel. Altogether the use of all kinds of material, not considering the money value, the preciousness of stones or metals, but their fitness for the purpose, their beauty in colors or texture, becomes a prominent feature.

As an example let me name a wash basin by Max Blondat, made of tin and showing to greatest advantage the very graceful lines of a nymph and her surroundings.

Flower motives are used a great deal, but never in natural forms nor in conventionally repeating order. They are conventionalized, but adapted to the wavy, harmonious lines which are prominent in all examples of *Art nouveau*. Every decorative motive is individual and different. The Oriental influence is shown very much in this attempt of individualizing the decorations, also new forms of plants; I mean plants not used hitherto in decoration are introduced.

The poppy, carrot, blossoms of fruit trees, leaves of all kinds of bushes are visible. A light inclination for symbolism is observable. The colors and

forms of the peacock are much in favor. Among the highest products of *Art nouveau* we have to count Talique's jewelry, which has reformed this branch to an art again all over the world. From the French most of the new motives in all branches of arts and crafts have found their way all over the European Continent. They have become changed, stamped with national differences, some abandoned, some added.

The nearest to France stands the Austrian secession. The Austrians are people of much artistic feeling. Just as the revival of the Renaissance took deep root among them, also the new spirit in art became very prominent in Austria and spread through the whole world of manufacture to a degree which is very remarkable. Austria possesses under the direction of the State excellent art industrial schools.

The Vienna Art Industrial School, conducted by the Imperial Museum for Arts and Crafts, is the mother school of all German similar institutions. One of the great leaders in the German secessionistic movement, Olbrich, who founded the celebrated

France.

Sèvres Vase

Darmstadt colony for artistic homes, is an Austrian. There is a great affinity between French and Austrian art ideals. While the Germans, mostly the North Germans, *construct* their new art after principles, the French and the Austrians *feel* it. We recognize in the Austrian secession many elements of the French *Art nouveau*, but individualized through the subtle, sometimes smooth German-Austrian temperament and marked by traits of the home industries of the Austrian Empire.

The new art of Germany is a virile, earnest art. If you pass through a suite

place in them. The spirit of Nietzsche speaks out of them! The coziness of the old German styles, with the spinning the many nooks and corners and towers, has disappeared entirely, without leaving any traces. I believe that a modification of some kind will take place, because the German new art of to-day is only in harmony with a certain school of wheel near the colored glass windows, thinkers; therefore, it is more artificial than artistic. The soul of the people does not find proper expression in it. It has been *constructed*, not naturally developed.

France.

Vases in Art Nouveau

of rooms furnished and decorated after the designs of modern German artists—in case these are not from Austrian or Bavarian descent or much under French influence—it will strike you at once that here the straight line reigns. You will find severe contrasts of light and shade, a very extensive and often very beautiful display of woods, the different kinds used as panels, instead of wall papers, to produce striking color effects. Stains of all shades are used. For a library or a gentleman's study most of these arrangements seem very suitable. But many of them give an impression of hardness and coldness. For love and happiness or playful childhood there seems to be no

The Belgian and Dutch arts and crafts are partly under the influence of France; still the products show that the inhabitants of part of these countries have a certain weight of heavier Teuton blood in their veins. The distinguished Van der Velde even has proved a reformer in jewelry, home furnishings, women's garments, etc. His wonderful personality has been felt in Germany and France. Threads leading from the old Dutch style to modern productions can be traced in many of his works, tho an entirely new spirit reigns in them. The lines are less wavy than in French art, but still curved. In colors mostly warm reddish-yellowish tints blending into

Germany.

Part of a Reception Room.—Leo Nachtlicht, Architect; Mohrbutter, Painter; Schmarle, Sculptor

Germany.

Dining Room.—Altherr S. Ortleb, Designer

browns dominate, while the modern Germans have a great liking for grays, blues, purple—all cold tints.

The ceramic art of Holland is of a

brushwork. Mostly plant forms with long stems are used. They are under-glaze painting, still they give the impression of surface decorations, much in

Belgium.

Aurora

very high grade. The forms show big handles, which are essential parts of the vases. The decorations are done in fine

contrast to the works of the Copenhagen Porcelain Manufactory. Here the decorations of pale, mostly bluish, colors

and mystic uncertainty of forms are really part of the pieces themselves. Landscapes with a few high trees blended into the atmosphere, birds with large wings, animal inhabitants of the Northern seas, form the objects of these really poetical decorations. Simple as they are the forms of the vases, flower-pots, plates which they adorn. A Northern refined taste for nature finds expression in these objects, just as in Northern poetry and landscape painting on canvas. Most of

Holland.

L. Nienhuis and W. G. F. Tausen

the Northern nations are greater in landscape than figure painting. So are also the Swedes. In their country within 15 years an entirely new school of landscape art has arisen, based on the native impressions, the peculiar effects of the midnight sun and the deep snow effects of winter, to which the sons of the country are very receptive. Art industries have also not failed to ripen to a high standard in Sweden, where original minds are not scarce and where also the peasants

Belgium.

Room in the Flemish Style

have conserved the faculty of art productions. Wooden vases, baskets, decorated in lively colors, a great many of them showing the peasants at their joyful national dances, others decorated with primitive ornaments, are plentiful. Also tapestries are done by peasants, for these floral and animal motives are preferred. It is remarkable that we find nowhere a realism crude because lack-

motives are chosen and treated with an unspoiled fervor.

In Norway the art furniture and the tapestries are the most remarkable features in art industries. The furniture is more remarkable for its constructure and coloring than for its forms, which are mostly modern developments of old German peasant styles. But the many colored woods are in much livelier tints

Austria.

Pavilion at World's Fair, St. Louis —Secession Style

ing of detail knowledge, as might be expected.

There is a tendency of conventionalizing and showing the objects as if seen from a distance through an idealizing atmosphere.

As to the products of individual artists working independently or in connection with some of the great Swedish potteries, bronze or glass works, we observe in their products a genuine originality and freshness in conception. Going into details is out of question in this sketch article. So it must suffice to state that human, animal and flower

than the modern German or French woodwork mentioned before, and bear a primitive popular character.

The tapestries of Norway are deeply allied to the nationality. The old folklore furnishes the motives of the designs, and we find whole sagas told in continuous different tapestries. The colorings, bluish greens and grayish blues, with mild yellows and reds for flesh tints, give the general toning. They bear a stamp of the mystic; the old germs still living in the modern people have been taken up. But no pre-Raphaelite character is observable as in

England. The reminiscences are all entirely national.

I have to add but a few words concerning some of the southern nations of Europe.

The art industries neither of Italy nor of Spain bear traces of great originality in the pursuit of modern ideas. In fact, some reflections of the veristic, overnatural art in the Italian sculpture can also be observed in art industries.

doubtless soon also be felt in the applied arts.

In Spain the best art industrial products are also relying on Renaissance and some on Moorish ideals. The modern spirit is slowly gaining space, and, of course, the economic disastrous conditions do not help to bring forth productions in applied arts. There is without doubt a great deal of genius for art in Spain. In painting we find there also

Austria.

Works of Art from the Industrial School at Prague, Bohemia

Not to its advantage. The best that Italy produces as well in furniture as in ceramics, art embroideries, etc., is entirely based on old Renaissance models, while minor work shows an overloading with ornaments based on Baroque modes. In sculpture Italy is bringing forth a new ideal school, somewhat under Rodin's influence, which means a purification of the veristic style dominating until lately. This modern and pure spirit of the newest era in Italian sculpture will

at present a school excelling in composition and color, tho mostly relying on the ideals of the great art of Murillo and Velasquez. The modern spirit gains there space only slowly, also in social life. In Russia the unhappy political circumstances, the pressure of the Czarism, must account for the fact that we find beautiful peasant work in embroidery, woodwork, etc., but modern artistic productions in applied arts have not appeared to a great extent, while Russians

Denmark.

G. Rode, Designer

are highly talented in art. Costly vases are produced in imperial factories in the Ural, but not in modern taste. The political horizon is altogether not favorable to a fresh blooming in art industries. The artistic genius tries to express itself in ways in which the descriptions of corruption and cruelty, the sadness over the country's disaster or revolutionary thoughts can find expression: writing or painting of pictures. Most of Russia's art of to-day has a tendential background.

After dealing with the national pe-

culiarities of leading European nations the question arises: Do we have so far any traits of a national art in our handicrafts? Beyond question they are showing national life, but slowly; artists and artisans have too long been suffering under the prejudice that imported goods *must* surpass home products. Nevertheless there is great progress observable. We begin to possess national styles in furniture, original works in ceramics, etc. But of all this there is no room to speak.

Peace!

BY ERNEST NEAL LYON

Beat your sabers into plowshares!
 Kennel all your dogs of war!
 Let the blossoms pour their beauty
 O'er the trenches' ragged scar!
 Forward! March! To nobler music
 Than the war-drum's raucous din,
 With the voices of Evangels,
 Sing the Golden Era in!

Literature

Novels of the Occult

GHOSTS are not easily laid. At one time it was thought that they would all disappear at the first cock-crow of science, but here we find ourselves at the dawn of the twentieth century haunted by as many specters as ever. We have preserved all the superstitions of our ancestors and added a few new of our own invention.

As a theme in literature the occult in one form or another is still popular, and it is convenient to consider together the stories published in the last three or four months in which the supernatural is a dominant note, in which the center of gravity is in the fourth dimension of space. If we consider them solely from the standpoint of hair-raising and shiver-exciting potencies they are a disappointing lot. Almost any person could read them all without discomposure, even while sitting with his back to a dark doorway. The only ghost story we have read this year with the real old-fashioned thrill to it is one of H. G. Wells's "Twelve Stories," which we have previously reviewed.

But it must be said in fairness that, except in one case, we are not sure that the supernatural element was introduced into any of these books with object of exciting such a primitive emotion as fear. In the case of *The Image in the Sand*,¹ however, there can be no doubt of the author's intention. He has gathered together all the properties for a supernatural drama: hypnotism, telepathy, spiritualism, thunderstorms and magic, white and black, and uses an Egyptian temple as a back scene; but, in spite of all his pains, the whole is surprisingly ineffective. We do not shudder even when the brain of the heroine is obsessed by the foul spirit of Set-nekht. The reason why Mr. Benson has not succeeded better is that he lets us too much behind the scenes. The occult is only interesting when it is mysterious. The only thing anybody is afraid of is

the dark. *Séances* in the daylight are always failures. Besides, Mr. Benson's book, unfortunately for him, comes into comparison with a much stronger Saharan romance, "The Garden of Allah," by Mr. Hichens.

*The Tyranny of the Dark*² also deals with a case of the unwilling obsession of a young girl by denizens of the other world, but after the cold, expository manner of the psychical researcher. It has no more of a thrill to it than the real ghost stories in Myer's mammoth collection, the "Phantasms of the Living." In fact it was under the auspices of the S. P. R. that Mr. Garland made the investigations which furnish the material for this book, but they gain nothing in emotional interest by being transferred from the Transactions of the Society to a novel. "Blithedale Romance" shows what can be done with the same theme in the hands of a real mystic like Hawthorne, and in the "Undiscovered Country" Howells, tho a realist, has done better than this. We do not like to disturb Mr. Garland in his cozy shack on the sunny side of the big butte known as Morning-side Heights, but we do wish he would hit the trail once more, or take a ranch in the arid region. Antæus is getting exhausted. The *séance* room has done a little better for him this year than the greenroom of the theater did for "The Light of the Star" last year, but nothing he does now has the vividness and life of his early Western stories.

In *The Verdict of the Gods*³, by Ghosh, and *A Digit of the Moon*,⁴ by Bain, we have two chaplets of stories from India, where the occult is so commonplace that it ceases either to horrify or to amaze; tales of superhuman love surmounting supernatural obstacles, told as they must be by an Oriental storyteller, who dare not drop the thread of his narrative for a moment lest he lose his audience. In *The Verdict of the*

² THE TYRANNY OF THE DARK. By Hamlin Garland. New York: Harper & Brothers. \$1.50.

³ THE VERDICT OF THE GODS. By Sarath Kumar Ghosh. New York: Dodg, Mead & Co. \$1.50.

⁴ A DIGIT OF THE MOON, AND OTHER LOVE STORIES FROM THE HINDU. By F. W. Bain. New York: G. P. Putnam's Sons. \$1.35.

¹ THE IMAGE IN THE SAND. By E. F. Benson. Philadelphia: J. B. Lippincott Company. \$1.50.

Gods the prince in disguise goes through a series of trials more difficult than the labors of Hercules and as exciting as the adventures of Sinbad the Sailor, but the fantastic legends of Mr. Bain have more of poetry and charm. His rhythmical prose carries smoothly its heavy burden of riotous imagery and strange and grotesque folklore and mythology.

Superstitious science affords the theme of many short stories and an occasional novel. Radium, x-rays and electricity, altho we know more about them than many things that we have known longer, have something of the magical and mysterious about them for most people, who have such unlimited faith in their possibilities that anything may be ascribed to them without disturbing the popular mind. Two of our novels have used such pseudo-occult agencies to effect an alternation of personalities. *The Mortgage on the Brain*⁵ gets a new complication in romance by making use of a lady and a gentleman who each have two different personalities, after the manner of those interesting instances of mental duplicity with which the Society for Psychical Research have made us familiar. Holmes said that when two persons were talking there were really six engaged in the conversation. Obviously if any of our subliminal selves are allowed to come to the surface the number of characters concerned must be increased in geometrical proportion, which is an alarming outlook. Mr. Harper handles the Box and Cox brains of his principal characters with considerable deftness and produces some startling transformation scenes. *The Prince to Order*⁶ is another variant of old Zenda theme, Prince Maximilian, pretender to the throne of Budavia, being merely a hypnotized American.

*At the Sign of the Jack o' Lantern*⁷ does not really belong in this group. To be sure, it has a black cat that has been killed and buried and afterward takes an active part in the household affairs, but even normal cats have nine lives and this may be only its second avatar. And

there are several spirit letters, but these turn out to be forgeries by merely human hands. This most surprising old house is full of mysteries and undeniably haunted, but it is not in the least spooky. On the contrary, it is full of the funniest characters that have been brought together in a long time. If any one is troubled with relatives who come too often and stay too long he can get rid of them by purchasing a copy of this book and laying it on the center table in the parlor. If the unwelcome guests can take a hint it will rid the premises of them; they will not die in the house.

Larned's History of the World

THESE volumes* are evidently intended for the general reader who wishes an intelligent grasp of the broad outlines of universal history. To fulfill their mission with reasonable success they should possess three important characteristics. The perspective should be arranged with a view to the explanation of the world to-day; the arrangement and presentation should leave clear and lasting impressions, and accuracy in detail and conclusion should be maintained throughout.

The first of these canons of criticism Mr. Larned meets by devoting half his space to the last five of the seventy centuries of history. Whether it is more important or more cultural to know about Aristides or Bismarck is a matter over which the factious may quarrel, but there can be no doubt that the interest of most people of our time is on the side of Bismarck. While his proportions leave nothing to be desired, our author has scarcely broken from the time honored models of narrative history. He does not give to social and economic institutions that attention which the interest of our day demands. For instance, the long struggle of the patricians and plebs is dismissed with a few lines, while many pages are given to the wars of Rome.

The determination of the arrangement, chronological, national or topical, is much more difficult than the fixing of proportions, and while Mr. Larned has

⁵ A MORTGAGE ON THE BRAIN. By Vincent Harper. New York: Doubleday, Page & Co. \$1.50.

⁶ A PRINCE TO ORDER. By Charles Stokes Wayne. New York: John Lane Company. \$1.50.

⁷ AT THE SIGN OF THE JACK O' LANTERN. By Myrtle Reed. New York: G. P. Putnam's Sons. \$1.50.

* SEVENTY CENTURIES OF THE LIFE OF MANKIND. By J. N. Larned. Two vols. Vol. I, pp. xviii, 465; vol. II, pp. xv, 539. Springfield, Mass.: C. A. Nichols Company.

improved on the jejune and unprofitable annals of most general historians, he has not produced altogether happy results. In the first place, his measurement of periods by the lives of great men is calculated to destroy that impression of historical continuity for which he argues in the preface. A historian's characterization of a period is the best evidence of his grasp of its true import and position in the development of mankind. In the volumes before us the French Revolution is included under the title "From the Advent of Washington in the American Revolution to His Death," while Bryan and the silver question are placed under the heading "From Bismarck's Founding of the German Empire to the Present Day." Now, there is neither logic nor felicity in such an arrangement. The mind works most effectively through associations and the skill with which a writer weaves connected movements together is a test of his power as a historian. The simplest psychology teaches us that the rapid passage to and from unconnected and dissimilar events not only makes reading burdensome, but leaves blurred impressions. Notwithstanding this potent fact, Mr. Larned confuses the reader by adhering strictly to chronological arrangement and continually breaking and taking up the threads of national histories. This is true not only of his sections on ancient history but also of the account of the Orient. The latter is broken into small fragments of sometimes half a dozen lines and inserted without the slightest connective tissue into the chapters based on the movements of Western Europe. The entire work would have been far more useful if the author had departed farther from the arbitrary limitations of chronology and done in the text itself that synthesizing which he suggests may be done by the use of the index. The arrangement of the work is not striking and the impressions conveyed are not clear cut.

So far as scholarship and accuracy are concerned, Mr. Larned has been more successful. He has made remarkably discriminating use of excellent and recent materials available in English and has eliminated many of the hoary myths which masquerade as truth in general

histories from generation to generation. He properly realizes the difficulties of ethnic questions; his appreciation of the medieval Church is temperate and scholarly; he gives proper recognition to the political forces of the Protestant revolt, tho he retains the term "reformation," which scholars are gradually abandoning; he indulges in none of the unreasoning panegyrics which Americans usually bestow on Oliver Cromwell. The treatment of the French Revolution is not particularly fortunate, for the dramatic aspects are emphasized to the neglect of the social and economic transformation; the author has apparently read too much of Lanfrey and Seeley to give Napoleon his just due; the political bias is not entirely absent from the history of the last century, but good temper is preserved throughout.

The biographical prefaces to each period are unique and useful, the index is good, the illustrations are chosen with discrimination, the typography is excellent. There is, however, a notable deficiency in maps.

Taken as a whole this work is a useful contribution to our stock of general histories.

The Jewish Encyclopedia*

WE are now brought within two volumes of the conclusion of this monumental work.* It is an amazingly full and thoroughly scholarly compilation of important information on all sorts of subjects that touch the Jews. We have repeatedly commended it as essential to a complete library. The notable article in Vol. IX is "New Testament," and very interesting it is to the Christian scholar. The writer, Dr. Kohler, is a specialist in the history and literature that is attached to the period of our Lord's life and of the Essene teachings. The Christian religion, in his view, had, in the mind of Paul, its basis in the prophecy of Jeremiah, where Jehovah declared he would make "a new covenant with the house of Israel and the house of Judah, not according to the covenant which I made

* THE JEWISH ENCYCLOPEDIA. *A Descriptive Record of the History, Religion, Literature and Customs of the Jewish People from the Earliest Times to the Present Day.* Vol. IX, Morawczyk-Philippson. Vol. X, Philipson-Samasz. New York: The Funk & Wagnalls Company. \$6.00 each.

with their fathers." In Dr. Kohler's view the original records, undeveloped by later accretions, show that Jesus was a Jew, who did not break with his Church and had no idea of starting a new religion. He came into conflict not with the Pharisees, but with the ruling class of Sadducees, while the people remained attached to him, and he was executed by the Romans. The condemnation of the Sanhedrim was for his hostility toward the temple; he had committed the unpardonable offense of "lifting up his hand against the temple." Dr. Kohler is obliged to write with great compactness, but very interesting are his suggestions as to the rabbinic parallels to the teachings of Jesus. He finds the Book of Acts of immense value for the light it throws on the Jewish dispersion and proselyting. The other leading article in this volume is "Moses," which, like many others, is treated diversely, one author giving the "Biblical Data," and another the "Critical View." It is interesting that for the latter a Christian scholar has been selected, Prof. G. A. Barton. His conclusion is that, while the successive writers of the Pentateuch, "J," "E," "P" and "D," have added legendary and miraculous elements, Moses is yet a historical character and the real emancipator and founder of the Israelitish nation. Among the topics treated at length in the tenth volume we notice "Plants," "Poetry," "Philo," "Phylactery," "Prague," "Prayer Books," "Prophets," "Proverbs," "Psalms," "Purity of Grace," "Reform Judaism," "Revelation," "Rome," "Rothschild," "Russia," "Sabbath," "Sacrifice" and "Samaritans." Some of these are of very great value. Such is Professor König's clear and moderate view of the meter of Hebrew poetry, in which he finds numbered accent, but no regular metrical feet. The list of plants is a very valuable botanical study. There is a delightful collection of more modern Jewish proverbs, one of which tells us that no scold berates the tailor who makes her shroud. The question of the purity of the Jewish race is left uncertain, as the historical evidence for the last two thousand years clearly favors purity, while the ethnological evidence is not so

clear. The writer raises the question whether the Jews are really Semites, as their heads are not usually dolichocephalic, like those of the Arabs, but round and short; and he seems inclined to think that they come rather from the Proto-Armenians and Hittites of Mesopotamia, whose facial outline they more resemble. This volume has 243 illustrations, well chosen, largely bibliographical. We are promised that the whole work will be completed in November of this year. We shall be greatly pleased if the promised Roman Catholic Encyclopedia shall prove as complete and as truly catholic.

Immigration and the Immigrant

WITH the Aliens' Bill facing England and with the constant influx into the United States of undesirable immigrants from Russia, Italy, Rumania and Hungary, since 1894 and especially lately, stimulated by unusual conditions, war, famine, even steamship competition, the question of immigration is again to the front. So far nothing new has been said beyond the creation of the ear-filling and mind-clogging term, the "lesser breeds."

Three recent additions to the literature on the subject arrange themselves on opposing sides. Mr. Whelpley's book¹ is chiefly an abstract of the laws and regulations of migration to and fro in the Western World. Its introductory chapters are distinctively alarmist and restate the stock arguments with refreshing disregard to age. Nor does the apparently new classification of causes of emigration as natural, economic, political and artificial, strike one as sufficiently scientific. This hasty "book of the hour," for such it evidently is, interests in parts, particularly in its emphasis upon emigration as a matter of international concern.

So far the standpoint has been national, the main difficulty always presented being that of assimilation, which implies a substitution of traditions and social and economic standards sufficiently thorough to preserve the homogeneity of the whole. The remaining books undertake a description of the conditions and progress of two "undesirable" elements,

¹ THE PROBLEM OF THE IMMIGRANT. By J. D. Whelpley. New York: E. P. Dutton & Co. \$3.00.

the Russian Jewish² and the Italian.³

The former volume, based upon the confusing plan of treating each subject with respect to three cities—New York, Philadelphia and Chicago—is repetitive and retards a general grasp. But it is a splendid argument for the Jew. One rises from the book with the feeling that the activities of the Russian Jew—in numbers incomparably the largest of the Jewish-American world—are unique in scope and in many ways well worthy the flattery of imitation from other strata of American life. Many of the articles are by well-known Jewish writers and students, Miss Szold, Abraham Cahan, Dr. Fishberg, etc. Carefully portrayed are the economic struggles and successes of the Russian Jew, indicated not only by an almost entire absence of pauperism, but by a standard of living superior to that of the other foreign nationalities. The trading and the educational instincts of the Jew—root-grounded and crystallized by an environment of centuries—have served to give him no mean economic and intellectual standing. On sanitary grounds a strong case is made out by Dr. Fishberg and supported by Professor Ripley's remarkable statement that the death-rate of the Russian Jew, in spite of his generally unhealthy environment, is but little over one-half of the average American population.

While neither so comprehensive nor so thorough as the previous work, *The Italian in America* is of normal simplicity and clearness. The economic causes of the unusual emigration from Italy are discussed, whereof the facts are not, on the whole, complimentary to the Italian Government. In the last twenty years the Italian has made progress in no uncertain steps. His services in the mines, on farm and plantation have created a place for him in the labor world. Particularly in dairying and intensive farming he has shown unusual native ability. An unstable argument is that based upon Italy's glorious past, when one considers how practically negligible in it all was the participation of Southern Italy, the source of present immigration.

The Boss of Little Arcady. By Harry Leon Wilson. Boston: Lothrop Publishing Co. \$1.50.

Arcady has been variously located on the earth's surface by poets and romance writers, to say nothing of all lovers who have lived there at least once in their lives; but this time it is situated in Little County, Illinois, U. S. A. The author of "The Spenders" has again in *The Boss of Little Arcady* painted a picture of the Western town more truthful, because more affectionately touched with misty hues of the imagination, than are the raw splotches of "local color" mis-called "novels of the West." There is much exaggeration in this book, too, of a whimsical sort, with a blended flavor of Charles Dickens and Mark Twain, but it is gentle raillery. The figures are a little distorted, the peculiarities emphasized a shade too much—some of the queer characters never lived in Arcady or anywhere else—but the man who pokes fun at the country editor of *The Argus*, the Methodist minister, the Ladies' Home Study and Culture Club, the Boy Detective and many other entertaining citizens of Little Arcady loves them all, and his presentment of their life is neither hard nor squalid in its details, being in that respect much nearer the truth than much self-styled "realism." A Southern matron—no, "lady" is the word south of Mason and Dixon's line—and her ex-slave Clem, Mr. J. R. C. Tuckerman as his simple fellow townsmen knew him, are no less painstakingly studied than the more usual village types. Full justice is given to the best characteristics of each race in a way that reminds the reader of the "Two Gentlemen of Kentucky" we have known and loved so long.

"His eyes were wells of ink when the light fell into them—sad, kind eyes that gave his face a look of patient service long and toilsomely but lovingly bestowed. It is a look telling of kindness that has endured and triumphed, a look of submission in which suffering has once burned but consumed itself. I have never seen it except in the eyes of certain old negroes."

The friendship which grows up between "Miss Ca'line" and the Union Major, with his empty sleeve and his great heart, is very beautiful. There is a strong temptation to quote many passages like

² THE RUSSIAN JEW IN THE UNITED STATES. Edited by G. S. Bernheimer. Philadelphia: The John C. Winston Co. \$2.00.

³ THE ITALIAN IN AMERICA. By E. Lord, J. J. D. Trevor and S. J. Barrows. New York: B. F. Buck & Co.

the one in which the dying Confederate officer on the field of battle whispers to the wounded Major, who has painfully dragged himself to the spot to bring water: "You can't beat us! God is a gentleman, above practical jokes of that kind," but the above extracts may give a hint of the quality of the book; its story, altho faulty at times and loose in construction, must be read; it is fitly told only by the lovable Major.

Shakespeare's Christmas and Other Stories.

By A. T. Quiller-Couch. New York: Longmans, Green & Co. \$1.50.

In the production of historic atmosphere few authors can equal "Q." His abundant knowledge of archeology and

local color is effectively used without being made unduly conspicuous. In these stories, which range in date from the end of the sixteenth to the beginning of the nineteenth century, and range in characters from Shakespeare and Wellington to the fishwives of Saltash and the highwaymen of Tregarrick, he has need of varied scenery. Mr. Quiller-Couch writes a great deal, but we have never heard any one say that he wrote too much.

The Beautiful Lady. By Booth Tarkington. New York: McClure, Phillips & Co. \$1.00.

This is a long short story, written in the graceful style of "Monsieur Beaucaire." The most lovable character is not

"The Little Officer Had Turned White as a Sheet." From "Shakespeare's Christmas." New York: Longmans, Green & Co.

From Tarkington's "The Beautiful Lady." McClure, Phillips & Co.

"the beautiful lady," but the poor Italian gentleman, who earns a living for himself and his brother's children by sitting in the Café de la Paix with a theatrical advertisement painted on his shaven head. How he became the "governess" of a rich American youth who desired to "create considerable trouble for Paris" and how he saved the beautiful lady from a sad fate should only be told as he tells it in quaintly foreign English.

The Man of the Hour. By Octave Thanet.
Indianapolis: The Bobbs-Merrill Co.
\$1.50.

"From socialist to strike-breaker" ought to be added as a sub-title, for Octave Thanet's first novel is not a novel, but a tract against the methods and aims of the labor movement. The son of an American manufacturer throws himself and all his money on the side of the

workingmen in the Chicago strike,, but finds out later that he has sacrificed himself in vain and has done irreparable injury by encouraging them in an effort that could only result in ruin. It is only in the first part, where she tells of his childhood and youth, that the author shows the same power and charm in narration and character sketching that her short stories of Western life have led us to expect from her. The latter half of the book is stuffed with not very enlightening discussions of labor problems, and it ends in an absurdly conventional way.

The Little Conscript. By Ezra S. Brudno.
New York: Doubleday, Page & Co. \$1.50.

This story of a Jewish boy, kidnapped from his home, forced into practical slavery, knouted to convert him to Christianity, starved to make him a soldier

and imprisoned because he was too honest would be called incredible if there were not too much evidence of the accuracy of its picture of Russian life. It is fiction only in form. A tale quite as horrible and very similar in many details is told in the autobiography of Eliakum Zumser, ballad singer, published in the *American Hebrew* March 31st, 1905.

Love's Cross Currents. By A. Charles Swinburne. New York: Harper Bros. \$1.50.

When Mr. Swinburne's volume of romantic letters came out we were at once reminded that he was the man who should have led off in the love-letter business, which has been a prominent feature in fiction for some years now, and not the last author to show what he could do along this line. However, this is explained when we learn from the preface that the letters actually were written years ago and for publication. They are interesting to those who enjoy the stupid way English people have in fiction of being good or bad, but they will add nothing to Mr. Swinburne's fame.

The Heart of the World. By Charles M. Sheldon. Fleming H. Revell Co. \$1.25.

This book is quite characteristic of Dr. Sheldon, for in it we find him pleading for a more literal application of the teaching of Christ to the every day life and work of the world. It is the story of an Episcopal minister who wrote and published, anonymously, a book entitled "The Christian Socialist," and on the occasion of his consecration as a bishop renounces his office and the pulpit because of the consecrating bishop's charge to him to oppose socialism and this book in particular. It abounds in thrilling situations and sensational episodes which have nothing essentially to do with the story.

The Two Captains. A Romance of Bonaparte and Nelson. By Cyrus Townsend Brady. New York: The Macmillan Co. \$1.50.

If the "historical novel" of to-day had been invented when Horace Walpole wrote his letters he could hardly have failed to include it in his definition of the

epic poem: "a mixture of history without truth and romance without imagination." And of this the present outgiving is a shining example, provided, of course, one agrees with the author in regarding it as a historical novel at all. We differ with him, mainly for the reason that a wildly improbable blood-and-thunder narrative cannot be justly dignified even by that much abused title through the easy process of mixing into it a few well-known incidents in the life of Nelson, a description of the Battle of the Nile and naval evolutionary orders mainly culled from the pages of Admiral Luce's "Seamanship." Not that we mean that originality is wholly absent from Mr. Brady's conception of the great sea fighter. Far from it; on the contrary, we affirm that "Well, by Jove," whistled Nelson, "if that wasn't an idea!" indicates a choice of expression on the part of the victor of Trafalgar which, if peculiar to him, has escaped the notice of all his biographers from Southey to Mahan. The plot is hardly worth tracing. Mr. Brady is trying manfully enough to follow in the footsteps of Fenimore Cooper and he is not without qualifications, but he has yet to discern wherein Cooper was the artist, and still less has he found out the secret of that writer's charm.

The Pocket Books. The Amethyst Box, by Anna Katherine Green. The House in the Mist, by Anna Katherine Green. Enchantment, by Harold McGrath. The Princess Elopes, by Harold McGrath. The Motormaniacs, by Lloyd Osbourne. Indianapolis: The Bobbs-Merrill Co. 75 cents each.

Anybody finding a long, narrow, green and red plaid book on a counter will do well to pocket it, after duly compensating the dealer, of course. He will then be sure of an hour's oblivion to the most unpleasant surroundings, for all the stories in the series proceed at so rapid a rate of narration as to exceed the legal limit in suburban towns. The books may be guaranteed not to strain any intellect, for they are not historical or sociological and contain no problems other than "Who did it?" "What will happen next?"

Literary Notes

THE latest volume of "The Musicians' Library," published by the Oliver Ditson Company, Boston, contains fifty of Schumann's Piano Compositions, edited by Xaver Scharwenka (paper, \$1.50; cloth, \$2.50).

.... "The Business Man's Pocketbook" (International Textbook Company, Scranton, Pa.) contains in very compact form a large amount of information useful to any one, except a tramp; business law, definitions of financial terms, interest tables, card systems and the like.

.... "Only a Grain of Sand," by C. M. Taylor (J. C. Winston Company, Philadelphia, \$1.00), comes too late in the season for its best use, which is to read on the seashore to a group of children tired of digging in the sand. But this story of a grain of sand from its bed in the sea to the cut glass vase, illustrated with appropriate marginal sketches, will interest and instruct the children at any season.

.... Shakespeare's Complete Works in six volumes, none thicker than half an inch, fitting easily in a coat pocket and printed in a good sized, heavy-faced type, all this sounds incredible, but Thos. Nelson & Sons, Philadelphia, have accomplished it by the use of the thin India paper formerly used only for Bibles. Their "New Century Library" also includes the standard novelists, and is sold at \$1.00 for cloth and \$1.25 for limp leather.

.... Among the fall books announced by Houghton, Mifflin & Co. the following will doubtless be of especial interest: The papers read at the International Congress of Arts and Science at St. Louis, the final report of the Committee of Fifty on the "Liquor Problem," "The Subconscious," by Joseph Jastrow; "The Immanence of God," by Borden P. Bowne; "Sidney Lanier," by Edwin Minch; "The Fixed Period," by William Osler; "In the Land of the Gods," by Alice M. Bacon, and "Rose o' the River," by Kate Douglas Wiggin.

.... The ingenious idea of Sartor Resartus, that the artificialities of life, the social distinctions, affectations and mock modesty, are due to the clothes we wear, is utilized by Mr. "Dickberry" in a novel "The Storm of London" (H. B. Turner & Co., Boston). By the electrical storm which destroyed all cloth, paper and similar fabrics in London, society was completely regenerated, democracy triumphed, health and beauty banished disease and ugliness and vice spontaneously disappeared. The story is spoiled in the telling by its absurdly grandiloquent style. The book should be stripped of its verbosity by the same electrical treatment.

Pebbles

Edith: "Why did you refuse him?" *Ethel*: "He has a past." *Edith*: "But he can blot it out." *Ethel*: "Perhaps, but he can't use me for a blotter."—*Puck*.

.... A SALESMAN'S WOES.—It is to be feared that, generally speaking, women shoppers are not always as considerate as they should be of the rights and feelings of the clerks who serve them from the other side of the counter. The following may not be a typical case, but it is suggestive, at least: "A woman stopped at a cloth counter in one of the large department stores of Philadelphia recently, and asked to be shown some dress patterns suitable for early autumn wear. The salesman began on the lowest row of shelved compartments and pulled out and opened box after box until the counter on either side of him was piled as high as his head with goods. Three times he climbed a ladder to the upper rows and staggered down under a weight of box patterns until, when the woman took a survey of the shelves, but two patterns remained unopened. Then she said, very sweetly: 'I don't think I'll buy any to-day. I'm sorry to have troubled you; but, you see, I only came in to look for a friend.' 'No trouble whatever, madam,' he replied, politely. 'Indeed, if you think your friend is in either of the remaining two boxes, I don't mind opening them, too.'"—*New York Sun*.

.... HAD READ THEM ALL.—They had just met, and conversation was somewhat fitful. Finally, he decided to guide it into literary channels, where he was more at home, and turning to his companion, asked: "Are you fond of literature?" "Passionately," she replied. "I love books dearly." "Then you must admire Sir Walter Scott," he exclaimed with sudden animation. "Is not his 'Lady of the Lake' exquisite in its flowing grace and poetic imagery? Is it not—" "It is perfectly lovely," she assented, clasping her hands in ecstasy. "I suppose I have read it a dozen times." "And Scott's 'Marmion,'" he continued, "with its rugged simplicity and marvelous description—one can almost smell the heather on the heath while perusing its splendid pages." "It is perfectly grand," she murmured. "And Scott's 'Peveril of the Peak' and his noble 'Bride of Lammermoor'—where in the English language will you find anything more heroic than his grand auld Scottish characters and his graphic, forceful pictures of feudal times and customs. You like them, I am sure." "I just dote upon them," she replied. "And Scott's Emulsion," he continued hastily, for a faint suspicion was beginning to dawn upon him. "I think," she interrupted, rashly, "that it's the best thing he ever wrote."—*Office Topics*.

Editorials

Theodore Roosevelt, Peacemaker

WHILE the "bugles sound the truce of God," and all the world rejoices that peace has returned to men, all the world joins in respectful congratulation and praise of the one man who broke precedents and risked failure and pressed and won success. Not simply to the two mighty Powers whose envoys have agreed to end the war, but also to President Roosevelt do Emperors and Kings and Presidents send their warmest tributes.

It was against all precedent that Mr. Roosevelt invited the two belligerent nations to consider terms of peace, while neither had asked his intervention. Especially difficult was it when one of the two had been uniformly successful, and the other mightier nation, the mightiest in the world, had been constantly and shamefully beaten. Why should the victor stop? Why should the defeated nation not wish to recover its lost prestige? But it was a fearful war, a horrible slaughter of men; and our President put his hand on both combatants and asked them to stop and be friends. Then they came together and could not agree; and again Theodore Roosevelt intervened and urged and pleaded with them to put an end to a conflict which shocked the world. We know not what were his suggestions; but only know that the two great nations honored the personality and the representative dignity of the great nation of the West, and they agreed to lay down their arms and make peace.

And this urgency and pressure put by President Roosevelt on the envoys of the two warring nations, and on the Cabinets at St. Petersburg and Tokyo, was also against all precedent. It was hazardous. It might seem impertinent. It might arouse resentment. Even yet it may. But it was right, and Roosevelt makes his own precedents where precedents there are none, but precedents there ought to be. There will be a fine precedent in the future, if war comes again.

We would utter no fulsome praise, but we cannot withhold our sense of the

purposeful and yet tactful directness with which our courageous and resourceful President has in this great matter led the diplomacy of the world. Partly because we are a great Republic, with no selfish purpose to gain, and partly because he is a strong, positive, right man, he could do what no other ruler could have done. He has won the gratitude of the world, and all the other nations of the world know it; and Japan and Russia will know it best of them all, when

"peace,

Dear nurse of arts, plenty and joyful births,"
shall brood again over their homes.

Peace with Honor

"A peace is of the nature of a conquest,
For then both parties nobly are subdued;
And neither party loser."

PEACE is assured, and we begin to award praise to the envoys and their Governments, and to measure the results.

We may begin by declaring, with Shakespeare, "neither party loses." We believe it was Franklin, himself a diplomat, who said "There was never a good war nor a bad peace." But this is especially a good peace, even if the two parties are not yet certain of it.

For Russia it is good, altho the war was very bad in the field, if a blessing to representative government at home. But the war had lasted long enough. It had accomplished all it could, in securing a Duma composed of five hundred representatives, and having liberty of speech. That is a revolution which cannot go backward. Peace is now needed to give time to attend to internal reforms. Russia's war credit was exhausted, but not her peace credit. The continuance of the war would have imposed fresh losses, and the terms of peace were all she could have expected, and more than all. Doubtless Witte's bluff was magnificent, and it succeeded. Russia, who provoked the war, pays not a cent of indemnity, and gets back half of Sakhalin, which she had lost. Witte pretended indifference, seemed willing the war should go on,

utterly refused to make any concession on the important matters in dispute, and finally got his terms. We say it was a huge bluff, a kind that succeeded with envoys from a country which has not learned all the arts of misleading diplomacy, but who might now say, in the words of a Jewish lawyer of this city, admiring the rapacity of his Christian associate, "Almost thou persuadest me to be a Christian." Witte proved himself a master of such diplomacy, and we credit the report of his own description of how he did it as given in his own paper, the *Slovo*, altho disavowed by him later. For his conduct of his case he ought to receive upstinted praise at home.

And for Japan it is a most honorable victory of peace, quite equal to her victories of war and no less surprising. Where Russia was stubborn, Japan yielded. She wins the moral conquest. It was very hard for her to do this. Her rulers, and especially those Elder Statesmen, knew that they would be bitterly blamed by every hot head that carries a sword, and that even the lives of the envoys would be in danger from crazy zealots. But they did wisely. It seemed—and it might be true—that Russia would allow no more liberal terms, but would continue the war indefinitely. War is a terrible evil. It breaks up thousands of homes, and the Mikado could not bear to see his people suffer. So he yielded most generously and magnanimously. The whole world wonders and applauds, and Witte confesses himself stupefied.

But yet, so much less than was demanded, the acceptance of these terms was good statesmanship. War continued might have brought other victories, but peace has more victories still. And in further war Japan might have lost some of the bloom of her unfailing success. Of the honor of uninterrupted victory nothing can now rid her. It has gone into history and cannot be reversed. And all the ends for which she went to war she has secured and much more also. She has won Port Arthur, ravished from her after the war with China. She has driven Russia out of Manchuria. She has gained unquestioned supremacy in Korea. She will hold half of Sakhalin, which she was forced to yield fifty years

ago. She has annihilated the Russian fleet in the Pacific, and so crippled the Russian power that it will not for many years be a menace to her expansion. The advantage she has gained is immense, and, while it might have been greater, perhaps, it is enough, so that it ought to fill the people with gratification and pride. We should think less of Japan if her people should not respond to the wise and magnanimous action of her rulers, who understand that

"Peace rules the day where reason rules the mind,"

and that the better statesman is he who turns the sword into a plowshare and makes of the helmet a hive for bees. We give wondering recognition to the astute stubbornness of Witte, but we yield a higher praise to the more noble and even Christian acquiescence of Japan in the difficult and unwelcome terms of peace.

The Council of Peace at Brussels

LAST week the Executive Council of the Interparliamentary Union assembled at Brussels. Hon. Richard Bartholdt represented the United States, and we may say also America. One or two of the leading members of Parliament from all the important nations of Europe were present. As requested by the first part of the American program, invitations to all the members of South and Central American Parliaments were ordered to be sent out at once for the thirteenth annual session of the Union, so that America can be properly represented at the historic assembly which will consider the basis of a constitution for a World Parliament and the granting of jurisdiction to The Hague Court by embodying, in treaties of arbitration, provisions such as we have pointed out were necessary to give that court its proper place among political institutions.

Mr. Bartholdt has cabled us that the meeting of the Council was a substantial success for the Americans, the program being heartily welcomed and approved by the Council, and committees appointed to develop and perfect it.

This meeting of the Council and the coming session of the Union may well be called Councils of Peace. Strangely

or naturally, the scene of these Councils of Peace was the scene of the Council of War which finally overthrew Napoleon a century ago, at Waterloo, only a few miles distant from Brussels. The struggle is raised now above brute force guided by military genius and made effectual by courage and organization. It is now in the realm of ideas alone. But this does not at all do away with the necessity in this war for peace of an organized army led by able men and made effective by courage.

When the proper basis for a Parliament of Nations was put on the program of the Interparliamentary Union this was a call to all peace societies, all patriotic, all religious, educational, commercial and labor organizations, and to the press, to enlist for this war until it is won, with the leadership intrusted to the Interparliamentary Union. Shall the hitherto confused and disorganized peace forces continue to fight at random and to some extent in vain, or shall they become organized and effectual in this war, on this plan of campaign and under this leadership? The Union consists of men who can win and retain seats in national Parliaments and who are devoted to the cause of peace and justice and firm believers in the Parliamentary form of government. They are therefore both able to see and to stand for this plan as the most practical one, both in their respective Parliaments and in International Councils. The plan is practical; every move has thus far been wisely and effectually made. The proposed constitution for the International Congress is simple and scientific—evolved, in fact, by the vital events in American political history.

We have, therefore, a capable man at the head of our delegation in the Interparliamentary Union, who has shown fitness for leadership by leading. We have a strong body of Congressmen organized around him as President. We have a plan which calls for applying our principles to international relationships. Who are better qualified to stand for this plan in the Council of Nations than these Representatives of the United States? Count Apponyi has truly said it is right for the United States to lead in this movement for democratizing or repub-

licanizing international affairs. The work cannot be accomplished until men in official position make it their business to carry it through.

When the present condition is fully apprehended by the people and press of America we expect to see such approval of this plan for peace and justice manifested that not only our Government but other Governments will realize that the American people are ready and determined to have a system of law and order in the place of the violence which has hitherto reigned in international relationships, broken by spasmodic resorts to arbitral tribunals.

Dr. Gladden's Resolution

DR. GLADDEN proposes to offer to the American Board at Seattle next October a resolution to this effect:

"That the officers of this society should neither solicit nor invite donations to its funds from persons whose gains are generally believed to have been made by methods morally reprehensible and socially injurious."

That is, we suppose, they should not solicit them specially and individually. We understand that the general invitation to everybody to give still includes both reputable and disreputable people, so that those who get their gains "by methods morally reprehensible" are still to be inclusively invited. Thus, if Mr. Rockefeller—for all this is aimed at him—happens to be in church, the Home Secretary in making his appeal is not to say that those who "are generally believed" to have got their money "by methods morally reprehensible and socially injurious," are kindly requested to put no money in the plate. If, however, in answer to such a general appeal, such a man should be seen to put in a bill, or should send in a cheque signed with his name, we understand that the proposed resolution would not require it to be returned; for it is only the "soliciting" or "inviting" of donations that is forbidden.

Would it not be well, should this resolution be adopted, for President Capen to appoint a committee to draw up a list of such undesired contributors, men "generally believed"—but how gen-

erally?—to have acquired their wealth in bad ways? Does it mean “generally” through the country, and in that case is there more than one man aimed at? Or will it include men with bad reputations in their neighborhood—say, men who employ child labor in their factories, or who refuse to give suitable wages, or who do not provide seats for their clerks in department stores? The principle, it is clear, would apply equally to a man who has a reputation as a hard man within the circle of his local influence and one whose name is familiar to all the country. It strikes us that it must be a matter of judgment as to the choice of persons whom one should solicit for money, and that no hard and fast rule can be laid down. In a new mining camp one might go to the saloon to solicit help to build a church, which he would not do in Kansas.

An interesting point in the discussion is brought out by that excellent textual expert, Dr. George F. Pentecost, who floors those who say that taint does not attach to money by quoting Saint James, who says of the rich oppressors of his day: “Your riches are corrupted, your garments are moth-eaten, your gold and silver are rusted.” Surely, says Dr. Pentecost, that money was tainted. Doubtless it was—so long as they kept it. It is not quite clear from the Epistle whether it would continue to “rust” if they had distributed it in charity. If, instead of keeping it to “lay up treasure,” and “live delicately,” and “nourish their hearts in a day of slaughter,” they had sent a box of their best clothes and a few talents to the poor saints in Jerusalem, possibly the garments would somehow have got patched and the gold would have gained a new shine.

An Experiment Which Failed

THE temptation to gibe at Bishop Potter's experiment is very great. He borrowed it from one of the English Peerage (*Beerage* they call it irreverently over there since several wealthy brewers bought seats in the House of Lords), who came to this country to teach their fellow Churchmen how drunkards were to be reformed by moderate drinking. So nearly a dozen wealthy men formed

a syndicate to support a well-behaved Subway saloon, which should provide genuine liquors, unadulterated and undiluted, with an attachment for soft drinks and a restaurant. They dedicated it with religious rites, they sang the Doxology, and they opened the bar.

Never was a saloon so well advertised. One would think it ought to have made a fortune. Its backers were sure it would. They promised themselves five per cent. profits, and the rest they were to use to create more temperance saloons. But somehow the profits did not come. It is whispered that employees skinned the till and skipped. They say it was not well managed; at any rate it failed to pay from the beginning, and at the end of a year's experimenting its promoters had lost \$17,000 and their courage and faintly they threw up the sponge and sold out their liquors, their good will and their stand for a straight, ordinary saloon, with no pious flummery about it. The holy spell put upon it a year ago in Doxology and psalm was spelled backwards and reversed, and the place was delivered over to Satan.

We admit that it is not easy for us who believe in total abstinence and who rejoice over every local option county that expels the saloon to refrain from joining the gibers when we recall the pious, old-time, old-world simplicity of that opening ceremony. It was all so well meant and we

“know it is a sin
For us to sit and grin
At him here;
But the old three-cornered hat,
And the breeches and all that,
Are so queer.”

It really seemed incongruous to dedicate that saloon as one would dedicate a church. The Bishop giving his pastoral blessing! There is a certain fitness in blessing a bell, or a fountain, but a whisky barrel! Really, the toppers laughed, and the W. C. T. U. scoffed and added a feminine petitionary curse, while the churches were astonished and indignant.

But it was well meant and was half good. It failed, not wholly because the plan was bad. It failed because it was not well managed, because the supporting company of millionaires had not

courage enough to try the experiment well out. A year is a very short time in which inexperienced men may be educated to learn a new business, and \$17,000 is an insignificant amount with which to undertake a great social reform. They would give much more than that to carry a political election. If the first manager of their saloon failed; if its money was stolen, or if they had hit on an unfavorable locality, could they not have mended their plan and administration and tried it elsewhere? Men risk more money on one horse-race.

To be sure, total abstinence is best; but there is a second best in habits as there is in legislation. All cannot agree with us. As a moderate drinker is better than a toper, so an honestly conducted saloon is better than a vile one. Moderate drinking is no sin to those who believe it right. They claim that this Subway saloon, with its respectable character, drove out of the field two or three vile saloons near by. That is good; it is something. We admit a real respect for the purpose and intentions of the excellent, but faint-hearted, syndicate that began their venture. They did not watch it. They did not see how it ran down. They did not observe how it degenerated to be no better, no cleaner, than any other unblest saloon. They did not put business care and skill into it, and so we are sorry that a really well-intentioned effort to improve conditions among those who don't want to be improved was a failure. They say the plan succeeds in London, and it might succeed here if properly conducted.

The Future of China

EVENTS have most happily conspired to assure the normal development of the Chinese Empire.

For many years past things have apparently been going wrong. Regarded as incapable of military resistance, China, easily humiliated by Japan, has been looked upon by the great European Powers as a fat carcass to be divided. And it has seemed as tho the only question which the Powers considered was that of their respective shares.

The first setback in the anticipated realization of this program came with

the Boxer uprising in 1901 and the part which the United States was at that time compelled to play. Influential in restoring order, the United States was enabled thereafter to insist firmly upon its demand that the open door policy should be respected and that further moves toward the partition of China should cease.

Russia alone of the European Powers continued to follow up her original intention in disregard of promises made to America, to Europe and to Japan. Always protesting that she would carry out her agreement to withdraw from Manchuria, she day by day made her occupation of Manchuria more effective. Could she have achieved her purpose, there can be little doubt that in the end China must have been crushed between advancing Russia and the combined resistance of England and Japan.

The thunderbolt of war, hurled not without warning, but at an unexpected moment, by Japan, effectually cut short the Russian enterprise. Had the war continued another year or two, or could Japan have routed or annihilated the Russian land forces as she destroyed the Russian fleet, Japan's influence in China might have become all controlling. As matters now stand the terms of peace will leave the Chinese Empire intact and in a stronger position than at any former time. Japanese influence will be paramount in Korea, but neither Russia nor Japan will dominate Manchuria.

Meanwhile other influences have been quietly at work, the outcome of which will be an immense strengthening of China's own internal policy. The Chinese dissatisfaction with the terms of its treaty relations with America and with the American policy of exclusion of the Chinese from the United States has led to a general boycotting of American goods. A reopening of all questions of relations between China and the United States has been made necessary, and it is obvious that they can be dealt with only on the basis of a generous recognition of China as an independent Power, whose rights and self-respect must scrupulously be regarded.

That one result of these disagreements should be a transfer to China itself of the great railway interests that Amer-

icans had acquired in the empire and were rapidly developing was natural. On all accounts this disposition of these interests is to be welcomed. A great deal of bad blood was stirred up among the Chinese people by the way in which the American concessions were obtained and exploited. That a vast new railway system in any nation should be owned and controlled by foreigners is anomalous, and any such arrangement could not be enduring. The first condition of normal development for any people is an unrestricted control of its own affairs. China for the Chinese must be the first article on any program which can satisfactorily formulate a sound Chinese policy.

The way for such a policy is now well clear. For many years to come "the Russian advance" is effectually checked. Japan must continue to be an insular Power. England, relieved from apprehensions of Russian aggression and fortified by the new treaty of alliance with Japan, can devote her energies as never before to the development of her Indian interests until such time as India, made ready under English rule for a political life and awakened to political self-consciousness, shall in her turn become an independent empire. Thus left alone in safety, China can devote herself to her own affairs in her own way. Already the spirit of progress is awake among her people. Her transformation into a partly Westernized nation will not proceed as rapidly as did the transformation of Japan, but perhaps for that very reason the final outcome will in some respects be more satisfactory. China has infinite riches of mind and character, of social custom and moral tradition, as well as of material resources. These she will conserve while adapting her ways to those of the wider modern world. She will become a nation of prosperous and happy people, of a rich and beautiful civilization.

The Growth of Non-Living Matter

As far as the East is from the West so far is a living being from non-living matter. But no one is able to draw a dividing line between East and West, and it is found equally impossible to

make a clear and logical distinction between life and the non-living. The three kingdoms of nature approach each other as we trace them back. Animals and plants in their simplest forms become so much alike that the line which divides them into two kingdoms for the convenience of zoologists and botanists is as arbitrary as the division of Sakhalin between Japan and Russia by the fiftieth parallel. And now the biologists and physicists are getting into disputes over the definition of the boundary line separating their respective provinces, for the "neutral strip" between them, once a *terra incognita*, is being explored from both sides. For example, Professor Loeb shows that many of the actions of lower animals, such as seeking the light, are the direct effect of physical forces as much as the warping of a board in the sun; on the other hand, Professor von Schrön proves that crystals feed and grow and propagate.

Almost all the forms and movements once held to be peculiar to living beings have now been more or less successfully imitated by artificial cells of various substances, even inorganic, suspended in water solutions. These imitation protozoa can be made to assume all the shapes of simple living beings, from simple spherical cells to the forms of bacterial colonies in gelatine and the arborescent forms of the higher plants. They will react toward stimuli such as touch, light, heat and electricity; they put out tentacles and pull and push themselves around; they distinguish between nutritious food and other substances; they are poisoned by arsenic and prussic acid; they show nucleous, nucleolus and intra-cellular currents; they grow and reproduce in both ways, by budding and by fission. That artificial cells can be made in many different ways that exhibit one or several of these characteristics does not give any ground for hoping that we shall ever be able to create really living beings of non-living matter, but it will enable us to explain many mysterious things in physiology by reference to known chemical and physical facts.

One of the most interesting of these biological counterfeits, the "radiobes" of Professor Burke, which surprised and puzzled the world a few weeks ago, re-

ceives what seems to us a satisfactory explanation from Sir William Ramsay in this issue. If correct, it shows that the cells formed by Professor Burke in bouillon by the action of radium are produced in a very similar way to the cells formed by Professor Stéphane Leduc, of Nantes, in a solution of copper sulphate or blue vitriol. If a drop of sugar syrup containing traces of potassium ferrocyanide is put into a dilute solution of copper sulphate a cell is produced which behaves very much as if it were alive. It grows out into a long rod-like bacilli; it buds and puts forth branches; it gives off smaller cells that grow in like manner. In this case there is no possibility of life, such as there might be in bouillon, for copper sulphate solution is very poisonous to the lower forms of life, as we know from its use in destroying smut in grain and in disinfecting water reservoirs. The cause of these peculiar actions is that the ferrocyanide when it comes in contact with the copper forms a membrane of insoluble copper ferrocyanide. Now the sugar solution inside this cell expands owing to the absorption of water, and this breaks the skin at its weakest point; so here a bud is formed and grows into a branch. But the expansive force of sugar in water, known as osmotic pressure, is very much like the gaseous pressure in a bubble, which Professor Ramsay thinks is the cause of the growth of Burke's cells; so these two close imitations of living beings are due to substantially the same cause.

Two weeks ago we discussed Professor Darwin's extension of the law of the struggle for existence and the survival of the fittest to atoms and suns. His presidential address before the British Association for the Advancement of Science may be considered as the longest speech on record, since it was begun in Cape Town and finished in Johannesburg, 800 miles away. In the second half of his address he discusses the birth and death of planets and the conditions under which they can survive. He traces back the history of the earth and the moon to the time when the month and the day were of the same length, about five hours—that is, when the earth revolved in that period and the moon, near its surface, kept pace with it. This was

the condition immediately succeeding the birth of the moon, which came forth as a bud from the side of the earth and then formed an independent sphere. The nebular hypothesis of Laplace does not stand the test of modern mathematical analysis and will require considerable modification. The conflict between the geologists, who wanted indefinite time for the deposition of strata and the development of living forms, and the physicists, who would only grant them a paltry 20,000,000 years, may now be peaceably arbitrated, since in radium, which doubtless, like the other elements, exists in the sun, we have a substance giving off sufficient heat to have kept the sun going for a time long enough to satisfy even an evolutionist. Professor Darwin calculates that 22 ounces of radium, if it could have been utilized, would have furnished the power necessary to drive the ship which brought the British scientists from England to Africa, 6,000 miles, instead of the 5,000 tons of coal which was used.

Having discovered that the atoms are not immortal, chemists are now hard at work constructing family trees. Like other genealogical tables there are some discrepancies between them, and in places one or more generations may be skipped, but they read somewhat as follows: Now Thorium begat Uranium, and Uranium begat Radium, and Radium begat Helium and Polonium, and Polonium begat Lead. The production of Radium from Uranium and of Helium from Radium is pretty well established, tho it is thought the mother element cannot be Thorium, but is some element of higher atomic weight not yet separated from it.

But now that our scientists have got to speculating they do not stop with the genesis and degeneration of the elements, but are beginning to extend these conceptions to all matter. According to M. Le Bon matter decomposes into electricity and this into ether—that is, the atoms break up into electrons or corpuscles of electricity, and these are dissipated as waves in the ether, like those of light and those used in wireless telegraphy. Thus all matter is dying away into the nirvana of limitless, formless ether from which in the beginning it arose.

A Letter and a Problem

A LETTER lies on the editorial table that in the pressure of correspondence came near landing in the waste basket. But a second reading recognizes that it deserves a better fate. The principle involved is universal and vital. The writer states his case as follows:

Does a man protect his family better by a salary, which gives him a modest, but happy home, at present; yet whereby he can do very little for old age; or is it his duty to try many things, involving the taking of chances, in order to make his future outlook more prosperous? I am seven years in this country, am married and have two children. My wife is intelligent, and a good housekeeper—worthy to be loved, as I do love her. I am thirty-nine years old, and am bookkeeper with one house, just as long as I am here. I started with ten dollars a week, and draw now twenty-five dollars. Altho my house is modest, it is joyful. There is all we need, and besides we have managed to save about six hundred dollars. Our expenses are small—about seventy dollars a month, including eight dollars that I send monthly to my mother home in Europe. (This is one of our pleasures.) Otherwise we spend on educating our children, music, and reading. Now what troubles me is, Should I stay employed, I have about one other twenty years to work. I cannot save as I now do as the children grow up, but may be able to put aside ten dollars a month. This may give at sixty years about \$4,000. I have no expectations my salary can ever be increased. The firm can have all bookkeepers, and good ones, too, for twenty-five dollars a week.

The letter goes on to show the possibilities and the probabilities ahead. It is a rational outlook toward old age. The proposition is, is it safe to go on anticipating needs and feebleness without a better preparation. If the writer must ultimately go into business for himself, why not do it at once? Why not go to the West or South, into some small place, and open a country store? Why not "grow up with the West," as we often hear it said? The writer holds himself to be a man of some tact as well as intelligence, and able to build up a business of his own. If he dies he will leave a small insurance policy, but his income would be cut off from his family.

Shall a man in comfortable circumstances, with an assured income, a little larger than his yearly needs, void it for

a venture that may yield more, but possibly may fail altogether, in order to be prepared for old age? This is one of the sore problems that fringes human life and should be considered by every man during his most vital years. The whole world is recognizing the growing importance of this problem by granting old age pensions. The case in hand comes well under the pension rule, for the writer is himself creating a fairly good insurance against old age poverty. Taking his own estimate of working years, and he has at least "twenty," in which to do full work and lay by a portion, he figures this out at a possible \$4,000. This is an underestimate in years probably and it takes no account of any investment of his surplus. If placed in a savings bank he would have considerable interest to be added. Then, with the small insurance which he has secured of fifteen hundred dollars his death would leave his family in possession of somewhere between six and eight thousand dollars. Would the possession of a small store and its income be preferable? There is no certain reason for affirming this.

But this is not all that can be safely foreseen from the standpoint of our bookkeeping friend. Five hundred to one thousand dollars will buy a quiet little country homestead, accessible by trolley or steam car. Such a home can be made to save rent and many other city taxes; it will greatly add to the family income by garden and orchard products; it will surely add largely to the educating force of the family; it may in time even become a very profitable investment or a retreat in old age. We have great faith in this sort of old age insurance. It is possible for a family to live in a country home while doing city work. While health is benefited and comforts increased, the opportunity for laying up for old age is considerably increased.

On the other hand, we have the example of a majority of employees, an ambitious venture to get rich and at the same time to be their own masters. These two passions have much to be said in their favor, yet independence of character does not necessarily follow independence of action. Those who employ may find themselves under the absolutism of trade conditions and even social

demands. There are laws of life that touch us on the shoulder at every turn. An honored and honest clerk is individually and socially in as good a position as most of those who serve no employer. The real independence is freedom from debt, freedom from unjust requirements and from conventionalism and abuse. Perhaps the chief trouble with the bookkeeper's position is that he lives in a world of figures, without any facts. "Once a bookkeeper always a bookkeeper." This is largely his own fault. "The ideal bookkeeper learns the relation between his totals and the business—is, in short, a thinking human being."

The writer estimates correctly. To go into business for himself involves surrender of certainty and subjection to chances. He knows that his present position is reasonably secure as long as he wishes to hold it. There never was a harder master than the uncertain. "Nothing venture nothing win" is a true proverb, and sometimes it is a good guiding principle. If a single question and not a general principle were under discussion we might say that the conditions warrant a venture. But the conditions, as stated by the writer, do not take him out of the general, as an exception. As a rule we are profoundly convinced that a sure dollar is better than a possible ten dollars; that comfort is always preferable to wealth in a lottery. The one thing to be avoided above all others is instability of income. This is not to suggest that under all conditions a man should prefer the settled and sure. The ordinary clerk whose intellectual life is summed up in the pedantry of a technical knowledge of the prices and qualities of a single line of goods has something else to think of besides stability of income. The narrowness of life in trade must be counted as a dictating factor in the argument. Unless, outside the petty routine of trade, there can be a border of manly thinking and doing, any venture is excusable.

The greed to get rich is undoubtedly bottomed on a wholesome provisional power of the human being beyond that of animals. To look ahead and prepare for ill health or old age is common sense. But this provision should be, as far as

possible, disentangled in its results from the dangers of making matters worse rather than better. The disasters of speculation are many times greater than the successes. If investing your small savings invariably shut your ear against those proposals which offer undue profits. Money can hardly pay beyond five per cent. Our laws have recognized a rate of interest not beyond six or seven per cent. While holding a subordinate position, because secure, it is fatal folly to venture into the speculative arena with small savings. We thank the writer of this note for his confidence in applying to *THE INDEPENDENT* for advice. We have responded in the same frank and cordial spirit. We would as far as possible eliminate chance from the life of the young man who is creating a home. That this can be entirely done we do not presume or believe, but our social fabric is built far more than it ought to be or need be on the uncertain.

The Resignation of Mr. Loomis

There is no special regret experienced or expressed anywhere that Francis B. Loomis is no longer Assistant Secretary of State; and no more does the country grieve that his services have not yet been engaged in any diplomatic position. Naturally after the rebuke uttered by Secretary Taft, in which he said that Mr. Loomis's intense interest in American interests in Venezuela "did not justify Mr. Loomis in becoming personally interested in any of the schemes" "because it would surely in the end make his public duty and private interests conflict," Secretary Root desired a change. *The Herald* is out with a long selection of letters that relate to the interest which certain concessionaires had in Mr. Loomis's appointment as Minister to Venezuela. They have been published as the result of a conflict between a minority and a majority of holders in certain large concessions. It would seem that they were extremely anxious to have a Minister of our Government in Caracas who should be under their influence. It was they who secured the appointment of Mr. Loomis, and the implication seems clear that he was to help their interests in Venezuela, while representing our Government, and that he was himself

financially interested, as, indeed, was proved by the facts and documents brought out at the time when Mr. Taft made his investigation. The following passage from one of the schemers on learning of their success is securing Mr. Loomis's nomination and confirmation allows of no other meaning:

"I trust 'our friend' [Loomis] will not make the mistake of appearing to be interested in concessions. The more dignity he brings to the office the more valuable will its influence become to us. He can best serve us by an apparent impartial regard for his friends and an apparent impartial indifference to their enemies."

It is not strange that one who could thus write should have been said to carry the United States Minister "in his vest pocket."

White Journalism

It is always a pleasure to see a journal established with the pronounced purpose of supplying only decent reading matter to the public, such matter as one need not be ashamed to read aloud in his family circle. Such a paper is announced in Chicago, where it is supposed to be particularly needed, called *The National Daily Review*, and published and edited by John J. Hamilton and his sister, Mrs. Ella Hamilton Dureley. They have had experience and success in local journalism, and now try a larger and more difficult venture. It proposes to give only verified news, to exclude the wearisome and useless reports of murders and suicides and police news, except when they come to be of importance, and to exclude indecent advertisements, in which are counted those of liquor and tobacco. The attempt will be made to treat news editorially, with comment and explanation, and to give no more weight to Chicago events than to those of the rest of the world. It will be interesting to see whether a daily paper can be made other than local. In this city we have had examples of much the same sort of attempt. *The World* began with the highest professed ideals of purity, but before long became the chief example of yellow journalism, until *The Journal* taught it new wrin-

kles. On the other hand, *The New York Times* has succeeded about as well as has seemed possible in this evil world in living up to its motto "All the news that is fit to print"; but it has had to fight its yellow rivals on the same basis of a cent a copy. We wish well to the Chicago effort, but we suspect that a daily paper must depend chiefly on local patronage, which is not the aim of *The National Daily Review*.

Esperanto Many international congresses have been held this summer, scientific, literary, legal, sociological, religious, medical and peace, but there is only one of them which was not hampered by the fact that the members could not understand each other on account of the difference in language. This exception was the Esperanto Congress held at Boulogne-sur-Mer, where 1,200 men and women from all parts of the world met and talked Esperanto with each other for three days. Dr. Zamenhof, the creator of this new international language, in his opening address emphasized its importance in the promotion of amity and intercourse between different nations, in addition to its practical advantages in commerce, diplomacy and science. The Catholic Esperantists attended mass in the morning, where Esperanto hymns were chanted. In the evening one of Molière's plays was given in Esperanto by a polyglot company of actors and actresses, Italian, French, English, Norwegian, German and Russian. We published recently [Vol. LVII, p. 326] an article on Esperanto by Dr. Zamenhof, so our readers are familiar with its general principles. On account of its regularity and simplicity it can be read at sight with the aid of a dictionary, and the study of an hour or two will give its grammar and a considerable vocabulary. In this country it has been used for the amusement of evening gatherings where all the guests are required to speak Esperanto under penalty of a fine of a cent for every English word spoken. A sheet containing the sixteen grammatical rules and a small vocabulary is sent out a day or two in advance with the invitation, which is, of course, printed in the new language.

The charges of cruelty against the administration of the Kongo Free State do not subside, but are rather supported. The commission of investigation appointed in Belgium has evidently tried to conceal and minimize the revolting facts which came to their knowledge. The British representative finally permitted to attend the sessions reports that the commission cut its sessions short because they found the charges largely substantiated, and that hundreds of natives had fallen victims to the system of government. The evidence given by missionaries shows conduct too atrocious to print, and makes us ashamed to belong to the race that can be guilty of it. Judging from Lord Percy's address on the subject in the House of Commons the British Foreign Office is taking a very serious view of the matter, and Mr. Morel and his Kongo Reform Association are justified in their charges of mutilation and murder for the sake of more rubber to enrich the wealthy King Leopold.

In THE INDEPENDENT of March 28th and April 4th, 1901, appeared a long essay entitled "A Theory of Poetry," by Henry Timrod, which had remained unpublished since his death in 1867. That essay now appears in *The Atlantic Monthly* as if published for the first time. We printed it with a prefatory note signed by Henry Austin, who read the poem at the celebration in honor of Timrod at Charleston, S. C., May 1st, 1901, and it was copyrighted in our columns by W. A. Courtenay, into whose hands Timrod's manuscripts passed. We make no charges of deception against any one, and, of course, the editor of *The Atlantic* had no knowledge that it had previously been published by us.

A few years ago the Secretary of the Agricultural Bureau of the State of Kansas proved that it was the women's hens that paid up the mortgages on the farms. Now the Missouri Bureau of Labor Statistics has made a similar brave showing for that neighboring State. It finds that the value of live poultry shipped in 1904 from Missouri

was \$13,473,377; of dressed poultry, \$4,855,363; of eggs, \$13,021,046, and of feathers, \$289,973, the tremendous total of \$31,639,759. Surely Missouri may be proud of her hens. No wonder she sends a Cockrell to the United States Senate.

There is at least one other surviving member of the unsuccessful expedition of Commodore Biddle to open Japan in 1846 besides Mr. Burton, who wrote the account in our issue of last week. Rear-Admiral S. B. Luce, now retired at Newport, was appointed midshipman in 1841 and was a watch officer on the "Vincennes" under Commodore Biddle.

There has been chartered the Union Transportation Company, of Nashville, Tenn., with a capital of \$25,000, organized by negroes to fight the Jim Crow street car law, and they propose to run automobiles. The street car company has, it is said, lost \$500 a week since the negroes refused to ride; but the salaried officials will not care. It is the stockholders that lose their income.

Germany is having trouble now that a bit takes down her pride. In South Africa the little war with the negroes continues, with the expense of millions every year, and now at home the cholera has broken out, notwithstanding the most scientific medical control. There are reported 66 cases and 23 deaths, which is enough to excite alarm and suggest strict quarantine.

A Montana sheriff has set a good example. Three hundred miners tried to take a murderer from him, but the sheriff would stand no nonsense. That sheriff risked his life; a Mississippi sheriff lately lost his life in a similar effort to do his duty, and will have a statue set up for all time in his honor.

The battalion of negro troops in the Georgia militia is to be disbanded. Why? Because it will not work to have a negro officer have a title higher than that carried by a white man. But that might be remedied as in Kentucky, by giving every white man the title of Colonel.

Insurance

The New Hampshire Fire Insurance Company and Its President

FRANK W. SARGEANT,

President of the New Hampshire Fire Insurance Company. Born at Candia, N. H., March 7, 1860

THE New Hampshire Fire Insurance Company of Manchester, N. H., which was organized in 1869 and commenced business on April 6th, 1870, with a capital of \$100,000, has lately been reorganized. This step became necessary because of the resignation of President Uberto C. Crosby, who entered the service of the Royal Exchange Assurance Company of London as its Manager for the United States, and the death of Treasurer G. Byron Chandler. The result was the election of the following officers: President, Frank W. Sargeant; Vice-President, Walter M. Parker; Treasurer, N. P. Hunt; Secretaries, Frank E. Martin, Lewis W. Crockett; Assistant Secretaries, William B. Burpee, Charles C. Clifford. Frank W. Sargeant and Arthur M. Heard were appointed members of the Finance Committee, the other members of which are Nathan P. Hunt, Chairman; Lewis W.

Crockett, Clerk; Walter M. Parker and Frank P. Carpenter. The present complexion of this committee assures the perpetuation of the same conservative and successful policy that has obtained since the organization of the company. The newly elected officers have all been identified with the company of which they are now the executives for a number of years. The New Hampshire Fire Insurance Company was a pioneer in the business when it was organized, there having been no previous stock company in New Hampshire. The project was generally regarded at the time as "extra hazardous." The company decided at the outset of its business life to retain all premiums to meet losses and expenses, only the interest on the investment going to the stockholders. This conservative plan has worked so well that it has since been followed and is now in operation. The first statement filed by the New Hampshire showed a capital of \$100,000, assets of \$134,586, and a net surplus of \$8,029. The last company statement published, which was dated December 31st, 1904, showed a cash capital of \$1,000,000, assets of \$3,911,743, and a net surplus of \$1,199,685, in spite of the Baltimore and Rochester conflagrations.

THE ÆTNA LIFE INSURANCE COMPANY of Hartford, Conn., is issuing through its accident and liability department a "Log Book of the Motor Car," of which C. H. Gillette is the editor. This little volume contains a lot of information that is of the highest value to owners of auto cars. Pages are provided for the keeping of data concerning the towns visited, number of miles traveled, distances, time, etc. Considerable space is given over to the expense account, which is, generally speaking, of great importance to the motorist. There does not appear to be any special place for fines imposed, but such items can, of course, be conveniently put under the head of sundries. A useful pencil accompanies the book. There are also several blanks for memoranda of accidents.

Financial

Industrial Prosperity

THE getting together of warring nations at Portsmouth and the signing there of the so-called "treaty of Sagamore Hill" this week, is marked by a period of domestic industrial prosperity that is exceedingly widespread. Broadening commercial activity is at the present time strongly reflected in increasing Government receipts, and there is a pronounced tendency toward activity above the average in all branches of industry. The first autumnal month opens with fall buying very active in all departments. The purchases of rolling stock on the part of the Pennsylvania Railroad, to which reference was made in this department last week, was rather under, than over, stated, and this and other carrying roads are liberal purchasers of rails and other equipment. The movements of harvested crops is another element making for general prosperity, and shipments of money to Chicago and other interior shipping centers has already begun. A healthy demand now exists in the East for cotton goods, clothing, shoes, millinery, lumber, building material and hardware. Still another evidence of present day prosperity is to be found in the fact that the commercial failures during August, as reported in *Dun's Review*, were only 851 in number and \$6,140,566 in amount, of defaulted indebtedness, as compared with 900 bankruptcies, involving liabilities of \$10,491,498 during the same period twelve months ago, and still heavier losses in August, 1903. It would seem that something approaching an industrial boom is here and there to be reckoned with. In Philadelphia, for example, there is in the course of erection a number of manufacturing plants that is noteworthy, and in the City of Brotherly Love alone there will be expended this year something like \$5,000,000 for structures of this kind. With the equipment of these plants largely intended for the production of various textiles, these large figures will be nearly doubled. Extraordinary activity in the production of window glass is also an encouraging feature in the industrial prosperity that is now characteristic of

the market. The entire outlook that is collateral with the suspension of the Russo-Japanese hostilities is extremely optimistic.

ACCORDING to census figures the amount of cotton ginned for the past year was 13,693,279 bales. This exceeds by 2,300,000 bales the highest previous record of cotton harvesting.

....A new record price of \$6,500 has been made for a share of the New Orleans Stock Exchange, which was sold on the last day of August. With the passing of the fever scare and its incidental but abortive shot-gun quarantine, the market has rallied, prices have stiffened and confidence is again restored.

....Work upon the uncompleted parts of the through trolley line from Worcester to Hartford will be begun at once. The road will be a continuation of the existing line from Boston to Worcester. Running time from Boston to Hartford will be 5¼ hours, and the fare will be about half of the fare on the steam road.

....The New York Central Railroad Company has ordered 35 electric locomotives, to be used, instead of steam locomotives, in moving trains between the terminal station in this city and suburban points about 30 miles distant. Each locomotive will be able to draw an eight-car train at the rate of 60 miles an hour. They are to be ready for use one year hence.

....The Depew Improvement Company has repaid to the Equitable Life Insurance Society the loan made to it in 1898. The original loan was for \$250,000, but the interest and costs swelled the figures to \$293,850.82. In connection with this transaction Senator Depew has made a statement, in which he answered the charges made against him.

....Dividends announced:

International Paper Co., Preferred, 1½ per cent., quarterly, payable September 30th.

Amer. Can Co., Preferred, 1¼ per cent., payable October 2d.

The Independent

VOL. LIX NEW YORK, THURSDAY, SEPTEMBER 14, 1905 No. 2963

Survey of the World

Republicans in Delaware and Maryland

There is a general expectation that the long division in the Republican Party in Delaware, which has prevented the full representation of that State in the United States Senate for years, will come to an end soon in the withdrawal, or removal, of Addicks from the field. There are two State organizations, one for and the other against Addicks. At last his friends seem to be convinced that their hope of electing him is vain. The chairman of the Union (Addicks) caucus seeks to secure a combination of the two wings, and one of the strongest Addicks stalwarts says that he believes that within thirty days there will be but a single Republican organization in the State. A real wave of harmony seems to have come over the State. There has been talk of calling an extra session to elect a Senator, but that is not likely, as it is feared that in such a case the wave of harmony will recede before reaching its flood.—The Maryland Republicans held their State Convention last week. Secretary Bonaparte, who has been at times thought a good deal of a mugwump, made the principal address, and his praise of President Roosevelt was loudly applauded. He said:

"Last autumn a noted Democratic lawyer criticised Mr. Roosevelt because he 'did things.' I said then that the American people wanted a President who did things, and I believe that every American feels glad this morning that he voted for Theodore Roosevelt if he did or feels sorry that he did not vote for him if he did not."

The important thing done was the

adoption of a platform attacking the Democrats and Senator Gorman for attempting to reduce the suffrage in the State, but at the same time decrying negro domination and social equality as no part of their belief. This was in reply to the Democratic charges that the white Republicans and negroes are inseparable, and that Maryland would be liable to negro rule unless the voting power of the blacks were curtailed. The platform says:

"The Republican party of the State of Maryland favors no social equality among the races, favors no negro domination over the white people here or elsewhere, and can be depended upon to guard against the establishment of either of these conditions here in Maryland."

The Anti-Tammany Situation

The fusion forces, consisting of the Republican Party, the Citizens' Union, the Municipal Ownership League and a few minor organizations, adjourned their last Thursday's meeting after appointing a subcommittee who are expected to select a ticket to oppose Mayor McClellan by this week Thursday. Of the various candidates mentioned so far Recorder Goff seems to be the Republicans' first choice, while John Ford, Judge Seabury and Judge Gaynor would all be acceptable to the Municipal Ownership League. The Citizens' Union, having proposed Mr. Jerome, who subsequently refused to allow his name to be used, have now no candidate, as they feel that the responsibility of naming the Fusion candidate for Mayor should not be on their shoulders. The question of the municipal

ownership of the expiring gas franchises and the future subways will undoubtedly be the issue of the campaign, but the question of the operation of franchises will probably not be made as prominent as it was in the recent Chicago election. Candidates for the position of Comptroller and President of the Board of Aldermen have not even been considered as yet.

After Signing the Treaty

Last week we simply reported the signing of the Treaty of Portsmouth. This was done at 3.47 p.m. on Tuesday. It was a most quiet, unostentatious affair. The four envoys each signed four copies of the treaty, two in English and two in French. They then drank champagne and toasted each other. A clerk rushed out and gave the word and the guns were fired, the bells rang and the correspondents hastened to send the news to all the world. Only a dozen or two officials and attendants stood around the tables where the envoys sat. Each envoy provided his own pen, and Mr. Witte gave his to Dr. E. J. Dillon, St. Petersburg correspondent of the *London Times*. Baron Rosen rose and grasped Mr. Takahira's hand with "an old friend, and now a new one," and read a very pretty little speech in behalf of Mr. Witte and himself. The health of President Roosevelt was drunk and the conference finally broke up. Then the Russian party went to Christ Church, where a service was held, conducted by Bishop Potter for the American Episcopal Church and a number of Greek priests. All of the envoys were completely exhausted by their hard labors and avoided interviews. Before leaving Portsmouth the Japanese envoys sent a courteous letter to Governor McLane, inclosing a gift of \$10,000 as a testimonial, for such purposes as the Governor might designate, and Ambassador Rosen sent the same sum for the charitable institutions of the State. On Wednesday morning the envoys left Portsmouth, the Japanese on a later train, and returned to New York and rested on Thursday at their several hotels. But Baron Komura stopped over Wednesday afternoon to visit Harvard University, his *alma mater*. The Japa-

nese declined nearly all invitations and interviews, but the Russians gave a dinner to the Russian priests and some others of their countrymen. On Thursday evening they attended a dinner given by Col. George Harvey. On Friday they were guests at luncheon with General F. D. Grant at Governor's Island. On Friday the Japanese envoys attended a dinner in their honor given by Consul-General Uchida and several Japanese merchants, but the dinner that was to have been given by the Nippon Club was given up because of the dissatisfaction with the terms of the treaty on the part of many Japanese members. During the day Baron Komura had a long interview with Secretary of State Root, but the subject of their conversation was not reported. It probably was related to the open door in the East and commercial relations. On Saturday President Roosevelt entertained the envoys at Sagamore Hill, the Japanese to lunch and the Russians to dinner. In each case there was an exchange of toasts and expressions of hearty good will. With the Russians the President conversed in French, as Mr. Witte's command of English is imperfect. At the conclusion the Russian envoys gave to the President the important information that Russia calls off her tariff war with the United States. On Sunday the Russian envoys were in Washington and spent the day in visits to the public buildings, especially the Library and Mount Vernon, and seemed greatly pleased with their impressions gained in a long and hard day of sight-seeing. This week the Russians sail for home, while the Japanese envoys will take the Canadian route as guests of the Canadian Government.

Commercial Peace with Russia

Contemporaneously with the settlement of peace through the efforts of President Roosevelt the Czar has sent a communication to him stating that hereafter the discriminating duties against American products would be removed. Under the Dingley act whenever any Government should pay a bounty on products exported our duty on such goods was to be increased cor-

respondingly. In the effort to increase the production of beet sugar the leading countries of Continental Europe paid such bounties to the exporters, so that their sugar was sold much cheaper abroad than at home. This was an especial benefit to English manufacturers of jams, etc., but the cane sugar producers in this country insisted that the extra duty should be paid on beet sugar from the producing countries. When all were paying a bounty the local advantage ceased, and in a Sugar Congress of the nations all of them except Russia stopped paying the bounty, and our extra tariff was dropped. In 1900 we entered into negotiations with Russia for a reciprocity treaty, and meanwhile, as a matter of courtesy and expecting an agreement, our Government remitted the extra duty on Russian sugar, but later reimposed it on the demand of American producers, after our Supreme Court had decided that it was a genuine bounty that was paid in Russia. Thereupon the Russian Government put maximum duties on iron, petroleum, meats, etc., to the serious loss of our trade, which was diverted to Germany and England. Now, possibly as a recognition of President Roosevelt's work for peace, this maximum charge is removed, and our merchants will pay no more duty than others. The message was handed to the President by Mr. Witte at Sagamore Hill, at the close of the impromptu farewell speech by Baron Rosen. There is likely to be a renewal of reciprocity negotiations.

Various Items

One of the most remarkable messages received by Mr. Roosevelt came from the Emperor of China in "the joyful tidings" of peace, congratulating the President, and expressing the hope that "the three Manchurian provinces of China may be blessed with complete tranquillity and lasting welfare, to the benefit of the whole world." The Empress Dowager added her "heartly felicitations for your grand achievement."—As the result of a quarrel between Public Printer Palmer and his foreman over the purchase by the former of typesetting machines, Mr. Pal-

mer was removed from his office by the President. The quarrel is in good part between two typesetting machine companies, the one which failed to get the contract having charged fraud.—More than \$15,000,000 of gold from the Alaska and Klondike fields have already been received at the United States Treasury, and half as much more is expected before navigation closes. This will be three or four millions more than last year.—A sad case of lynching occurred at Italy, Texas, last week. A negro guilty of assault on a woman, who had confessed his crime, was taken from the officers by a mob of 200 farmers, and burned to death. The mob were deliberate about it, gave time for him to pray, and all the neighbors came, and waited until the man's brother and sister, who had been informed by telephone, should have time to come eight miles and see him. Two thousand people saw him die, and his brother and sister gathered up the ashes.

The Panama Canal

Two serious charges have been made against the management of the Panama Canal. Hudgins & Dumas and H. Balfe & Co. have protested against the award of the five-year contract for feeding and caring for the Government employees on the Isthmus, and now the general manager of the Frank S. De Ronde Company charges that his firm did not receive the award for contracts, altho he was the lowest bidder. The first charge protests against the concession to Mr. Markel, who is to furnish food for employees of the company. Mr. Markel will supply food for five hundred guests in each of the dining rooms of the ten hotels. For a room and board in any of these ten hotels the concessionaire will charge \$36 in gold a month. The average meals will consist of the following:

Breakfast—Fruit, cereal, meat and eggs, a vegetable, bread and butter, coffee or tea.

Dinner—Soup, fruit, meat, entrée, two vegetables, bread and butter, pie, pudding, or ice cream, coffee or tea.

Supper—Cereal, fish, meat or eggs, fruit,

sauce or preserves, bread and butter, cake, coffee or tea.

Laborers, however, will pay \$12 in silver per month and their *menu* will be:

Breakfast—Cereal, fish, bread and butter, coffee or tea.

Dinner—Soup, meat or fish, two vegetables, bread and butter, pie or pudding, coffee or tea.

Supper—Meat, a vegetable, bread and butter, sauce or syrup, coffee or tea.

Alfred T. Holley, general manager of the De Ronde Company, has made affidavit that he submitted a bid for roofing work and that at the hour specified for the opening of the bids a representative of the Government purchasing agent appeared and delayed the award until some more bids could be brought from a safe. Half an hour later these bids from the safe were opened and one of them received the award. The members of the Canal Commission who can be found refer the matter to Chairman Shonts, but he has not yet made any reply. The firms who make these charges say that nothing but a rigid investigation will be satisfactory.

Venezuela President Castro has just issued a decree expelling M. Brun, the manager of the French Cable Company, from Venezuela. The President's anger has been aroused because M. Brun protested against the decree of the highest court in Venezuela, which had just annulled the concession of the French Cable Company. French diplomats, however, do not look at this incident as one unsuceptible of peaceful adjustment, especially when they have the Morocco situation on their hands. In the meantime Judge Calhoun, President Roosevelt's special envoy, is busily engaged at Caracas in finding out what he was intended to find out and is reported to have received every attention from the Venezuelan Government.

Cuba President Palma was on September 9th unanimously nominated by the Moderate Party for re-election to the Presidency of Cuba, and Mendes Capote received the nomination for

Vice-President. No mention of the Platt amendment was made directly in the platform, as the Moderates consider that affair settled. The platform declares, however, very strongly for a reciprocity treaty with the United States. The pending trade treaty between Cuba and Great Britain, however, is receiving a great deal of adverse criticism. Two of the principal commercial and economic associations have just declared emphatically against its ratification, fearing that Cuba's commercial interests with the United States are too great to permit her granting for ten years such privileges to British ships and citizens as those named in the treaty. The treaty was signed last May and it is known that in Washington it was regarded as inimical to the interests of the United States.

Teachers in the Census A recent Census report tells us that there are in the United States more teachers of all sorts than there are of clergymen, lawyers and physicians put together. In eighteen Northern States there is a larger proportion of teachers to population than in any European country, and, if we take the United States as a whole, the proportion is larger than in any country except England and Wales. If we assume that the students who need a teacher are practically between 5 and 25 years old, we shall find that in 1900 there was one teacher for every possible 71 pupils, while in 1870 there was one teacher for 137 possible pupils—that is, the ratio of teachers to scholars has nearly doubled in thirty years. The teachers average older and are thus more experienced and better than ever before, showing that the profession is becoming more permanent. Nearly three-fourths of the teachers are women, and the proportion has increased from decade to decade.

Earthquake in Italy A number of villages were destroyed and thousands of people left homeless in the province of Calabria in Southern Italy, in the very toe of the boot, by a violent earthquake which occurred on the morning of September 8th. It

lasted less than 20 seconds, but that was sufficient to cause much destruction of life and property. The village of Martirano was completely wrecked, with a loss in life of 2,200, and in other villages the number of the dead is estimated at several hundred. As the trains made their way into the district, cautiously on account of the crevasses in the ground and the damaged track, they were met by crowds of half clothed, hungry and frightened peasants begging for relief. Their houses were in ruins and in some places there were not enough people left alive to bury the dead or to rescue those caught in the ruins. Subscriptions were immediately opened for their relief in the cities. The Pope telegraphed to the bishops to give all possible aid, and King Victor Emmanuel subscribed \$20,000 and went himself to the scene of the disaster. In Messina, Sicily, on the other side of the Strait, many walls were cracked. The volcanoes of Stromboli and Vesuvius were unusually active for a week before the earthquake.

The Chinese Boycott

An imperial edict has been issued by the Board of Foreign Affairs to put a stop to the boycott of American goods. It states that the American Government has promised that Chinese merchants, students and other travelers will hereafter receive courteous treatment in the United States and that the treaty will be revised as soon as Congress meets in a manner satisfactory to the Chinese Government, and in the meantime the people should peacefully await the action of the Government. It points out that the discrimination against American goods is injuring the friendly relations between the two countries, and commands the Viceroys and Governors to see that business is not interrupted and that all disturbances and manifestations of lawlessness are prevented. It was not until after receiving the announcement that Mr. Morgan had consented to relinquish the concession for the Canton-Hankau Railroad that the imperial edict against the boycott was issued. It is too early yet to say whether the Chinese Govern-

ment will succeed in checking the boycott movement, but it is already reported from Shanghai, where the anti-American feeling was strongest, that the import trade is reviving. The agitation is being carried on principally by students from Japan and from America. The latter rouse intense feeling by telling of the indignities and outrages inflicted upon them by American immigration officials. The Chinese newspapers are beginning to demand the unrestricted entry of all Chinese, including laborers, and threaten to use the weapon which has been found so effective in the case of the United States to secure more favorable laws from Australia and other countries that discriminate against them. In Tien-tsin the boycott movement has been checked by the energetic action of the Viceroy Yuan-Shi-Kai. In other places officials who had been sent from Peking to see that standing contracts for American goods were not broken introduced restrictions which practically prohibited commerce. —Secretary Taft has by order of the President visited Canton and Amoy in the endeavor to put a stop to the boycott. In his addresses at these points he has assured the Chinese authorities of the intention of the American Government to treat them fairly, and has protested against the boycott as a violation of treaty rights.

Tatar Outbreak in the Caucasus

Riots on a scale unexampled even in this turbulent region have prevailed for the past week and have caused the destruction of so much property in the Baku district as to practically ruin the oil industry there, which is second in importance only to that of Pennsylvania and Ohio. Both the Armenians and the Tatars have frequently revolted against the oppressive measures of the Russian Government in the Caucasus, and the Government has never attempted to remove their grievances, or to establish peace between the warring factions, altho it has suppressed riots when they occurred with great severity. According to the report from Russian sources the present uprising is a planned revolt on the part of the Tatars with the encourage-

ment and support of their co-religionists from across the Persian border. A depot of arms is reported to have been discovered on the Aras River and proclamations calling for a crusade against the Christians. Four thousand armed Kurds have crossed the Aras River from Persia and joined the rebellious Tatars in Trans-Caucasia. Several villages of Armenians are believed to have been destroyed, and in Shusha the Armenian quarter was reduced to a mass of burning wood. Two hundred and fifty Armenians were killed and the fighting continued uninterruptedly in the city for five days, the killed and wounded being left lying in the streets where they fell. The outbreak began Saturday evening, September 2d, by fighting between the Tatars and Armenians in the Black Town, or oil district of Baku. The Cossacks were entirely unable to put down the rioting, and on the following night the Nobel oil reservoirs were set on fire. It was a week before the proprietors of the oil wells were able to visit the industrial quarter, even under an escort of troops, and by that time the oil industry was practically destroyed. Even if order is restored at the present time it will be six months or a year before the region will be able to supply the Russian railroads with residue for fuel and the cities with oil for lamps. Three thousand out of three thousand six hundred wells are believed to have been ruined; the total damage is estimated at \$90,000,000, on account of the destruction of the oil stored in the reservoirs, which were all set on fire and, being made of wood, were completely destroyed. The railroads consume 2,000,000 tons of crude oil residue annually, which they will have difficulty in getting from America, and will therefore probably have to import coal if the Government will permit. All the homes of Russian and Armenian workmen were pillaged and burned by the Tatars, and ten thousand workmen are now in destitution, without food or work. Both the Christian and Mohammedan religious leaders attempted to put a stop to the massacres in the beginning by joining in a procession through the

streets proclaiming peace, a method which was successful in putting a stop to the riots in the Baku region last February. This time, however, they were unable to quench the inflammatory spirit of the Armenians and Tatars, and pillaging, arson, murders and still worse outrages continued uninterruptedly for many days, and it is not certain that the disturbances are yet over.

The Arabian Revolt Quelled

The Turkish troops under Ahmed Fezi Pasha have captured Sanaa, the capital of the province of Yemen, which has been in the hands of the rebels since April 20th. The expedition was divided into three columns in its march from its landing place at Hodeida on the Red Sea, and it does not appear that any important resistance was offered to them. Ali Riza Pasha, who with some 10,000 men attempted to relieve Sanaa last spring when it was besieged by the rebels, was attacked in the passes of the desert by three times that number of Arabs, and most of the Turkish troops surrendered or deserted to the enemy. This time the Sultan's troops amounted to some 50,000 men, of a more reliable character and better equipped for the difficulties of the march from the sea. Evidently the Imam Yahya, who raised the standard of revolt in the cause of Arabia for Arabians, struck coins in his own name bearing the title of "Commander of the Faithful," and over a large part of Yemen made and enforced his own laws and levied tribute, has not found the power of the Sultan in Arabia as slight as he expected. In Central and Northern Arabia, too, the Sultan has recently reasserted his authority. The outside world has credited the report that the Nejd in the heart of Arabia was lost to the Sultan, and to disprove this a column of troops was sent across Arabia from Bagdad to Medina. They arrived in the Nejd too late, however, to give the promised support to Hail Emir in his fight to recover the oasis of Riad from Sheik Mubarak ibn Sabah of Koweit, who has the support of the British. In Northwestern Arabia the favorite project of the Sultan for

a railway from Damascus to the holy cities of Mecca and Medina is being carried out successfully, tho slowly. On September 1st a new section of the railroad extending 30 kilometers south from Maan was formally opened. Early in October a branch connecting the line at Deraa with the coast of the Mediterranean at Haifa will be completed. The railroad is expected to have advanced southward as far as Hedjaz in three years, and there is no reason why it should not go on to Medina and Mecca, so as to form an easy route for the Mohammedan pilgrims. With branch lines to the Mediterranean at Beirut and to the head of the Red Sea at Akabah the western border of Arabia will be opened up to commerce. The total cost of construction of the railroad is estimated at \$25,000,000, of which part has been subscribed by the Sultan himself and by pious Mohammedans at his solicitation.

Russian Reform The Russian Liberals are not very well satisfied with the signing of the Treaty of Peace because they have reason to believe that it will strengthen the Bureaucracy and check the reforms already inaugurated. Altho the Emperor has called for the election of delegates to an imperial Duma, or national advisory assembly, there is no possibility of the election being preceded by a popular discussion, which would result in the formation of parties and adoption of a common policy by groups of electors having similar interests. Even meetings in private houses have been dispersed by the police, and any criticism of the plan of the Duma, either spoken or published, is rigorously suppressed. The clergy are, however, permitted to use their influence on the conservative side and to prejudice the people against the intellectuals. The Commission, under the presidency of Count Solsky, in charge of the preliminary measures for the election, have voted in favor of permitting the public assemblage of voters for the purpose of discussion in the cities, but not in the country. Since the apportionment of the electors will give the peasantry a predominating in-

fluence in the Assembly, this is considered by the Liberals as an effort to prevent the education of the peasantry on political questions.—The universities will be opened on September 14th, as an imperial ukase has been issued granting some degree of autonomy to the universities. The election of rectors and deans of the universities, who have hitherto been appointed by the Minister of Education, and were regarded as members of the Bureaucracy, will be in the hands of the university professors, and the faculty will be responsible for offenses by the students. The students and professors of the universities and technological institutions struck last February and refused to continue their studies so long as the schools were kept under the oppressive authority of the Government.—Admiral Nebogatoff and the captains of the three vessels who surrendered to the Japanese after the battle of the Sea of Japan have been dismissed from the service in disgrace. All the other officers who surrendered will be tried on their return to Russia.—The trial by court-martial of seventy-five of the mutineers of the battleship "Georgi Pobiedonosetz" has resulted in the following sentences: Three are to be executed, nineteen are condemned to penal servitude and thirty-three to disciplinary work; two thousand other mutineers are to be distributed around in small groups among the troops in the Odessa district. The military authorities object to this arrangement, fearing it will result in the spread of revolutionary views in the army.—An armistice has been arranged between Field Marshal Oyama and General Linevitch. The news of the signing of the treaty at Portsmouth was received with great rejoicing among the common soldiers in the field, who sang songs and drank to the health of President Roosevelt.

Rioting in Japan Rumors of the disadvantageous terms to which the Government consented to make peace aroused the greatest dissatisfaction all over Japan, culminating in a three days' riot in Tokyo. A mass meet-

ing to protest against the treaty was called to take place in Hibiya Park, but the police, fearing disorder, attempted to prevent it by closing the gates. This excited the people still more and a crowd of 100,000 persons assembled outside. The Mayor and Council protested against the closing of the park to the public, the police gave way and the barriers were torn down by the mob. Speeches denouncing the Government were made by members of the Diet and it was voted to telegraph to Field Marshal Oyama urging him in the name of Japan to continue the fight rather than accept such a shameful treaty. After the meeting the crowd attacked the residence of Viscount Yoshikawa, Minister of the Interior, battering down the gates with poles. The police defended the building by charging the mob with drawn swords, killing two and wounding many. In the evening a few men succeeded in entering the place by the rear and set fire to it with bundles of straw, the mob stoning the police and firemen as they tried to put it out. The members of the Minister's household escaped. A similar attack was made the same night upon the offices of the *Kokumin*, the only newspaper that defended the treaty. In spite of a brave defense by the employees and police the mob gained entrance and smashed the furniture and machinery. Elsewhere the mob did little but hoot and yell in front of the houses of the Ministers and burn the sentry boxes of the police in the streets. On the following day and night the Christian churches and schools were the object of attack. The Catholic church, school and priests' residence and the Protestant church and residence of Rev. Aubrey Armstrong at Honjo were burned. Six other churches were also sacked or destroyed. The crowd threatened the Russian cathedral, but were stopped by the sergeant of the guard, who said that he and the guard would commit suicide if the property in their charge were destroyed. A number of street cars were burned. E. H. Harri- man and other Americans, who had been dining with Baron Soné, were attacked on their way home, but were protected by their escort of soldiers. Marquis Ito, one of the Elder Statesmen who advised the concessions to Russia, was stoned in

the streets of Tokyo, tho without severe injury. His statue in Kobé was pulled down from its pedestal and dragged through the streets. The city of Tokyo was placed under martial law, five newspapers were suspended, and by the use of soldiers in place of police order was restored. The Premier, Count Katsura, called together informally a number of the members of the Diet and explained to them the situation and the terms of peace, which did much to allay popular excitement. Baron Yamamoto, Minister of the Navy, stated that to have captured Vladivostok would have required a greater sacrifice of life than Port Arthur, and great expense, which there was no prospect of getting back. Marquis Yamagata said that the cessation of hostilities was advantageous to the material development of Japan, while a continuation of the war meant wasting her energies and resources. The Opposition papers demand the resignation of the Government and declare that the police caused the disorder by closing the park. Mr. Adachi, chief of the Metropolitan police, has resigned in consequence. Over 1,600 persons are said to have been arrested for rioting, but the Government will be lenient in prosecuting them.

Morocco The Moroccan Government
Apologizes has complied with all the demands of France for indemnity and reparation for the arrest of Bou Mzian, an Algerian merchant. The Grand Vizier, accompanied by a retinue, went to the French Legation at Fez and publicly apologized for the arrest of the French citizen, paid over the indemnity demanded and announced that the Kaïd making the arrest had been removed. The French Minister, M. St. Rene Tailandier, then declared the incident closed. Raisuli, who was made Governor of a district between Tangier and Fez after his kidnapping of Perdicaris, is fighting the Anghera tribe, who recently attempted to capture him by raiding a village party. Raisuli escaped, but his mother was taken prisoner. The skirmishing has extended to the suburbs of Tangier, and the authorities have notified the foreign population that they can only be protected by keeping close within the city.

The Growth of Navies

BY RT. HON. JAMES BRYCE, M.P.

[The Rt. Hon. James Bryce, M.P., represents all that is best in Liberalism in English political life. He possesses the ear of the House of Commons in a remarkable degree, his criticisms of public policy being always statesmanlike and practical. His experience of office has been a varied one. Having served a brief apprenticeship as Under-Secretary for Foreign Affairs in 1886, he entered the Liberal Cabinet in 1892 as Chancellor of the Duchy of Lancaster, succeeding to the more useful office of President of the Board of Trade in 1894. For the last ten years Mr. Bryce has taken a leading part in the discussion of all educational and social reforms. Both friends and opponents recognize that he is destined to occupy a high and influential position in the next Liberal Administration. The following article, as Mr. Bryce says, is partly suggested by that of ex-Secretary Morton, published in THE INDEPENDENT of July 6th. It is copyrighted in Great Britain and the United States.—EDITOR.]

THE question of the maintenance of great navies has become a serious one within the last few years, quite as serious as the growth of vast standing armies had become in 1890. The rivalry of the chief European States in appropriating to themselves territories beyond the seas which could be held only by a navy, coupled with the immense development of transmarine commerce, has made fleets fully as important as armies.

There is no better way of marking the change that has come upon the navies of the world than by recalling the figures of naval expenditure. In 1880 Great Britain spent on her navy ten and a half millions. In 1890 the sum had risen to seventeen millions. In 1905 it was about £40,000,000 (reckoning all forms of charge for naval defense). This is the greatest increase. But let us take some other countries. In 1890 France expended on her navy about eight millions; in 1903, twelve millions.

JAMES BRYCE

In 1890 Germany spent £3,400,000; in 1903, over £10,000,000. In 1890 Russia spent £4,200,000; in 1903, over £12,000,000. Finally, the United States, which in 1890 spent £4,600,000, spent in 1903 nearly £17,000,000.

The wealth and population of all these countries have doubtless increased during the period specified, but have not—not even in the case of the United States—increased nearly so fast as the expenditure for naval purposes, which means either that the burden of taxation is greater

or that a larger part of taxation goes to this branch of preparation for war. In fact, it means both. The great Powers tax their subjects more heavily and all spend more upon fleets. These considerations were in the mind of the present Czar when he brought about The Hague Conference of 1899, the primary object of which was to procure some international agreement for the simultaneous reduction of armaments. That object was not attained. Armaments

have continued to grow. Will the meeting of that Hague Conference which we expect to follow the conclusion of peace between Russia and Japan—it was suggested, as everybody knows, by President Roosevelt some little while ago—be encouraged to reopen this question? It is much to be desired.

The need for reduction is certainly greater than ever. But the omens do not seem favorable. The German Reichstag is being continually pressed for larger grants for naval purposes. Immensely as the British Navy has grown, there is a section of opinion in England which continues to cry for further growth. And I note that an eminent ex-Secretary of the Navy in America, Mr. Morton, has just written an article (which I have read with much interest) suggesting that the American navy ought to be developed till it outclasses every other except that of England. He, doubtless, expresses the views of many of his compatriots, but he does not convey to his readers a very definite impression of the grounds which, in his opinion, make such an enormous development necessary, for he does not indicate any danger threatening the United States, and he writes as a friend of peace, not contemplating any aggression on the part of his country.

What are the reasons which may be supposed to urge the Powers whose rising expenditure has been referred to to think that their interests require such vast additions to their naval strength?

The considerations which moved Italy are obvious. She is more exposed to attack by sea than is any other great country on the European Continent, having an exceptionally long coast line and two great islands. Twenty years ago she desired to protect herself against possible dangers by bringing her navy up to a point at which it might be formidable to any possible foe. But now any danger from the side of France seems to have passed. The terms on which Italy stands with her great neighbor are, happily, cordial, and seem likely so to continue.

Anxiety is from time to time felt as to the relations between Germany and France. Two Powers so placed are under a temptation to go on building ships against one another. But where two

States are conterminous by land the issue of a struggle between them is not likely to be determined at sea. Inferiority at sea inflicts much inconvenience on the country which maintains the weaker fleet, yet it is not a decisive factor.

As respects England, neither Germany nor France appears to contemplate the prodigious expenditure that would be needed to bring the fleet of either up to a level with the British, nor is there any probability that these two countries would unite against England. Let it be observed in passing that the idea of a rupture between Germany and England, an idea dwelt upon by foolish hotheads in both countries, appears absurd to any one who credits the statesmen or the public opinion of these countries with common sense. What could either England or Germany gain by a war? They have no serious cause for antagonism. I am sure that there is no considerable party in England, that there is, indeed, no man of political knowledge or judgment holding a responsible position who would not regard a rupture as an inconceivable misfortune which he would do everything in his power to avert. One cannot but think this must hold good of the Germans also, whose real views must not, any more than those of the English, be gathered from the reckless phrases in which some newspapers indulge.

Of Russia nothing need be said. Her navy has for the present vanished. Her future naval policy, with revolution seething all over the empire, is outside the sphere of prediction, one might almost say of conjecture.

Great Britain, far ahead of all other countries in the sums she devotes to her navy, has no doubt far stronger reasons than any other for imposing on herself a burden which is now four times as heavy as it was in 1880. She has immense territories beyond the oceans which she must defend. Some of those territories are conterminous with the dominions of military Powers whose armies are far larger than hers, and thus her control of the sea becomes an important element in her strength as against them, for it makes those dominions virtually hostages for their keeping the peace toward her. She main-

tains a comparatively small home army, and must, therefore, trust for her defense against invasion to her fleet. She is bound to protect her self-governing colonies, none of which (except Australia, to a very small extent) maintains vessels of war. She has an immense mercantile marine. She depends for her food supply upon imports, brought for the most part from a great distance. In these facts there is ample justification for the maintenance of a navy strong enough to prevent any invasion and to protect her commerce, so far as it is possible for fleets to protect merchant vessels trading all over the world. But it may well be doubted whether she is not now going beyond the necessities which her position imposes. Some years ago people talked of a navy which should be equal to those of any two other Powers combined, and the two Powers thought of were usually France and Russia. To-day, however, altho France is friendly and the Russian fleets have perished, the navy of Britain is much larger than that of any two other Powers.

The navy is, as it has always been in England, a popular service. We are proud of it. We believe it to be thoroughly efficient. No one grudges any expense needed to keep it efficient. But in the present state of the world, with no danger from any other country threatening Britain, and no combination of other Powers against her even distantly visible to any sane imagination, is it necessary to spend £40,000,000 a year on fleets which are now as strong as those of any three other Powers taken together? Armaments and policy must have some relation to one another. If a country is pacific, seeking only to keep what she has got and not to aggress upon others, and if her force is more than ample to protect her against any risks that she can see after scanning the whole horizon, why should she go on spending upon ships and munitions of war—which in a few years may be out of date, because science has continued to advance—sums which might have gone to developing those internal resources which are the perennial spring of her real strength? This is the question which is being asked in Britain by persons who have hitherto

cheerfully voted all the demands made upon Parliament for the fleet.

Let us apply a similar process of inquiry to the United States, where naval expenditure, tho still far smaller than Britain's, has been growing almost as fast. The situation of Britain is most unlike that of the United States. The former country is a small island, living on imported food, with an immense sea trade. The United States occupies the whole width of a continent, has abundance of food at home, possesses a comparatively small mercantile marine. The United States does not need a navy as a defense against invasion, for no invasion could hope to succeed. America is practically unassailable. The most that an enemy holding the sea could do against her would be to damage some of the maritime cities and send squadrons up some of the larger rivers—marauding squadrons which would probably never return. Enterprises of that kind would incense but would not discourage the people. They would effect nothing toward success in a war.

With her boundless wealth and vast population, with her inexhaustible supplies of food, of coal and of iron, with the amazing alertness and ingenuity of her citizens in swiftly producing and skillfully employing everything necessary for warlike purposes, America is the most formidable antagonist that any Power could have. No country could hope to gain anything by a war with her. None could strike at a vital point. None could wrest anything from her that she now possesses. None could hold out so long as she could in a protracted struggle. If her enemy were able to blockade her coasts she would doubtless suffer by the temporary interruption of commerce. But her home market is far more important than her foreign market; and she has at home almost everything that she needs. The only antagonist that could attempt such a blockade would be Great Britain, and the eventuality of a war between America and Britain may be dismissed as outside the range of present practical politics, not merely for sentimental reasons, but also for other reasons of the strongest cogency.

It is sometimes said that the United

States needs a great navy in order to maintain its ascendancy in the Western Hemisphere. As for the republics of Central and South America, a few battle-ships and some gunboats would be amply sufficient to chastise them should they infringe, as they have sometimes seemed likely to do, the rights of American citizens, while the idea that any European Power will attempt to acquire territories on the South American Continent, tho one finds it treated seriously by a few American publicists, seems to a European observer chimerical. Whether a German or French colony established in Brazil—to take the instance sometimes supposed—could injure or could even cause disquiet to the United States need not be discussed, for it is certain that neither Germany nor France would attempt to establish a colony against the wish of the United States.

"But the United States has now," so it will be said, "entered on a new line of policy as an ocean Power. She holds territories in the West Indies, in Hawaii, in the Philippines, which can only be defended by a navy." Again, the question arises: Who is going to attack her? Who could attack her with any prospect of ultimate success? Americans themselves do not seem to realize the full strength of their strategical position nor how true it is that in a naval war victory must ultimately go to the nation which commands the largest resources. Even assuming courage and

science to be equal, the Power which can raise revenue most easily and quickly is certain to prevail, and to such a Power the momentary loss of control of a part of the sea or of an island would be a matter of small consequence, because, being sure to come out winner in the end, she would recover everything.

It is sometimes argued that America needs a great navy in order to expand her foreign trade and become a great exporting country. The connection of these things is not obvious. She is already an immense exporter of her natural products and she can become an immense exporter of manufactured goods also whenever she pleases. This object will be most directly attained, not by spending more on unproductive purposes in quadrupling her navy, but by lowering the present protective tariff.

If America desires to have a gigantic navy she has both the right and the means to indulge her desire. Englishmen, recognizing, as Mr. Morton says, the likelihood that she and England will continue to stand together, can have no reason to wish otherwise. The question that occurs to Europeans who regret the sums they find themselves led on to spend is, rather, this: Does America need a gigantic navy? Armaments cannot be considered apart from policy. Both England and America have to consider whether policy and their position toward other countries require the stupendous armaments they are asked to maintain or to create.

LONDON, ENGLAND.

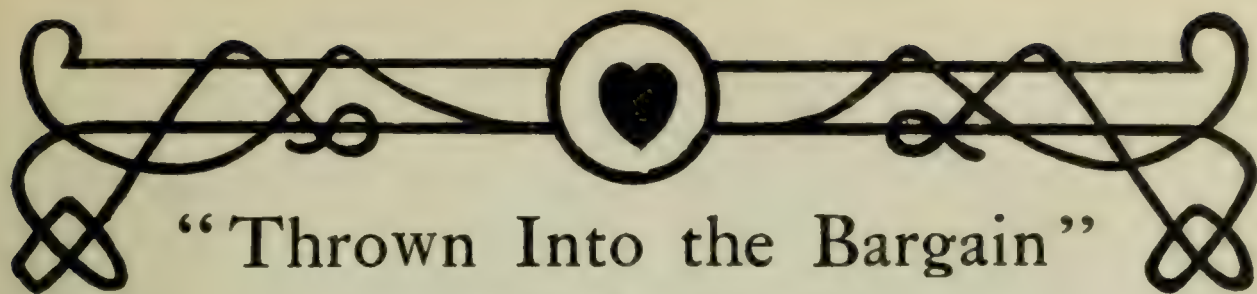

The Wise Dahlia

BY MAURICE FRANCIS EGAN

TELL me, crimson dahlia,
Tho I love you not,
You're so stiff and haughty,
Like a garish spot
In the russet garden
Bending not a jot—
How d' you stand so straight?

I answer, said the dahlia—
O you stupid man,
Good at asking questions
About God's wondrous plan,
Just enjoy the garden,
And live your little span.
I'm nodding while you wait.

WASHINGTON, D. C.

"Thrown Into the Bargain"

BY ANOTHER MINISTER'S WIFE

[The writer of the following article sufficiently explains herself to need no comment from us. We especially commend it to our deacon, elder or vestryman readers.—
EDITOR.]

JOHN is a minister. I am John's wife, and the experiences of another preacher's wife, recently published in *THE INDEPENDENT*, have inspired me to rush into print likewise. Every one knows that the minister's wife must be a very wonderful woman. There is an unwritten law that she must make several hundred social calls in a year; that she must visit the sick and afflicted of the parish; that she must be sufficiently well educated and self-possessed to preside in public meetings; that she must shine in social life; that she must be able to dress in a manner to please both the fastidious and the economical; that she must keep her domestic machinery running smoothly and her home so bright and happy that the pastor shall have no distractions there. If she is gifted musically the church can make good use of that accomplishment also. No salary is ever offered for her services, as is customary with the foreign missionary's wife, nor has she any opportunity to fit herself for her life work, as has the minister. Tho not required to appear before any august body to be examined as to her call into the (wife of) ministry, yet as much or more is expected of her often as of the minister himself, with his years of previous preparation in college and seminary.

John entered the ministry solely from altruistic motives, leaving a lucrative profession behind. I entered the profession (?) of a minister's wife simply for the love of a man, also leaving a lucrative profession behind me. I was regarded by fond parents and prejudiced friends as a capable and accomplished young woman. I was popular in the polite world in which I moved. I had been educated in one of the best institu-

tions of its kind in the United States; but when I married John I necessarily sank my profession into his, to be henceforth the unwearied and unsalaried "bond servant" of the church and of the denomination to which he belonged.

The first parish to which we went, after John's graduation and our marriage, would have a man *with a wife*. It was an ideal parish for John, as it would afford him opportunity for study and growth; but it was only a lonely little village to me, who had hitherto been so active in social and professional life. We arrived, after our wedding trip, in time for the Sunday service. John had previously prepared two or three sermons and asked me to look them over and choose one. The first one began something like this: "Troubles seldom come singly. Misfortunes often go in pairs." Tho this now seems like an omen, I thought it would hardly do for our first Sunday and another sermon was chosen. I had never heard John preach before. I was sure he could never preach another sermon as good; so I made him preach it again the following Sunday, when we were away on a visit. I wondered what he would ever say at funerals. I knew I could never think of anything except "There is no use crying over spilt milk" or something of that kind. But I found that John knew what to say on such occasions and he soon became so popular that it seemed as if the whole country around came for him to officiate at funerals. I now began to experience something of the thoughtlessness of people in their sorrows. Even those outside of his parish, who had no claim upon him whatever, would never consult his convenience as to hours of service. They rarely ever offered to provide a convey-

ance and they seldom paid him or even thanked him for whole days of ministry. One or two instances will suffice: One well-to-do old man was in the habit of ridiculing ministers and churches. He never did anything for our church or showed any interest in religious things. But before his death he requested that John and two out-of-town ministers should see that he was "properly planted." The other two arrived in time for me to serve them all an eleven o'clock dinner (we had breakfasted at eight), after which John engaged a conveyance and took them to the funeral. All four of us spent the whole day and some money in ministering to one who had never had any use for ministers or churches during his lifetime.

On another occasion John and I had long been planning to attend the "Commencement" at his seminary, which was in a distant city. This was to be our first visit there together and John was to attend his first alumni banquet. We had been invited for a three days' visit to the home of some charming friends. We were to be "banqueted, dined and fêted." We had looked forward to it all for many months. But, alas! for human hopes. A woman from a far distant State of whom we had never heard came to our village to make a visit. She died there, suddenly, in the home of her friend, who was an occasional attendant in our congregation. He desired simply a prayer at the house, when he would send the remains back to the far-away home. He would have this service on the second day of our proposed visit, even the very day and hour of the alumni banquet. No other time would suit his convenience. So on the day appointed John arose at five o'clock, crept softly from his host's house, started for his fifty-mile trip back home, got his breakfast at a way station, caught a two-mile ride in a pouring rain to the village on an old hayrack, there engaged a conveyance, went to the mourning house, offered the desired prayer, went back to the station with the procession—having no opportunity for even a noon lunch—and arrived at his host's house again in the evening just in time for a seven o'clock dinner engagement. All of this was done for a woman who had

no claim to his services, for one whom he had never seen and for which service he never received any thanks or pay, unless I except a can of very sour green plums which the man's wife sent us some weeks later. This is not mentioned in an unkind spirit, but only as a fact.

In this parish I began also my work as unpaid choir director, singer and organist. The organist, living at some distance, was not always present Sunday morning and never on Sunday evening. I was obliged, therefore, to play at the midweek and Sunday evening services. I served also usually as a supply on Sunday morning for the regular soprano, the alto or the organist (the bass and tenor were usually present, fortunately for me); taught in the Sunday-school and was parish visitor and pastor's assistant during the week.

After a few years in this parish we went to a great city as assistant pastors to a very large and wealthy church. I say "we," because this church also asked for me. They wrote to the seminary for the recommendation of "the right man," one of whose qualifications must be that he had a wife. There was nothing ever said about paying me, but as the salary offered to John was just what they had been paying the young unmarried man who preceded him I supposed I was meant to be "thrown in" to the bargain. How I did work for that church! John had charge of a chapel under its care and I was now getting valuable experience. I led meetings, I taught a large class, in the Sunday-school, of big, tough boys from the slums of that city. I played an indescribable little cabinet organ at several services a week. I taught sewing classes. I walked four miles on Sundays to three services. I led the various departments of the young people's work. I was a member of the large parent church and was called upon to assist and contribute my share to its work also. Did I ever receive any remuneration for my services there? Not so much as a very small present.

Our next move was to the pastorate of a church of several hundred members in a smaller city. Shortly after my arrival I was interviewed by a very influential lady in the church concerning my personal appearance. She advised me

to dress well, saying that the former pastor's wife dressed altogether too plainly to please the congregation and she hoped that I would not make the same mistake. About this time I was appointed to an office in a young woman's State organization and the editor of a religious paper printed my photograph. My dress was, as I thought, very simple. It was a China silk gown made with the prevailing large sleeves. The only trimming was a lace yoke. My hair was a little fluffy in front, but was quite plain otherwise. It happened that I had not on a single piece of jewelry or ornament of any kind other than a small shell comb in my hair. Yet the editor received two pages of closely written foolscap from a correspondent concerning that picture. The writer was "grieved over that wordly conformity to dress." "It saddens my heart," she writes, "and out of its abundance of sorrow I would write," etc. She quoted I Peter 3:3 at me: "Whose adorning let it not be that outward adorning of plaiting the hair and of wearing of gold or putting on of apparel." Now I had on no gold, my hair was not plaited, but I was obliged to plead guilty to putting on of apparel. This seemed almost necessary in our climate and especially when preparing to face the photographer and the public. Her reminder that "the Lord hates a proud look" was sufficient to keep me in a humble frame of mind for several days. Her statement that she once donned fashionable attire, which "looked so out of place on a saint of the most high God" that she took it off and never wore it again, reminded me of the man who used Pears' soap ten years ago and had never used any other since.

But these experiences showed me how insoluble was the problem of the dress of the minister's wife. I had tried to cultivate an elegant simplicity which should be equally acceptable to the "spiritual" and to the "worldly" and I fell between the two stools. In that very congregation some said I was extravagant, others that I was too plain.

We had not been long in our new parish when the salaried organist was taken ill. I was requested to supply the vacancy until her recovery, and I played that pipe organ and directed that chorus

choir for five months. All this was entirely gratuitous. At least I never received any pay, nor did the organist, for my services. The reason must have been either that I was the pastor's wife or that I did not send in my bill. Possibly for both reasons. But the fact that my labors were unpaid did not prevent unjust criticism. One of the official board took me in hand because I had asked his sister if she would kindly sing the alto part in one of the choruses. He wrote me a personal note saying that his sister's voice was soprano and that I must not ask her again to sing alto. He thought that part inferior to the soprano, and the family was grieved because she was asked to take what they considered a subordinate place.

On another occasion I asked a lady of the congregation who had a cultivated voice to sing a solo one Sunday evening. I was taken to task for this by one of the same board, who told me that I must not do it again, because that lady was very unpopular in that church.

We were in this parish many years and I played the piano for the Sunday-school, the young people's societies, the midweek meetings and for extra meetings during all of that time. There seemed to be no one else to do it regularly except one lady, who, while playing, would never let her left hand know what her right hand was doing. The result was too painful and I could not desert "Mr. Micawber" in his extremity. I also taught a large class in the Sunday-school, from which eighteen young women were received into the church. I led a large Bible class of women one afternoon of every week. I was president of two missionary societies and an active member of a third; I turned hundreds—more probably thousands—of dollars into their society treasuries during those years through my unpaid professional services and by my leadership and instigation; I "called" continually with John and without him; I visited the sick and afflicted; I had many social duties, for John and I were popular socially; I entertained a great many people at our table; I held the most difficult secretaryship of a denominational State woman's society; I often gave addresses at women's religious meetings away from home,

never but once or twice receiving even my traveling expenses for these services; I have occasionally written for the religious press, sometimes receiving remuneration for these labors, and I have looked well to the ways of my household. At any rate John thinks me a capable housekeeper and mother.

John also worked extremely hard for this exacting church, tho the salary was not commensurate with the size of the church or its ability to pay. A time came when we both "broke down" physically. Acting upon our physician's advice we went away for a few weeks' change and rest. After arriving at our destination one of us became very ill and lay at the point of death for many weeks among a foreign people. Of course this illness necessitated a longer absence than we had intended. We returned, even before complete recovery, to find that the entire salary had been taken away from John meanwhile and given to men who merely supplied the Sunday services. There was nothing left to pay even the board of the little child we had left at home. It is fair to add, however, that the people of the congregation, tho not knowing this, were very kind, giving us useful presents and showing their love and sympathy in many sweet ways. But the action of the church *through its officers* was such as I have stated.

Nor was this all. It was not strange, perhaps, that the pastor, whose health was not yet fully restored, found that his resignation would be acceptable to these officers. He had literally almost killed himself in the service of that church. In his entire pastorate of many years there had never been a communion service without additions to the church. He had doubled the membership, tripled the attendance and quadrupled its benevolences; we gave more money through its various channels than any other family in the church. Our relations with the people had ever been most cordial and affectionate. But because he could not yet do his full measure of work they let us go out between two Sundays at the beginning of a hard winter, not knowing whither we went. Neither the feelings of the congregation nor our own heartaches were considered. Both they and we were victims of man's inhumanity to man.

There was one member of the official board and his wife who, it seems, could never approve of us for several reasons. John was not an ardent third-party Prohibitionist. He would not publicly attack from the pulpit those who engaged in certain forms of amusement. His wife had no sympathy with me because I was not a "faith curist," a pronounced woman suffragist nor an active worker in the W. C. T. U. The religion of these two was of the kind that would "hold you up" and demand your piety or your life. They were constantly sticking pins into us, using other people generally as tools. On one occasion we received an invitation to a very fine reception given by some ladies in the church, after which there was to be "dancing at ten." We sent a formal note of regrets. Soon afterward we received an anonymous letter in which we were advised to have a dancing and card party in the church parlors. The writer suggested that as the week of prayer was over the Sunday-school room and tables would be available, and perhaps as we "*regretted*" that we could not attend the other party we might be able to indulge ourselves there. It was that little formal word "*regret*" that had caused all this distress of mind.

At another time I was arranging a concert for the benefit of one of the societies. Of course this was with no expectation of any profit to myself. There was a fine pianist and music teacher in the church in whose behalf I had used my influence very generously, with good results to him. He was my friend. I asked him to play two piano solos at this concert, but he urged that I should play one of them myself and divide the vocal accompaniments with him. I consented. He afterward came to me saying that a lady friend whom he could not name had advised him not to place himself in comparison with me, for it was just a scheme of *mine* to show the public what I thought was my superior ability as a pianist. And she had reminded him that at a certain previous concert in the church parlors, when we had each played a solo, the audience had wished to show their disapproval of that kind of scheming and so applauded him very generously, while scarcely applauding me at all. He thought it was a kind-

ness to tell me and save me from another such humiliation. I thanked this innocent tool for his good intentions, but felt constrained to remind him also that on that occasion I had not only been very generously applauded, but vociferously encored as well. This man's wife was a particular friend of the woman I have mentioned and it would not have been difficult to trace the origin of this unkindness.

It often happens when one member of a church board becomes "obstreperous" that the other members think they must seek the peace by sacrificing the minister and his family, tho the latter may be entirely innocent parties. They may not mean to be cruel, but it is not unusual even in these days for good men to stone the prophets and think they are doing God service. There is a "sunny side" to the question, of course, and many good, noble men are serving the church in an official capacity, among whom are many of our very warmest friends. The beloved disciple saw at least four and twenty elders in the New Jerusalem. But, not to be too facetious, I have long believed that there should be some sort of deacon-ological as well as theological seminaries, where church officials could get a little helpful training for their work. Too many of these think that three or four years is long enough for the educated and fully equipped minister to serve a church, but that a lifetime is none too long for uneducated elders or deacons to hold office. These seminaries might profitably have departments also for ministers' wives, since so much is expected of these important "helpmeets."

It is not strange, perhaps, that so many ministers have been widowers. It has been asserted again and again that a larger percentage of clergymen have second, third and even fourth wives than is to be found among members of any other profession or craft. A minister's wife said recently that out of twenty ministers of one denomination in a city of a hundred churches there were only three whose first wives were still living, and not one of the ministers was over sixty years of age.

There are still those who think that the acceptance of discounts and other favors often given to ministers and their

families is unworthy of the profession. The minister's call usually reads: "That you may be free from worldly avocations (would that it might add provocations) we promise on our part to give you," etc. As a matter of fact the preacher is not paid according to his ability, but according to the ability of the church. To illustrate: John supplied a church one Sunday which paid him fifty dollars for his services. The following Sunday he preached for another church, which paid him ten dollars for precisely the same service. Most churches must be manned by those who have received equal advantages of education and equipment, but only a few comparatively can give generous salaries and ministers as a class are very much underpaid. If any, therefore, appreciate this fact enough to kindly add a little more than is promised I think we should take it as from the Lord and be thankful.

It does not make "mendicants" of railroad men or of editors to receive passes, or of soldiers to receive pensions, or of dressmakers to receive discounts, or of retired professors or army officers to receive annuities. I have received many beautiful presents and kind favors from indulgent friends, but for the reasons which I have tried to state in this personal confession I have never yet felt overpaid for my service to the church except by my Heavenly Father, "whose I am and whom I serve."

As to one minister's wife:

"Well! She isn't prim and proper,
But she doesn't care a copper
What they say.
She's so innocent of wrong
That she's happy all day long
On her way.

"She's no zealot or fanatic,
She don't try to wax ecstatic
To be good.
She's a woman through and through,
Whose religion is to do
What she should.

"No! She may not be ideal,
But, what's better far, she's real
And intact.
She's no figment of a dream,
Nor a poet's idle theme.
She's a fact."

My Footstool

BY ADDISON BALLARD

WILL they forget the toilsome hours,
And roughness of the way,
Whose weary feet are kissed by flowers
When evening shuts the day?

PITTSFIELD, MASS.

The Church as a Trust

BY AUSTIN BIERBOWER, LL.D.

[Mr. Bierbower has contributed many articles to *THE INDEPENDENT* on diverse themes. The range of his intellectual interests can be gathered from the following titles of a few of his books: "Principles of a System of Philosophy," "The Morals of Christ," "From Monkey to Man," "How to Succeed," "On the Training of Lovers," "Ethics for Schools," etc.—EDITOR.]

THE first great trust or monopoly formed was the Christian Church. Several generations after the establishment of Christianity a single organization sought to gather up the independent congregations and conduct the affairs of Christianity in one body. This organization claimed in time to own and distribute all the benefits of Christ's religion. No other was admitted to have right to any of it. It claimed to represent the only valid religion in the world and tried to crush out all competitors. It had the sole means of salvation, and out of its pale was no hope. Having the keys of heaven, it had the power to admit or exclude, and could make its own terms. It claimed, in short, to have a monopoly of Christianity, and with it a monopoly of all religion. No other was genuine. It had the truth as an exclusive possession, and claimed the sole right to determine what men might believe. Its ideal was a single corporation embracing all the people. This corporation was to be exclusive in its dominion, controlling all things moral and religious, and covering the whole world. It was to have the sole right to teach, and nothing hostile to its doctrines might be inculcated or practiced. No other worship was to be allowed. It was a complete trust, or monopoly, in religion, embracing all the churches everywhere, and having as its field the

whole earth. Having one head and one set of officers, to which all must be subject, it was to give orders which all must obey. There could be no appeal and no dissent. It assumed to control the mind as well as the conduct of men, and none could hope to live outside of it or in opposition to it. Its slogan was: Believe or be damned—submit or suffer. A close corporation, whose power was handed down from ruler to ruler, its government was perpetual. The people might never change it. No other administration could ever succeed it; no revolution could overthrow it; no reform could improve it. Making no mistakes, its utterances were infallible, and there was no power to judge of its teachings or conduct but itself. It was, in short, supreme and perpetual.

The formation of this power was like that of modern trusts in every essential. At first there were many churches, and the local organizations were independent. Having no fixed doctrines or discipline which could be enforced, the people differed in opinion and conduct, and much liberty was allowed. In a few generations, however, the larger churches in the great cities united and in time extended their dominion over the local churches. This federation was called Catholic, and aspired to be universal. Its ideal was a union that should include all the churches and

form one body. No other churches could be tolerated. What was not in the trust was held unlawful and dangerous. The Church's unity became its chief characteristic and was zealously inculcated. Independent churches were prohibited, and all which did not enter the trust were stigmatized as illegitimate and persecuted. It was held not only immoral but criminal to form other churches or to patronize them. Those who ventured to get their religion elsewhere or to exercise any not in connection with this monopoly were cursed as rebels. Prayers offered outside of it were not honored by God. Baptism, confirmation and marriage were invalid if solemnized beyond its pale. It had a monopoly, in short, of everything Christian, and counted all competing movements wicked, if not criminal.

And not only did this Church claim a monopoly of all Christianity, but it claimed a monopoly of all religion. No other faith had a right to exist anywhere. It tried to convert all men to itself and to confine them within its fold. It aspired to a monopoly over the whole earth, supplanting every competing faith. The world was to be one in religion: universal humanity was to be organized in the Church, the people were to act as an entirety and everything religious was to be produced by this single company or corporation. There was to be no competition in religion. Every rival was to be crushed out, and crushed out by law if necessary. Not only was nothing else to be done, but nothing else was to be thought or believed, than what this monopoly wanted. There must be no dissent and no revolt. It was declared wrong even to think or wish anything different from its teachings and purposes; so that it was the completest form of a trust or monopoly ever attempted.

When we have thus early in history such an example of a monopoly we need not wonder that men have since tried to form other trusts or monopolies. Its example taught men that by such organization power could easily be obtained and results cheaply

wrought. What the Church did in religious and moral affairs the industrial corporations could do in manufacturing and trading. Corn, pork and oil could be cornered as well as religion, and there might be one organization for running all the railroads as well as for running all the churches. The people perceived that they could deal in earthly products as they did in Christian graces. If one organization could monopolize all the burials, another might monopolize all the caskets.

The Church thus set the example and furnished the model for all kinds of monopolies. What was done in religion became a pattern for combination in every other interest. One company might as well make all the bread as all the creeds. Universality could be put in operation in one thing as well as in another, and men could everywhere be organized. Monopolies in all kinds of business could be made to extend over the whole earth. International undertakings could be conducted, and we could as surely have a universal commerce as a universal Church. It is the ideal of Socialism to have a world-wide republic, or union of all men in one socialistic community. Catholicity is a common idea, the idea of a universal organization, not only for morals and religion, but for education, public works and armies. There is no reason why it should be confined to things spiritual. A universal State is as natural as a universal Church, and one set of laws as one set of ceremonies. It is no more necessary to unite in religion than in production or trade. The principles of theology are no better fixed or more generally believed than those of economics or natural science. In fact, there is less difference of opinion in almost anything than in theology; and if in the most uncertain of subjects men have been able to unite, they might do so in those on which there is substantial agreement. In forming modern trusts capitalists are simply following the example of the Church, which for centuries has been the only example of a universal monopoly and the model for all subsequent ones.

The Crime of Jasper

BY ANDREW LANG

IN "The Mystery of Edwin Drood" Dickens at least bequeathed to mankind a solid, satisfactory puzzle. Mr. Cuming Walters, in his new book "Clues" to the mystery, mentions several American sequels to the unfinished tale, one of them professing to come from the pen of Dickens in the world of spirits. Mr. Walters adds a very well reasoned theory of his own, but the puzzle remains a puzzle. Let us consider the *dramatis personæ*:

John Jasper, a lay choirmaster in Cloisterham Cathedral, aged twenty-six. An energetic amateur of opium. Wears black whiskers. Uncle of Edwin Drood and in love with Rosa Bud, who is betrothed to Edwin by a family arrangement.

Edwin Drood, a young engineer, "as pretty as a girly," nephew of Jasper and betrothed to Rosa Bud, but not in love with her.

Rosa Bud, betrothed to but not in love with Edwin.

Neville Landless, the semi-Cingalese pupil of Minor Canon Crisparkle. In love with Rosa Bud and at feud with Edwin.

Helena Landless, sister of Neville, devoted to Rosa Bud. A girl of masculine force of character, in love with

Crisparkle, a muscular Christian minor canon.

Grewgious, an eccentric lawyer of sterling virtue. Agent for Edwin and Rosa.

Bazzard, his clerk, an amateur writer of tragedies.

Old Woman. Keeps an opium den in London. Patronized by Jasper, but detests him. Reason unknown.

Sapsea, Mayor of Cloisterham. An ass. Possesses a family vault.

Durdles, a drunken vagrant. Naturally trusted, as such, by the Dean and Chapter with the keys of the cathedral crypt, vaults, etc.

Deputy, a street boy paid by Durdles to stone him home at nights.

These are the chief characters at the opening of the Mystery. Few of them act like human beings or obey normal

motives, while Jasper is not only addicted to drugging himself, but to drugging the rest of them. This complicates the puzzle, as nobody can guess what such bemused people will do.

It is certain that Dickens wished us to believe that Jasper, jealous of Edwin, means to kill him. It is certain that Jasper, after causing a quarrel between Neville Landless and Edwin Drood, gives them a dinner of reconciliation; it is certain that the young men leave his house together at midnight, in a storm, that Edwin disappears, that Neville is suspected of his murder and that Jasper believes himself to have murdered Edwin and has possessed himself of Edwin's watch and scarfpin, which he has put in the river, where Crisparkle, diving in consequence of a vague telepathic monition (!) finds them. It is also certain that Jasper did not know that Edwin had a gold ring in his pocket, a ring which he was to restore to Grewgious. Again, we know *how* Jasper meant to kill Edwin and dispose of his remains. We know that he made a midnight expedition to the cathedral with Durdles, that he drugged Durdles, stole his keys and probably put a quantity of quicklime, which happened to be lying about, into the family vault of Sapsea, the Mayor. It is indicated that, after Edwin and Neville parted, Jasper met Edwin, drugged him (somehow) and either led or carried him into Sapsea's vault, strangled him there, heaped quicklime over him (whether he had put the quicklime there before, or did so on this occasion) and went to bed. The crime will be detected by the finding of Edwin's ring, unconsumed by the quicklime, which destroys his mortal body, boots and all. So much Dickens told Forster, or so Forster understood Dickens. But Dickens added that he had "a very new and curious idea, not communicable." Now nothing in all this is "new," and everything is "communicable," and was, in fact, communicated to Forster by Dickens.

There must be something else. There *was* something else. We do not know

why Jasper, when planning his plot, climbed *to the top of the cathedral tower*, with the intoxicated Durdles, at night. He could go up alone any day if he chose. Again, Jasper, blabbing, under opium, to the old woman, says that he had often dreamed of the murder, had seen it in all its details, "and yet I never saw *that* before!" He added that all was very soon ended. What was the "*that*" which Jasper had never foreseen, but which, in fact, did occur? Why was the deed so rapidly ended? If we knew why Jasper climbed the tower in the night, and what "*that*" was, we should understand the mystery. Meanwhile there is, on Forster's showing, no mystery about the murder; nothing "new," nothing that was not "communicated" to Forster.

But how was Jasper detected? By the evidence, says Forster, of Edwin's ring unconsumed by the quicklime. Moreover, a new character, Datchery, in appearance a middle-aged man in a tight surtout, with black eyebrows and a huge head of white hair, is playing amateur detective at Cloisterham.

Now, if we remember that Jasper was a victim of drugs, and that the murder was amazingly soon over, and that an unforeseen event occurred, we might, *prima facie*, guess that Jasper "foozled" his crime; that Edwin was only unconscious; that the burning of the quicklime brought him to his senses; that the vault door was not properly locked, or was unlocked by Durdles, who was "drunk on the premises"; that Edwin walked away and reappeared disguised as Datchery. But, if he was alive, he could return the ring to Grewgious, who, I presume, replaced it in the quicklime! There was no apparent motive for Drood's not denouncing Jasper at once, but nobody acts in the tale like a man of this world. Besides, of what could he accuse Jasper, after all? He had no real evidence against him.

Mr. Proctor in "Watched by the Dead" thought that Datchery was Edwin. Mr. Cuming Walters proves, however, I think, that Datchery could not be Edwin. He appears not to know things that Edwin must have known. Again, crazy as the idea seems, Mr. Cuming Walters makes it highly proba-

ble that Datchery was—Helena Landless! Was *this* the "incommunicable" idea? It may be, as Forster would have remonstrated vigorously against the absurdity of the plot. Helena, a very young girl, known to Jasper, could not escape him in the disguise of a middle-aged man, in a costume, a tightly buttoned surtout, which would betray every line of her figure. The plot is absurd, but it may have been the plot of the author's outwearied brain, and Datchery, the "buffer living idly on his means," may have become as Helena the bride of the minor canon Crisparkle!

Granting that Datchery is Helena, and that Edwin Drood is alive, where is Edwin Drood? Dead, if we believe Forster, reporting what he was told by Dickens. Dead he ought to be, but, in that case, what was the "*that*" which Jasper saw and had not foreseen? Again, and this is important, if Jasper rifled Edwin's pockets he *must* have found the tell-tale ring, and he *must* have rifled Edwin's pockets. If he did not, he must have left Edwin's money, gold, silver and bronze, to testify to the burning of the body of somebody, if not necessarily of Edwin. He could not overlook the search of the pockets when he murdered Edwin, and in the search must have found the ring, which Edwin was to give to Grewgious. Yet the ring was to reveal the secret! This is not what I call a scientific plot. However, take it that, months after the murder, Jasper, in a lucid interval, remembered that he had taken Edwin's watch, chain and scarfpin, but had overlooked the pounds, shillings and pence. In that case he would revisit the vault at night. He is certainly the man with black whiskers who, in the lowest design on the cover (drawn by Dickens's son-in-law, Mr. Collins), enters a vault, holds up a lantern and reveals a pretty young man in a summer great coat and a tall, soft felt hat. Now that pretty young man resembles nobody in the story, or in Mr. Fildes's illustrations, except Edwin Drood. He is not in the least degree like Datchery and does not wear Datchery's mop of white hair or his tight surtout. Mr. Cuming Walters, however, thinks that this pretty young man is Helena disguised as Datchery.

The figure was, I think, intended by Collins, instructed by Dickens, to induce us to believe that Edwin was alive. He is more like Collins's Edwin, with his hat in his hand, *à la* Datchery, on the cover, than like any other character in the tale, and he is Mr. Fildes's rendering of Edwin in the illustrations. So where are we? Mr. Cuming Walters thinks that Neville Landless was slain by Jasper in the vault while defending Helena, who, again, is the pretty young man, and in that case, I think, is intentionally disguised as Edwin, not as Datchery, "and the same with intent to deceive." But, also on the cover, we see a young man, clearly Neville, bounding up the stair of the cathedral tower, pointing to the top, and looking down at two men who follow him, Crisparkle,

in a soft clerical hat, and Grewgious, showing his white stockings, as was his wont, between his short trousers and his low shoes. Now this rush to the tower top has some connection with Jasper's "unaccountable expedition" at midnight, to the tower top, with Durdles. The reason of that expedition is of the essence of the mystery. I think that Jasper threw Neville down from the tower, but was seized by Crisparkle, the muscular Christian. The rest remains as much of a mystery as ever. But, if Mr. Cuming Walters is right in thinking that the horrible old woman is Jasper's mother, then she is also Edwin Drood's long lost grandmother! What a story. Probably she is not Jasper's mother.

LONDON, ENGLAND

What Sakhalin Means to Japan

BY ADACHI KINNOSUKÉ

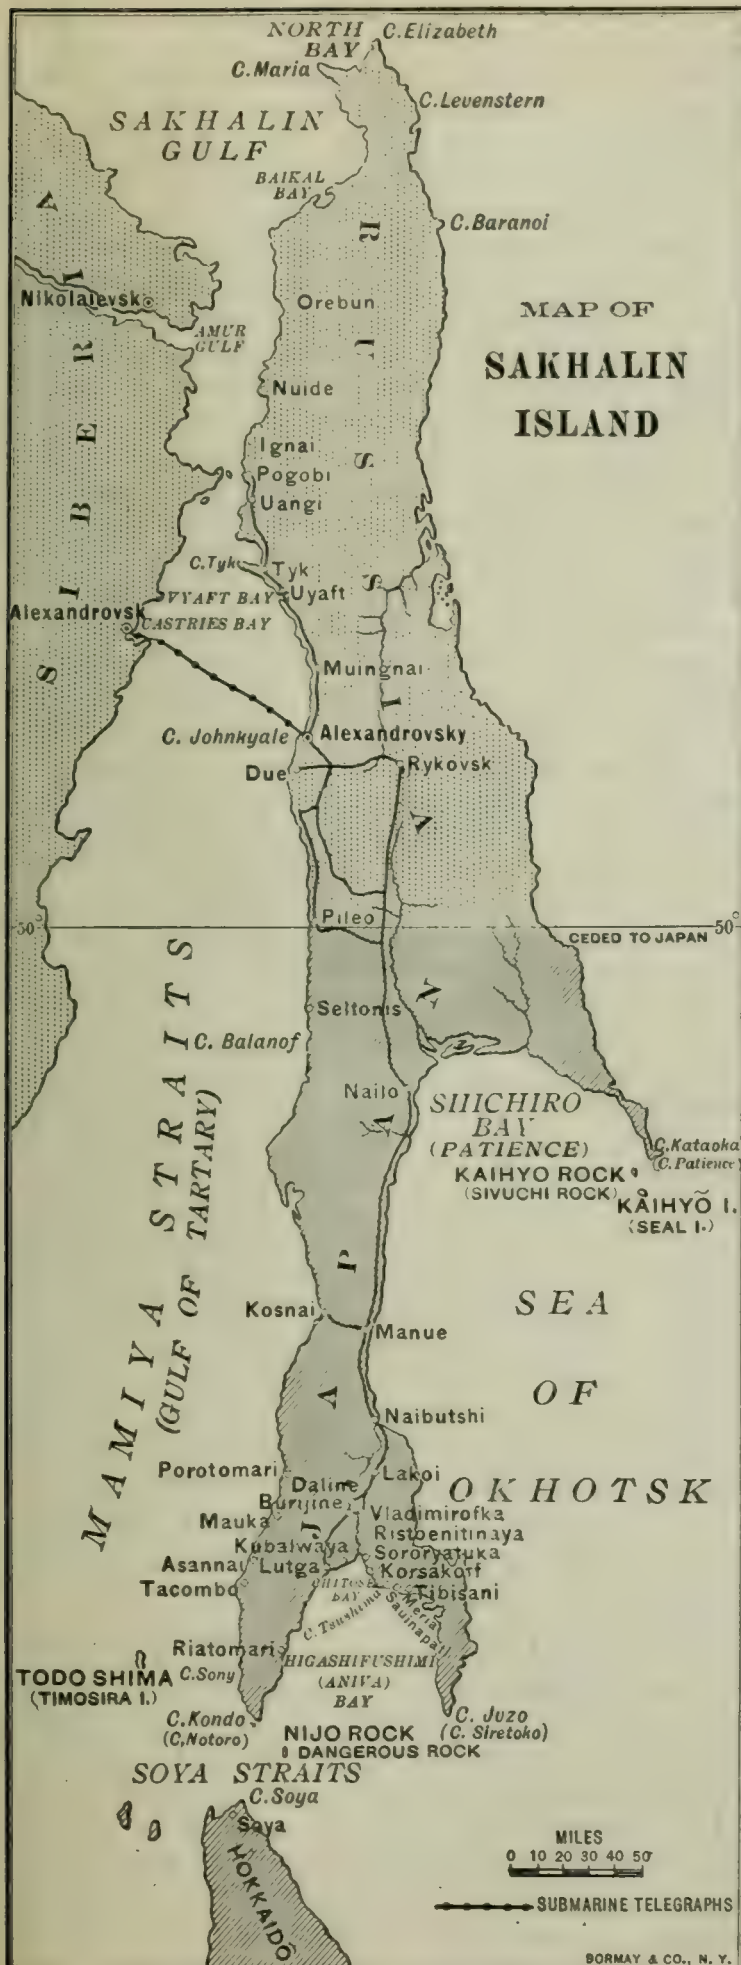

[A great many people have recently been puzzled to comprehend what there was about a barren Arctic island to make Japan almost willing to break off the peace negotiations rather than fail to get the whole of it. As Mr. Adachi shows, the interest taken by the Japanese in the island of Sakhalin, or, as they call it, Karaputo, is a mixture of the sentimental and the material.—EDITOR.]

THE Treaty of Portsmouth has passed into history; with it half the island of Karaputo goes back to its ancient master, and the disgrace of our first diplomatic defeat by Russia in 1875 is wiped out.

Quite apart from the resources of the island is our chief interest in the island; it is sentimental. As early as 1624 the Lord of Matsumae—and he was the Lord of Yezo as well as the island of Karaputo—made a tour of inspection through the Karaputo. On the year following he dispatched a number of his retainers to spend a year in the island. It was his wish that his subjects would learn something more of the climatic conditions of his remoter domain and of her resources, that they might, with intelligence, make a better use of the land and sea, given over, at the time, almost entirely to neglect. It was as late as 1785, however, that the Yedo Government of the Shogun

began to take any serious note of the Karaputo. In that year the Shogunate dispatched ten officials to the island for exploration and mapping of sea and land. In 1789 the Shogunate, in accordance with the petition of the aino of Karaputo, paid an indemnity to the men of Santan, who inhabited the continental littoral facing the island. That seems to have been the only foreign diplomatic incident in connection with the island—that is, till 1803.

There appeared in the harbor of Nagasaki in that opening year of the nineteenth century a Russian commission; it was headed by a gentleman called Lezanoff. He came to us on a charitable mission—did he not come from a Christian land, bearing the torch of civilization? He came to return to us a sailor or two from Nippon who had had the good fortune of having been wrecked on a Russian coast. The Yedo Government had sacrificed a few thousand of its

subjects at Shimabara in what is known as the Christian revolt. And their blood, as it turned out, was the price of enlightenment to the Government of the Shogun. At that wholesale slaughter the Government was permitted to see into the inner thoughts of the men of alien pallor who came saying unto us: "Worship no other gods but God." The heathen Shogunate and its officers were, therefore, utterly blind to anything that was good in the blood and conduct of the alien from over seas. What, therefore, the Shogun's officers at Nagasaki said to the Russian did not improve the temper of M. Lezanoff. And perhaps that was the reason why the charitable Russian mission, on its way north, tore off its Christian mask. The Russian ships ravaged the coast of Karaputo, especially at Kuskotán, to which, since 1790, the Lord of Matsumae clan had been wont to send an administrative officer. It was a thankless task, like the robbing of a pauper's backyard; it was not worth the trouble; it is an incident not worthy of a record. Yet our history remembers it, perhaps because it was the first Russian invasion of our territory. It is true also that this waked the Shogun's Government from its indifference toward northern lands. Mamiya Rinzo was dispatched to complete the scientific study and investigation of the geography of the island. In 1809 he discovered the strait which divides the Karaputo from the continent, and gave it his own name. And geography, somewhat more grateful than Nippon diplomacy, remembered the painstaking and scholarly efforts of Mamiya by insisting to call the shallow belt of water Mamiya Strait, long after the Nippon Government lost the island to Russia.

In 1850—that is, three years after the appointment

of Miravieff, the famous Count of the Amûr, to the position of the Governor of the Eastern Siberia—Lieutenant Orlof, whom Miravieff had sent in company with Captain Nevilskoi and Lieutenant Savin, discovered the mouth of the Amûr, and Nevilskoi ascended the stream and founded Nicolaievsk. The following year saw the Russian activity in the northern part of the Karaputo, perhaps the first serious attempt of Russia to occupy the country. Very rapidly the Russians made their way south; three years later Alexandrovsk was founded on Castries Bay, and one hundred men under command of Major Busse established a Russian base at Dui, on the west coast, and occupied the Aniwa Bay. The land hunger of Russia traveled fast, but the Russian diplomacy, as of wont, was swifter still; it was already there to set the pace. In the fifth year of Kaei, or 1852—that is to say, when Alexandrovsk and Dui were not yet on the map—there appeared in Nagasaki and a little later in Shimoda, made famous by the American Commodore and the treaty, one Admiral Putiatin, representing the Czar. He invited the Shogun's Government to recognize the whole of Karaputo as Russian possession. The much distressed Government of the Shogun, with both of its legs already in a coffin at the time, proved itself superior to the weak-kneed diplomacy of the present time; it held on bravely to the fiftieth degree of north latitude as the dividing line. But, of course, it was not proper in Russian diplomatists to listen to anything like reason from a heathen Power. And the treaty, which was of friendship and amity and of commerce, concluded at the time passed into history with the following paragraph, funny enough for a page of *Punch*:

"As for Karaputo, there shall be no definite boundary between Russia and Nippon in Karaputo, and it will remain as heretofore."

Four times negotiations to settle the question were undertaken, but proved fruitless. And at last, in the eighth year of Meiji, which being translated means the Enlightened Reign, or 1875 of the year of grace, on the twenty-fourth of April of the Russian calendar and on the seventh of May of ours, there was signed

in St. Petersburg a document, and these are its first articles:

"His Majesty the Emperor of Nippon cedes to His Majesty the Czar of all the Russias, in perpetuity and full sovereignty, the right to a portion of Karaputo. Henceforth the entire island of Karaputo belongs to the Russian Empire and the La Perouse Strait shall be the boundary between the two countries.

"His Majesty the Czar of all the Russias accepts the cession of sovereign rights over Karaputo mentioned in article first, and in exchange cedes to His Majesty the Emperor of Nippon . . . the entire claims and full sovereignty of the eighteen islands (enumerated). Henceforth the whole Kurile group shall belong to the Empire of Nippon," etc.

The choice humor of this masterpiece is in the words "in exchange." It is nearly thirty years since the day the above quoted treaty was signed. And every day of the thirty years, every time we happened to look upon the map of the East, upon the bleak sterility of the Kurile rocks and upon the generous and spacious wealth of the Karaputo, we were compelled, willy nilly, to have the disgrace and regret burn into our eyes and minds. It would not have been so bad had we had a different history from the one of which we of the Land of the Gods are so proud. For twenty-five centuries it is our boast from the school room hours—and the men of Nippon have never been known to outgrow the childish glow of enthusiasm—that Nippon, the Homeland of the Sun, has never yet suffered a single humiliation from an alien foe; that no invaders have been able to tread upon the sacred soil. And to have such a black accusation staring us in the face every time we turn to the laudable study of geography of the regions round about our country, now that was something quite enough to work upon our nerves.

Only next to the sentimental is the interest of our fishermen in the waters of the Gulf of Tartary and of the Okotsk Sea. Like the land, the fishery in the northern waters is still in its primitive innocence. And the activities of the Nippon fishermen have been chiefly centered round about the littoral of Korsakovsk. Up to 1899 the number of the

fishing grounds for our men steadily spread in area and the number of them rose as high as two hundred and twenty-two places. In that year Russia imposed her restrictive measures upon our fishermen. In 1903 the number of our fishing grounds fell to ninety-nine. However, even under the unkindly measures of the Russians, our fishery in 1903 amounted to 568,195 bushels in all. According to the official reports of the Department of Agriculture and Commerce of our Government for the thirty-sixth year of Meiji (1903) the marine products which we imported from Asiatic Russia amounted in value to 3,480,064 yen. Over three-fourths of them came from the Karaputo. And these are almost entirely the fruits of the Nippon labor. And in this permit me to say you have hardly seen the a b c of the promise of those waters. According to the report of our Consul at Korsakoff the amount spent by our fishermen in that district alone for the year 1902 was 603,656 yen, of which 80,579 rubles were paid to the Russian Government for taxes for the year. These amounts were expended by only thirty-five parties in one year; it is not an unpromising comment on the future of the Nippon fishery of the Karaputo seas. Off her northeastern littoral, in the Sea of Okotsk, lies hid another one of those heaven's treasure houses the key of which still remains undisturbed in the hands of nature—for no faults of the gods. For ages innumerable it has been displaying its wealth, in quite a tempting manner, too, in the face of all the world. This is now open to us by the terms of the treaty.

The whole island seems to be floored with coal beds; especially along the coast it seems to be rich. Of the nineteen points staked along the coast line only four of them are being mined. There are many difficulties in making the coal mining on the island profitable and practicable. One of the most serious is the conditions of the sea. Usually it is rough, but even in calmer days the ebbs and flows of tides are so violent that it is impossible to find a good harbor for the purpose of loading and unloading the coal. The Dui Harbor in Korsakoffsk is a splendid bit of deep water harbor. The trouble with it seems to be, however,

that the interior of the harbor is entirely too large and rather difficult to hit upon a convenient anchorage. Moreover, when the sea runs high the ships are obliged to find shelter in Castries Bay. Since 1892 the Russian Government has encouraged a semi-governmental and semi-private coal mining company. It draws upon the criminals for miners; the success has been indifferent. The construction of a suitable port, therefore, must be the beginning of a successful mining work in the island. Moreover, the construction of a hospitable harbor would solve a number of other embarrassments besides the coal mining problem. It would tempt the steamship lines which are making for Vladivostok and Supporo. And the establishment of a steady line of communications would open a new era for the fishery and lumber trade quite as much as for mining industry.

The soil in some portions is adapted for the successful cultivation of radishes, wheat, barley, potatoes. The entire acreage under cultivation at the present time is not more than ten thousand acres. A vast portion of this is confided into the care and keeping of the criminal labor. The agricultural product of the island is about six pood per head of its population—that is to say, a little over one-third of what the people actually consume, based on the modest supply of fifteen pood per head per year. The humidity of the atmosphere is excessive. In an entire year one finds something like thirty-nine days of clear weather and sixty-one days of cloudy weather. Even in July and August, at the height of summer, the temperature might drop suddenly with a blast out of the Okotsk Sea. In its northern portion one can only find the Arctic vegetations. And even in the southern portion, in Korsakoffsk, for example, the farmers are constantly menaced with the excess of rain in the harvest season. It is far from a rare sight to see the work of a whole year either washed away completely or rotting under water. At best, therefore, the agriculture in the island is a rather discouraging work.

Her forests, however, tell quite a different tale. The island is rich in splendid pine and other timbers. In fact, the magnificent forests cloak the two ranges

of mountains which form the backbone of the island. They are practically untouched. For the construction of Ussuri and Dalny Railway and also for the building purposes in Siberia and Manchuria the Russians have felled not a little. But the protective measures of the

Russians against the fishery along the coast wisely included the provision for the protection of forests, and the island in this respect promises a future that is enough to make Oregon sit up and think—so far as the command of the Oriental markets is concerned.

NEW YORK CITY.

Gamaliel to St. Paul

BY LOUISE DRISCOLL

TELL me, dear lad—
Thou art still a lad to me,
So wilt thou ever be—
Hast thou gone back,
Unlearned the learning I have given thee,
Shut up the volume I had opened wide?
Or hast thou found
The thing I lack,
That holy ground
Whither I would have gone
Tho all paths turned aside?

Thy form, too slender for thy heart and brain,
Bearing all ill.
Thou the uplifter, sovereign of pain,
I grieve to see thee weary,
But I am wearier still.
Upon my heart all sadness lies,
The burden of this world—no less;
But I have seen
Within thine eyes
The kiss of peace and righteousness.
I never taught thee this.

Lo, I am old, my years all spent
Seeking for knowledge, finding an empty word.
To-day I heard thee speak.
Thou stoodst alone.
Weary and worn,
I paused to see.
Thou saidst, my old ears heard,
This—"I have learned content."
Thou didst not learn from me.

Saul, Saul, I love thee, lad—
Still thou art lad to me,

So wilt thou ever be.
Years have gone by
Since thou and I
Sought what the wise world had,
Found what the world could give.
Thou hast learned how to die,
While I—
I know not why I live.

Tell me, dear lad,
Hast thou forgot?
Or hast thou found—
What I have not—
The much desired end
Whither our strivings tend?
For, having striven long, at last I find
Fruitless my busy years,
Empty my heart, while fears
Compass me round.
Saul, Saul, thou wert to me
What a loved son would be.
All that I knew,
All that my heart could give,
I gave to thee
In the long council sweet
When thou wert at my feet.

Learned in the law am I.
Thou let'st the law go by.
Knowledge is in my heart.
Faith is thy better part.
I have seen years increase
The while my hopes would cease.
Thine is the gift of peace.
Saul—pray for me!

CATSKILL, N. Y.

"Let the Dead Session Bury Its Dead"

BY JUSTIN McCARTHY

THE very genius of ceremonial could hardly devise any plan for giving the session of Parliament just expired a funeral service which should be at once appropriate and majestic. In Webster's magnificent tragedy, "The Duchess of Malfi," one of those who stand around the deathbed of the duchess murmurs in words of pathetic appeal, "Cover her face—mine eyes dazzle—she died young." No such appeal could have been reasonably made to any of those, and they were not many, who watched over the closing scene in the life of the now dead Session. There was nothing whatever in that Session to dazzle the eyes of any of its beholders and it did not die young, but lived out what may be called a Session's regulated term of life, altho from the scanty work which it did it seemed for many weeks past to have been merely dragging out its inane existence. The funeral ceremonies, which have only just taken place, created but little interest even in the regions of Westminster. The attendance of members in both houses was very limited and was practically confined to the men who had to be there and whose absence would have been regarded as a neglect of duty. The King did not attend in person and the Royal Speech was read by the Lord Chancellor. American readers will have noticed with satisfaction that the King in his speech described the negotiations now going on between the Russian and the Japanese Governments for the purpose of bringing to a close the war in the Far East as "due to the initiative of the President of the United States." The King showed his usual good sense and cordiality in thus rendering honor where honor is due, and, indeed, the whole speech was in every respect satisfactory. The Sovereign certainly had not much to say about the actual work done during the Session then coming to a close, and one can easily imagine that if he could have spoken out his genuine thoughts as

to the manner in which the business of the House of Commons had been carried on during the past six months he would have given utterance to some sentiments which would have echoed very distinctly the popular feeling on that subject. The Session really accomplished little or nothing and accomplished even that little or nothing in a most unsatisfactory fashion. It passed two measures, the Aliens Bill and the bill concerning State provision for unemployed workmen, but these measures were passed in a form which the Government themselves acknowledged to be absolutely inefficient and only presented to the houses because they thought something ought to be done with regard to each subject and could not make up their minds in time to do anything better.

The Session, therefore, has been a failure to a degree for which the memory of the present generation at least can find no Parliamentary parallel. The Government are, indeed, just now in a very peculiar position. They still command a nominal majority in the House of Commons, but they find it almost impossible to prevail upon their followers to attend the division lobby in such numbers as to make that majority felt in the decision of important questions. Never before in my recollection were such desperate and now and then such ignoble artifices employed to compel Conservative members to keep in close attendance, and, indeed, there were several occasions within the last few weeks when, if the Liberals had only fulfilled their duty in voting on the divisions, the Government must assuredly have been outnumbered and defeated. The fact is that the Conservatives are greatly divided among themselves. Some men who were the strongest and most respected members of the Conservative Cabinet itself but a short time ago have withdrawn from office and now sit behind the Ministerial bench merely as critical observers of the doings of their former colleagues. These men

WINSTON SPENCER CHURCHILL

were too independent and too high-principled to support Mr. Balfour's utterly irresolute policy on great financial questions and have withdrawn from office frankly acknowledging the reason for their withdrawal. I do not include among these men Mr. Joseph Chamberlain, altho he is still undoubtedly a man of some power in the House, but, then, every one assumes that he is merely playing his own game and no one can foretell at what moment or on what terms he may come to an agreement with Mr. Balfour or whether he may not do his best at some sudden crisis to precipitate Mr. Balfour's fall. The utter failure of the late Session is but the natural result of such a condition of things. I must say that the Irish National Party, under its leader, John Redmond, has been making its strength and its united purpose more and more evident during this Session. The Irish Nationalists were able to inflict on Mr. Balfour and his Government the one actual defeat which they received on a division, and if the Liberal Party had been more steadfast in its attendance might have enabled

other defeats to be inflicted, which must have compelled Mr. Balfour to appeal to the verdict of the constituencies at a General Election. I cannot call to memory any other Session of Parliament in which a Prime Minister has been put to such "double, double toil and trouble" as have come on Mr. Balfour

JOHN REDMOND

during the last few months. He has had no one to support him whose support was worth having, and, as I have already said, the best men on his own side have broken away from him. I cannot help feeling a sincere regret that a man of unquestionably great ability, of high and varied culture and, as I fully believe, of thorough sincerity and conscientious principle, should have been placed by any concurrence of circumstances in such a position.

Some men who had already risen to high repute in the House of Commons have distinctly added to their reputation during the past Session. On the Ministerial side of the House Lord Hugh Cecil must be noted as one of these.

Lord Hugh Cecil is now one of the foremost debaters in the House of Commons and in his style of speaking there is something of the genuine orator as well as of the debater. Lord Hugh is, as I need hardly tell my American readers, son of the late Marquis of Salisbury, and, altho he still holds to his place on the Conservative side of the House, he is a thoroughly independent critic of the present Government and, indeed, seems to be led absolutely in his political course by the light of his own conscientious convictions on every great question which comes under discussion. Mr. Winston Churchill, son of the late Lord Randolph Churchill, has for some time past taken his seat on the Opposition, now the Liberal, side of the House, and

HUGH CECIL

he, too, has distinctly added to his reputation during the present year and is already looked upon as very likely to hold a place in the next Liberal Administration. Mr. Lloyd-George, the brilliant Welsh member, is another man who has won still higher reputation during the past Session than he had before, and I do not think it needs much prophetic in-

spiration to enable one to foretell that Lloyd-George is destined soon to hold a place in the Cabinet of a Liberal Ministry. Another man who has risen higher in the House of Commons this year than the high position which he held before is Mr. John Redmond, but I do not think there is any great likelihood of his accepting a place in any forthcoming British Ministry until at least the Home Rule cause in its main principles be accepted by some brave Liberal Government.

Thus, therefore, we may leave the dead Session to bury its dead—its blunders, its perverse errors and its vague wrongdoings—with the hope that these may be buried once for all and may not come up again as ghosts to visit the glimpses of the Clock Tower. In the meanwhile the whole country has been celebrating with sudden enthusiasm the visit of the French fleet to the English coast and the living illustration which it gives of the *entente cordiale*. My American readers will no doubt have heard all about the events many days before this letter reaches them. The welcome given to the French fleet and to its officers and seamen has been of the most enthusiastic and universal character, and the French

DAVID LLOYD-GEORGE

visitors have returned the enthusiasm and reciprocated the good will with the most cordial demonstrations of friendship. Some of the London newspapers have printed long leading articles on the subject in the French language—a French, I hope and trust, not of Stratford-atte-Bowe. One evening paper went so far as to have a whole edition of its issue printed in French, advertisements and all, and I hardly know what a London newspaper could do more than this in the way of paying its tribute to the *entente cordiale*. The great ceremonial of the occasion was the grand banquet given in Westminster Hall to the officers of the French fleet, a sort of celebration not of the order which we usually associate with Westminster Hall memories. The Lord Chancellor as President of the House of Lords, the Speaker of the House of Commons and Mr. Arthur Balfour, the Prime Minister, were leading figures in this demonstration of welcome. The Lord Chancellor delivered his speech in French, and so did Mr. John Morley, who in former days spent much of his time in France and is a most qualified student of French literature. Everything went off well and I believe that both in Portsmouth and in London the French and English seamen of war vessels fraternized in the most cordial and genial fashion. In this country the visit of a French fleet was at one time wholly associated with such excursions as the First Napoleon more than once projected and sent out with the view to a very different sort of introduction to the English shores. I sincerely hope and every one must sincerely hope that the effects of this more recent French invasion may be lasting and beneficent. Nothing but good could come from a thoroughly friendly feeling between the French and the English people, and I can only hope that no foreign state—Germany, for example—may be led away to believe that the welcome given by England to the French was meant as a threat or even as a warning to other peoples. But we all can easily understand that the enthusiasm caused by such meetings is not always very lasting in its effect, and it is not long since the feeling toward France among the newspaper instructors of the English

people was wont to be expressed in a very different form from that which it has lately and suddenly adopted. In any case the effect of this international cordiality seems for the present to promise nothing but reciprocal benefit, and even the most skeptical among us might fairly make up his mind to hope for the best. I need hardly say that among my own countrymen and among the people of Scotland in general there has never been anything but the most friendly feeling toward France. I only wish that some other European States would follow the example of the French Republic and organize an invasion of the English shores with a like genial and beneficent purpose. War and the rumors of war and the preparations for possible war are still the great curse of Europe, and if the year which saw a thoroughly wasted and perverted Session of the British Parliament should also have witnessed an event which promises to be the harbinger of peace between England and her neighboring States then we may well allow the dead Session to bury its dead and may none the less regard the year as above all things else a period of bright hope and promise.

Meanwhile we have not had much doing in literature of late. We hear many rumors, some of them supported by authentic evidence, that there are great projects afoot for the application of the wholesale trust system to the English newspaper press. We have, in fact, already seen some practical illustrations of this organization in the buying up of certain journals and placing them all under the directorate of one company. Now we are told that the system aims at something still more comprehensive and more dictatorial and that we may yet be destined to see all the great journals of London and the important provincial cities made the absolute property of a capitalist directorate. Let us hope that these rumors thus confidently accredited may prove to be only wild alarms and that for all said and done we may yet have some independent journalism left in England.

I am glad to see that Mrs. Campbell Praed, one of the best and most original of our women novelists at present, has just issued a new romance, "The Maid

of the River," drawn from the observations and experiences of her early Australian life. Mrs. Praed has suffered much lately from bad health and her friends are all the more rejoiced to find that she can return to her loved literary work again. While speaking of literature I must not fail to call the attention of American readers to a rising young writer, Oliver Madox Hueffer, grandson of the late Ford Madox Brown, the historical painter and one of the brightest lights of the pre-Raphaelite school. Oliver Madox Hueffer has, to my thinking, entered upon a literary career of high promise. I have just been reading an article of his called "Souls and the New London" in a metropolitan paper, *The Daily Mail*, which seems to me to

show a combination of poetical imagining, of humor and of pathos not unworthy of an essay by Charles Lamb or Robert Louis Stevenson. The essay deals with the proposed conversion of London into a sort of English Paris, with broad boulevards, city parks, underground and overground tramways, and with the preliminary removal of all the old houses, narrow streets and familiar corners of the London seen and pictured by Dickens and Thackeray. The essayist, who, altho young, is in sympathy with many of the old conditions, plays with his subject charmingly and may well find interested and sympathetic readers in America as well as in England.

LONDON, ENGLAND.

With Taft in Japan

BY JAMES A. LE ROY

[Our readers need no introduction to Mr. Le Roy, who as Secretary of the first Philippine Commission has sent us many valuable articles on Philippine subjects. He is now with the Taft party and will send us another article if the occasion requires.—EDITOR.]

WHEN the invitation of the Japanese Government to Secretary Taft was accepted, and it was cabled from Honolulu that it would be pleasing to the party to be entertained on their way to the Philippines instead of on the return trip, no one, least of all the Secretary of War himself, expected that the reception in Japan would take on the scope it has assumed, nor that various extraordinary and unprecedented features connected with it would be realized. That there would be an audience with the Emperor at Tokyo (one of the stiff and formal affairs, bound around with the rigid etiquet of the Japanese court, which are accorded on occasions only to distinguished foreigners), afterward perhaps a garden party or luncheon at the American Legation, and some more informal entertainment at Tokyo or Yokohama or both, was the limit of the expectations of the party up to its arrival off Quarantine at Yokohama on the early morning of July 25th. The

ship's arrival in the bay the night before, one day ahead of time, had been reported to Tokyo, and a special train was waiting to take the whole party, unofficial guests as well as official visitors to the Philippines, to Tokyo, where, as was learned from the delegation of Japanese officials who came aboard with the American Minister, the entire party were to be entertained as the guests of the Japanese nation. It further developed immediately that they were to be taken in hand from their arrival in the country until their departure from its westernmost seaport with that thoroughness in detail which seems to characterize the Japanese in everything, so that the many little side trips for sightseeing and shopping were not to be during this visit to Japan. Instead, the party has gone through a round of notable entertainments, some quite numerous attended, others assuming the character of little private dinners and personally conducted excursions. Members of the Japanese

nobility—women, let it be remarked, as well as men—and high officials on the Government generally, the highest in fact, have constituted themselves personally the hosts and attendants upon the party and have directed its every movement while in Tokyo and through the interior to Kyoto and then Kobé.

Miss Alice has really been in Japan—as she probably will be in the Philippines—"The Princess," as the irreverent young college men with the party have dubbed her. Everywhere she has been associated with the Secretary of War as being in a special sense the representative of the chief executive of the United States, while the receptions have also been in some sense a personal tribute to the man William H. Taft himself, who has twice previously been officially honored in Japan and whose administrative work in the Philippines and the United States is well known to the Japanese, and who has been openly referred to in Japan during this visit as the man who, the Japanese assume, will be the next President of the United States. One can only conclude that the active participation of the women of Japan in the features of this reception, both of the women of the middle classes, who were present at railroad stations and elsewhere to greet the party (a thing most unusual in itself), and of the women of the imperial household and of the Japanese nobility in the various social functions, both formal and somewhat intimate in character, has been in considerable degree intended as a recognition of the presence of Miss Roosevelt, as well as being designed to meet American ideas with regard to the participation of women in affairs of public importance and the presence with this party of a number of the wives of Senators and Representatives of the Congress of the United States. Miss Roosevelt and her friends Miss Mabel Boardman, of Washington, and Miss McMillan, of Detroit, were quartered at the American Legation in Tokyo, and not entertained at any of the royal palaces, as was Secretary Taft with his staff. There was a desire, it is said, to set apart suites in the Imperial Palace for the Secretary of War and his staff and for Miss Roosevelt and companions, but it was deprecated at Wash-

ington as being a too unusual mark of favor at this time of delicacy in relations between Japan, Russia and the United States. But in every other way possible Miss Roosevelt has been honored as the personal representative of her father's household and as the representative, we may suppose, of America's young womanhood. She has risen to the responsibilities thus placed upon her with a dignity that has been all the more effective because of her simplicity of manner and her evident hearty, youthful enjoyment of all the features of her entertainment. It was altogether a most pretty sight, and one that won instant smiling recognition from the Japanese officials and noblemen around her, when, giving way to the enthusiasm that seized her as she was greeted with such a tremendous ovation at the station in Tokyo, she raised one hand above her head, and with face aglow shouted, or seemed to shout "Banzai!" to the sea of upturned faces before her. The utterance she made could not have been heard anyway, but the attitude and expression were unmistakable in their pleasure, and she caught the crowd at once, as well as that portion of her attendants who were immediately about her and saw the episode. Again, she insisted on seeing the wife of Admiral Togo when the latter called at the American Legation simply to leave their cards for a formal call, in company with ladies of higher rank, and Madam Togo soon found herself, greatly to her own embarrassment, the center of an admiring crowd of American ladies, who recked little that a princess of the imperial household was also of the party. The Japanese had set out, in all their entertaining, to meet the Americans somewhat on their own ground of informality in social affairs and forms, and here they were met in kind. Coming across the country on the "Welcome Special Express," furnished and stocked by the Imperial Government, Miss Alice was showered with gifts of all sorts and sizes and values as well as with bouquets at every station where a stop had been arranged. The gifts began coming on at three o'clock in the morning following the departure from Tokyo and continued to arrive until the reception in Kyoto, after which Kobé took a hand at giving,

before the party went on board the steamer again for the run through the Inland Sea. During the forenoon's run to Kyoto a car was half filled with the presents for Secretary Taft and Miss Roosevelt. They had already been showered with souvenirs of one sort and another at the many social functions, small and great, in Tokyo. The Tokyo papers contained the announcement that the Emperor had given especial gifts to Misses Roosevelt, Boardman and McMillan as well as to Secretary Taft and the members of his staff, and that the Empress, regretting an indisposition which required the Crown Princess to take her place at the audience and luncheon given in the Imperial Palace, had provided these young ladies with rich gifts, besides remembering the wives of Secretary Taft and his staff attendants. These gifts, comprising rich tapestries and other hangings, embroideries, lacquer and silver pieces, were packed together in Tokyo and will be put on the ship with the party when it shall return from the Philippines through Japan. The Japanese, by the way, have said they wish to entertain the party at that time again; and the American Minister says he is under pressure from Japanese of prominence who wished to give social functions on this visit but could not on account of the constant pressure of engagements for the party.

The messages cabled to the United States have given an idea of the scope and of the features of this reception which is just over, but they cannot have conveyed any adequate idea of the great cordiality which the Japanese displayed and of their evident determination to give it to be understood that they want the friendship of the United States. That they entertain any design upon the Philippines so long as the United States chooses to determine the fate of those islands it would be foolish to suppose for a moment in the face of the evident attitude of the Japanese, from their Emperor and highest responsible officials down. On the contrary, it is plain that they wish to count upon the United States as a silent ally, well disposed toward them and their interests in the Pacific through a natural friendship. The great ovations given the party, at Tokyo

first and in a lesser degree in the smaller towns passed through, were, of course, primarily arranged by word from above, but it would be impossible not to believe that there was a genuine cordiality, and on the part of the masses, back of them. Too many signs there were to prove this. To-day even Nagasaki, which is hardly truly Japanese, so long it was a merely foreign settlement with Japanese fishermen, sailors and laborers for its bulk of population, has taken its part in enthusiastically welcoming the party, and its officials were disappointed that it would not stay for an evening banquet afterward. Several towns passed close at hand in the narrow parts of the Inland Sea yesterday had their people out to cheer the people on board the "Manchuria" as it passed, while in the strait between Moji and Shimonoseki there was a salute from a Japanese gunboat, and tugs with Japanese officials and army and navy officers steamed alongside the ship for several miles, shouting "Banzai!" setting off the always unique Japanese fireworks and having bands play American patriotic airs. The "Star Spangled Banner" has been heard everywhere along the route of this party.

Necessarily such an event has its amusing features, and they have arisen chiefly on this occasion through the curious blend of American informality and Japanese etiquette, which has given way in a dozen different directions where it has hitherto been rigid. From the Emperor's palace down this has been the case, and he himself gave the cue by going around informally and shaking hands with the members of the official party, over fifty in number, whom he invited to lunch with him after the formal audience was over. Doubtless some of our American legislators have time and time again shattered a cherished social custom of Japan in their offhand way at these various entertainments of a week past, and perhaps even now the Japanese of the nobility who unbent on this occasion so notably are smiling the silent Oriental smile as they tell over to each other some of the doings of those strange Americans. But they accomplished their object none the less; they met Americans like Americans, or as nearly after American fashions as a Japanese could. They

did not breathe politics; they took the cue of the Government at Washington, which excluded all politics from this event. The Japanese even parried the questions of Americans who would discuss some features of the war—except for Marquis Ito, who is described as a “first-class fellow,” and who would chat it all over with almost any one, and for the great courtesies shown to Representative Foss, chairman of the Naval Affairs Committee of the House at Washington,

by the highest officials of the Japanese Navy, who took him to Yokosuku and Sasebo and talked freely with him. But the cordial good feeling inspired on this occasion among Americans of such prominence in national affairs cannot fail to possess future good feeling for the Japanese. Altogether the greeting in Japan equaled the celebrations at the opening of the war and the first reports of victories in Manchuria.

EN ROUTE TO MANILA.

The Portland Exposition

[The following article is by a lady whom we especially commissioned to write for us her impressions of the Lewis and Clark Exposition. She modestly prefers not to have her name appear.—EDITOR.]

IT is a common remark even with Portland people themselves that, of course compared with the gigantic shows of the past twelve years, this Lewis and Clark Centennial is small and not much is here to hold the interest of a supercilious generation which has already visited Chicago, Paris and St. Louis. But it is hard to conceive the soul so unimaginative or supercilious that by the time it has approached Portland it will fail to see the Exposition grounds as the focusing point of all the streams of production and achievement from a region singularly blessed in natural resources and in inhabitants. Those who stay away may choose to explain their absence by condescending reference to a “little Exposition,” but from those whose spirits have been attuned to closer harmony with it by every day’s journey westward one rarely hears the disdainful “Oh! I saw all that in St. Louis.”

Seen in its true light the Exposition is big, and big just as its originators meant it to be, for to the eye which sees its full import *it is the West*, and never once, from Denver to San Francisco, from Vancouver to Los Angeles, do you get away from the atmosphere of the Lewis and Clark Centennial.

Portland has somehow solved the problem of disposing of its crowd more

comfortably than a part of the railroad companies. Perhaps it is younger and more susceptible to thrills of compassion; perhaps with such a climate and location it could not make its guests uncomfortable if it would. Certain it is that *comfort* is one of the ever present features distinguishing it among expositions. Fancy the peace which enfolds the feminine spirit as one realizes that she can tramp all day among the exhibits untroubled by the habitual Exposition consciousness that she is “a sight.” Even the larger masculine mind cannot be above a certain satisfaction in the possibility of coming through a day, and evening, too, with unwilted collar. Also, if my own experience may be trusted as typical, the body no less than the mind gains from exploring such Exposition grounds as never were before—park and lake and river outspread along the foothills of a great mountain range, with four snowy peaks in the distance, huge guards who change their uniforms hourly through all gradations of rose and silver and dazzling white. The penny-in-the-slot weighing machine is one form of dissipation whose allurements I am never able to withstand so long as a penny is forthcoming from my own purse or that of a friend. Conscientious patronage of the entire Lewis and Clark

collection, from the "Trail's" entrance to the Fairbanks exhibit in the Machinery Building (where you are weighed "without money and without price"), not omitting the youth upon the Bridge of Nations who guesses your weight and takes pay according to his accuracy, showed that in my few days' stay in Portland I had added to my original delicate proportions more than as many pounds as there had been days.

There is, of course, an occasional sight-seer, some schoolma'am (I have been one myself, but I also know the vacation art), or delegate from a woman's club, who comes to improve her mind and reduce her weight, and I doubt not she succeeds in both. We saw one of her in the Forestry Building, with note book in hand. She was industriously taking down all the data supplied by the young men in charge of the miniature Columbia River, which, faithfully reproducing all the machinery of the salmon industry, occupies a conspicuous central position, as it should, in this wonderful temple to the sylvan deities of Oregon and Washington. She will go home with every detail and date of ante and post mortem salmon existence, from yellow egg to salad on your luncheon table, on tap for her (let us hope) information-thirsty neighborhood, and she will know the exact amount of lumber contained in each huge tree trunk that rises from floor to lofty roof; but she will miss, I think, something of the ingenuous joy of the young woman who said: "Oh! weren't the tiny fish too cunning as they swam in an animated phalanx with heads all pointed up stream?"

Our party did not refuse enlightenment, either, in the captivating Baby Incubator, altho, to be sure, it was the doctor who received the most of that. The doctor's wife and I possibly took a more lively (and intelligent) interest in the tying of the pink and blue butterfly bows which impart to the bag of waterproof cloth in which the mites are incased an infinitely more festal appearance than is ever produced by the ruffles and hemstitching of the mother-tended baby. At any rate we ran off in the middle of a valuable discussion upon temperatures and nourishment at another woman's announcement of "the

cutest little brown-eyed one in that next room." But we learned enough to be quite convinced of the good fortune of the incubator baby.

It is among the peculiar advantages of the Portland Fair, however, that one may absorb an unusual amount of really valuable information without going in search of it. I suppose that others have made as interesting displays in forestry and irrigation; I confess that I never looked to see. But here, in the heart of a region whose very life they are, they assumed for me an importance far exceeding Oriental embroidery and Italian mosaic. The Fisheries Exhibit is relatively small, but hundreds who never went near more imposing displays crowd around the tanks showing the baby life of the salmon, which they are now eating fresh for the first time. In the excellent Government Exhibit one now takes time to read the letters bearing many a great American's autograph and making frequent mention of Lewis and Clark; and I felt a new interest in Filipino cooking utensils when I had just fallen in with an old college friend, fresh from Government service among the Igorrotes, who pointed out those from whose like he had more than once been served. Then, too, you take time in Portland to do so many of the silly things which bring joy to the soul, especially the soul old and dignified enough to know better. When "hitting the trail" of course you would spend an evening in Kiralfy's gorgeous "Venice," and another among Jabour's trained animals; you would also probably "bite" on some of the fake shows; but if the "Trail" were as long as the "Pike" you might hurry on and miss the delight of being swindled out of successive dimes by such engaging gentlemen as preside over the side attractions, in "Fair Japan," for example.

There is, of course, the Forestry Building, the happiest bit of originality Portland has to offer. One would not regret having come far to see only this marvelous "log cabin," 205 feet long by 108 feet wide, its roof resting upon a colonnade of fifty-two tree trunks, all clothed still in the rough bark of their forest life, 50 feet high and in diameter equaling the height of a tall man, while as many more trees, just as thick and

half as high, support the rustic galleries which skirt the structure on side and end. To one who has inhaled the woodsy fragrance of the place, and measured his insignificant stature beside its monster pillars, the effort to convey an idea of it to others seems so futile that he is forced from customary forms of description, from literary terms to numerical; for here, at least, figures must prove more eloquent than adjectives, even adjectives in the superlative degree. Permit me, therefore, to filch a single item from the estimates of one who has described the building in detail:

"One of the logs contains enough lumber with which to build a one-story cottage 40 x 40 feet in size, with a fence around it, and board walks leading up to it. And there would still be enough wood left to kindle the fire in the grate for many months."

It was in this place, most perfect type of the wondrous West, this spot where the strength of its ancient forests and the vigor of its new-born cities have met in enduring hand-clasp, that Joaquin Miller stood on a Saturday in mid-July and received the many who came to greet him as poet of the Pacific and acknowledge that he had been a true seer when he wrote of their region years ago:

"Dared I but say a prophecy,
As sang the holy men of old,
Of rock-built cities yet to be
Along these shining shores of gold
Crawling athirst into the sea,
What wondrous marvels might be told!

* * * * *

Here learned and famous from afar
To pay their noble court shall come,
And shall not seek or see in vain,
But look on all with wonder dumb!"

He had not in mind, I fancy, either a generation ago or on that day of his reception by enthusiastic Oregonians, alone or even largely the great progress of the far Western States in things material. It is no small indication of the spirit of the region—its fearlessness and independence of judgment—that it has dared to face the bugbear of all previous American expositions and seems to have proved it after all a monster of only imaginary deadliness. Perhaps most significant of any feature connected with Sunday opening at Portland is the fact that it has not come about in response to

the clamor of the worldly-minded and of a secular press, but that the committee which has worked for it and now directs it has for chairman and secretary ministers of the Gospel, and its entire membership drawn from the clergy of Portland or members of the laity eminent for adherence to high moral and religious standards. Certain restrictions have been imposed and carefully maintained; the gates remain closed until noon, thus removing temptation from the path of those whose feet might not steadfastly tread the way to the morning services of the churches; the "Trail" is closed all day, and no machinery is in operation. All other exhibits may be visited as on week days, and open-air entertainment is provided in concerts by a number of excellent bands (those from neighboring military posts and the young Indians from Sherman Institute lending a satisfying Western flavor), which play at different buildings throughout afternoon and evening.

The scheme of the Sunday opening, however, goes much beyond the mere provision of decent and pleasant recreation for a visiting crowd, which, if shut out from here, might seek it through devices less innocent. The major part of the committee's effort, so far as Sunday is concerned, has been directed to the afternoon service in the Auditorium, and there is apparently much reason for gratification with the result of their efforts, both in what they have been able to provide and in the public response in interest and attendance. The program consists of a simple religious service, wholly undenominational, save that one Sunday will be given over exclusively to the direction of the Roman Catholic Church, but simplicity is made impressive by the excellence of the speakers and the music. Comment upon the committee's success in respect of the former would be superfluous when their roll runs: Robert McIntyre, Emil G. Hirsch, James W. Lee, Merle St. C. Wright, Charles M. Sheldon, Josiah Strong, Newell Dwight Hillis and Washington Gladden. One Sunday afternoon of each month is to be given to the rendition of one of the great oratorios, "The Messiah," if I remember aright, the chorus for these being drawn from Portland and

its environs, and the director being a Portland musician. The music for the weekly service is also supplied by local talent, and if all of it ranks with the *Lakme* Quartet, which it was our good fortune to hear, its quality is far from amateurish. The exquisite voices of these young women and their admirable training in quartet work are well worth crossing a continent to hear.

It has seemed worth while to speak at this length of Sunday opening at the Lewis and Clark Exposition, because it is an experiment which will be watched with interest as a precedent for coming world's fairs. Perhaps its completest vindication is the entire absence of protest from either press or people of Oregon, with the possible exception of holders of "Trail" concessions, whose complaint is not of the opening, but of its restrictions.

Another of the unique features of this Exposition is the manifest realization of a group of Western States of their kinship, their common origin and common destiny. There is rivalry, to be sure, but of that good-natured sort which, tho it may poke a bit of fun, is proud to see, and to let others see, its brothers' success. Thus Portland, since to her belongs the honor of the Fair, is very generous in calling the visitor's attention to the beauty of Washington's and California's State buildings, and has admitted to her scheme of illuminations, shining afar across Guild's Lake, the familiar watchword of the "Tacoma Booster," "Watch Tacoma Grow." And Idaho combines tribute to her neighbor with appreciation of her own merits in the sentiment wrought in her native grains upon the door over against the flaming Washingtonian beacon:

"While you watch your neighbors grow
Keep your eye on Idaho."

To Idaho, I think, belongs the palm for the most remarkable product exhibited by any State. I would not rank above it the huge grizzly made from California fruit nor the picture of the Exposition grounds done in human hair by a daughter of Oregon. It is a square of gayly embroidered canvas bearing this simple legend, "Made by a Gentleman." Modest in all but his choice of

colors was this retiring soul, and the unexpectedness of it makes his offering the more fraught with tender interest. One might have been prepared for it from Rhode Island, or even Pennsylvania, but not here in the haunts of the "cow puncher" and the "broncho buster," and the picture of the gentle creature, sitting apart from his ruder kind, decorating the Christmas sofa cushion and laundry bag of many a lady friend, will long cling in my imagination.

Of the eleven States represented by buildings and exhibits creditable and in some instances remarkable Illinois has undoubtedly sounded the note which will vibrate in most hearts and be longest remembered. She makes no display of imposing architecture nor of giant fruits and abundant harvests; it is only a plain and ugly little house, with an interior adorned by scant and unpretentious furniture. But crowds flock to see the counterpart of the Springfield home of Abraham Lincoln and linger long in the square rooms, whose walls are eloquent with Illinois history. The collection of pictures, made by Mrs. Jessie Palmer Weber, is designed to cover the story of Illinois from earliest times to the present day, and most interesting and pregnant with surprise as well is the array of Illinois Governors, for Louis XIV leads the procession, and George III of England stands before La Salle, while Patrick Henry's face reminds that Illinois was once a county of Virginia. But it is the Lincoln relics which hold the crowd, often with moistened eyes: the marriage certificate with the name of Nancy Hanks, the request to Stanton for a few flags for Tad, the brief note to Grant concerning Lee's surrender, the pictures of Ford's Theater, of Booth and the other conspirators, the mud-scraper on the back porch.

Of all the sights that thrill, of all that gives distinction to Portland's Exposition, none can claim precedence of the figure of the Indian girl, with her papoose strapped to her back, leaning forward to look far out across the lake to the sea. The artist has idealized her doubtless, this Shoshone captive, wife—with a one-third interest—of a Canadian voyageur; but since qualities of mind and heart are hardly expressed in

bronze, who would not wish that youth and grace should be the outward form of that courage which risked her own life to save the papers and scientific instruments of the explorers, that unselfishness which defrauded her own child to share with them her last loaf? The

unveiling of this first statue of an Indian woman, designed by an American woman (Miss Alice Cooper, of Denver), was fitly made an event of importance by the managers of the Exposition and the women of the West.

PORTLAND, ORE.

The Bird, the Rose and the Breeze

BY ANNIE CAMPBELL HUESTIS

"AHA!" said the Bird to the Rose.

"Aha, little Rose!" said the Bird.

"Don't you think that my song,

So merry and strong,

Is the sweetest you ever have heard?

Now singing I fly

To the beautiful sky,

But *you* cannot utter a word.

Aha, little Rose!" said the Bird.

"Aha!" said the Rose to the Bird.

"Aha, little Bird!" said the Rose.

"But dainty and fair

Is the crown that I wear.

I'm the queenliest flower that grows!

You may fly on your way,

But the Breeze loves to stay,

So sweet with my perfume he blows.

Aha, little Bird!" said the Rose.

"Alas!" said the Breeze. "And, alas,

Little Rose, little Bird!" said the Breeze.

"The singers shall fly

From the frown of the sky,

And their nests shall be blown from the trees.

And, stealthy and drear,

A strange breath shall come near,

Rose bloom and rose fragrance to freeze.

Little Bird, little Rose!" said the Breeze.

"Oh I never shall die," said the Rose,

"So perfect and rare am I made.

Would I blossom so gay,

Growing fairer each day,

But to fade, little Breeze, but to fade?"

And the Bird, flying high,

Sang in scorn from the sky

Of his wonderful nest in the shade—

And O, the mad music he made!

Alas, for the Rose and the Bird!

For the high little heart of the Rose,

For the flight, wild and free,

For the nest in the tree,—

Since here are the frosts and the snows.

And the Breeze far and near

Has a footstep of fear,

So wild and so restless he goes,

And mourns for the Bird and the Rose.

HALIFAX, N. S.

Literature

The Magna Carta

FOR centuries Magna Carta has been the theme of lawyers, historians and orators, but until the present no really satisfactory and exhaustive commentary has been produced. The reason for this need not be sought far away. He who would interpret for us the thoughts of the men who gathered around King John on that famous June day must be both a lawyer and a historian; he must understand the structure and workings of the Anglo-Norman feudal system and be able to reason with Bracton and Glanvill. All this has been made possible only in our day by the researches of a number of scholars, among whom may be ranked Stubbs, Maitland, Round and Vinogradoff. None of these has seen fit, however, to write a treatise on the Great Charter, perhaps for Stubbs's reason that all English constitutional history is only a commentary on that document. At last we have in Dr. McKechnie's book* a scholarly and authoritative work based on the results of the latest critical research, devoid of rhetorical flourish and meeting the requirements of the lawyer and the historian.

The book is well planned. An introduction of some two hundred pages gives the proper historical setting and technical information for the study of the text. As the preliminary for the elucidation of the document itself, there are chapters on the events preceding the granting of the charter, on the crown and feudal obligations about which the baronial grievances centered, and on the precursory charters prior to 1215. This is supplemented by a short discussion of the legal and political value of the Great Charter, in which Dr. McKechnie clears away many of the extravagant claims and misinterpretations of later generations. The author does not entirely agree with Mr. Edward Jenks, who maintains that Magna Carta was not a help, but a reactionary and feudal hin-

drance in the development of English liberties; he contends, on the other hand, that some of the clauses were not reactionary, that the charter marks a step in the nation-making process, and that even misinterpretations of the document in later days were of great value in the battle for freedom.

The commentary on the text itself occupies over three hundred pages and is followed by an appendix of important documents and a short but well selected bibliography. Departing from the method of grouping related clauses, Dr. McKechnie has chosen the simpler, but in many ways less effective, plan of treating the sixty-three sections *seriatim* in as many chapters. At the head of each chapter the original Latin clause and an English translation are given. The commentary on each section is so clear that the layman in law will have no difficulty in following the interpretation. Throughout the document is explained in the light of contemporary law and custom; the famous clauses on rights and liberties call forth no indiscriminating rhetoric, and the ancient fiction of the charter guaranteeing trial by jury is effectively disposed of. By applying the principle that the barons at Runnymede were a group of practical men remedying specific grievances and not a French assembly formulating a bill of rights, Dr. McKechnie has gone straight to the real meaning of the charter. The reader who has not kept in touch with recent researches in the period of the Great Charter has a number of surprises in store. The famous twelfth chapter, which is commonly supposed to have enunciated the doctrine of self-taxation, is shown to mean no more than the protection of crown tenants from impositions levied by the king as feudal lord. The twentieth chapter, which provides that the villein shall not be so heavily fined as to lose his "contentment," is not a real safeguard for the peasant, but merely prevents the king's court from taking away from him the property that makes his services valuable to his lord; it does not protect him against his own lord at all.

* MAGNA CARTA. A COMMENTARY ON THE GREAT CHARTER OF KING JOHN. By William Sharp McKechnie. New York: The Macmillan Company, \$4.50.

The *judicium parium* clause, fondly thought to have instituted trial by "peers," is a barrier imposed to protect the barons against prosecutions instituted by the king—an extremely reactionary provision. We need not go into ecstasy over the section prohibiting the sale or delay of justice, especially in view of the practices which continued to prevail in law and still prevail in our day. The man with the long purse has always had many advantages in court, and in the land of King John and the many lands belonging to the descendants of his people there are delays at law which would make a modern Job weep. Dr. McKechnie's work will be wholesome reading for "Anglo-Saxons," and ought to relieve meetings of the bar from many mighty platitudes. We are grateful to our author for clearing up the problems of Magna Carta in so scholarly and definitive a fashion.

Karl Wessely's Fayyum

ONLY a few years ago we knew almost nothing about the Fayyum (Faijûm). It was a name with a local habitation and that was about all. When, then, the papyrus fragments came to be unearthed they were full of "unearthly" names that sounded for all the world like Aztec or some other wild speech, and nobody knew where the places were. A series of scientific operations, in which the different nations have vied with each other, has changed all this. In several cases English and French excavations settled the names of places. Then Georges Salmon, the Arabian scholar, worked up the Kitâb Tarikh el Faijûm, the report of a Governor of the Fayyum, An-Nablûsî, and placed before us the first historical map of the Arabian Fayyum in the seventh century after the Hegira. Ahmed Zeki-Bey discussed that same report and compared the names in it with the old names of places that are still known to the natives. Upon these followed numerous treatises of other scholars, among which I observe one by Dr. Edgar J. Goodspeed, of the University of Chicago.

Prof. Karl Wessely, the indefatigable student of the papyri, who for twenty-five years has been delving into these

scattered fragments and revealing their secrets, has now published a "Topography of the Fayyum (Arsinoites nomus) in the Greek Period." It is in the Memoirs "Denkschriften" of the Vienna Academy of Sciences, philosophico-historical group, vol. 50, and fills 182 folio pages, three maps being added. A man like Wessely, able to take up the Greek or the Arabian sources at will, was needed for this work, and Wessely's energy and exactness were just as necessary. He examined the lists of places that he found in the papyri. Sometimes, as in an alphabetical list, he only got a full form for a name of which a papyrus fragment elsewhere had given a syllable or two, or he only got the certainty that that place was there somewhere at a given time. But sometimes it was clear that a list gave the order in which a tax collector went around, and then he knew that a certain unknown place must be in between two others, or that several unknown places were near some one other the position of which he knew. Of course the names changed as in a kaleidoscope as Wessely chased them through the centuries. Look at Pisaei, for example: that in Coptic was Pishai and in Arabic became Abshayet and frolicked around as Abshây, Abshuây, Beshuâi, and Beshé. Sometimes a town had two totally different names in two different languages, sometimes it had in one language a translation of the name in the other language, and sometimes, as we have just seen, the external form was reproduced with more or less success in the other language. It is interesting to see the ancient Egyptians also used the names of well-known cities over again; out of about twenty-eight that Wessely refers to it will be enough to mention Memphis, Athens, Philadelphia and Samaria; and, just like men of to-day, they even had in the province itself double names. It is further remarkable to see how as the water fails a series of villages vanishes and the villagers pass into other towns and press the workmen there, drive down the price of labor. Professor Wessely goes through the districts and townships and shows how the towns and villages and farms were grouped together, and he gives a long list of the places that have been found

in the papyri, showing so far as he can where they were, when they were there and what the references to them in the papyri thus far known are.

Wessely is, however, not only a scholar, but also an inventor. He has put the results of his long researches before us in a most ingenious way and one that I cannot recall having seen in this shape before. It is a pity he did not patent it. At the close of his treatise he gives Georges Salmon's map based on An-Nablûsî; this is on thick paper and shows the Fayyum in, say, the fourteenth century. Before this map Wessely puts on exquisitely fine paper, that you can read through, his map with the names of places in the Byzantine period, and thus you can see at a glance both what the Fayyum looked like then and how those places fit upon the later places. And then he puts before that a map on similar paper with the places in the Ptolemæo-Roman periods. You can thus see all three maps at once and can at once check the agreements in position. May heaven reward Professor Wessely for his labors. The fact that the University of Vienna does not make him a full professor in the university shows how little good work is valued there.

CASPAR RENÉ GREGORY.

The Odes of Hafiz

HAFIZ could not himself have chosen a better translator than Mr. Le Gallienne. He has a gift of graceful versification which he has often used to express the same rose-tinted views of life that he finds in the Persian. Hafiz has the epicureanism of Omar Khayyâm without his philosophy. He sings of nothing but wine and love. Whatever there may have been in the original to give the Sufis a chance to interpret the songs in a spiritual sense, as biblical commentators have done with the Song of Solomon, there is nothing left of it in this version. Mr. Le Gallienne has not merely translated, he has transmuted the odes into true English poetry, and any one but an antiquarian will prefer to read them in this form rather than in the

literal versions. He has made use of a great variety of verse forms, without attempting to preserve any of the features of the Persian, except that in some cases he has made effective use of the characteristic repeating phrase as in the opening stanza of this ode to Spring:

"Heart, have you heard the news!

The Spring has come back—have you heard!

With the little green shoot and the little
pink bud, and the little new-hatched
bird,

And the Rose—yes! yes! the Rose—

Nightingale, have you heard the news!

The Rose has come back and the green and
the blue,

And everything is as new as the dew—

New nightingale, new rose."

Mr. Le Gallienne makes use of all the freedom of Fitzgerald in expanding, eliminating, rearranging and modifying his material to suit Western taste and to meet the requirements of our poetic forms and conventions. As an example of his method we may compare a few stanzas of the ode on the death of his wife as given in the literal prose translation of Colonel Wilberforce Clarke, in which he preserves the repeating phrase or monorime at end of the lines:

"That friend by whom our house the dwelling
of the Pari was,
Head to foot, free from defect, a Pari was.

"My heart said 'In hope of her, in this city
I will sojourn;'
Helpless, it knew not that its friend a traveler
was.

"Sweet was the marge of the water, and the
rose and the verdure. But,
Alas! that moving treasure a wayfarer was."

This monotonous repetition of the theme "was," impressive as it is, could not, of course, be used in English verse. Some expansion, too, is doubtless necessary. The only fault we have to find with Mr. Le Gallienne is that he is inclined to make his task easy by diluting his poetry until it flows freely. With more pains he might have kept more of the terseness and spirit of the original. But, considering what translations usually are, we have reason to be grateful for such as this:

* ODES FROM THE DIVAN OF HAFIZ. *Freely
Rendered from Literal Translations.* By Richard
Le Gallienne. Boston: L. C. Page & Co. \$1.50.

"This house hath been a fairy's dwelling-place;
As the immortals pure from head to feet
Was she who stayed with us a little space,
Then, as was meet,
On her immortal journey went her ways.

"The moon it was that called her, and she
went;

In Shiraz I had lived to live with her,
Not knowing she was on an errand bent—
A traveler,
To sojourn for a night, then strike her tent.

"How sweet it was on many a summer's day
On the green margin of the stream to lie
With her and the wild rose, and nothing say;
Little knew I
That she was running like the stream away."

Kropotkin's Russian Literature

PETER KROPOTKIN is no less distinguished by the variety of his talents than by the vicissitudes of his life. He was the first geographer to explore, in disguise as a merchant, the route through the mountains from Siberia to China, afterward followed by Russian expansion. He wrote for *The Nineteenth Century* the best summaries ever published of scientific progress in all fields. He joined with the late Elisee Reclus in the publication of an Anarchist journal, and in "Fields, Factories and Workshops" and "Mutual Aid" has given his ideal of a co-operative commonwealth where there shall be no king, capitalist or soldiers to tyrannize over the people. And the kindly personality of the Prince-Anarchist is naively and interestingly portrayed in "The Memoirs of a Revolutionist."

Now he has entered a new field, that of literary historian and critic, and has given us a much needed compendium of Russian literature.* It is not necessary to say here much about his style and method of treatment, for part of the book was originally published in THE INDEPENDENT. Since he has covered the whole history of Russian literature from the earliest time to the present, and included all writers of any claim to distinction, the book is so overloaded with titles, and names, many of them unknown to the ordinary reader and those

he does know made unfamiliar by a new system of transliteration, that it will be more used for reference than for continuous reading. For this purpose it is very valuable, for there is nothing else so comprehensive and competent on the subject in English and there is no literature of which we have more need of information than the Russian.

In no other country now is literature cultivated with so serious and earnest a purpose. This is partly owing to the censor, who drives into the field of *belles-lettres* many brilliant men, who in freer countries would devote themselves to political, religious or social reform. Consequently literature in Russia is not an amusement, the plaything of the leisure class and the trade-mark of culture, but the expression of national aspirations which are forbidden other outlets. As Prince Kropotkin puts it:

"It is thus seen that for the last eighty years Russian art-critics have worked to establish the idea that art has a *raison d'être* only when it is 'in the service of society' and contributes toward raising society to higher humanitarian conceptions—by those means which are proper to art and distinguish it from science. This idea which so much shocked Western readers when Proudhon developed it has been advocated in Russia by all those who have exercised a real influence upon critical judgment in art matters. . . . These few remarks will explain why Tolstoy's 'What Is Art?' produced much less impression in Russia than abroad. What struck us was not its leading idea, which was quite familiar to us, but the fact that the great artist also made it his own, and was supporting it by all the weight of his artistic experience."

Since much of Russian literature is due to humanitarian and revolutionary motives, Prince Kropotkin is a sympathetic interpreter of it, but there are parts of the volume where the writing strikes one as purely perfunctory. He does not, for example, show that delight in keen critical analysis which is manifest in Merejkowski's study of Tolstoy and Dostoyevski. But he has done us an especial service by making accessible information concerning the younger Russian writers whom we want to know something about, now that their stories are being translated into English and their plays are being produced in this country.

* RUSSIAN LITERATURE. By P. Kropotkin. New York: McClure, Phillips & Co. \$2.00.

American Thumb-Prints. Mettle of Our Men and Women. By Kate Stephens. Philadelphia: J. B. Lippincott Co. \$1.50

This is not a scientific book by some follower of Galton, but a volume of essays written in so personal and characteristic a style as to make the title quite appropriate. The subjects are various—Franklin, misogyny and gastronomy, for examples—all giving evidences of wide reading and close observation, hardly appreciated by the reader, because they are carried so lightly on her gracefully flowing sentences. But best of all are two sketches of the early days of Kansas and of its State University, in which Miss Stephen for six years taught Greek, by her watchfulness keeping the lamp of classical education burning steadily, altho the boisterous winds that blow over the top of Mount Oread often threatened to extinguish it. Now there are more buildings on the campus and the flame she once tended as a vestal is better sheltered. What sort of boys and girls they were who sought this "University of Hesperus," as she prefers to call it; what they went there to get and what was given to them have never before been told so sympathetically.

Casual Essays of The Sun. Editorial articles on many subjects. New York: Robert Grier Cooke. \$1.50.

The peculiarities of American editorial writing reach their climax in the *New York Sun*, and it is a good thing to have in book form specimens of this special type of literature. In this way they can be utilized by the college professors of rhetoric as awful warnings and will be largely quoted by the philologists of the future as illustrations of the first appearance in print of certain words and phrases. Besides which they are enjoyable reading—that is, until the reader strikes one that ridicules his own hobby, faith or foible, when he is apt to injure the binding of the book. They treat all subjects, important or trivial, in the same way, briefly, flippantly, wittily. It is always, if we may use a like freedom of phrase, the style of the "Smart Alec." There is no evidence that the writer is restrained by any limitations of conscience, consistency or charity from put-

ting down anything interesting or amusing that comes into his head.

Parisians Out of Doors. By F. Berkeley Smith. New York: Funk & Wagnalls Co. \$1.50.

The Bois de Boulogne, Trouville, St. Cloud, Barbizon, Nice, Monte Carlo, these and the rest of the resorts of Parisians are as familiar to the stay-at-home, if he cares to read about them, as any places can be made by pen and pencil. Nevertheless Mr. F. Berkeley Smith writes of them as freshly and interestingly as tho he was the first to discover them. As he strolls through gambling halls and by woods and sea he makes many conversational acquaintances, and by his sketches introduces them to the reader in the same pleasant way as he did in "The Real Latin Quarter."

Les Classiques Francais. Chateaubriand: *Atala*, René et le dernier Abencérage, préface du Vicomte Melchior de Vogüé. Balzac, *Contes Choisis*, préface de Paul Bourget. Bernardine de Saint-Pierre: *Paul et Virginie*, préface de Melchior de Vogüé. Prosper Mérimée; *Colomba*, préface de M. Augustin Filon. New York: G. P. Putnam's Sons. \$1.00 each.

In this series are to be published a number of French classics, with introductions by distinguished academicians. Being intended for readers and not for the school room, they are altogether in French, with no notes except bibliographical. They are very prettily bound in limp lambskin and are very convenient in form and size. It is, in our opinion, a mistake to follow the French custom of printing such readable prefaces in italics, which few people can read with comfort for a great length of time. But no one could ask for a daintier edition of a favorite book for self or friend.

Talks in a Library with Laurence Hutton. Recorded by Isabel Moore. New York: G. P. Putnam's Sons. \$2.50.

These "talks" amount in reality to nothing more or less than the memoirs of the late Laurence Hutton. Feeling unequal to the work of writing out his recollections for himself, he consented to the suggestion of his publisher that they should be taken down from his lips and

put into shape by Miss Moore, who appears in a manner as their editor, tho they have all been passed under his own hand and may be looked upon, therefore, as doubly authentic. They are chatty, rambling, anecdotal, very personal, social rather than literary, concerned solely with the author, his friends, acquaintances and possessions, and are likely, no doubt, to be found entertaining by those who care for the more gossip, intimate sort of confidences about public characters.

The New Testament in the Light of the Higher Criticism. By Ramsden Balmforth. New York: E. P. Dutton & Co. \$1.25.

There is need not only of careful introductions to the books of the Bible and manuals of Biblical history and religion, but also of popular and non-technical essays, setting forth the results of critical study in readable form, with discussion of the bearing of the newer views upon religious faith and life. Mr. Balmforth aims to supply this need, and in sixteen brief chapters he presents the principal conclusions of higher critics on debated questions of the New Testament. His positions are somewhat radical and he follows frequently the authors of the *Encyclopedia Biblica*. He is outspoken as to the legendary character of the stories of the birth of Jesus and the accounts of the bodily resurrection. But his views as to the untrustworthiness of the fourth Gospel as a historical record, and the need of criticism in the use of the synoptics and his recognition of unhistorical ecclesiastical elements in the early portions of the Acts and the later epistles, are matters in which an increasing number of scholars are coming to agree. Mr. Balmforth's discussions are bold, almost blunt, but they are reverent and well considered, and they will do good service in promoting familiarity with the achievements of Biblical scholarship in its most important field.

The Accomplice. By Frederick Trevor Hill. New York: Harper and Brothers \$1.50.

We do not often review detective novels. There are too many of them and

they are so much alike. But this one is worth mentioning because of the unusual way the mystery is unraveled, and those who enjoy being kept guessing as to who is the guilty man or woman will find here a good opportunity for the exercise of their powers.

Pebbles

If a husband doesn't like to have his wife save the old love letters he wrote her, let him write her new ones.—*Atchison Globe*.

....This is a delicate way of putting it, isn't it? "My dear," he said to his wife at table, "I begin to think there are a few misprints in your cookery book."—*Dublin Mail*.

...."Now, boys," said a Sunday school teacher, addressing the juvenile class, "can either of you tell me anything about Good Friday?" "Yes, ma'am, I can," replied the boy at the foot of the class. "He was the fellow that done the housework for Robinson Crusoe."—*Chicago Journal*.

...."Yes," said the conceited bore, "she was quite frigid when I called, but she became more pleasant the longer I stayed." "I understand," replied Miss Peppery; "the longer you stayed the nearer approached the time of your departure."—*Philadelphia Press*.

....They had started for a stroll. "There is our minister," he said. "I'm going to ask him to join us." "To join us? Oh, George, this is so sudden! But hadn't you better speak to papa before engaging the minister, dear?"—*Spare Moments*.

....HIS REASON.—*Smithkins*: "There's old Biffkins. I don't care to meet him. Let's turn this way. Last summer I requested a loan of twenty dollars." *Tiffkins*: "Well, he ought to have obliged you; he's rich enough." *Smithkins*: "The trouble is, he did!"—*Smart Set*.

A NONSENSE CALENDAR.

The Oyster is a stupid thing;
He cannot dance, he cannot sing,
He cannot even read or write—
Indeed, he isn't very bright.

When in September school begins
(A school of fish, I mean),
The fishes come with shining fins
And sit in rows with happy grins,
But Oyster isn't seen.

He just lies lazy in his bed,
Altho 'tis day;
And so to oystermen o'erhead
He falls a prey.

—*St. Nicholas*.

Editorials

The Riot in Tokyo

WE have had worse riots in half a dozen cities in the United States than was the riot in Tokyo last week; vastly worse ones in a dozen cities in Russia within the year. A chief difference between them is that while Russia and the United States have seen mobs rise against being drafted for war, these rioters were angry because they could fight no longer.

The authorities had no difficulty in quelling the riot, but it has left a bad taste and some anxiety. It is not strange that the people were much displeased that indemnity had to be yielded. Why a half of Sakhalin should have been given up to Russia even we cannot understand. Nevertheless it was necessary to forego indemnity, and there may have been reasons, after the offer to yield north Sakhalin for money, why it should be given up for nothing. But the reasons for the failure of the Japanese envoys in securing their extreme demands cannot be made publicly known, and the mob in Tokyo only knew the failure. They did not consider the immense gains that were made and were allowed by the Russians—Port Arthur, Korea, the better half of Sakhalin, the recession of all Manchuria to China, the removal of Russian power from the Pacific. All these are glory and fruit enough of the Portsmouth Treaty.

But what now concerns us in this country is the indication of a popular feeling in Japan against the United States. If the Japanese believe that the continuance of the war would have given them great further advantage, and that President Roosevelt's intervention stopped them in a career of quick conquest they may naturally be angry with Mr. Roosevelt for his interference. Indeed, his opponents of the American press were all ready to attack him for "butting in" where he was not wanted, and only his unexpected success has turned that criticism into praise. Of course, any Japanese feeling against the

President's action is turned against the country.

But the Japanese have too much good sense to fail to know what is the kindly sentiment of America toward Japan and what is the real service done to her by this peace to allow anything more than a temporary ill will on the part of the more inconsiderate people. We hear of a number of Christian churches injured in the riot, but so far as we can judge this was not specially directed against Americans, and hardly against Christianity. If the Christians wished shops closed on Sunday, or refused to contribute to Buddhist temple funds, this may be a sufficient explanation, and the feeling will pass away. Christians have been too active in this war, as high officers in the army and navy, and have shown too much sympathy with Japanese patriotism, to allow the feeling to be at all serious. We expect, rather, a more rapid growth of Christianity in Japan.

There will be a little class of bitter critics of Christianity here at home who will try to show that Christianity has no superiority over Buddhism, as shown both by the victory of Japan in war against a Christian Power and by the magnanimity of her treaty of peace. We have never heard of it before, but there has sprung up a "Hindustani Progressive Association of New York City," which has advertised itself by sending a glowing tribute to Baron Komura, telling him that "through His Majesty's goodness of heart Buddhism triumphs over Christianity, and through His Majesty's wisdom the Orient has become secure in the future from the perennial wanton excursions of the freebooters of the West." But they do not represent India or Japan. There is far more danger to both American business and missionary interests in China than in Japan, and that wholly the fault of our own legislation.

The wise Elder Statesmen of Japan have acted prudently and in perfect harmony in the conclusion of the peace, and the second thought of the people will approve their act. There is a national ebulli-

tion of disappointment, but it will pass and Japan will enter on a fresh era of industrial development which will draw her redundant population to Korea, Manchuria and Sakhalin, as well as to Formosa. An immensely strong empire will that be, having a mighty influence in China, and able to enforce peace in the East against "the freebooters of the West."

"The Bargain"

RECENTLY we published a minister's wife's confession of her husband's faults. In this issue another one tells on the deacon and elders in her husband's church. Now if some one will give a Parsonage Aid Society's view of preachers' wives in general we shall have another chapter dealing with the frailties that are peculiar to the good. But we shall find it increasingly difficult to count the beads of their virtues, which is more encouraging to the struggling souls of sinful saints. And so, if anybody knows anything good about the good, let them tell it. Apparently we shall not hear of it from ministers' wives, who are supposed to be intimately associated with that class of people.

In a former editorial we held that the preacher is mere man as much as any other, that he is probably tempted oftener and more subtly, and that for these reasons he is better than the average man when he maintains the average standards in morals. As for the deacons, elders or stewards who compose "church boards," we all know that they are a varied type, often more difficult to manage than the sinners who sustain purely complimentary relations to the pastor. And the things they do for the welfare of the church are often as harrowing as those recorded by the preacher's wife in this issue. But we must not forget how many of them kindly, cheerfully endure old, inefficient or lazy pastors rather than hint for a resignation.

And granting the justice of her complaint, we should bear in mind how regnant human nature is. It may wear a hymn-book smile in the church pew, but really it is the same dear old incorrigible thing there that it is elsewhere. Men are not deliberately mean in the church; they simply have not learned how to do good

with the same facility that they act naturally. Church boards are usually composed of the oldest, richest, most influential men in the membership. And when one of them has dealt unscrupulously in stocks and bonds, or sold goods with a mercantile eye upon his fellow man all day, if he attends a vestry meeting in the evening he is apt by an association of ideas to swap off a feeble pastor for a healthy one. His business instincts have commercialized his ethics.

Now the convalescent pastor does not need more piety in his dealing with such a man, but he should act according to his secular understanding of a nature that will remain commercial in the church, in the world and even in the city of Heaven if he can get a contract there for paving its streets or building its temples. He is not as a rule intelligent in the management of this kind of church pillar. He does not give him a "square deal" in a Gospel suited to the exigencies of particular needs. The old financiering deacon cannot put it into words. His vocabulary is not fitted to these superfine values in spiritual commodities, but he feels vaguely that he is not getting his dues, and eventually he votes for a preacher who hits his nail on the head a trifle harder. This happens oftener than those preachers are willing to admit who walk too softly before their vestrymen. The vestrymen are honest after all in their shrewd worldly way, and they do not like being cheated out of their pastoral chastenings. More men stay away from church because ministers lack a definite courage in delivering their message than stay away because they have taken offense at it. And more preachers resign on this account than for the sake of their health.

Now a word about the preacher's wife. Does she enter a different vocation from that of other men's wives, and is she really "thrown into the bargain," not counted or paid for? She may have brought this state of affairs upon herself, but as a matter of fact the situation does not demand such sacrifices of her as have been described in the article above referred to. Unless she admits that her husband is less efficient, she is no more his deaconess than the lawyer's wife is his clerk or the doctor's wife a sick

nurse. There is such a thing as being too good a pastor's wife, and this one seems to belong to that class. She apparently crippled the church at every point where she could do some one else's work. Nothing can be more enervating to the life of any organization than to have some one in it assume too many functions upon which its vitality depends. It is as often wrong as right to assume other people's duties when they are neglected, because this trains them in neglect.

But the gravest fault of this admirable, misguided woman is suggested by the following quotation: "John," she writes, "entered the ministry solely for altruistic motives. . . . I entered the profession of a minister's wife simply for the love of a man." This is where blasphemy begins for many a woman in a similar position. Having no spiritual mind for a vocation that is distinctly spiritual, she goes as far in the ministry as custom allows, "for the love of a man." People are very keen. They know who is "called" and who works simply for the glory and profit of her own. She cheats them to this extent, professing an interest in their souls which she has chiefly in the success of her husband, and they cheat her by getting her to "play the organ five months" without paying for her services. The writer knows a minister's wife who responds with every evidence of contrition to the first invitation to penitents during a revival in her husband's church. "It encourages the young people to come up when they see me go and keeps the service from falling flat," she once explained, having no conception of the shocking deceit of her conduct.

To love one's husband is a becoming virtue in any woman, but it is an immoral motive for leading in prayer or presiding over all the orphaned female "boards" and societies in his church. And the proof of this is to be seen in the fact illustrated by this particular preacher's wife. Her real relation to the church in the incidents she describes adds to her contempt and indignation, but not to her Christian character. Preachers and "church boards" are far enough from perfection, as it is; let their wives be all

the more discreet about rushing in where angels fear to tread.

Meanwhile let the minister's wife and all the others remember that this is a difficult world to live in any way we take it. And when every one who has been trampled upon or sacrificed rebels, we shall be further than ever from the Kingdom of Heaven.

The Lioness and the Hare

ONCE upon a time, but many years ago, a hare boasted of her large family to a lioness. The lioness admitted her quantitative deficiency, but added that her one offspring was a lion. It was a conclusive retort—at the time. The lioness had no need to be disquieted by the success of her rival in maternity; indeed, she could rejoice in it, for there was no danger that the hares, however numerous, would crowd out the lions; on the contrary, if there were more hares there would be more lions and better fed.

Now, however, conditions have so changed that the reply of the lioness is no longer satisfactory. We have put a stop to killing as a factor in the struggle for existence. The lion has his claws trimmed and his jaws muzzled by law. The battle is not to the strong, but the race is to the swift—breeder. The lion and the hare are compelled to live peaceably together and are placed on an equality. Questions are decided by counting noses, not by weighing brains. There is no reason to think that the propaganda of Neo-Malthusianism will ever influence the hares, nor that legislative bonus or Presidential advice will increase the size of leonine families. Consequently lions are becoming extinct and hares are multiplying all over the earth. In its modern form, therefore, this fable teaches that the hares are bound to beat the lions in the long run, no matter how much bigger the latter may be or how much louder they can roar.

And having extracted this lesson from the fable we drop it right here. A fable is a single-barreled weapon and if you attempt to get more than one shot out of it it is likely to explode, to the injury of the user. So we notify the reader that we are not going to discuss whether the

savage and predatory lion is a nobler beast than the meek and vegetarian hare and better fitted to populate the world; still less are we going to identify with the lion and the hare any particular classes or races.

We only use it to call attention to the fact that Bulletin No. 22 of the Bureau of the Census, dealing with the birth rate of the United States, is more important than all the public documents that discuss the tariff and the currency. For the future of a country depends chiefly upon the character of its population and this upon who were their ancestors. Political forms, educational methods, and social institutions are questions of minor importance compared with the fundamental and determining one of heredity, for good laws will not restrain a lawless people, education will not make the stupid wise, and the more refined and complicated the social machinery the greater the danger from incompetent engineers.

Birth rate statistics are notoriously inaccurate on account of imperfect registration. In New York City, for example, not more than three-fourths of the births are recorded in compliance with the law. But the proportion of children under five years of age to the total population—or, better, to the number of women from 15 to 49 years of age—gives an index of the birth rate much more reliable than that from registration. These data are obtainable from the Federal censuses and it appears that at the beginning of the century children constituted one-third the total population and now are less than a fourth of it. The proportion of children to women of child-bearing age was in 1900 only three-fourths of what it was in 1860. If we could exclude immigrants from consideration the decline in the proportion of children would be much more marked, for there are 462 children for every 1,000 native women and 710 children to every 1,000 foreign-born women. Whether General Walker was correct or not in saying that our population is no greater now than it would have been if there had been no immigration, it appears from the tables that the direct accompaniment of increase of immigration into a State is to reduce the native birth rate. The fecundity of foreigners has had the

very curious effect of raising the birth rate in our large cities to a number almost equal to that of the surrounding country districts. In New York only one-sixth of the births registered are of American parentage. We have always stood for the "open door" policy for our own country; we believe in "a fair field and no favor," but we regret that the older American stock, which, as we have been led to believe by orations on Fourth of July and Forefathers' Day, had some peculiar excellences, is not holding its own in the country where it had the first start.

Of much more importance is the fact that the birth rate decreases with prosperity and intellectuality. Among the older States those which are the richest and have the most schools, colleges and libraries, and have produced the largest number of men of ability and national usefulness in politics, literature, invention, science and business, have the smallest proportion of children, while those States which are the poorest in all these things are richest in children. Statistics from England prove that there the professional and intellectual classes and abler and more capable working and artisan classes have much smaller families than the same classes 50 years ago, and that as you go down in the social grade the reduction in the size of the families is less marked. Harvard University would be a very small institution if it depended for its students on the children of its graduates. This is not due to natural sterility, nor largely to fewer and later marriages, but to intentional limitation of the size of families, and there is no use trying to disguise or ignore the fact. The stupid and reckless are leaving more children to form the population of the future than the wise and prudent. And since this is voluntary, and not inevitable, or accidental, it is, as Professor Ross called it, a true "race suicide."

In spite of all the inequalities and injustices of our social system it is true in general that the educated classes are the intellectual classes, and that if the population were bisected at the line of the average income the wealthier half would be the superior in natural ability. Now since these classes are becoming relatively fewer in geometrical progression, evolu-

tion is working backward in the civilized world. To this cause Prof. Karl Pearson attributes the physical deterioration and dearth of intellectual ability in England.

His statistics, which, however inadequate, are the best we have, show

"that pairs of exceptional parents produce exceptional sons at a rate more than ten times as great as pairs of non-exceptional parents. At the same time, 18 times as many exceptional sons are born to non-exceptional as to exceptional parents, for the latter form only about $\frac{1}{2}$ per cent. of the community."

It is this exceptional stock which is, under modern conditions, most apt to become extinct through abnormal modes of living, particularly those of the city. As Professor Ross puts it:

"The great glittering cities attract the brightest youths from the farms and tempt them to strain for the prizes of success. But what with shortened lives, bachelorhood, late or childless marriages, and small families, the cities constitute so many blast furnaces where the talented rise and become incandescent, to be sure, but for all that are incinerated without due replacement. Thus may run down a race keyed up by the migrations of more than two centuries."

A Bishop on a Presbyterian Liturgy

IN *The Churchman* Bishop Coleman, of Delaware, gives his comments on the proposed Presbyterian Book of Common Worship. On the whole he likes it much as an approach to the proper worship by liturgy, but finds some points seriously to criticise. It is of interest to consider what they are.

One criticism is that prayers should have been credited to the Anglican Prayer Book which Dr. Van Dyke has credited to the older sources. In this, it appears to us, the criticism is not well taken. In devotional literature, as in biological nomenclature, we must go back to the earliest authority.

A more serious fault is found in the order for the celebration of the sacrament of the Lord's Supper. The Bishop does not like it that it is not mandatory for the minister to lay his hand on the plate and the cup. Why it should be mandatory in a free country we confess we do not see. Of course, he does not

like it that the elements are distributed by the elders, instead of being administered by the minister; but "it is a considerable satisfaction to find, on p. 79, a prayer in which the faithful departed are distinctly remembered."

The order for the baptism of infants the Bishop of Delaware finds imperfect, for "there is no sanctifying of the water and no signing of the cross." That provision should be made for the baptism of adults without their being received to the Lord's Supper strikes him as "surely a blemish."

He is pleased to find an order for "confirmation and reception to the Lord's Supper," and that the words to be said by the minister are "exactly what our bishops use at the time of confirmation"; but he regrets that it is only an "unfortunate permissiveness" that the minister should put his hand on the head of the kneeling postulant.

The rubrics for marriage and funerals meet the Bishop's general approval, especially the fact that in the former "the word *obey* finds its proper place." And in the funeral service he is glad that "the faithful departed are again remembered." The order for the ordination of ministers is also found as good as could be expected, altho "of course it lacks some of the essential ideas which are incorporated in our own."

But the main satisfaction which Bishop Coleman finds in this new Presbyterian Prayer Book is in the fact that it approaches the Episcopal order of worship. The committee which compiled it he thinks "were prepared themselves to go further than they recommended, but were restrained by the fear of jeopardizing their work as a whole," and "for the same reason, perchance," refrained from "mentioning our Prayer Book in instances of quotation therefrom," preferring to give the original sources.

From his own point of view the Bishop is quite justified in his criticisms and in his approval of liturgical development in the Church in which Saint Jennie Geddes is remembered with a certain honor. Yet we are far from convinced that it is the general desire of the Presbyterian Church that there should grow up any such uniformity of liturgical

worship as the committee desired. There are great advantages in written prayers and as great disadvantages. We recall that once Professor Park preached a sermon before the Congregational State Association of Massachusetts which was so tremendously vigorous an attack on liturgical worship that it offended not only Episcopalians, but also some of his own denomination, one of whom called him to task for it. "But," said Professor Park, "I read the sermon to you before I preached it, and you did not object." "True," replied his friend; "but when you preached it you put the devil into it!"

A Good Man for a Town

In a number of Western towns public-spirited individuals will during the early autumn award prizes for excellence in things that make for municipal improvement. In two cities these rewards will be given to those families whose lawns have been selected by judges as the most attractive in the community. The published list of prizes restricted the contestants to those owning homes of moderate value—approximating \$3,000. There were further requirements regarding the hiring of workers, but generally the means were not considered; results only were asked. It cost the donor in one instance \$100; in the other \$200. Then there are awards elsewhere to the boys and girls who maintain the handsomest flower beds and who possess the best tended garden patch.

The effect of such efforts to secure interest in the beautifying of homes is visible in many ways. In one town over one hundred lawns were judged by a committee consisting of the editor of the daily paper, a minister and a florist, and so excellent were the greater portion that a long list of honorary mentions was necessary. "Even where no attempt was made to compete for a prize," says one of the committee members, "a distinct influence was visible, the example of neighbors' lawns being unconsciously felt in arrangement and care of flowers and shrubbery. The value of the prizes was gained many times over by the people of the city and the effect will by no

means pass away with the end of the season."

One of the favorite phrases of growing cities adjures all to "make this a good town to live in." A capital method of doing it is to acquire good men for the town—such as those who, in the instances mentioned, encouraged the fairer side of municipal life. Those who will unselfishly do this serve their fellows in distinct measure and deserve much encouragement. It is one thing to devote money to the improvement of one's own lawn frontage or to one's own block; it is quite another to give it to the day laborer over in the flats because he succeeded in raising a pretty bed of pansies. Yet the effect on the community is greater in the latter case than in the former, as it is likewise greater on the donor. It is not only one bed of pansies that is secured; all over the town are beds of posies to delight the passer-by and to uplift the possessor.

The "good man for a town" is not necessarily the one who gives a massive library building or founds a new college; such donations sometimes become burdens in no slight degree. He who does what he can to foster a spirit of municipal pride, who inaugurates a healthy rivalry in making the city or village attractive or who adds to the good feeling citizens naturally have for their home town accomplishes much—oftentimes more than the giver of greater gifts. It requires fortunes to establish libraries and found schools or colleges; it requires only modest donations to start a movement in favor of a better place in which to reside.

In the building of the new towns in the West only here and there has there been made provision for the esthetic side of the community's development. Parks are omitted, because towns lots may be sold where the park should be; boulevards are not planned, because they would take up too much precious ground; lawns are neglected, because everybody is too busy making money to give attention to such things. The commercial side of the town is developed at the expense of the esthetic and the place acquires a reputation as a "rustler" rather than as a fine town in which to bring up a family. Thousands of such

communities, large and small, are awaiting the inspiration of the right man or the right woman to awaken the other side of the people's aspirations and desires.

It requires no vast wealth—a gift of \$100 set all the young folks of a town of 8,000 people planting out flowers. It does, however, mean a hearty good will and a disposition to sacrifice time and effort for the advantage of one's fellows. This is not always an easy task. It absorbs a good deal of the energy that may be used to advantage in one's own business. There are meetings to attend, committees to form, duties to assume, and criticism to withstand, for some will see self-interest in it all, however much this feature may be eliminated.

But in the end it pays. One little Western town had a few years ago a lawyer who loved literature. The place had been a cattlemen's headquarters; it was a "bad" town in its early days; it had scarcely heard of Shelley or Lanier; the book store dealt principally in paper bound novels of the lighter sort. He organized a group of students, taking in the ministers, the principal teachers, the editors and such others as were promising material. He opened his own home, he purchased books and pictures, he laid out a course of discussions and readings and mingled enough social life with it to keep up the interest. The influence of that group changed the outlook of the town; it brought an era of good literature, the best literature; it resulted in a public library and the sale of real books at the corner book store. The lawyer was a good man for the town and all mourned when he went away.

Probably better opportunity exists in the new, growing communities of the West for helpful personal effort than in older settled portions of the nation, but nowhere is there lacking a field for this sort of influence.

The Telephone Problem

THE older telephone company failed to grasp the entire problem. They undertook to serve commercial interests alone, overlooking the application of the telephone to agriculture and home life. This is not to be wondered at, for there was their

chief profit, and so the smaller profits of the country districts were neglected. But early in the nineties the fundamental patents expired and independent companies multiplied. These were largely expressive of the fact that the smaller towns and rural districts demanded the telephone quite as much as the greater centers of population. Competition spread all over the land, but it also reached out into the country, where the Bell company had neglected to plant itself. Prices not only fell, but, as material grew cheaper through competitive production, service became greatly improved. The present apparatus and service bear no sort of comparison with that which was afforded at a much higher cost in 1890.

The first impulse in rural districts was to establish routes of a co-operative sort. Farmers hitched wires to trees and to hop poles, but the service was poor and very irregular. It needed an expert to oversee the instruments and keep the lines in order. Long distance service was soon demanded, and for this reason coalescence was quite as requisite as better supervision. The question very soon became that of local companies or of municipal plants. The trouble with municipal plants has been to secure skilled electricians and operators. That such plants will come into vogue is highly probable and desirable, but for the present independent local companies are most economic and efficient.

The only cities in the United States now retained by the monopoly are New York, New Orleans, Cincinnati and San Francisco, while the whole stretch of rural districts is practically out of their hands. New York City has been especially handicapped by exorbitant rates. The smaller cities of the State are far better served and at prices incomparably more reasonable. Philadelphia has independent business service at \$80 and home service at \$48. Buffalo pays for single calls 5 cents, New York 15 for the same service. Cleveland gets unlimited service for \$72 per annum; Indianapolis gets unlimited and excellent service for \$40 each 'phone, and St. Louis pays \$72. All the other larger cities of the United States are paying in the same ratio, with the

exception of those we have named. Of course, New York City is seriously handicapped in its business and social concerns by this state of affairs. Relief must be secured from some direction—whether by municipal action or by competition remains to be seen.

To some extent the telegraph may be considered as separated from common everyday life, but telephone service is a necessity of existence. We cannot get on without it any more than we get on without water and light. The possible popular use of the telephone is unlimited. In Minneapolis and St. Paul before competition—that is, before 1898—service was rendered to 5,000 people at \$120 a year; now at less than half that price, under a system of competition, over 25,000 people are served. The same story is told everywhere. In Los Angeles the home telephone company has 18,000 'phones, or one for every 8 men, women and children. The telephone mileage in Iowa increased last year $3\frac{1}{2}$ times over the previous year. When the Bell patents ran out there were 300,000 telephones in the United States; to-day there are over 3,000,000. The story from the country is even more startling. Rural service is covering the whole land and keeping pace with free mail delivery. Indiana reports that 25,000 of its independent 'phones are in the houses of farmers—an interesting fact when we remember that before competition not a farmer in that State had a telephone in his house. The educative force of the change is fully equal to its economic advantages.

Witte
Jokes

"What do you do with your political prisoners?" asked Mr. Witte of the keeper of the Tombs in this city. "We have none," was the reply. "We have in Russia," replied Witte, with not a change of expression. It was his little joke, for he knew well enough, as he had previously asked a similar question of the Commissioner of Police, and had got the same answer, and he must have known long ago that they do not have political prisoners in England or America, imprisoned for their uttered opinions. That is a specialty of

criminology prevalent in Russia, and the adoption of freer speech there would do more than anything else to create stable political conditions, and we imagine that Mr. Witte thinks so, too. So it was one of his little jokes that he asked last Sunday at Mount Vernon if in this country special rank was given to the family of George Washington. He knew well enough, but it was only his way of recalling to himself that in Russia princes indistinguishable and barons innumerable hold social precedence over himself, a mere plebeian, altho he is first statesman of the Empire, by merit of pure ability. He knows that the aristocratic system is bad, but he can only make a bit of veiled pleasantry over it.

Against
Arbitration

While there is so much talk about a sympathetic fellowship politically with Great Britain, there are the same old antagonistic forces constantly breaking forth. One of these is seen in the organization of branches of the Anti-Anglo Alliance League, chiefly under the direction of men of Irish birth or near ancestry. They declare that the appointment of Robert Bacon as Assistant Secretary of State foreshadows the ratification of an arbitration treaty with Great Britain, like that which was defeated several years ago, referred back to the Foreign Relations Committee of the Senate last year and will come up again the coming winter. A call that has been issued asks attention to "the spirit of the Declaration of Independence [possibly meaning Washington's Farewell Address] setting forth the dangers of entangling alliances," and they warn against "all foreign complications leading up to an invasion of this doctrine." They are organized to combat this treaty, which they declare to be against the Constitution as well as against the Declaration of Independence. While our citizens of Irish birth or origin are organizing to prevent the passage of a treaty of arbitration with Great Britain the rest of the world moves forward in the direction of peace. Brazil has signed a general treaty of arbitration with both of her powerful neighbors, Chile and Argentina. Only the United States fears to join in mak-

ing The Hague what she proposed it should become, the arbiter of the world.

American Citizenship in Turkey

A very serious matter is opened by the trial and condemnation in a Turkish court in Constantinople of an Armenian who is a naturalized American citizen. The civilized world does not recognize Turkish courts as competent to try their citizens guilty of an offense. They must be tried by a consular court of the country to which they belong. An American citizen, one Vartanian, was condemned and sentenced to death for murder, by the Turkish tribunal. The Turkish Government claimed that under its law he was still a Turkish subject, as he had emigrated without permission. Thus both countries claimed him as citizen, the American by his own will and the Turkish against his will. This, we say, is a serious clash. So far as we can see our claim is the more just. If a country makes it difficult to renounce citizenship, and a man escapes to another country, he has the right to protection, even if he returns to his native land. This Vartanian may be a murderer for all we know, but he has the full rights of a citizen to American trial. A serious matter of doubt has sometimes been involved, which needs adjustment by treaty, whether a man who seeks American citizenship and then returns to live in Turkey does not after a time forfeit his American rights, but this is not such a case; and, for aught that is now reported, it would seem to be the duty of our Department of State to protect this man by as vigorous measures as were taken in the case of Koszta against the Austrian Government in 1852.

Changes in Rome

A liberal spirit seemed to have entered the Vatican with Leo XIII. The scholarly and advanced clergy of the Church began to rejoice in its effulgence. Specially is this true of the liberal-minded American prelates and clergymen. A congenial spirit our countrymen fancied they had met in the Rev. Father David, O. S. P., whose

family name, Fleming, bespeaks his Irish birth. Living in Rome, he was ever at hand, always busy, and his aid was freely sought and given. When, however, Leo XIII slipped into the hands of the Jesuits, and Americanism was condemned, then, like the sheep after the shepherd, Father David followed. Thereafter he was as great a reactionary as Rome knew. Soon he got his reward—membership on the Biblical Commission and, if our memory be correct, also the office of secretary. Moreover, after the death of the General of the Franciscans, some years ago, he was *locum tenens* and a strong candidate for that dignity. He failed to win it, as also the Red Hat, which seemed at one time within sight. But now Pius X finds the Franciscan *too liberal*, gives him his *congè*, and sends him home to his native land. Whether on the banks of the Liffey, the Barrow, or the Lee, Father David, like many of his countrymen at home and in America, will have time and chance enough to ruminate on the ebb and flow of Roman politics. If David is too liberal, what must be said of our clerical Solomons? Meanwhile we are concerned over the Biblical Commission.

Race Migration

The two main causes which produce race migration are lack of food and oppression. A growing population finds that the land will not support them, and they must move elsewhere. Professor Panspelly shows in his report to the Carnegie Institution on his expedition to Turkestan how the gradual desiccation of the country during thousands of years has caused wave after wave of population to flow over the more fertile regions to the south and west. So the youth of central Europe and of Italy are now seeking homes where labor will better support life. But it is oppression that is driving the Jews out of Russia. We are not apt to think of this cause affecting the movements of people in this country, but the matter is brought to us by the report on conditions and duties presented to the important Afro-American Council, which lately met in this city. It was the most representative body of the race ever held in this country, and it adopted a series of recommendations,

among which were the investigation of lynchings, the legal testing of laws meant to suppress suffrage, the securing of equal civil rights by a Constitutional amendment, the insistence on prison reform, and the encouragement of both individual and higher education. But we are interested in the further advice that there be "a healthy migration from terror-ridden sections of our land to States where law is respected and maintained." To be sure, the fuller argument appended to this recommendation seems to take away its force, inasmuch as it was recognized that, apart from the larger freedom of the North and West, the South affords vastly more favorable economic conditions for the negro, so that his future is more hopeful there if the racial prejudices and unjust legislation can be relieved. And this they expect. It is very pleasant to observe the optimistic expectation of a change in public opinion at this time, when many are inclined to think that everything is going wrong. And now is no time for division in the ranks of the negroes themselves. Their best leaders, such as Bishop Walters, president of this hyphenated Council; T. Thomas Fortune, who wrote this report; Dr. Washington, and Professor Du Bois, all believe in higher as well as industrial education, and all believe in claiming their political rights, and they ought not to break into separate camps.

The origin of the yellow fever in Pensacola, Fla., was undoubtedly from a man by the name of Judge Ham, who died August 6th. While some of the physicians admitted privately that the case might be yellow fever it was announced that he died of hydrophobia, altho he had not been bitten by a dog or other animal later than eight years ago. Just at the proper time the other cases developed and in the immediate center, or focus, where Judge Ham was sick and died. But Pensacola has been more interested during the past four weeks in devising city laws to prevent the colored people from riding on certain seats in the street cars than they have been in cleaning up the city or even looking after yel-

low fever cases. Montgomery, Ala., had one case of yellow fever and acknowledged the fact, isolated the case and the fever did not spread.

This is an apt description of the oligarchy which controls the party machines in cities and States, as given by a well-informed observer:

"First, saloon keepers, gamblers and others who engage in business that degrades; second, contractors, capitalists, bankers and others who can make money by getting franchises and other property of the community cheaper by bribery than by paying the community; third, politicians who are willing to seek and accept office with the aid and indorsement of the classes already mentioned."

Of the three the second class, the respectable corrupters of the people, are the worst. The thugs of the first class are their ignorant agents; the third class are their political go-betweens.

A case of noble self-sacrifice is told in the papers of last week. The "Savonna" was wrecked in a storm on Lake Superior. The lifeboats, strange to say, would not hold all the crew—there were no passengers—and Captain McDonald, of North East, Pa.; the first mate, the second mate and the wheelsman remained on board to certain death, and sent off the crew, whom the captain felt it to be his duty first to save. That is the ethics of the captain's office. He is the last to be saved in case of wreck.

We have nothing to boast of in the way we have treated our native Indian tribes, and the white race in South Africa, English and Dutch, treat their native tribes no better. At Cape Town a native is not allowed to step on the sidewalk. We see that in the Transvaal what is called the "Progressive" Associations have urged the Government—and they are likely to succeed—to refuse to allow any native to purchase land in the country which a few years ago was all their own.

Insurance

Queer Mutuality

It is generally understood that the cardinal principles of mutual co-operation in a corporate capacity consist of: Representative self-government by the members; equitable distribution of all the burdens; and equitable distribution of all the benefits. These are fundamental; and if for any reason either of them is modified—whether upon inclination of the whole membership; through subterfuge on the part of a small, but powerful, minority; or as the result of neglect by the large and indifferent majority—mutuality is destroyed, representative government is a form without substance, the burdens are fitted to the shoulders of the many and the benefits pass into the possession of the few. Mutuality is almost susceptible, in practice, of being made to conform to the theory upon which the system is formulated.

The system as applied to the conduct of the life insurance business is of ancient origin, the Equitable Life Assurance Society of London being the most distinguished existing example. That institution is now in its one hundred and forty-fourth year, and while its territory is circumscribed and its operations comparatively insignificant, the results to its members probably exceed those of any other corporation similarly engaged. It is claimed that for every £1,000 for which the Society became liable on account of deaths during the nineteenth century it paid to policy holders £2,121. To affirm that all the principles of mutuality were faithfully adhered to would be difficult for one not intimately acquainted with the Society's history, but it is perhaps no exaggeration to assert that they were substantially observed.

The investigation into the methods of American life insurance companies by the committee of the New York Legislature, commencing last Wednesday, has already revealed an astonishing condition of affairs. It appears that in so far as their governments are concerned, these companies are more completely "close corporations" than

any of the stock companies. The testimony adduced shows that the Mutual Life, with at least 500,000 qualified voters, casts about 200 votes at its annual elections; the New York Life, with about 800,000, polls from 500 to 2,500; the Mutual Benefit, with 175,000, shows up with about 2,000, and the Connecticut Mutual, with something like 40,000, can muster but forty or fifty at the ballot box. In each case the bulk of this vote is cast by employees at the home offices, supplemented occasionally by a few proxies running to the principal officers. In short, the whole system is a farce. The managements are perpetual; they renominate themselves for re-election, and do all the voting.

What is the cause? The indifference of the policy holders. What the result? The perpetuation in power of men without regard to fitness or merit; the administration of vast sums of money in their own interests in such a way as to avoid any evil consequences resultant from the usual operations of the law; the indulgence in extravagant practices, greatly to the injury of the policy holders; the whole constituting a menace as well to the interests of society at large as to individual members of the companies.

What is the remedy? The answer cannot be given off-hand. Perhaps there is none. One thing only is certain, and that is that if the policy holders will it, the so-called mutual companies can be made mutual in fact. This they can accomplish by voting at annual elections. In this connection we would recommend for investigation and study the systems of government in use by the secret societies and fraternal orders. ❀

THE WASHINGTON LIFE INSURANCE COMPANY, of which John Tatlock is President, reports an increase in income and surplus and a decrease in death claims, office expenses and agency expenses during the past six months. The net decrease in all expenditures has been \$213,858.87. Under its new management the Washington Life Insurance Company is making a notable progress.

Financial

"Honest Graft"

REVELATIONS regarding certain questionable financial transactions that have grown into a system came out last week during the course of the Armstrong Insurance investigations now in progress. These, while by no means surprising to those on what has been called the "inside," will surprise many who are "outsiders." The term "honest graft," originated by Plunkitt, of Tammany Hall, suggests itself in this connection. Graft in modern business has so grown into it that it seems almost impossible to do trading and merchandising without it. The politician has long known and practiced graft as a part of his political business irrespective of ethical considerations, but the entrance of graft into commercial transactions and its growth and development long ago became a serious menace. Wherein "honest graft" differs from graft that is dishonest is, however, an exceedingly fine question in ethics that will be found very difficult of answer. The modern business code, it appears from the inquiries already made by the Armstrong Committee, sees no impropriety on the part of an officer, a director, or even an employee, making as much money out of his employing concern as he can, always provided he does not actually violate the penal code or, in other words, if his graft is "honest graft." The buyer for a department store may thus with perfect complacency accept valuable gifts from concerns of whom he buys goods for his department so long as he does not allow his judgment to be warped by the gratuities received and continues to follow the principles laid down by Adam Smith to buy in the cheapest market. Old-fashioned honesty was not called upon to consider the question of graft at all. The banker and the merchant conducted their business along varying lines, it is true, but with high ideals and kept as far away as possible from even "honest graft," possibly on the theory that degeneracy into dishonesty is always possible and because of the acknowledged difficulty of serving two masters it is best to avoid even the appearance of evil.

BECAUSE of a protest on the part of the Simpson Crawford Company, which has been sustained by the Board of General Appraisers, the duty on paste jewelry has been reduced from 60 to 45 per cent.

....According to trustworthy announcements made last week the Russian Government, instead of canceling its orders for army clothing and other supplies calling for the use of low grade wool in their manufacture, as was expected, has placed additional contracts with domestic woolen manufacturers.

....The Erie Railroad has placed orders for the construction of 5,500 steel freight cars. These cars will be equipped with automatic couplers, air brakes and other modern safety appliances. The cars now building for the Erie road, taken in connection with those under order by the Pennsylvania Railroad, when finished ought to go far toward preventing a car famine.

....The Armour Car Lines have filed with the Interstate Commerce Commission a denial that the Commission has any jurisdiction over their refrigeration charges, and takes a position that is identical with that of the Santa Fé Refrigerator Dispatch—viz., that it is not a common carrier and is not the agent of a railroad. The Armour lines further deny unjust charges.

....The American Bankers' Association will hold a convention in Washington, D. C., beginning on October 9. In connection with this convention it is planned to transport 500 prominent Western financial men from Chicago to the City of Magnificent Distances on what will probably be the most elegantly appointed train of ten Pullman coaches ever to leave the Windy City. The train will be known as the "Bankers' Special" and it will go over the Big Four Railway, via Old Point Comfort, in time to reach Washington on the date of the convention's opening.

....Dividends announced:

Amer. Car & Foundry Co., Preferred, 1 $\frac{3}{4}$ per cent., payable October 2d.

Manhattan R'way Co., quarterly, 1 $\frac{3}{4}$ per cent., payable October 2d.

The Independent

VOL. LIX NEW YORK, THURSDAY, SEPTEMBER 21, 1905 No. 2964

Survey of the World

Mr. Bryan on Questions of the Day

Mr. Bryan, who is soon to begin a tour of the world, was the guest of honor last week at a banquet of the Jefferson Club, in Chicago. Several speakers who preceded him insisted that he must be the Democratic candidate in 1908. Mr. O. M. James, of Kentucky, said that the six and a half millions of loyal Democrats no longer looked to the East. "The wise men used to be there, but, with the star of empire, westward they have taken their way." Judge Tarvin, of the same State, said the nominee must be a man "who stands for something," and one who could win. In his opinion, Mr. Bryan was the man. Mr. Bryan himself said that he was neither announcing nor permitting a candidacy. He had not said, he continued, that he would never again be a candidate, but he was not now a candidate for any office. He believed that his place in history would be determined not by what the people were able to do for him, but by what he was able to do with the people. It was too early now to choose a candidate for 1908. He hoped that when it should be necessary to make a nomination the party would choose a man who could do more for it than he had been able to do. Responding to the toast, "Democracy Against Centralization," he began by speaking of "the partial adoption by some of the Republican leaders of remedies proposed by the Democratic party." In this country, opposition to the rule of the people usually took the form of centralization. But "while the advocate of centralization is urging legislation which obliterates State lines and removes the Govern-

ment from the control of the voters, the monopolist may, on the other hand, hide behind the Democratic theory of self-government and use this theory to prevent National legislation which may be necessary. The Democrat who believes in Democratic principles, and who wants to preserve the dual character of our Government, must be on his guard against both." Advocates of centralization would now probably ask for legislation that would take the business of life insurance out of the hands of the several States:

"No National charter should be granted to an insurance company, and no Federal supervision should interfere with the exercise of the power now vested in the various States to supervise companies doing business in such States.

"So, in devising a remedy for the Trusts, the Democratic party should resolutely oppose any and every attempt to authorize a National incorporation or chartering for trading or manufacturing enterprises. The Democratic National platform of 1900 proposed a National remedy for the Trusts entirely consistent with the preservation of State remedies. It suggested a license system—the license to permit a corporation to do business outside the State of its origin upon compliance with the conditions of the license. But the license would not permit it to do business in any other State except on compliance with the conditions provided by the State. In other words, it would be such a license as is now granted for the sale of liquor.

"No advocate of centralization should be permitted to impair the power of the various States over business done within their borders under the pretense that it is necessary to transfer the power to the National capital, and no Democrat should oppose necessary Federal legislation when the powers of the several States are properly safeguarded."

It was natural, he continued, that the Democratic party should advocate the election of Senators by direct vote of the people, and the initiative and the referendum were growing in popularity because they increased the control of the people over their own affairs.—Mr. Bryan has addressed to President Roosevelt an open letter commending him for his efforts to end the war in the East, and urging him “to use the present opportunity to put on foot a movement for the establishment of permanent peace.” He suggests that the President should ask Congress for authority to submit all international questions (when an agreement cannot be reached by the parties interested) to an impartial board for investigation, “which will, in nearly every case, remove the cause of complaint and reconcile the parties”:

“If the leading nations of the world would enter into an agreement to join in the creation of such a board and pledge themselves to submit all disputes to the board for investigation before declaring war, the danger of war would be reduced to a minimum. Few men have had it in their power to do so much for humanity. Will you improve the opportunity?”

Mr. Roosevelt to the Canal Engineers At a conference with the members of the Isthmian Canal Commission's Board of Consulting Engineers, last week, President Roosevelt spoke at some length, saying that his remarks must be considered as suggestions rather than as directions:

“I hope that ultimately it will prove possible to build a sea level canal. Such a canal would undoubtedly be best in the end, if feasible, and I feel that one of the chief advantages of the Panama route is that ultimately a sea level canal will be a possibility. But while paying due heed to the ideal perfectibility of the scheme from an engineer's standpoint, remember the need of having a plan which shall provide for the immediate building of a canal on the safest terms and in the shortest possible time.

“If to build a sea level canal will but slightly increase the risk, then, of course, it is preferable. But if to adopt the plan of a sea level canal means to incur hazard, and to insure indefinite delay, then it is not preferable. If the advantages and disadvantages are closely balanced I expect you to say so.

“I desire also to know whether, if you recommend a high level multi-lock canal, it will be possible after it is completed to turn it into or substitute for it, in time, a sea level canal, without interrupting the traffic upon it. Two of the prime considerations to be kept steadily in mind are:

“1. The utmost practicable speed of construction.

“2. Practical certainty that the plan proposed will be feasible; that it can be carried out with the minimum risk.”

There might be good reason, he continued, why the delay incident to the adoption of a plan for an ideal canal should be incurred, but if there was not, then he hoped to see the canal constructed on a system which would bring to the nearest possible date in the future the time when it would be practicable to take the first ship across the Isthmus. The delay in transit, owing to additional locks, would be of small consequence when compared with the shortening of the time for construction. The Board will visit the Isthmus a few weeks hence.—In reply to the protests of Hudgins & Dumas and H. Balfe & Co. concerning the award of the contract for supplying meals on the canal route, Chairman Shonts has submitted to the President an explanatory report, which has been approved. The award will stand. Mr. Shonts says he did not advertise, because “it was a railroad matter,” and there was need of haste. At the suggestion of Hudgins & Dumas the weekly *menu* was inserted in the specifications. Hudgins & Dumas increased their prices after he had explained certain things which they had not understood, and they thanked him for the information. He considered not only the prices submitted, but also the experience of the bidders. Hudgins & Dumas had had no experience, except in a three years' contract at Ellis Island, but Markel (the successful bidder) had had charge of railroad hotels and construction camps for thirty years. Mr. Shonts says he thinks he was not really required to invite competitive proposals.—At their State convention last week the Prohibitionists of Massachusetts adopted a resolution (which was sent to Mr. Roosevelt) de-

claring that the sale of alcoholic liquors in the Zone ought to be forbidden, and that any person selling such liquors there should be sent to jail for thirty days and then expelled from the Zone.

Political Topics

The testimony of Vice-President George W. Perkins, of the New York Life Insurance Company, that this company contributed \$48,702 to the Republican campaign fund in 1904, and \$50,000 in each of the campaigns of 1900 and 1896, has led Judge Parker, the Democratic candidate last year, to publish a statement in which he says that the acts of the responsible officers who caused the contributions to be made "were unlawful and their purposes corrupt." Other life insurance companies, he says, and the railroad and manufacturing corporations, made similar contributions:

"The officers responsible for these raids upon the treasuries of corporations have received their reward in unfettered management of life insurance corporations; in unembarrassed raids upon the public through Trusts—condemned by both common and statute law; in refusal to punish criminally the officers of railroad and other corporations violating the laws; and in statutory permission to manufacturing corporations to levy tribute on the people."

The people should insist, he adds, upon legislation making it a criminal offense for officers to contribute corporate funds for political purposes.—In New York, the fusion movement in opposition to the re-election of Mayor McClellan has been affected by the withdrawal of the Citizens' Union from the fusion conferences, owing, the Union's representatives explain, to the disinclination of the Republicans and other associated organizations to take up the question of candidates and to the delay thus caused. These organizations desire to nominate Justice William J. Gaynor, who is not acceptable to the Citizens' Union. At last accounts, his decision had not been made known.—The Republican organization in Philadelphia has withdrawn the local nominations (for Sheriff, Coroner, etc.) made last spring, the nominees having been prominent supporters of the gas

lease and opponents of Mayor Weaver's reform policy. Other names have been substituted, but they are not acceptable to the reform party. At a mass meeting, last Saturday evening, the Mayor, a Republican, pledged his Administration "in all its parts, every department and bureau, to the assistance of the people in bringing about the defeat of the organization this fall."

Interesting Contest Over Franchises

The nomination of Mr. Everett Colby for the State Senate in New Jersey has excited much interest beyond the boundaries of that State. Mr. Colby, a New York banker, who will be 30 years old in December next, is a resident of Essex County, which includes Newark, Montclair and the Oranges. Serving for two or three terms in the New Jersey Assembly, by advocating there certain measures concerning public service franchises and the taxation of railroad property he lost favor with the "organization" rulers of the Republican party in his county and was marked for retirement. Whereupon he boldly sought at the primaries (which were held last week) a nomination for the State Senate, upon a platform opposing the granting of public service franchises in perpetuity, calling for a franchise tax, demanding that railroad property be taxed at prevailing local rates, and asking for legislation providing for an expression of opinion at general elections as to a choice of candidates for the United States Senate. For several weeks he made a vigorous canvass, stoutly opposed by the party "organization," which has been controlled for several years by a shrewd and influential politician, and which, Mr. Colby and his friends assert, has been under the domination of large corporations directly interested in public franchises and the taxation of railroad property. The measure of his success exceeded all expectation. There was an unprecedented attendance at the primaries, and nearly three-quarters of the delegates to the county convention were elected in his interest. He was nominated for the Senate without opposi-

tion, and at the same time eleven men standing upon his platform were nominated for the county's seats in the Assembly. The movement against public service grants in perpetuity and for equal taxation is gaining support in other parts of the State—in which transportation and other corporations have exercised great influence for many years past—and it may be that Mr. Colby and those who stand with him will obtain the legislation they desire. He would have no public service franchises granted for a term exceeding 25 years in the large cities or for more than 35 years elsewhere. Such restrictions have been opposed by his party "organization" in Essex County, but the leaders of this "organization" have now been defeated by the rank and file.

Washington Notes.

Senator Elkins has called a meeting of the Senate Committee on Interstate Commerce for Nov. 15th, to frame a railroad rate bill. The Senator has been regarded as an opponent of the President's railroad policy. He now says the Republican members of the Committee have reached the conclusion that there must be rate legislation this winter. He would have all rate disputes referred to a Court of Interstate Commerce, composed of nine judges.—All the private car lines, replying to the Commission's complaints as to unjust rates and unlawful rebates, have asserted that the Commission has no jurisdiction over their business, nor any right to inquire as to their rates.—Witnesses have been summoned to testify at the second trial of Senator Burton. At his first trial he was found guilty and sentenced to be imprisoned, but the verdict was set aside upon a technicality.—The Commercial Pacific Cable Company's lines are to be extended to China and Japan. An agreement with China, permitting the landing of a cable from Manila at Shanghai, was made some weeks ago, and a similar agreement with Japan was signed last week by Minister Takahira. Connection with Japan will be made by a line from Guam to Yokohama.—It has been decided by the Commissioner of Internal Revenue that the manufacturers of many patent

medicines composed largely of alcohol must take out licenses as rectifiers and liquor dealers and that a druggist selling these compounds must have a retail liquor dealer's license. Large quantities of some of the medicines, containing from 25 to 45 per cent. of alcohol, are said to have been sold in places where prohibitory laws are in force.—Ex-Judge William L. Penfield, Solicitor of the State Department, has been appointed Special Commissioner to visit South American countries and make an investigation as to our trade relations with them. He will attempt to procure a removal of Brazil's discriminating duties on our products and a reduction of the Brazilian export duty on coffee shipped to the United States.

Cuba's Political Campaign

Much excitement has been caused by the action of the Government in what appears to be a contest for the control of certain municipalities for partisan purposes. On the 15th, Gen. Freye Andrade, Secretary of the Interior, asserted that he had discovered a conspiracy in the Liberal Party (which opposes the reelection of President Palma) to remove all the mayors and other prominent municipal officers in the provinces of Santa Clara and Pinar del Rio who were supporters of the President. The work was to be done by the Liberal Governors, and the mayors of Guanajay and Habanas (in Pinar del Rio,) had already been ousted. The President at once issued a decree warning all the mayors that they must not cease to perform their official duties without first receiving orders from the Secretary of the Interior. On the following day the arrest of Acting Governor Alberti, of the province of Santa Clara (of which Gen. José Miguel Gomez, Liberal candidate for the presidency, is Governor), was ordered by the Supreme Court, because he had directed the Mayor of Vuelta to disobey a Presidential decree. In Vuelta the municipal building and records were burned several weeks ago, apparently to prevent an investigation by the central Government. Alberti had afterward refused to recognize a mayor appointed by the President in place of one removed upon the charge that he had conspired to destroy the rec-

ords. The Liberal Governor of Pinar del Rio had removed the Mayor of Guanajay and seated one Diaz, a Liberal, in his place. Diaz was arrested and imprisoned, on the 16th, for disobeying a Presidential order directing him to withdraw. It is alleged that the Liberal leaders sought by such removals to obtain control of the local election boards.—The newspaper organ of Gov. Gomez asserts that the Moderate party has a secret platform, radically differing from the conservative one recently adopted in convention. This secret platform, it says, provides for action by the Government designed to provoke disorders in Liberal strongholds and thus to cause intervention by the United States in support of the present Administration. In reply, the Moderates deny that they have any policy except the one set forth in their published platform.

The Taft Party in the East

Secretary Taft returned to Japan on the 11th and was greeted at Yokohama by many prominent residents of the islands. As he was unable to visit Tokyo, Prince Toguwa, President of the House of Peers, and Mr. Matsuda, President of the House of Commons, came from that city to Yokohama to give him an official welcome. While the Secretary and a majority of the original party were thus making their way eastward, Miss Alice Roosevelt, Major General Corbin and Rear Admiral Train were traveling to Pekin, where they arrived on the 12th. Two days later they were received in formal audience by the Dowager Empress, whose guests they were at the summer palace, and from whom they received handsome gifts of bracelets and rings. On the 16th the tourists went to Tientsin and attended there a reception given by the Viceroy. This week they are to be entertained by the Emperor of Korea at his capital. After remaining there for a few days they will go to Japan by way of Fusan.

European Items

The Hungarian Cabinet has resigned, and Baron Fejervary, the Premier, announced to the Lower House the prorogation of the Parliament until Octo-

ber 10th in order to allow the coalition parties to submit a program to Emperor Joseph. Francis Kossuth, leader of the united Opposition, protested vigorously against prorogation as unconstitutional, when a motion to that effect was adopted, and the House adjourned amid great excitement. Work was at a standstill in the factories the same day, while workmen came in crowds to the Lower House to present petitions in favor of general suffrage. The resignation of the Cabinet has been followed by the impeachment of the members in the Lower House of the Diet. Emperor Joseph, as King of Hungary, directed the members to hold office provisionally, altho their resignation was accepted by him, so that the impeachment is possible. The King absolutely refuses to yield to the chief demand of the Liberals that Hungarian be the language of their army.—Mr. Leishman, American Minister at Constantinople, has by his firm attitude induced the Porte to yield in the case of the Armenian Vartanian, who was tried for murder and condemned by a Turkish court, altho he claimed American citizenship. The Porte has quashed the death sentence; Vartanian went from this country to Constantinople, it seems, to murder another Armenian at the instigation of the Armenian revolutionary committee. We suppose he will now be tried by a consular court.—The loss of property by the earthquake in Calabria, in the southern extremity of Italy, has been reckoned as not less than \$25,000,000, besides hundreds of lives; and two other violent shocks occurred on September 15th, which destroyed several towns. The catastrophe will have the effect of causing a study of the proper construction of houses in regions subject to earthquakes. A large part of the buildings destroyed were loosely constructed of stone, very imperfectly compacted with mortar.—There is a curious report of the discovery of an extensive revolutionary plot in the Balkans aiming at the assassination of King Peter of Servia and Prince Ferdinand of Bulgaria, the proclamation of a republic in both Servia and Bulgaria and the organization

of a rebellion in Turkey, primarily for the purpose of liberating the Macedonian provinces, after which Constantinople is to be attacked, compelling the Powers to intervene and guarantee the independence of Macedonia. Servians, Bulgarians and Armenians are said to be involved in the conspiracy, and some of the ringleaders have been arrested. Whatever may be said of the ultimate desirability of such a union by Serbia and Bulgaria as a republic, this is far from practicable for the present, and is likely to await the breaking up of the Turkish Empire.—The Shah of Persia has left St. Petersburg, where he has been making a visit, which is declared at the Foreign Office to have no political meaning and which does not involve a new commercial treaty.

Sweden and Norway It is believed that the differences between Sweden and Norway over the terms of separation have been amicably settled. The final question in dispute was as to the neutral zone. But Norway has certain old fortresses on her Swedish border that have an historical interest and are the object of pride. Sweden wanted all forts demolished, which Norway resented. Then Sweden consented that two old forts should remain, but insisted that the new additions should be taken down. To this Norway objected, saying that forts on her ground ought not to trouble Sweden, as they are only for defense and not for attack; and if Sweden does not intend to attack her the forts can make no difference. Both parties have been very much excited, but the conferring delegates have, it is said, now come to an agreement, altho the terms are not stated. It is said that King Edward has acted as peacemaker. No conclusion has yet been reached as to the choice of a King, and it may go to a popular election. During the last few days Sweden and Norway have each charged the other with massing troops on the frontier, each being compelled to do so by the other's previous threatening action.

Affairs in Russia Civil war seems to have broken out in the region south of the Caucasus Mountains, and it may mean a revolution. For the present the troops are not able to quell the uprising, but 15,000 were expected to come this week. This is the region which Russia conquered half a century ago, when the Caucasian leader Schamyl made himself so famous. The disturbance is in the narrower portion which separates the Black Sea from the Caspian, and a railroad runs from the city of Batum, on the Black Sea, to Baku, the principal port on the Caspian, half way between it and the capital, Tiflis, and the center of the coal oil industry. It is at Baku that there has been the destruction of nearly all the oil works by fire, so that the railroads and steamboats and factories, which principally use the crude oil, have been very much crippled. This is a fight of the modern Tatars against the Christians, Russians and Armenians, for the Armenians seem to have sided with the Russians, and to have been the chief sufferers, as, indeed, they largely control this industry. Hundreds of them have been killed. Now it is said that the disturbance has crossed over to Batum, where there is likely to be an outbreak similar to that in Baku. It is suggested that it was the purpose of the revolutionists to begin their operations in this region, so as to cripple the railroads, and then extend activity to other portions of the Empire. At present the unexpected ending of the war seems to have disturbed their plans. The Russian army, if willing to fight in the Caucasus, ought to have little difficulty in quelling the disturbance, as the insurgents will have no cannon. It is reported to be the plan of the revolutionists to kill all journalists, and a newspaper man was killed in Baku last week, and on Thursday five murders were committed on the busiest streets. There is a panic among the people and the shops have been closed.—The Russian Government seems to have reason to fear an outbreak in Finland. The customs authorities have seized 5,000 rifles landed by a vessel which afterwards was sunk by her crew. Troops broke up a convention of 800 delegates from all parts of Finland called to discuss the political situation.—The Cholera

outbreak in Prussia is not yet controlled. There have been reported 183 cases and 66 deaths.—The Russian Czar and Czarina, with their family, are to take a rest of two months at Darmstadt at the direction of their physician. Apparently there is no available health resort in Russia. Another report says they are off on a cruise in the imperial yacht, and yet another reports a projected interview with the Emperor of Germany.

The Zemstvos Attacked

A statement is reported of an extraordinary circular sent by the Russian Ministry of the Interior to all Governors and Mayors, directing them to keep a close watch over zemstvoists everywhere, with the view to arresting them under specified circumstances. The action is based upon the zemstvo congress at Moscow in June, to which the circular refers in the most condemnatory terms. It accuses the zemstvoists who attended the congress of fraudulently misinterpreting and falsifying the words of the decree issued by the Czar in March, "the aim of which," according to the circular, "was to improve the laws of the country and the economic conditions of the nation by maintaining the actual form of government, based on unrestricted absolutism." The circular accuses the congress of contemptuously rejecting "this freedom offered by the Czar's bounty, of working out a project of government based on universal suffrage, and of attempting now to seduce the nation by propagating their decision throughout the country, thereby declaring open war against the Government." Every zemstvoist must be specially watched by secret service agents and must be prevented from issuing any publication whatever. If detected in doing so the zemstvoists must be arrested and handed over to the courts, while the people must not be allowed to attend their meetings. The circular says: "Once the zemstvo is abolished the disorders of the country will cease of themselves."

Aftermath of the War

Hostilities have formally ceased between the two armies in Manchuria, but peace has not yet been declared. There

has been created an isolating zone which neither army can enter. The armistice was to go into final effect on Saturday last. The Chinese are returning to their homes, and are most happy. The treaty between Great Britain and Japan has not been published, being held back at the request of Japan, and it is supposed that it will be published simultaneously with the publication of the Treaty of Portsmouth.—Perhaps the most terrible disaster that has ever happened to a ship of war occurred at Sasebo Harbor on Monday of last week as the result of fire and explosion, in which nearly six hundred persons were killed and wounded. The "Mikasa" was the finest of all the Japanese vessels, of over 14,000 tons, and was the flagship of Admiral Togo, and went nearest of all to the Russian fleet in the naval battle, and received the most shots. Coming just at the time of the news of the peace terms, which have caused so much dissatisfaction, the suspicion has been expressed that the destruction of the vessel was a sort of hirikari on the part of the officers and crew to express the indignation of the Navy; but this is hardly possible. The vessel is sunk so that the guns in the upper deck are visible at low water.—The Japanese authorities stoutly contradict the imputation that the attack on the Christian churches implies hostility to Americans or to Christianity. They say that one Salvation Army preacher has made offensive statements in a street address, which were resented. When one church was threatened the mob were willing to desist if it would put up a United States flag. Apparently the injury has been much exaggerated, for our missionary societies have received no cable dispatches telling of any destruction. But the feeling against the treaty still is warm, altho the explanations by the authorities have somewhat quieted the people. There have been minor riots in one or two other cities. The Minister of the Interior, Viscount Yoshikama, has resigned, and Baron Kiyura, Minister of Agriculture, has succeeded him. This action was taken after a number of the powerful princes and nobles had memorialized Prime Minister Katsura, holding the Government responsible for the disturbances and urging the dismissal of the Minister of the Interior.—

Mr. Witte and his staff sailed from New York for home last week. Baron Komura, the chief Japanese envoy, was detained by sickness which it was feared would develop into typhoid fever, but his fever has subsided, and he hopes to be able very soon to leave for Japan by the Canadian route. Threats have been made at home by agitators that he would be received with funeral ceremonies, but conservative men agree that when the conditions are better understood a second thought will approve the conclusion of peace.—If one can trust the editor of one of the Japanese papers who is also a deputy to the Japanese Parliament, the result of the war, and of the return of the soldiers to their homes, will be to make the constitution of the Empire more democratic; and that the franchise will have to be extended, as was done in Great Britain after the Napoleonic wars and in Germany after the war of 1870 with France.

Turkish Victory in Yemen

It is confirmed that the Turkish forces have captured Sanaa, which had been taken by the rebel Arabs. There was hard fighting. The Turkish army was under Marshal Ahmed Faizi and advanced by three routes from the coast. The main body, from Hodeida, marched inland and came upon the Arabs and defeated them and then marched on to Sanaa, the capital of Yemen. The previous Turkish army had been recruited in Syria and Palestine and had no heart in the fight. The present army came from European Turkey. A writer in *The Congregationalist* tells us that when the soldiers from Marsovan were drafted for Arabia and left the local mufti at the mosque refused to grant them public prayer and blessing, so that they went with a heavy heart. The reason for refusal was evidently sympathy with the claim of Hamid ed-Din, head of the revolt, that the Sultan is no Caliph and successor of Mohammed, as the Caliph should be of Mohammed's blood and so entitled to wear the green turban. The troops of Hamid are said to have some of the early copies or original leaves of the Koran affixed to the very banners borne in the days of the Prophet, and

to fire on them would be a sacrilege. A venerable mufti is thus reported:

"My friend the mufti tells me how their prophet promised that a mahdi, a guide, would come in the fullness of time, who would perfect all things.

"They asked when he would come, and the prophet said, 'Before the year 1400.' Asked to be more specific he said, 'After 1300.' (It is now 1323 by Mohammedan reckoning.)

"What shall be the sign of the mahdi's coming?' 'The wolf shall dwell with the lamb, and universal peace shall prevail.'

"What shall be the character of his age?' 'The establishment of righteousness in all the world.'

"Whence shall he appear?' 'From the Yemen.'

"And I can easily believe that the day of the mahdi is near, tho this man now is only his forerunner."

The venerable mufti further declared that St. Elias had already appeared at Trebesond, and had said that the Imam would appear in 1336, which will be in thirteen years from now. Such common belief as this explains the unrest in Mohammedan lands, especially as it is believed that the Turks do not live up to the moral laws of Islam.

The Pope Renounces Politics

The Pope has issued an official communication declaring that he has no intention of seeing the nuncios and apostolic delegates for the purpose of conferring with them on foreign politics. The reason for this communication is that too often the purpose has been attributed to the Sovereign Pontiff of meddling with the affairs of foreign states. Within the last few days it has been asserted that the Pope would intervene in the Austro-Hungarian conflict, and also that he was about to establish diplomatic relations with China and Japan, and that he would treat with some Powers for the protection of Christians in the East. The Pope has wished to make it clear by this official communication that he has no intention to occupy himself with foreign politics, that he is a purely religious Pope, with no relation to diplomatic intrigues, and that it is no part of his plan to effect changes in what is called the protectorate of Christians.

The Confession of a Japanese Servant

[Those who have wondered what was behind the uniform politeness and unreadable face of a Japanese servant will be interested in this very frank confession of one, whose preconceived ideal of America as a land of opportunity and equality has been disproved by his experiences here. We have not made any alterations in the manuscript, for his occasional use of Japanese idioms and of bookish English makes his narrative all the more personal and naïve. He requests us to withhold his name, but possibly some of his employers will recognize themselves as seen in a Japanese mirror.—EDITOR.]

THE desire to see America was burning at my boyish heart. The land of freedom and civilization of which I heard so much from missionaries and the wonderful story of America I heard of those of my race who returned from here made my longing ungovernable. Meantime I have been reading a popular novel among the boys, "The Adventurous Life of Tsurukichi Tanaka, Japanese Robinson Crusoe." How he acquired new knowledge from America and how he is honored and favored by the capitalists in Japan. How willingly he has endured the hardships in order to achieve the success. The story made a strong impression on my mind. Finally I made up my mind to come to this country to receive an American education.

I was an orphan and the first great trouble was who will help me the expense? I have some property my father left for me. But a minor has not legally inherited, hence no power to dispossess them. There must be at least 200 yen for the fare and equipment. While 200 yen has only exchange value to \$100 of American gold, the sum is really a considerable amount for a boy. Two hundred yen will be a sufficient capital to start a small grocery store in the country town or to start a prospective fish market in the city. Of course, my uncle shook his head and would not allow me to go to America. After a great deal of difficulty and delay I have prevailed over his objection. My heart swelled joy when I got a passport, Government permission, to leave the country, after waiting thirty days investigated if really I am a student and who are the guardians to pay money in case of necessity. A few

days later I found myself on the board of "Empress of Japan," of Canadian Pacific Line. The moment steamer commence to leave Yokohama I wished to jump back to shore, but was too late and I was too old and ashamed to cry.

After the thirteen days' weary voyage we reached Victoria, B. C. When I have landed there I have disappointed as there not any wonderful sight to be seen not much different that of foreign settlement in Yokohama. My destination was Portland, Ore., where my cousin is studying. Before I took a boat in Puget Sound to Tacoma, Wash., we have to be examined by the immigration officer. To my surprise these officers looked to me like a plain citizen—no extravagant dignity, no authoritative air. I felt so envious, I said to myself, "Ah! Indeed this is the characteristic of democracy, equality of personal right so well shown." I respect the officers more on this account. They asked me several questions. I answered with my broken English I have learned at Yokohama Commercial School. Finally they said: "So you are a student? How much money have you at hand?" I showed them \$50. The law requires \$30. The officers gave me a piece of stamped paper—certificate—to permit me go into the United States. I left Victoria 8 p.m. and arrived Tacoma, Wash., 6 a.m. Again I have surprised with the muddy streets and the dirty wharf. I thought the wharf of Yokohama is hundred times better. Next morning I left for Portland, Ore.

Great disappointment and regret I have experienced when I was told that I, the boy of 17 years old, smaller in stature indeed than ordinary 14 years old

American boy, imperfect in English knowledge, I can be any use here, but become a domestic servant, as the field for Japanese very narrow and limited. Thus reluctantly I have submitted to be a recruit of the army of domestic servants of which I ever dreamed up to this time. The place where I got to work in the first time was a boarding house. My duties were to peel potatoes, wash the dishes, a few laundry work, and also I was expected to do whatever mistress, waitress and cook has told me.

When I first entered the kitchen wearing a white apron what an uncomfortable and mortifying feeling I experienced. I thought I shall never be able to proceed the work. I felt as if I am pressed down on my shoulder with loaded tons of weight. My heart palpitates. I did not know what I am and what to say. I stood by the door of kitchen motionless like a stone, with a dumbfound silence. The cook gave me a scornful look and said nothing. Perhaps at her first glance she perceived me entirely unfit to be her help. A kindly looking waitress, slender, alert Swedish girl, sympathetically put the question to me if I am first time to work. Said she, "Oh! well, you will get learn and soon be used to it!" as if she has fully understand the situation. Indeed, this ordinary remarks were such a encouragement. She and cook soon opened the conference how to rescue me. In a moment I was to the mercy of Diana of the kitchen like Arethusa. Whistling up the courage I started to work. The work being entirely new and also such as unaccustomed one, I felt exceedingly unpleasant and hard. Sonorous voice from the cook of my slowness in peeling potatoes often vibrated into my tympanum. The waitress occasionally called out for the butter plates and saucers at the top of her displeasing voice. Frequently the words "Hurry up!" were added. I always noticed her lips at the motion rather than hands. The proprietor, an old lady, painstakingly taught me to work how. Almost always commencing the phrase "I show you" and ending "Did you understand?" The words were so prominently sounded; finally made me tired of it and latter grew hated to hear of it. Taking the advantage of my green hand Diana of

kitchen often unloaded hers to me. Thus I have been working almost all the time from 5.30 a.m. to 9 p.m. When I got through the day's work I was tired.

Things went on, however, fairly well for the first six days, forgetting my state and trying to adapt my own into the environment. But when Sunday come all my subsided emotions sprung up, recollecting how pleasantly I used spend the holidays. This memory of past pleasure vast contrast of the present one made me feel ache. What would the boys in Japan say if they found me out. I am thus employed in the kitchen receiving the orders from the maid-servant whom I have once looked down and thought never to be equal while I was dining at my uncle's house. I feel the home-sick. I was so lonesome and so sorry that I came to America. Ignoring the kind advice of my friends, rejecting the offer of help from my uncle at home, quickened by my youthful sentiment to be the independent, and believing the work alone to be the noble, I came to this county to educate myself worthy to my father's name. How beautiful idea it was while it existed in imagination, but how hard it is when it came to practice. There was no honor, no responsibility, no sense of duty, but the pliancy of servitude was the cardinal requirement. There is no personal liberty while your manhood is completely ignored.

Subduing my vanity, overcoming from the humiliation and swallowing down all the complaints, weariness and discouragement, I went on one week until Sunday. In spite of my determination to face into the world, manly defending my own in what I have within, together with my energy and ability, I could not resist the offspring from my broken-hearted emotions. Carrying the heavy and sad heart I was simply dragged by the day's routine work. The old lady inquired me if I am not sick. I replied, "No." Thank enough for a first time she gave me a chance to rest from 1 o'clock to 4 afternoon. Sooner I retired into my room, locked the door, throwing the apron away. I cast myself down on the bed and sobbed to my heart contention. Thus let out all my suppressed emotion of grief from the morning. You might laugh at me, yet none

the less it was a true state of my mind at that moment. After this free outburst of my passion I felt better. I was keenly felt the environment was altogether not congenial. I noticed myself I am inclining considerably sensitive.

After I stay there about ten days I asked the old lady that I should be discharged. She wanted me to state the reason. My real objection was that the work was indeed too hard and unpleasant for me to bear and also there were no time even to read a book. But I thought it is rather impolite to say so and partly my strange pride hated to confess my weakness, fearing the reflection as a lazy boy. Really I could not think how smoothly I should tell my reasons. So I kept silent rather with a stupefied look. She suggested me if the work were not too hard. It was just the point, but how foolish I was; I did positively denied. "Then why can you not stay here?" she went on. I said, childishly, "I have nothing to complain; simply I wants to go back to New York. My passion wants to." Then she smiled and said, "Poor boy; you better think over; I shall I speak to you to-morrow." Next day she told me how she shall be sorry to lose me just when I have began to be handy to her after the hard task to taught me work how. Tactfully she persuaded me to stay. At the end of second week I asked my wages, but she refused on the ground that if she does I might leave her. Day by day my sorrow and regret grew stronger. My heavy heart made me feel so hard to work. At that moment I felt as if I am in the prison assigned to the hard labor. My coveted desire was to be freed from the yoke of this old lady. Believing the impossibility to obtain her sanction, early in the next morning while everybody still in the bed, I hide my satchel under the bush in the back yard. When mistress went on market afternoon, while everybody is busy, I have jumped out from the window and climbed up the fence to next door and slip away. Leaving the note and wages behind me, I hurried back to Japanese Christian Home.

Since then I have tried a few other places with a better success at each trial and in course of time I have quite accustomed to it and gradually become indif-

ferent as the humiliation melted down. Tho I never felt proud of this vocation, in several cases I have commenced to manifest the interest of my avocation as a profession of Dust and Ashes. The place where I worked nearly three years was an ideal position for a servant as could be had. The master was a manager of a local wholesale concern. He was a man of sunny side of age, cultured and careful, conservative gentleman, being a graduate of Princeton. His wife, Mrs. B., was young and pretty, dignified yet not boasted. She was wonderfully industrial lady. She attends woman's club, church and social functions. Yet never neglect her home duty. Sometimes I found her before the sewing machine. She was such a devoted wife whenever she went out shopping, to club, or afternoon tea or what not, she was always at home before her husband come back from the office. Often she went out a block or two to meet him and then both come home together side by side. Their home life was indeed an ideal one. Their differences were easily made out. It was very seldom the master alone goes out the evening, except in business. Occasionally they went to the theater and concert. Every Sunday both went together to the morning service and afternoon they drived to the cemetery, where the mistress's beloved mother resting eternally.

She was such a sympathetic young lady whenever I was busy, being near examination. She arranged for me not to have any company and very often they have dine out. Indeed, I adored her as much as Henry Esmond did to Lady Castlemond. She was, however, not angel or goddess. Sometimes she showed the weakness of human nature. One day while I was wiping the mirror of the hall stand the mirror slipped down and broken pieces. Fortunately she was around and witnessed the whole process. It was indeed a pure accident. It is bad enough to break the mirror even in Japan, as we write figuratively the broken mirror, meaning the divorce. In old mythological way we regard the mirror as a woman's heart. I felt very bad with the mingling emotion of guilt and remorse. She repeated nearly rest of the day how it is a bad luck and were

I only been careful so on. Made me exceedingly uncomfortable.

I was exceedingly hate to leave her place, but I got through High School and there was no colleges around. Hence I was compelled to bid farewell to my adored and respected mistress, who was kind enough to take me as her *protégé* and treated me an equal. It seems to me no language are too extravagant to compliment her in order to express my gratitude toward her.

Next position I had was in New York—a family of up-to-date fashionable mistress. I was engaged as a butler. I have surprised the formality she observe. The way to open the door, salute the guest, language to be used according to the rank of the guests and how to handle the name card. Characteristic simplicity of democracy could not be seen in this household. I am distinctly felt I am a servant, as the mistress artificially created the wide gap between her and me. Her tone of speech were imperial dignity. I have only to obey her mechanically and perform automatically the assigned duty. To me this state of things were exceedingly dull. I know I am servant full well, yet I wished to be treated as a man. I thought she is so accustomed the sycophancy and servility of the servants she could not help but despise them. Perhaps the experience forced her to think the servants cannot be trusted and depended upon. I thought I might be able to improve the situation by convincing her my efficiency and also I have no mercenary spirit. Tho the position may be a disgraceful one, I consoled my own, hoping to make it pure and exalt little higher by the recognition of my personality by my master and mistress. I was anxious to find out of my mistress's strongest principle of her self-regard. I have carefully listened her conversation in the dining table with her husband, of whom I regretfully observed the traces of the hard-hearted and close-fisted selfishness, and at the afternoon tea with her friends. But each occasion made me feel disappointed. One day she told me go out get for her the cigarettes. Out of my surprise I said to her, "Do you smoke?" I had not a least bit of idea that the respectful American lady would smoke. I was

plainly told that I am her servant. I got to obey whatever she wants to. Same afternoon I have been told to serve the afternoon tea. The mistress seeing the tea cup, said to me, "No, no; put the glass for the champagne, of course." I was once more surprise. Meantime the luxuriously dressed, pretty looking creatures whom, when I met at the hallway, they were so dignified with the majestic air and impressed me as if they were the living angels; but, to my utter disgust, these fair, supposed innocent sex drunk and smoke like men do. Next day I tendered my resignation to my ladyship.

Another new impression I have obtained in this household. One day I noticed a diagram map of the lineage of the family hanging on the wall of the reception room. The ancestor was a knight of Crusade. This phenomena has quite struck me. Before I came to this country I have told my uncle the worship of ancestor is a primitive idea and boast of ancestor is a remnant notion of Feudalism. I shall be a my own ancestor. I remember how he reprimanded me with a red hot angry. Still at the bottom of my heart I have contended I am right. I thought I rather worship Franklin and Emerson. Now I must say that human nature is everywhere just same.

One summer I worked at steam yacht as a cabin boy. Captain, Chief and sailors were all good-natured human being. I do not see why they have been called as sea dogs. When you come contact with them they are really the lovely fellows. Indeed, they are good for nothing; too honest and too simple-minded to succeed modern complicated business world. Of course they use the unbecoming languages, but they really does not mean so. They use swearing even when they expose their joy and appreciation. I am soon nicknamed as "Jap Politician," as I have always fight against the ship crew of their socialistic tendency, defending the statesmen and wealthy people. It is wonderful how the morbid socialistic sentiment saturated among the unhealthy mind of the sailors.

Altho I has been advocated the gospel of wealth and extolled the rich, I hate the rich people who display their wealth and give me a tip in a boastful manner. I felt I am insulted and I have protested.

Sometime the tip was handed down indirectly from the hands of the captain. Each time when I have obliged to take the tip I am distinctly felt "the gift without giver is bare." I, however, thankfully accepted the offer from a lady who give me the money in such a kind and sympathetic manner. A gentleman gave one dollar, saying, "I wish this were ten times as much; still I want you keep it for me to help your study." Indeed this one dollar how precious I felt. Once a fastidious lady was on the board. She used to kick one thing to another. Of course I did not pay any attention. Whenever she scold me, I said at heart, "It's your pleasure to blame me, lady. I, on my part, simply to hear you. I am not almighty; I cannot be a perfect. If I made mistake I shall correct. You might bully me as you please and treat me like a dog, I shall not object. I have a soul within me. My vital energy in self-denying struggle could not be impaired by your despise. On the contrary, it will be stimulated." That the way I used swallowed down all the reprimand she gave me. I, however, getting tired to hear her sharptongue and hoping to be on the good term with her. One morning I have exerted an exceptionally good care to clean her cabin. Right after I got through her compartment she called me back and told me that I did not take a good care of. I replied emphatically with a conviction, "I did my best under the circumstance." But she insisted I must do better next time. Then she took out a dollar bill, gave it to me. I refused to take it. She thrust the money into my hand. I have thrown back the paper money to her feet. "Madam, this is the bribe and graft. I am amply paid from the owner of the yacht to serve you," said I. "No, madam; no tip for me." Without waiting her answer, while she seemed taken entirely surprised, I quickly withdrew from her. Since then she has entirely changed her attitude toward me.

While I was working on the boat I noticed the cook making a soup from a spring chicken and a good size of fine roast beef. I am amazed of the extravagant use of the material. I asked him why he do not use the soup meat and a cheaper roaster for making the soup. I

was told it's none of my business and get out from the place. Daily I witnessed the terrible scene of wasting the food. I often thought something ought to be done. It's just economic crime. The foodstuff cook thrown away overboard would be more than enough to support five families in the East Side. Yet the fellow honored as an excellent cook and especially praised of his soup!

The owner of the yacht and mistress were very agreeable persons; the children, too, were also lovely and good-natured youngsters. I shall never forget the kindness and consideration shown by them. While I am waiting on the table I have often drawn into the conversation. The mistress, unlike the wife who commands an enormous fortune, possessed a good common sense and has a sensible judgment in treating of her dependence, as she was cultured lady. The owner of the boat was the man of affairs; a broad-minded man he was. He has had struggling days in his early life. He has shown me great deal of sympathy. I did indeed "just love" to serve them, as one of the sailors has said to me.

Next summer I have been told by Mr. C. to work his yacht again. He said he would pay me \$40 per month and if I stayed whole season he would add to it \$100. "This \$100 is not charity; it my appreciation for your self-denying struggle, to help your school expenses," said he. How hard it was to reject for such a kind offer. I asked two days for the answer. Finally I have decided to refuse, as I had some reasons to believe there are possibility to develop my ability in another direction more congenial line. For days I did not hear from him. I thought I am sure he has angered me. I was waiting the occasion to explain to him fully and apologize. About a month later I got the message to come to his office. To my surprise Mr. C. told me he would give me \$50 at the fall to help me out my school expenses. He said, "I am interested with you. You will be a great man some day. I wanted to express by appreciation to the 'hard spot within you.'" How gratefully I felt. I did not find the suitable phrase to express my thanks, so I simply said, "Thank you." But inwardly I did al-

most worshiped him. I felt I am not alone in this world. What encouragement Mr. C.'s words to me; I felt as tho I got the reinforcement of one regiment.

Shall I stop here with this happy memory? Yet before I close this confession I cannot pass on without disclosing a few incidence I suffered from the hands of inconsiderate millionaire. About three years ago I have worked as a butler in a millionaire's mansion at N. J. Mistress was the young lady about twenty-three years old and the master was forty-five years old. Every morning mistress would not get up till eleven o'clock. Master gets up six. So we servants serve twice breakfast. At the dinner often mistress and master served the different sort of food. One day I was sick and asked three days absent to consult Japanese physician in New York. According the advice of doctor I have written twice asking to be given two more days to rest. I did not get answer. After I stay out five days I took 1.30 p.m. train from Jersey City; returned house 4 p.m. As soon as I entered the mansion the master told me I am discharged. This was the reward for my faithful service of eight months. I wanted to know the reason for. He simply said he wants to have waitress and told me to hurry to pack up my belonging and leave instantly. I asked, however, the reference to be given. He said he would send forward to New York by mail. I was everything ready in one hour; left his mansion at 5 p.m. to the station, where I waited one hour and a half. I returned New York again 9 p.m., with hunger and exhausted from emotion, as I am not quite recovered from my illness. Since then three times I asked the reference; he never answered. Until now it is quite mystery what made him angry me. His action handicapped me greatly to hunt new place.

Once I was engaged as a second butler in the villa of a retired merchant. When I got there I found myself I am really a useful man as well as second butler, as I am requested to make the beds of coachmen, carry up the coal for the cook, help the work of chambermaid, laundress and housekeeper wanted me to do. The

members of the family were only three, old gentleman, old lady and their daughter—old maid. They were proud and aristocratic. They would not speak to servants except to give order and reprimand. There were ten servants to serve them. An old lady and old maid has nothing to do but to watch rigidly how servants work. The old gentleman was lovely, good-natured man. So we servants called an old lady the queen regent, her daughter prosecute attorney, the housekeeper, detective. Every morning I wash the front door porch at 6 a.m. But sometime mail carrier or coachman leave the footmarks after I have cleaned the steps. Later prosecutor get up. If she found the marks she will upbraid me that I did not swept the place at all. When she come to reception room every morning first thing she would do was this, drew out her snow-white clean handkerchief, wrap up her forefinger and scrape the crossboard at the bottom of chair and also the corners of woodwork. If by chance any dust deposited to the handkerchief there will be a thunder of reprimand. The housekeeper-detective was a timid and sensitive woman. She enforced zealously the oppressive domestic rules issued by the queen regent. We were told not to talk aloud or laugh. If we commence to gay and our voice began louder sure the detective will come and hiss. If the door by chance of wind close itself with noise the detective come for explanation. I was always looked by her as suspicious boy. There must be complete silence be ruled, hence somewhat gloomy. I have openly called housekeeper "Miss Detective" and told her, "We ought make this household little cheerful, Let us have sunshine, Miss Detective," said I. While the luxurious dishes are served in the table, the meals given for the servants was lamentably poor one. The dog meat or soup meat was given to our dinner. The morning papers was not allowed to be read until 9 p.m. Besides I was expected to work all the time; this was impossible physically. One afternoon I am so tired I sat down in the chair at the pantry and rested. Miss Detective came inquired why I am not working. I said to her, "I have done everything assigned to me. I am not machine. I cannot

work all the time." Soon I was called out before the queen. Her majesty asked me what I have been doing. I replied, "Nothing, madam." "But you must do something, B.," said her majesty. "Did you cleaned the windows of my room?" "I have washed that windows last Saturday; this is Wednesday. They are clean, madam." "Last Saturday! You must wash that windows any way this week!" I told her it is foolish to waste money and it is more so to waste energy. "Do you know to whom you are speaking?" said she. "Do it now!" Finding no use to argue with her I went on to clean the windows. As soon as that is done I told Miss Detective I want to leave instantly; it is perfectly nonsense to work to such a person to enslave myself. Miss Detective, finding me beyond her control, send me up to the head of family. The old gentleman said: "Say, B., do you understand the law protect you and me." "No, sir; not always for a servant. The law might protect you and your millions are ample enough to break the law," said I in a sulky mood. "All I can do is to escape from the law. You can get rid of your servant when you dislike him. If I insist to quit immediately you can withhold my wages and could compel me to stay till the month out, as I have been engaged so, by resorting to the law." He said I must stay till my successor be found. Finally we have compromised that I should stay five days more.

Greatest trouble and disadvantage to be a domestic servant is that he has to be absolutely subjected under the emotional rule of the mistress. No amount of candid or rational argument will avail. No matter how worthy your dissenting opinion be, if it does not please your mistress you have to suffer for it. Once I worked for a widow lady whose incomes are derived from the real estate, stock and bonds. She is economizing so strictly that often handicapped me. One day, taking the chances of her good humor, I told her that her well meant efforts are the misapplication of her energy, trying to save her pin money through the economy of gas bill and grocery bill in the old-fashioned way, while neglecting to avail herself to the "modern high finance scheme" hereby

she may improve her resources. The reward of this speech was an honorable discharge! To be a successful servant is to make yourself a fool. This habitual submission will bring a lamentable effect to the one's brain function. Day after day throughout the years confined into the kitchen and dining-room, physically tired, unable to refresh yourself in the way of mental reciprocity, even the bright head will suffer if stay too long as a servant. Of course, one's character will be greatly improved and refined by serving the employer like Mr. C. and Mrs. B. But they are exception. Majority of employer will not be interested in their servants.

The motive of my engaging in the domestic work, no matter how meritorious it may intrinsically be, our people look with me the scornful eyes if not with positive despise. The doors of prominent Japanese family closed before me. Sometimes I was unrecognized by the fellow students from Japan, who are sons of wealth. I wrote one day a few lines to console myself:

Who does scorn the honest toil
Mayest ungraceful post thou hail
When the motive is true and pure
The wealth of learning to store.

O! never say that my humble lot
Does harm the fame of fortunate sons
Of Yamato. Disgrace me not.
How wilt thou feel, were it thine once.

How I suffer within knowest thou not;
Aspiring hope alone animates weary heart.
Year after year and day after day
Over the rough sea I steer my destiny

Unknown to shape my destination
My heart sobered with resignation.
But far from to be the misanthropist
The love of life giving the keener zest.

I kneel down for the silent prayer
Concealing my own I toil and prepare
To realize the hope dear to my heart
And absorbed the whole my thought.

O what joy how blessed I am!
With inspiring hope for my future aim
To consecrate my own for Truth and Humanity,
To this end I devote with honor and sincerity.

Some says Japanese are studying while they are working in the kitchen,

but it is all nonsense. Many of them started so, but nearly all of them failed. It is all well up to college, where there are not much references need to read. After you have served dinner, washing dishes and cleaning dining-room, you are often tired when you commence to write an essay. You will feel sometime your fingers are stiff and your arms are ache. In the afternoon, just when you began concentrated on the points in the book, the front door bell rung—the goods delivered from the stores, or callers to mistress, or telephone messages and what not. How often you are disturbed while you have to read at least three hours succession quietly in order to make the outline and dug up all the essential points. I have experience, once I attended lecture after I have done a rush work in the kitchen. I was so tired felt as tho all the blood in the body rushing up to the brain and partly sleepy. My hands would not work. I could not take the note of professor's lecture, as my head so dull could not order to my hand what professor's lecture was.

Many Japanese servants has told me as soon as they saved sufficient amount of money they would start the business. But many young Japanese, while their intentions are laudable, they will find the vile condition of environment in a large city like New York has a greater force than their moral courage could resist. Disheartened from the hard work or excessive disagreeableness of their environment often tempt them to seek a vain comfort in the misdirected quarter; thus dissipate their preciously earned money.

Even those who have saved money successfully for the capital to start the business, their future is quite doubtful. When they have saved enough money it will be a time that their business ability melted away or by no means are sharp. Years' husbanding of domestic work, handicapped and over-interfered by mistress, their mental agilities are reduced to the lamentable degree. Yet, matured by these undesirable experience, most of them are quite unconscious of this outcome as little by little submissive and depending habit so securely rooted within their mind. It will be an exceedingly hard to adjust themselves immediately to the careful and shrewd watch required in the modern business enterprise, tho they may be assisted by the instinct of self-interest. Most deliberate reflection is required from these unconscious servile habit of action to restore to their previous independent thinking mind. The sooner they quit the kitchen the better, tho needless to say there are a few exceptions.

Above all I am so grateful to the members of the Japanese Consulate, prominent citizens of our colony, editors of Japanese papers, ministers and secretaries of Japanese missions co-operating each other to help out young Japanese to secure their more agreeable and harmless position, and also they are throwing their good influence to induce Japanese domestic servants to go over to Korea and Manchuria to become a pioneer and land owner in these country, instead of to be the co-worker with the Venus in the American commissary department.

NEW YORK CITY.

W. J. McGEE

The Desert Cure

BY DR. W. J. McGEE

[A few months ago it was published throughout the country that Dr. McGee was going to the heart of the Arizona desert, at Tinajas, Altas, a solitary water-hole about seventy-five miles from Yuma, and reported to be about the hottest and driest spot in the world, to recuperate his health. The doctor has just returned, completely cured, from his novel and successful vacation, as the following article, given as an interview, attests. Dr. McGee is U. S. Commissioner of the American International Commission of Archæology and Ethnology, President of the American Anthropological Association, Chief of the Department of Anthropology at the Louisiana Purchase Exposition, and recently President of the National Geographic Society.—EDITOR.]

MY residence in the desert from May 20th to September 1st of this year has been one of the most delightful outings of my life. I have been alone except for an Indian boy, and my longest expedition from camp was a walk of forty miles across the desert to meet my wife, who stopped at the nearest railroad point for a visit.

Tinajas Altas, my headquarters, is by trail considerably more than 75 miles southeast of Yuma. It is a little east of south of the station Adonde on the Southern Pacific Railroad, forty miles distant. The nearest village is Gila City, which is the next station on the South-

ern Pacific west of Adonde. The only supply point of any consequence is Yuma.

The life remote from humanity was not undertaken by me as a hermit whim or even solely to gratify my natural fondness for the desert. Early in the year I decided upon Tinajas Altas as a health experiment. The strenuous work of building up the Department of Anthropology for the Louisiana Purchase Exposition—showing our half of the world how the other half lives—had come soon after an attack of typhoid fever, from which I did not take time to recuperate fully. I found myself bur-

dened by certain of the sequelæ of typhoid, which in my case were a partial disorganization of the arterial and venous walls and of the capillaries. By reason of this I became subject to small hemorrhages and some disturbance in the action of the heart, which was not very serious but which ought not to be permitted to continue. The condition might be temporarily relieved by drugs, but could not be cured in that way. So I set about to seek for some regimen that would meet the requirements of my system.

Since I had lived in deserts to some extent and had acquired that peculiar affection for the desert which binds the Arab to his home and leads all people who live in the desert to fall in love with it so that they can hardly reconcile themselves to life anywhere else, I naturally thought about arid regions. I began to realize that the best possible regimen would be exposure to the extremely strong sun and the extremely dry air of the desert, both of which tend to stimulate the skin and other external tissues more than any other known agencies.

I consulted one or two physicians, who seemed to think that my diagnosis and proposed treatment were exactly right; and my wife, Mrs. Anita Newcomb McGee, who stopped in St. Louis for a week on her way from Japan to Washington, and who is a physician, agreed with me that the campaign that I had laid out for myself was the best possible one.

The point which I selected possesses a historic interest. Long before Columbus came to this country the aborigines of the Southwest journeyed occasionally from what is now Sonora, Mexico, into what is now California, and in so doing they had to traverse deserts and seek for water. They discovered two or three water-pockets—Tinajas Altas, or "High Bowls," as the Mexicans call them—at a point in what is now the Gila range of mountains, about 75 miles in an air line southeast of Yuma and about one and one-half miles from the international boundary between Mexico and the United States.

That watering-place became sacred to the Indians. Altho they never resided there, they visited the place in their journeys and carved a vast number of in-

scriptions on the granite rocks about the water-hole. They worked into the flat surfaces of the granite rocks, both in place and lying around as bowlders, a multitude of mortars such as are used for grinding grain and are themselves symbols of food. Hundreds of them still remain and hundreds of the petroglyphs. These consist usually of votive inscriptions which note the passage of a particular group of Indians and take the form of the totemic animal of the group—the mountain sheep, the coyote, the antelope, the rattlesnake and many other animals that were the totems or tutelaries of the tribes.

Just what white man first saw the Tinajas Altas cannot be positively stated, but there is every probability that this man was one of the greatest Jesuits in the history of western America, Padre Kino, the man who discovered that California is not an island, as it had been regarded for many years through a curious blunder on the part of map makers and geographers. Padre Kino went from portions of Mexico included in what is now the State of Sonora to the Colorado River, and described the geography of the region with a good deal of accuracy. It is practically certain that in one of his trips he passed by the way of Tinajas Altas. Later, during the period of Jesuit missionizing, there was a good deal of travel between Mexico and California, and one of the land routes was by way of Tinajas Altas. It was a very hard route, because there was a stretch of some seventy miles without water, but the "High Bowls" were found to be never entirely dry. The parties traveled slowly and many died of thirst before they got to the water. Their bodies were buried in the desert sands or in the volcanic *débris* with which the region abounds, and usually the burial place was marked by a little cross flat on the ground, made of pebbles, because there was no wood.

Another chapter was opened by the discovery of gold in California, and when the golden germ invaded the brain-cells of Mexicans as well as Americans the Argonauts began to flock across the plains and the desert to California. The favorite route for the Mexican gold seekers and one of the routes for the

Americans lay by way of Tinajas Altas, along the old missionary trail.

The gold seekers were followed by pioneers, whose herds of stock subsisted on the prairie grass. There was very little of this grass to begin with, but that little was destroyed and the region therefore became more desert than before. Evaporation became more rapid and the last water dried up on the route between, so that instead of 70 it is now 90 miles from the nearest water on the east to Tinajas Altas.

The gold seekers and pioneers often died on the way from thirst and hardship and occasionally they were massacred by Apache Indians. Each new party sometimes had to bury the bodies of the preceding party. The whole ninety miles from the last water at the little Indian village of Quitovaquito to Tinajas Altas is almost a continuous cemetery.

The lowest basin of the Tinajas Altas is easily found in the granite rock and is now near the level of the plain. The others are higher, altho tolerably accessible. But sometimes when the pioneers arrived after the long, hard journey they had not vigor enough to climb up over the rocks, and sometimes they did not know that there was any water higher, so that they died even so near to the water, and the next party had to bury them. I think that within a few rods of the basins there are as many as one hundred pebble-crosses marking graves.

The discovery of other routes across the continent and the fact that this one was so extremely hard would probably have led to its final abandonment had it not been for the Gadsden Purchase in 1852 and the coming of surveying parties to locate the international boundary. The surveyors were about the last men to pass by Tinajas Altas until, with a curious irony, the County Supervisor of Yuma County went over the route in 1894 and erected guide-boards every dozen or two miles. After that a Mexican and an Indian, who had acquired their horses in an irregular way, watered at Tinajas Altas. The next party was my own, in 1899.

I had been down in Sonora to look for a tribe of Indians that I found extinct, and I concluded to go to the Colorado

River and observe the Cocopa Indians. I wanted to work along up the coast of the Gulf of California, but I found that the absence of roads and the presence of sand and the dearth of water made this impossible, so I went into the interior and struck the old Yuma trail at Quitovaquito. There I prepared myself for the ninety miles without water to Tinajas Altas.

The ordinary climatic processes move slowly there. The trails of the boundary survey party, of the Yuma County Supervisor and of the Mexican and his Indian were to be traced nearly always in the sand without difficulty. We located the camps of the boundary survey party. We followed the wagon tracks which they had made and noted the prints made by the feet of their horses and mules.

We completed the ninety miles without water—a statement which is painfully eloquent to any one who has gone through it, but which means nothing to those who have not done so. At the end of the ninety miles without water we reached Tinajas Altas. Naturally the water was the sweetest and the surroundings the most attractive that the human eye ever saw—for such is the effect of thirst. For that reason I sought Tinajas Altas as a health cure. The hopes which I entertained last spring have been more than justified. The effect of desert life upon my health has been all that I anticipated, and I return to civilization entirely well and with a store of experiences well worth the trouble of securing.

My fifteen-year-old daughter Klotho had been eager to accompany me and I would have taken her with me, but duties at home prevented her. So I started out, intending to have no companion, but when I arrived at Yuma I found prospecting and cattle driving parties, rendering it unwise to stay alone, and I took José, an Indian boy, to guard camp in my absence and help get fuel and water. The boy was away three times, for periods of three days, four days and one week, during which I was alone.

From Yuma a man with a strong team and a light vehicle took us and our rations and blankets out to Tinajas Altas. Our rations for each month consisted of

twelve pounds of raw bacon, eleven pounds of raw navy beans, two pounds of rice, four pounds of sugar and one pound of tea, a total of thirty pounds—a pound per day—for each of us. The merit of the navy bean is that each pound when cooked absorbs so much water that it becomes from five to eight pounds. In spite of the experiments of military organizations all over the world in the last quarter of a century, no ration in condensed form has been found equal to the good old frontiersman's standby of bacon and beans.

I had no tent or other bar against nature, nor did I desire one. I liked the sky above me, and as the average rainfall is only about one-half inch per annum, I needed no protection from the wet. It was, of course, cold at night. The ground was, therefore, more comfortable to sleep on than a bed or cot, because it became heated during the day and at night gave off warmth. Lying flat on the ground I was a great deal warmer than I would have been on a bed even as low as six inches above the ground. The diurnal range is very great at Tinajas Altas, as in all extremely arid regions, and this is one of the most arid in the world. The ordinary summer temperature, as nearly as it can be measured, ranges from 40 to 50 degrees at night to between 110 and 135 degrees in the day.

I have maintained at camp a United States Weather Bureau Station, in which observations have served to define the "summer low" about the head of the Gulf of California and a vapor zone lying between the fog zone and the interior thunderstorm zone, which has much to do with the weather of the Southwest and will aid in weather forecasting hereafter.

For cooking my meals I found sufficient roots and twigs of the mesquite

and creosote (*Larrea tridentata*). It does not take much fuel to raise water from the 100 degrees at which it averages here to the 200 degrees at which it boils at the Tinajas Altas altitude of 1,400 feet.

I took no reading matter with me. It was a time of resting. But I did some thinking in the way of studying the fundamental principle of vegetal vitality in deserts, the process by which the cacti, the mesquite trees and the creosote bushes utilize energy from light.

I found more life than I anticipated—two rattlesnakes, four centipedes, half a dozen scorpions, tarantulas and two Gila monsters, mostly in camp. Many birds and insects and some big-horns shared the water with us. I did not shut them out, altho water was scarce. Only two tinajas remain, one containing perhaps 250 gallons of rather bad water, the other with about 50 gallons of fairly good water and more in the sand. Each basin was an hour's climb (round trip) from camp. I am inclined to think the place is a sort of spring, drawing supply from the ground water in the granite rocks.

On July 20th I had the exciting experience of rescuing two Mexican prospectors at the point of death from thirst. They had gone out insufficiently supplied with canteens, boastful of their ability to stand heat and thirst. Five days later they straggled back to camp, semi-delirious, neither one able to articulate. They dropped, fifty yards apart, and José attended one, while I looked after the weaker, administering water and a little whisky, giving also a heart stimulant to the weaker one, to keep the thickened blood moving until the reaction was over. Glimpses of that side of desert life are awful, but happily one can provide against such emergencies.

YUMA, ARIZ.

The Recovery of Family Life

BY REBECCA HARDING DAVIS

MR. GOLDWIN SMITH gave us in *THE INDEPENDENT* the other day an eloquent description of the death of Family Life—of the Home—in England and America. He showed us how essential to human development, how full of all blessed influences, was this Home which our forefathers possessed and loved, but which, he believes, we are allowing to die out among us. He describes a typical English household known to him in his youth; the corps of faithful servants who honored their employers and cared for them, and who were honored and as faithfully cared for by them. This household was no doubt the outgrowth of the spirit and the time which taught the English child in his church catechism that his religion required him to “order himself lowly and reverently to all his betters.” He is taught the same words now. But what English or American child really believes to-day that he has any “betters”?

Mr. Goldwin Smith is convinced that the old type of domestic service is almost extinct here and in the mother country, and his article is, in fact, only a pathetic requiem for the Home. His logic is dreadfully convincing. The Home cannot exist without separate households, and separate households are impossible without domestic servants, and domestic servants are now all being metamorphosed into shop-girls and mill hands.

From one end of the country to the other the same wail is heard. We are told that in New England forty years ago, when the new summer boarder industry first promised prosperity to fishing villages in Maine and farms in New Hampshire, the women were ready to cook and wash and gather in the golden harvest, but that now the daughters of these women are in the mills, or sit idle at home, reading books on natural science or novels from the free libraries. Their education, they argue, has unfitted them to be cooks or chambermaids. Their

places in the household are filled by raw Irish or Swedish girls, all eager to leave the kitchen for the factories.

In the large cities of the East the riddle of domestic service is incessantly discussed, until the most patient listener is bored and wearied with it. Young married people, in haste to grow rich or to reform the world, have no time to waste on kitchen problems, and crowd into hotels or boarding houses, throwing wholly out of their lives the idea and the reality of the Home. It is, in fact, this hasty action of a class so numerous and prominent among us that has convinced such thoughtful observers as Mr. Goldwin Smith of the rapid decadence of family life in this country. All kinds of expedients have been seriously proposed in these overcrowded towns to remedy this difficulty, from racial suicide to the erection of huge buildings, each of which will contain fifty families; a laundry in which all of their clothes can be washed together, a kitchen where their food can be cooked, and a gigantic nursery on the roof, where all the children can be herded, fed, taught and brought up by the same nurses in or out “of the admonition of the Lord,” as luck may have it. Thus, the inventors of this scheme assure us, the mothers of the family will be set free from all home cares and responsibility and will be able to devote their energies to literary or civic affairs. These remedies, however, have not proved popular.

From the South the reports are not so hopeless. A much larger proportion of the negroes retain their old feeling of respect and affection for their employers than would be credited in the North. There are still skilled old Winnys and Bettys in the kitchens, with their secrets of soups and hot breads handed down unwritten for generations. There are gray-headed body servants who secretly despise the free and easy manners of their modern masters; and, best of all, the old-time Mammy lingers in some

nurseries, able not only to feed and dress the children, but to drill them in "manners," to dose them when they are ailing and to teach them religion in their prayers night and morning. The manners and the simple faith of these old black mothers are not a bad foundation for the life of any little child, white or black.

But the younger generation of negroes, especially those of mixed blood, are largely influenced just now by the ambition for what they call "high development." The foppish waiter behind your chair or the manicure girl in a silk gown and picture hat intends to fill a pulpit and a teacher's chair in some institute before long. Their ambitions are nothing, no doubt, but in the meantime your meals and nails suffer. The great majority of half-educated negroes do not accept the theory of Booker Washington. "Work" is not the cure for their needs, but the vague so-called "development." The man who writes a book of feeble verses or preaches a sermon in which every idea is borrowed is hailed by them as a benefactor to his race, rather than the skilful mason or carpenter. Whether these ideas are right or wrong we need not stop to argue now, but it is certain that while they control the colored people they will not furnish an answer to the kitchen riddle.

In the West that riddle is more urgent than even in New York and Philadelphia. The wife of a wealthy rancher in Montana lately wrote to me: "Household service such as we were taught was a necessity in a home is an impossibility here. Why should a girl be my cook or maid when she can be the mistress of a ranch herself? Wives are at a premium here. One or two boys too weak for outdoor work I have drilled in the kitchen and now they can wash beef or wash and starch shirts very creditably. Before I discovered them, a year ago, and when I was helpless from an attack of ague, the daughter of a neighboring farmer was induced to lend me her assistance for six hours each day. But she stipulated for a sum that would have paid a New York *chef*, and spent most of the time in practicing on my piano."

In the large towns of Montana and

Washington the household difficulty is met by countless small restaurants or *cafés*. The rates at which meals are served in these places seem absurdly low to Eastern housekeepers. From a luncheon of beef sandwiches and a cup of tea at ten cents to a dinner of soup, meat, vegetables, dessert and coffee at twenty-five, provision is made for the most ravenous appetite, and, the Western man being as a rule both honest and shrewd, the food is wholesome and good. To families who refuse to find the lost altar of "home, sweet home," in a covered basket or a table at a restaurant, the Japanese or Chinaman brings silent and effective relief.

The most piteous cries for help, however, come from the large manufacturing towns of the West, to which the negro and the Asiatic have not penetrated. The wife of a mill owner, whose capital is numbered by many millions, said lately:

"We have neither Chinese nor Japanese in our city. There are few negroes. The American and foreign girls prefer to go into the factories to domestic service, tho the mill work brings them in not half as much money. I am willing to pay the highest price for a skilled cook or chambermaid, but for years have felt that I was fortunate if I could secure one girl of all work, untrained, awkward and, as a rule, rude and insolent. When skilful work of any kind is needed now in the house it must be done by my own hands or left undone. Yet I live within fifty miles of Chicago! I have tried to import trained servants from the East and have humored them as if they were Bourbons in disguise. But after a week or two they invariably left me to 'better themselves,' which meant hard mill work at lower wages, under a coarse, rough boss."

"And why?" I asked. "Oh, it is a question of caste. The household servant is held by uneducated people to rank lower than the mill hand," she replied.

Is not this the key to the difficulty everywhere? There is no nation in the world in which caste is more important than in ours, altho we profess to have no such thing. Every village has its grades of social demarkation, laid on absolutely baseless lines.

What will be the result of this uni-

versal difficulty? Is the country to become a huge boarding house? Are the home and family life to die out?

I think not. Surely Mr. Goldwin Smith takes too gloomy a view of the situation.

There is no difficulty in the world which Necessity and Common Sense will not overcome if you give them time enough.

Next to religion family life is the most beneficent influence in the development of men. Are the people of this country to give it up because a certain kind of work is necessary for it and the workers do not come to it at call?

Given any kind of necessary work and good pay and sooner or later the workers will come. They are beginning to come now. In the Eastern cities, if you have the money, you can command a corps of skilled English servants. If you live in the West Chinese and Japanese will do the work with ability and intelligence. In the South better service will be had when enough years have passed to convince our colored friends that they cannot all be professional men and women. To them, as to the great mass of our incoming immigrants, liberty and equality are new waters of life. They have gone to their heads like wine; they all reel a little as they walk. In a year or two they will understand that no labor which is honest is dishonorable, least of all that especial service which women in

all ages have given to their husbands and children. When Irish Molly and Dutch Lena discover that more skill and comfort and profit belong to the work of a kitchen than to that of a mill the difficulty will vanish.

Have the mistresses nothing to do in this matter? Probably the most ideal condition of household service was that which existed a century ago in the large households of the Scotch-Irish settlers in Pennsylvania and Virginia. Cooking, weaving, all kinds of household labor, were carried on by apprentices bound to serve without wages until they came of age. As a rule the mistresses held themselves also bound to train these young people in the service of God, and did it faithfully. They gave personal care to each boy and girl, fitting them to be useful and happy men and women. A strong link of respect and affection bound servant and employer together through life.

How much personal care do we give now to our cook or waiter?

A little kindness and sympathy, a recognition of the human soul in every man or woman who comes near us, will send strange heavenly airs blowing through the darkest places in the world. We form clubs to carry help to prisons and to slums. What if each one of us went alone with it every day down into her kitchen?

PHILADELPHIA.

Peace and the World-Soul

BY EDITH M. THOMAS

I SENT my soul to ask the World-Soul *why*
Life-loving men the chance of war still court
Who all so soon this sweet, known earth must
fly,
Yet haste to launch away to Death's dark
port!

The World-Soul answered (not from Time
nor space):

"O fretful atoms 'neath your transient sun,
It is, that yet ye speak of sundered race,
Of alien tribe and law,—who are but *one*;

"For one ye are, wherever men shall fall;
Ye are but one (misnamed as 'friend and
foe'),

In whatsoever tongue your pale lips call
On whatsoever Name of God men know!"

Now—since my soul the World-Soul did entreat,

Through all embattled lands I fain would
run,

Crying: "This knowledge, brothers, is so
sweet—

Rest ye, and hear, *we are but one, but one!*"

WEST NEW BRIGHTON, N. Y

The New Assistant Secretary of State

Robert Bacon, whose appointment as Assistant Secretary of State to succeed Francis B. Loomis, resigned, was recently announced, was born at Jamaica Plain, Mass., on July 5th, 1860. He was graduated from Harvard in 1880, in the same class with President Roosevelt, with whom he has since continued a very close friendship. Subsequently he entered the banking house of E. Rollins Morse & Co., of this city, ultimately becoming a director therein. In 1899 he became associated with J. P. Morgan & Co., with Drexel & Co., of Philadelphia, and with the Paris house of Morgan, Harjes & Co. He quickly became a power in matters affecting the Morgan interests and gave considerable attention to railroad and industrial enterprises. In 1901 Mr. Bacon was acting head of the Morgan banking house during Mr. J. P. Morgan's absence in Europe. This period, marked by the famous corner in Northern Pacific, afforded Mr. Bacon an opportunity, which he improved, for displaying remarkable qualities. Mr. Bacon was active in the steamship merger and in the settlement of the coal strike in 1902. He retired from the Morgan firm on December 31st, 1902, on account of ill health. His present appointment is the first public office of a national character that he has held. Mr. Bacon is an active member of the best clubs of the city and is a director of the National City Bank, the Bank for Savings, the Chicago, Burlington & Quincy Railroad, Erie Railroad, Federal Steel Company, Northern Pacific Railroad and other corporations.

Lord Minto, Viceroy of India

The new Viceroy of India, whose full name is John Murray Kynynmond Elliot Gilbert, is now fifty-eight years old and is a man of wide experience, having seen service in four continents. He was educated at Eton and Cambridge and at the age of twenty entered the Ensign Scots Guards. Ten years later he served with the Turkish army and was in the Afghan War of 1879. He was the Private Secretary of Lord Roberts when he was in South Africa in 1881, and he volunteered for the Egyptian campaign of the following year. He was appointed Military Secretary of the Marquis of Lansdowne, Governor-General of Canada, and led the campaign against Riel and his half-breed followers in the Rebellion of 1885. He was Governor-General of Canada from November 12th, 1898, to December 10th, 1904. He now takes the place of Lord Curzon, who resigned the viceroyalty of India because of conflicts of authority with Lord Kitchener over the reorganization of the army and the control of supplies for it.

What the Vice-President of the Confederacy Thought of General Grant

BY I. C. CRAWFORD

[The following article was written by Mr. Crawford after an interview with Alexander H. Stephens, which has never before been given to the public. Mr. Crawford has lived in London for the past few years, but before that for twenty years he was one of the leading newspaper correspondents at Washington.—EDITOR.]

THE late Alexander H. Stephens, of Georgia, former Vice-President of the Southern Confederacy, attracted much attention in Washington when he came here as a member of the House several years after the war. In many ways his life had been a most remarkable one. No invalid has ever done more than did he. Physically he was almost helpless from the days of his childhood. Nothing but the energy of his mind and the strength of his character enabled him to take part in the active affairs of life. At no time in his life did he ever weigh over ninety pounds. Thin, attenuated, unable to walk, suffering constantly from pain, he was, in spite of all these difficulties, a most agreeable and cheerful companion. He was able to make his way about a room through the aid of an ingeniously contrived invalid chair. This he was able to propel himself a short distance. A stout negro servant carried him up and down stairs as he would a baby. This servant dressed him and fed him. Mr. Stephens occupied a position on the floor of the House of Representatives directly in front of the Speaker. There he would hold a little court, seated in his invalid chair, and occasionally he spoke from it. He had a small featured, boyish looking face. His hair was very thin and of a sandy brown color. He never had any beard. His face was as smooth and as soft as a baby's. His eyes were a kindly blue, his nose straight and his mouth small and refined. His face was that of a kindly old woman of unusual force and vigor of character. His voice was very shrill and penetrating, but not disagreeable. Mr. Stephens was noted for the clearness of his political vision and his remarkable lack of partisan prejudice. He opposed secession and never for a moment was deceived as to the outcome. He went into

the Confederacy to follow his State, but against his own judgment. There was no time during the war when he was not anxious and ready to negotiate for peace.

Mr. Stephens had a most remarkable memory for names and faces. He had this to a much greater degree than had Mr. Blaine, who was the most noted of the modern politicians for such a memory. If Mr. Stephens ever had a conversation with any one it was exceptional if he ever forgot the individual or his name. Through his invalid habits he was obliged to lead a most retired life. Every evening, however, he was at home in his invalid chair until nine o'clock. His rooms were nearly always thronged during the period which followed dinner. Mr. Stephens dined at six. He was so feeble that he was unable to prepare his own food. A servant would prepare his food and feed him as he would a child. The casual visitor not acquainted with Mr. Stephens was always surprised to hear him talk. By the side of such physical feebleness there was a striking contrast of great mental vigor and felicity of expression of a most unusual character. It was Mr. Stephens's habit to roll his chair quietly up and down and to turn to the right and to the left, taking in every one present in the range of the conversation. He was invariably courteous to every one. There was a special kindness in his manner to young people. He much preferred the society of young men to that of older ones.

I called upon Mr. Stephens one evening soon after his arrival in Washington. He had then been away for many years. It was his first return after his former political rights had been restored to him following the downfall of the Confederacy. His room, where I saw him, was thronged with Southern men. Mr. Ste-

phens was seated in front of an open fire, the yellow light of which played upon his pale, white face. He talked to his associates in a vein of most kindly charity. It was during the passionate and resentful days of the reconstruction period. The debates in Congress at that time were most bitter. Mr. Stephens advised his hot-blooded Southern associates to be patient. Every word he uttered was in the interests of harmony and devoid of all passion. I had but little opportunity then to talk with Mr. Stephens. There was nothing in my visit to attract his attention in any way. I did not see him again until three years after. I then called upon him in company with several others. He recognized me at once as I entered the room, called my name and mentioned the time and occasion of my first and only visit to him. While this was surprising to me at the time I learned afterward that this was not an unusual thing for Mr. Stephens; that he remembered every one and that this habit was strengthened by the fact that he was restrained in his life and occupied constantly the post of an observer.

It was during this second visit that Mr. Stephens related his experiences with General Grant at the close of the war. This is very interesting, as it gives a picture of General Grant as he appeared to a former enemy. It is an estimate of General Grant by one of the shrewdest observers who ever lived in American public life. Mr. Stephens, in the course of a conversation, had his attention called to General Grant by a Southern friend, who spoke of the General, who was then President, in the harshest terms. He repeated the phrases common at that time among General Grant's enemies. He was "ordinary," "uneducated," "boorish," and in every way unfitted for the high places he had reached. Mr. Stephens stopped this talk with a wave of his hand and then said: "It is a great mistake to underestimate an opponent. This was our mistake during the war. It would be worse than folly to continue this blundering view of a man who has the inclination to be our friend and the power to do us so much good. General Grant is one of the few great men this country has ever produced."

Mr. Stephens then went on to give the story of his first meeting with General Grant. It was at this meeting that he formed an impression of the true character of the General. He said: "I was appointed one of the Peace Commissioners to confer with the Federal authorities and to see if peace could not be accomplished without the useless shedding of more blood. It was in the winter of '64 and '65. The Confederacy was doomed. There were many who believed in dying in the last ditch and who were opposed to seeking terms. It was through my influence largely that this Peace Commission was formed. We placed ourselves in correspondence with General Grant and he made arrangements at once to receive us under a flag of truce. None of us had ever seen this victorious General. The only impression we had concerning him was derived from the exaggerated stories we had read in the Southern newspapers. The common impression concerning him was that he was at least six feet high, a coarse, tyrannical brute, who was nearly always drunk, and when sober was in such a cruel mood of fury that every one hated and feared him. We expected anything but a pleasant reception. The staff officer who was detailed to go with us was very particular about his appearance. I remember that he ransacked the shops of Richmond to get together a resplendent uniform, so as to make a fine appearance before this successful Union General.

"We were passed through the Union lines promptly. We arrived at Grant's headquarters in the field near Petersburg after dark. There was no committee to receive us. The guards everywhere were informed of the character of our visit and we found no obstacle in the way of our onward march to Grant's headquarters. Everywhere there was respectful courtesy, but no more. When we arrived at the place where Grant's headquarters were said to be we looked around for something indicating the character of a Commanding General's headquarters. We had been passed up through such formidable lines of sentries that we were surprised to find here at the very point where the General was no sentries and no guards to indicate the importance of the place. We asked

where we could find General Grant. A log cabin in the neighborhood was pointed out to us as his headquarters. We walked there and found no orderly at the door; so we were obliged to knock and to introduce ourselves. The door was opened by a gentleman in civilian clothes. He was of medium height. He held an oil lamp in his left hand, which he lifted just above his head in order to throw the light out. He rested his right hand upon the door as he opened it, saying, 'What is your wish, gentlemen?'

"I said: 'We are seeking General Grant.'

"'I am General Grant,' said he. 'Walk in, gentlemen.'

"This was our first surprise. The second was the unaffected warmth and simplicity of his reception. He placed the lamp upon the table and himself bustled about to find chairs. He stirred up the wood fire and listened to the account which I gave him of what we hoped to accomplish. We were with him an hour. He showed from the first the greatest pleasure at our visit and promised with the greatest cordiality to co-operate with us in working to secure peace. I studied him carefully during that hour. He was always the quiet, unobtrusive gentleman. Altho he was then the commander of an army of more than a million men, at the very pinnacle of the greatest military success of modern times, a soldier of the first rank, he was as quiet and unassuming with us as if he had been a mere captain. I doubt if there were many captains in the army at that time who would have shown such modesty and such quietness of manner. The proof of his greatness was his readiness to abdicate this position of splendid power as a command General in order to serve his country by giving a peaceful solution to the dreadful question between the North and the South. I observed him in his relations to his subordinates. Officers were continually coming and going. The Commanding General had continually to excuse himself to send this or that message by some orderly. I never heard him during that time use to one of his subordinates the tone of an imperative command. Even to the humblest of the orderlies he would say, 'Will you kindly do this or that?'

"When the first part of the conference was closed it was General Grant himself who said, 'You must remain here for a few days and perhaps we will be able to reach a peace.' He then said to us to follow him and he would furnish us quarters for the night. With almost boyish eagerness he picked up a soft black hat and said, 'I will show you myself where you are to go.' I protested at this trouble on his part. I said it would do quite as well if he would send an orderly. But no, he would not listen to this for a moment. It was now very dark. He started out with us and we went stumbling along after him down in the direction of the river, where a lighted steamboat lay. At every step we were challenged by sentries. To the cry of 'Who goes there?' General Grant invariably responded in a low voice, 'The Commanding General,' and on we sped without delay until we reached the steamboat, where General Grant himself selected the most comfortable staterooms and placed them at our disposal. He then said that he would be obliged to leave us. He intended to telegraph to Mr. Lincoln the results of the evening talk. If Mr. Lincoln indorsed the plan we should be able to come to an agreement at once and end the war.

"The next morning we were out on the hurricane deck. It was a clear, sunny morning. There was a sparkle in the air which made us all feel hopeful. Soon after our coming on deck we saw Grant. He came running along down the embankment, like a boy, waving a telegraph dispatch in his hand. He came on board at once and said: 'Good news! Lincoln approves and will send Commissioners to meet you.' I have never seen any one more unaffectedly glad than was General Grant. He sat down to breakfast with us and chattered like a boy and thanked me again and again for the good idea that I had had in seeking to arrive at a peaceful solution of the trouble. I did not see him but once after this. This was later in the day. Then he was disappointed and melancholy. Secretary Stanton had protested against the Peace Commission and his influence with Lincoln had been sufficient to countermand the order. Grant protested, but in vain. He received curt orders from Washing-

ton to proceed with the war, and that was the end of our attempt to accomplish peace. When I left Grant I was deeply affected. There were tears in his eyes when he shook me by the hand. The impression that he made upon me then of loyal simplicity, of true kindness of heart and nobleness of nature cannot be changed. He was in every sense of the word a true man.

"His conduct toward the South at the surrender of Lee's army only confirms my previous estimate of him. Since coming to Washington I have had a number of occasions to see General Grant. He has always treated me with the same kindness and consideration as at the time when I first met him. I think that if we Southern men had not kept away from the White House during this reconstruction time, but had gone to him with the frankness we could properly display in

going to a loyal enemy, our relations with the Government would have soon become agreeable and that General Grant would have met us more than half way. He has never shown the slightest desire to take advantage of any of his triumphs. He is too broad-minded not to know that one part of the country cannot prosper at the expense of the other without disadvantage to the whole."

It was in this kindly vein that the former Vice-President of the Confederacy used to talk to his Southern associates about General Grant. He did more to correct the misapprehensions in Southern minds concerning General Grant than any other public man at Washington. He was to the close of his days a loyal friend and was never weary of expressing his admiration for the high qualities and upright character of this greatest of the Generals of the late war.

WASHINGTON, D. C.

Hawaii and the Japanese

BY A. L. C. ATKINSON

[A. L. C. Atkinson is Secretary of the Territory, and is serving his third term as Acting Governor, tho only 34 years of age and legally too young to be Governor. It is generally understood here that he is ultimately to succeed George R. Carter as Governor. He is also Chairman of the Territorial Board of Immigration and Board of Archives. As Secretary of the Republican Central Committee in the first campaign he was the organizer to a very large extent of the party in the islands. He is an attorney, a graduate of Ann Arbor. The following article is from an interview.—EDITOR.]

I DO not believe that Hawaii is destined to be Japanized. It is a fact that the Japanese population of the islands is more than twice the number of Caucasians of all nationalities, and it must be admitted that the Japanese, originally brought here as laborers—a large majority of them contract laborers before annexation—have made very considerable advances as skilled laborers and have driven many American skilled laborers away from the group. The oft-mentioned fact that there are thousands of young Japanese growing up all over the islands who will have the right, being American born, to demand American citizenship and vote must also be admitted. It is pointed out by alarmists in Hawaii to-day that in about ten years enough of these youths will grow up to

dominate the political situation in the islands, and a Japanese Legislature and Japanese county officials in this little American Territory are freely predicted by the alarmists.

The Japanese, however, do not become expatriated. They will not want American citizenship. They do not want it now. In the last general election here the Japanese who voted can be counted on the fingers of a hand, tho there are undoubtedly several hundred who could qualify. The Chinese far more readily accept American citizenship, or, rather, reach after it when able, and we have about two hundred of them as voters. The Chinese desire for citizenship, however, is usually not founded on devotion to Americanism. It is merely a matter of avoiding the difficulties and incon-

veniences of the Exclusion Act, for a Chinese who is an American citizen may travel to and from the country as he wills. The Japanese want our education, our business and mechanical knowledge and our money, but, far more than the Chinese, they want to keep their own nationality. This is why they will never dominate an election in Hawaii and one reason why I say that the Hawaiian Islands will never be Japanized.

Another is that Hawaii herself has begun to initiate a movement which will populate her beautiful fertile valleys and plains and hillsides with the homes of whites.

In recent years the people of Hawaii have awakened to the realization more than ever of what is meant by the words spoken by President Roosevelt when he said that Hawaii must be developed "along traditional American lines," and also, perhaps, they have awakened to a realization of the fact that the American ideal was not being achieved here. I believe that our large sugar plantation men—even those who have asked from time to time that Washington allow them Chinese coolies—are taking more than ever an interest in this problem.

Hawaii boasts of an incomparable climate, soil of unexcelled fertility and scenery so charming that no visitor ever fails to say its impression will linger in his memory till death. She has thousands of acres of splendid Government land lying idle. She has the finest and largest sugar mills in the world and vast cane fields watered by some of the largest pumps ever installed by man. On the single island of Oahu there is pumped from the soil by this vast machinery the incredible total of 350,000,000 gallons every twenty-four hours. In these great mills and pumping plants there is employment for a small army of skilled engineers and machinists. Hawaii's uncultivated acres can produce tons upon tons of valuable tropical staples for which the United States every year pays millions of dollars more than she need pay if Hawaii were her tropical garden. Yet the past two years have seen the American, in fact all the white, population actually decrease. The Japanese or else the Chinese have taken the skilled laborers' places and little has been done to encourage the

American homeseeker. But a start has been made.

The Legislature has just created a Board of Immigration, which, in co-operation with the sugar planters and others, is laying plans for securing a supply of white labor consisting of men with families who will found homes and become American citizens, and for encouraging the immigration of the American settler. The mistake of encouraging the Asiatic skilled laborer at the expense of the American is now realized, and I believe that a few years will see a marked return of white skilled laborers to these islands.

The first missionary work will have to be done here. We shall have to put our own house in order. Our large employers must be brought to realize their responsibility. Hence we are asking the plantations and other large employers what they are willing to do. We want them to offer the whites employment and we expect them to do so. We can supply the homes. Give them work and give them homes and whites will settle this country. Hawaii has the work to be done and at good wages, and she wants the right kind of citizens to come here and do it.

The citizens who have made Honolulu and Hawaii what they are, including the present generation and their ancestors in the islands, achieved far more in the development of an American community than the average American is aware of. They have made a success of the scientific agricultural and mechanical features of sugar producing far beyond anything else in the world. There are no sugar mills, no fields of cane, in the world which are comparable to those of Hawaii. This result has been won by the application of the best scientific talent to be had in both lines. Nowhere is there more scientific farming than on the sugar plantations of these islands, where twelve tons of sugar to the acre are produced, as compared to the three or four tons regarded as satisfactory elsewhere; and nowhere else, after the cane has been harvested, is its saccharine matter extracted with equal skill or perfection of machinery. I believe that the people of the islands who have achieved these great commercial results are also capable of

solving their political problems and of carrying out the wish of our President and of McKinley before him, that the islands be developed along traditional American lines. In doing this they have to meet a concentration of what is known as the "yellow peril" such as has never before been met by an American com-

munity. The other "yellow peril," which is just beginning to be talked about, but which, let us hope, will never be a real peril—that of the utter defenselessness of the islands against naval attack—is one that may be left to the statesmen at Washington who are in charge of such matters.

HONOLULU, HAWAII.

Yellow Fever and the South

[Few people are so loyal to their home city and so careful to say no word of disparagement concerning it as are the residents of New Orleans, and it was with considerable difficulty and only on condition that his name be not used that THE INDEPENDENT secured this interview from a prominent railroad man who has spent his life in the Crescent City.—EDITOR.]

TO the Northerner and in the Northern newspapers yellow fever assumes a more dreadful aspect than it does to those who have lived through the epidemic. We who are old

residents of New Orleans know how to treat the fever, and we know several maladies which are worse. I have had both the yellow fever and the typhoid malarial fever, and rather than suffer

Tremaine Street, near Chartres, in the French Quarter of New Orleans. One of the cisterns commonly seen in connection with all residences is shown. These cisterns are in two compartments, the water from one side of the house flowing into the lower, and from the other side of the house into the upper. In all households of old residents the water is boiled and filtered before using

Fumigating Freight Cars

one attack of typhoid malarial I think I would be willing to go through with the yellow fever five or six times, either in respect to the after effects or to the present pain and discomfort. The yellow fever patient is wholly delirious. He knows nothing about it. As soon as he regains consciousness, if he does at all, he is almost well. For forty-eight hours the fever rages, then it subsides. For three or four days following the patient must live on liquid diet. After that he may eat what he pleases. He is no longer sick.

The mosquito bit me—I don't know the precise moment, but I am sure it was the mosquito—in the epidemic of 1878. I had the fever then, and feel perfectly safe about never having it again. My mother and two sisters were likewise seized with it. Each of us recovered under a treatment of ice and iced brandy or iced champagne. That is all that can be done. Nourishment is impossible and medicine almost equally so, with the tissues decomposed as they are. The cure for the fever is simply in keeping the patient cool and quiet and covered up.

Time after time I have seen this simple care prevail. No one need fear if he has a good, wise mother who has had the fever and is not frightened. She can manage the disease without a physician. She puts her patient to bed, preparing for a siege of about six days and remembering that it is an absolute requisite that the patient shall not be permitted to catch cold. Taking cold invariably proves fatal. The sheets and the night clothing turn a pale yellow (giving the name to the disease) and the fever burns on, with only a cooling stimulant now and then to work against it. A young lady who is a relative of mine suffered even the black vomit, but recovered under this regimen. The doctor packed her in ice and her attendants placed small lumps of ice touched with champagne to her lips as tongue and palate became dry. After her recovery we noticed that she seemed stronger than she had been before her sickness.

The practice of the negroes, who are usually too poor to get the more expensive champagne or brandy, is to administer cool teas made of orange leaves,

watermelon seeds, or, in fact, the infusion of almost any plant. Their indiscriminate dosing is far better than the panic of the Italians. In order to appreciate the senseless terror of these people one must understand that the Italian community of the lower delta is composed almost altogether of extremely ignorant persons who are very much afraid of the Americans. They rarely learn to speak the English language and are clannish to an extraordinary degree. They regard the English-speaking people of the city as a sort of Mafia and are loath to confide in them. The fever they look upon as a scourge, such as the cholera, sent by an incomprehensible fate and impossible to combat. Their first idea when the fever seizes one of their number is to conceal the patient. Their acts at such a time seem little short of insanity. Numerous cases have been known where they have thrust the fever-

stricken ones between mattresses or on roof-tops, or under cisterns. The mortality in such instances is, of course, very large. It would probably be equally so in typhoid.

Regarding the fever, as they do, as a visitation of an offended Deity, and having small knowledge of remedial and none of prophylactic measures, it is not surprising that these poor creatures have more faith in their scapulars than in material measures. Archbishop Chappelle, who could speak the Italian and who had great influence with them, happily utilized this religious fervor of theirs as a lever to help in bringing about a proper care of them. He encouraged them to have faith in their sacred emblems, but also in the good will of the doctors. His death makes it doubly hard to control the Italian quarter, and grief for him adds to their previous distress.

The little gray, spotted Lady Stego-

Screened Ambulance in Front of Hospital

myia is the weakest of all the mosquitoes. A single blow of the hand will kill it. But we have always regarded its bite as most vicious of all the mosquitoes, causing large, inflamed welts, even before we heard of its connection with the fever.

I suppose that we really have the yellow fever in New Orleans every summer—some few cases which, perhaps, are

tient be spared from publicity and quarantine.

We have every reason to believe that the fever actually existed in New Orleans May 24th. Yet when I left the city with my family, July 12th, to spend the summer in the North, as we usually do, there had not been a whisper of the fever.

There is great advance, however, in

Entrance to Cemetery of Charity Hospital, Where Many Are Being Buried

called by some other name. The great evil that we have had to face is that the doctors will not be frank about it. Of course it is hard in a city composed, as New Orleans is, of old families who have long been on terms of most intimate friendship with one another for the doctor to report cases when they occur among those to whom he is bound in closest affection, especially when these old friends plead with him that the pa-

the attitude of the people generally toward the disease. In 1878, when New Orleans and Memphis and almost all the South except the pine belt region were infected, there were far more refugees than now. In fact, of persons now who have fled the city because they wanted to get away from the fever there are really very few. The reason of the apparently heavy travel to the North is in large part because many families were

stopping at coast resorts when quarantine was declared, and in order to get back to their own city they were forced first to come North.

Among the causes of the dread which the disease inspires in persons to the north of New Orleans is the rarity with which it has appeared there and the ignorance of its nature which exists in those districts. Taking Memphis, Tenn., as an example, we will find that in 1878 about one-tenth of the population died of the fever. One Mississippi town tributary to Memphis was practically wiped off the map. Out of something like 300 inhabitants there were 278 deaths. Other places were subjected to almost as rigorous visitations. In New Orleans at present the deaths are not one in 1,000 in proportion to the population.

The people several hundred miles north of New Orleans do not know how to treat the fever properly, the doctors as a general thing being almost as little informed on the subject as the laymen, and when the horror of '78 is remembered it is not strange that they should become alarmed at even a remote prospect of another such visitation. I am credibly informed that in 1889, when there was fever at Brownsville, Tex., and at New Orleans, the city authorities at Memphis went so far to prevent a panic as to have men and women imprisoned for repeating rumors that there was a case of fever in the city and that the Mayor of Memphis forbade the Western Union officials and employees, on penalty of arrest, from sending away from Memphis any dispatch even hinting that there was fever there. No such message was sent out from Memphis and neither was there any fever there that year. So much harm had been done to the commerce of the town, however, and so upset was the business world by the causeless alarm that some of the people of the city began to urge that under the improved sanitary conditions a repetition of the epidemic of '78 was impossible, and a mild outbreak of the fever might prove a blessing in disguise, as it

would demonstrate that Yellow Jack was not so much to be feared after all. It was this opinion probably that loosened the quarantine ten years later, when yellow fever did appear again in Memphis. There were then several deaths, but there was no panic worth mentioning and the outbreak really did do Memphis good, for it allayed the insane fear that existed.

We of New Orleans have faced the fever so long that we are no more afraid of it. We know that it will not stop until frost, and that the month of September is always worse than the summer months; but we are not losing our heads over it. One would not know, in walking along the streets of New Orleans, that any epidemic exists. The street-cars are just as crowded and the baseball games are just as well attended. One of the amusement houses, which opened September 3d, received a telegram from New York suggesting that on account of the fever it might be better to delay the first performance until October 1st. The reply immediately went back that the theater would open September 3d, as planned; that the people were hungry for amusement and would not brook any postponement. And the theater did open and has crowded houses.

The test most infallible is that of the stock and bond quotations. If the people were frightened these would fall, and they have not done so. On the contrary, real estate in New Orleans just now is the best investment I know of. We have some improvements to make, such as a better placing of some of the cemeteries and a better water supply from the Mississippi River, the water of which is purer and clearer here than at any other point along its course, but these will come. Natural location gives New Orleans surpassing advantages for future commerce. As the Panama Canal goes on to completion the city will undoubtedly double its population, and ten years from now this entrance port to the United States may contain 750,000 inhabitants.

NEW ORLEANS, LA.

Through American Eyes

BY EDWARD TREGEAR

SECRETARY OF LABOR FOR NEW ZEALAND

ONE of the most valuable services that can be rendered to an insular people is for an intelligent visitor freely to express his convictions and impressions of their position. New Zealand has lately received this benefit through the action of the United States Government in sending a special representative from the Department of Labor to report on the actual state of things in a colony concerning which much praise and dispraise have clouded the clear issue in the minds of those who want to arrive at facts, and if possible learn lessons therefrom.

The action of the United States Government in choosing Dr. Victor S. Clark as its representative is amply justified by the report he has presented on "Labor Conditions in New Zealand." (*Bulletin of the Bureau of Labor*, No. 49.) Our visitor was unusually well equipped for his task—impartial, clear-headed, capable and gifted with a pleasant social manner, which helped the collection of information. His report is highly valued here and will no doubt be often quoted in arguments on industrial questions in America. It is this consideration which induces me to pen the present article.

I do not think that the report should be widely accepted in the United States without considerable searchings of spirit. So far as it deals with facts it is, as I have said, valuable exceedingly, but observations have been added which, being inductions on the facts collected, are in my opinion open to argument. Let me quote the passage to which I take the strongest objection. Dr. Clark says (page 1255):

"An American, while he finds much to admire in the intent and in many of the details of social legislation in the colony, senses a class consciousness among the people and a tendency toward rigidity and status in their institution that does violence to his inherited ideals and sympathies. It is not in a dead level of material comfort that the real prosperity of a nation consists. That was provided by the Incas of Peru. But it is in the constant incentive to individual enterprise, in untrammelled ambition, in the consciousness of the call to

labor on the part of every member of the community. The 'strenuous life' is already a well-worn term in our country, but it contains the secret of living for the present generation of Americans. . . . We are less law-abiding as a nation than New Zealand and more rampantly independent as individuals. An American community would soon kick holes all through the acts of Parliament of the other country. We shall have to solve our social problems in our own way, and perhaps after longer and severer experiences than those of the colony."

I greatly fear that the last sentence is true, but if so I cannot help thinking that it will be through downright obstinacy and shutting of eyes. Of course, it does not follow that work done under certain conditions in a laboratory can be perfectly reproduced on a larger scale and under different conditions. But there are certain fundamental principles at the base of human society which create parallels not to be escaped and a kinship not to be denied. What possible difference can there be in the vital necessities of social life between the American and the English colonial? "Hath not a 'colonial' eyes? Hath not a 'colonial' hands? Prick us, do we not bleed? Tickle us, do we not laugh?" There can be no more reason why moral laws applied to industrial life in New Zealand successfully should lose power and become pernicious in the United States than that the functions of a triangle should differ in the two countries. I cannot believe that the American father enjoys seeing his wife and children starving during a strike, or that it is better for an American child to work in a cotton mill or mine for twelve hours a day than for our youngsters to work eight hours under carefully guarded conditions of education and holidays.

If Dr. Clark represents truly the general American spirit then all I can do is to lift my feeble voice together with those higher minds in the States who protest against the "untrammelled ambition" of private enterprise run to riot. Some of us consider that a high level of material prosperity is more conducive to the higher life than that

condition in which six people eat canvas-backed duck off gold plate while sixty more deserving persons gnaw crusts as they provide the others with dainties. Recalling Mr. Clark's allusion concerning the Incas I fear that the Peruvian slave lashed with whips as he bore Pizarro's treasures to the coast did not relish "untrammelled ambition" as he did the wholesome fare of pre-Spanish days.

I feel sure that for the whole of the people of the United States a position of material prosperity is a thing to be desired. By many it has been attained, but there are still tens of thousands below the poverty line, and it only fills their hungry bellies with the east wind for their representatives to say, "We prefer untrammelled ambition to a general level of prosperity, and, tho New Zealanders may obey the best laws they can evolve, there is no law for us, the champion high kickers of the universe." Dr. Clark says his countrymen would soon kick holes through our acts of Parliament; well, some of our own people try to do so, and very sore toes they get.

There are principles in industrial life as common to America and New Zealand as the fact that water runs down hill. Let us take two of them: (1) The worker tries to get the best price for his commodity (labor) that he can. (2) The employer tries to obtain labor as cheaply as possible consonant with getting the most efficient work for the wage paid. Now, stripped of the usual humbug masking the subject, that conflict of interests means WAR! There may be a common third interest as against some competitive rival, but between the principals it is sheer unrelenting battle, with a pretty heavy butcher's bill on the always decimated workers' side. No one can doubt this who learns that in Great Britain a worker is killed every thirty-five minutes throughout the year, and in America there are more persons killed at work on private railways annually than on both sides in three years of the Boer War. Can the fighting be made to cease? Certainly not under the wage system. All that can be done is to do as in the case of military war, assuage and ameliorate the fierceness and cruelty of the fatal strife as much as possible. In military war we do so by forming Red

Cross societies, by providing floating hospitals, homes for convalescents, etc. What can be done in the case of the industrial war? We can mitigate the pain and anguish of this conflict only in one way, *by bringing the whole power of the State to keep the struggle of individuals within reasonable limits.* One manufacturer shall not deal another a foul blow by producing "sweated" goods; one worker shall not starve another by offering to do his work for half price; one trade shall not be ruined because two bands of unscrupulous men in another trade try to argue out a question with clubbed banking accounts and the revolvers of the "picket." That is to say, there shall be a "regulation of industry," now nicknamed in America "compulsory arbitration."

It may be urged that I write on the subject too generally and do not attack details. I have already said that the details in the report are wonderfully correct, and it is only with the inductions I disagree. There is one detail, however, worth attention: Dr. Clark speaks of the constitution of the Arbitration Court and objects to it for several reasons—reasons raising large questions and seen distinctly through his clear-eyed view of matters.

(1). The court is not an impartially appointed body, but is representative.

(2). Persons not cited nor allowed to appear before it are bound by its decrees.

(3). There is no appeal.

(4). It legislates and then takes cognizance of violations of its own laws.

I reply (1) That with growing institutions and the evolution of society there may well be changed methods. The Arbitration Court consists of three persons—viz., a judge of the Supreme Court, a member elected by unions of workers and a member elected by unions of employers. Such a court, suitable for a young but intensely earnest democracy, insures that the President, tho holding the real position of arbitrator, shall not issue a decision without the review and consideration of every point by his colleagues, the representatives of capital and labor. By this much of the "personal equation" of the President is neutralized, and how important this is only those who have known the unequal sen-

tences given by different judges for precisely similar offenses (within the wide margins of the Criminal Code) can value at the full. (2) That persons not cited to appear nor allowed to appear before the court are subject to its decisions and its penalties is quite true, but the explanation is simple. The Industrial Arbitration act was instituted, as its preamble affirmed, "to encourage the formation of industrial unions," and only unions or employers can appear before it. To effect this object of promotion the minimum number of those forming the union was set at seven persons. Experience has proven that even with this low minimum there is an insoluble residuum of selfish persons who prefer to remain outside the unions of their trade in the hope of obtaining all the benefits (high wages, short hours, etc.) won for them by unionism, but they themselves pay neither in money, time nor risk for their advantage. If such a one is not able to appear in court it is because he finds it to his own interest to be non-unionist, and there is no harm done, not even (in my opinion) a sentimental one. (3) There is no appeal. This also is a necessary and useful arrangement. The court seldom makes an award for more than two years; it understands the highly complicated nature of its business better than any Appeal Court could, and the two years would be often exhausted by protests and delay if appeal was allowed. Moreover, the sin of all ordinary courts is that the money power can constantly appeal from court to court till justice is mocked. The Arbitration Court of New Zealand is the only court on earth where the poor man can conduct his case without being fleeced. (4) If the court in giving its judgment on highly technical matters issues certain mandates for which there is no legal precedent this perhaps may be considered a kind of legislation. If so, the court certainly decides what is a breach of its award, and so sometimes punishes the breaker of its self-made law, but the necessity is inherent in the circumstances of the case.

Concluding, I make one more reference to the quotation already cited from Dr. Clark's report, the part where he says that "the strenuous life" contains the secret of living for the present gen-

eration of Americans. Secret certainly, for its merit is well concealed. It is wonderful that the early American's passionate love of liberty should have led his children to a life of willing slavery as an ideal. New Zealanders would perhaps also lead the strenuous life—that is, strain to acquire wealth—if two conditions could be fulfilled. One is that if a fortune can be made it shall go to the man that earns it, not to the human fish-hawk who can grab the spoil. The other condition is that the stakes should be worth playing for. Mere money is not; "no one is so poor as he who has only money." The nerve-racking, body-exhausting strain of "the strenuous life" is too unworthy and life too large a stake to risk on the game of money getting; so the New Zealand worker with his (doubtless mistaken) dislike of strike and lockout, of child labor and trust methods, remains in the full vigor of enjoyment when the American operative has got into his own coffin and pulled down the lid. I might bring a hundred quotations to show the position. I will cite only one, from the last review I have read of American industrial life. Miss Von Vorst in "The Woman Who Toils" gives us a picture of modern factory life in a Carolina cotton mill employing between 1,200 and 3,000 hands. She says:

"Plague is not too strong a word to apply to the pest-ridden, epidemic-filled and filthy settlement where the mill-hand lives, moves and has his being; horrible honeycomb of lives, shocking morals and decency. . . . There seems to be no effort to mitigate the dangers of the mills on the part of employers or to provide proper ventilation or fans."

Miss Von Vorst goes on to speak of the little children workers, unwashed, clad in rags, driven into the mills for thirteen hours of daily toil. Such work is the strenuous life indeed, but without reward (no mere "level of material prosperity"), for this filthy breeding ground of money is the garden plot of "untrammelled ambition," the soil necessary to grow an occasional multimillionaire. The beautiful young ladies who buy that variety of British title which can be exchanged for money are the lilies springing from this dung-hill of accumulated wealth. But is the product worth the cost?

WELLINGTON, NEW ZEALAND.

Literature

Thwaites's Early Western Travels

THESE reprints of the narratives of early Western travels* continue to have great interest for the student of life on our ever-changing frontier. No better picture of American expansion can be found. James Flint's "Letters from America" (1818-1820) [Vol. IX] are the best possible sources of information. Altho he saw both the lights and shadows of democratic institutions, yet he tells of them with such a dispassionate fairness that unfavorable criticism does not offend as in the writings of Basil Hall or Mrs. Trollope, whose unjust and flippant criticism so irritated Americans of the Jacksonian era. Flint has some very interesting opinions of New York and Philadelphia, but his chief interest was in what he saw as he crossed Pennsylvania and from Pittsburgh floated down the Ohio, whence he made a circuit through Kentucky, Ohio and Indiana. His keen eye and mind studied everything in his way. His comments upon the judicial system of the West show a good perception of the stern necessities of primitive justice, united with the law-abiding spirit which marks the Anglo-Saxon race. He even saw, in that early day, what the buying of Louisiana had done to remove the danger of a Western secession from the United States. Again, tho the Missouri trouble had but just begun, he saw with prophetic eye that the nation could not exist half slave and half free. He saw even then that the master suffered more deterioration by the system than the slave. He saw, too, that historic conditions, not the present masters, were responsible for the system. Flint was a scientific economist who had come to America for facts, such as the ratio of prices to wages and the prospects for emigrants. He condemned the unsound banking of the West, its booming of town sites and the irregularities of its

legislatures. On the whole he was one of the fairest critics that America had in her early, callow days before she had won the respect of other nations.

The tenth volume contains Hulme's "Journal" (1818-19) and Flower's "Letters from Lexington and the Illinois" (1819-21). These works were brought out by the bitter controversy resulting from the settlement of a colony of English immigrants in southeastern Illinois. Farming in England was much depressed at the end of the Napoleonic wars. This led to the growth of a strong movement to abolish the Corn Laws, attain manhood suffrage and abolish privileges. The resultant mobs and riot aroused in peace-loving men a desire to emigrate to America, to cheap lands and political freedom. Besides laborers, there were men of substance and property, like George Flower, who bought a large area in Illinois and founded a colony for the relief of poor English farmers. Detractors at once arose to decry all English migration to America. After the shrewd observations of Hulme, the sane and kindly views of Flower and the judicious comments of Woods there followed a series of books by English travelers, two of which are reprinted in Volumes XI and XII, which made acrimonious attacks upon America and her people. William Faux wrote "Memorable Days in America," in which he revealed, in addition to unpleasant truths, a lack of manners and good taste. He betrayed kind hospitality and showed a low craving for notoriety. What more delicate-minded men had hidden his brutality and frankness revealed. His book and that of Adlard Welby (also reprinted here) were used by the *London Quarterly* in a series of attacks on our manners and customs, which were answered in the *North American Review* until the "War of Reviewers" took a prominent place in the history of the time. So extensive became the migration from England that its public men became alarmed and they tried to frighten prospective colonists. Welby's book was especially useful to

Arthur H. Clark Company. Vols. IX to XVII.
\$4.00 each.

this end, for he disliked America before he started, and as he traveled westward in his own carriage, with his valet, he found it easy to rail against bad roads, bad inns, high charges and poor food. "To a rough, untutored set of savages," he declared, "another race of little less than savages has succeeded."

The thirteenth volume, Nuttall's "Journal of Travels into the Arkansas Territory," has its chief value for the scientist, but it is not devoid of interesting comment upon the border civilization (1818-20), the settled portions of Arkansas country. Volumes XIV to XVII, inclusive, contain Edwin James's account of S. H. Long's expedition (1819-20) to the upper waters of the Arkansas and Red rivers. The party did not foresee the possibilities of the railroad and irrigation ditch, so that their report depreciated the value of the region and retarded migration to it, because the Government was influenced to follow, rather than to lead, the movement thither.

Art Criticism by a Painter

WHEN the competent painter chooses to exercise the right of the artist to speak on his art he usually says something worth hearing. Hence those who are at all acquainted with the paintings of Mr. Kenyon Cox will take up his little book of art essays* with anticipatory pleasure. And they will not be disappointed. For, short as most of these essays are (there are twenty-one of them packed into less than 300 16mo pages), they form, taken altogether, perhaps the most notable and significant book of art criticism pure and simple, not only of the year, but of several years. Mr. Cox disclaims any attempt to write a systematic history of art. What he has written is a series of appreciations of certain individual masters in art, yet the book does present something like a general view of the course of painting since the sixteenth century. Perugino, Michelangelo, Veronese, Dürer, Rubens, Franz Hals, Rembrandt, among the older masters; the Pre-Raphaelites, Meissonier, Baudry,

Puvis de Chavannes, Whistler and Sargent, among the moderns, are his chief subjects. In dealing with these masters he wastes no space on well-known biographical details—he summarizes the history and devotes himself to criticism.

This criticism he writes as one having authority. For, altho the only plea he makes for his book is that "at least it has the unity of a point of view—that of a painter, seeing with his own eyes and not bound by authority," it is just this authority of the practicing painter that is of greatest value to the lay reader. Instead of trying to say something new of each artist he mentions he is concerned only to say the vital thing, to emphasize the salient points of the master's achievement, and, where the master fails, to say so and tell why. He does this clearly, succinctly and delightfully. He has seen with his own eyes and they have been well trained. He has studied the work of the masters closely and carefully at first hand and on that he bases his judgments. When he has something new to say he says it fearlessly. Much of what he says, whether new or not, is incisive and illuminating.

Of the older painters Veronese is Mr. Cox's special favorite, and the paper on him (who has been least and least adequately written of among all the great masters of painting) is valuable both as an appreciation and as an exposition of his mastership in composition. The essay on Baudry, whom among the moderns he reverences as much as any, is a timely and excellent tribute to a great French artist who deserves a wider fame. That on Sargent, the American of the wonderful draftsmanship, ranks with these. But the best paper in the volume is the one on Whistler. Indeed, this paper is probably the most discriminating and the sanest word that has yet been uttered on the work and development of that eccentric genius. It is a healthily direct and a thoroughly sustained exposition of the growth of Whistler's technic until it almost ceased to be a technic—"almost as if he painted with thought":

"The painter has come almost as nearly as is conceivable to a realization of his personal ideal—the ideal of painting purged of its rep-

* OLD MASTERS AND NEW. *Essays in Art Criticism.* By Kenyon Cox. New York: Fox, Duffield & Co. \$1.50.

representative elements, and brought to the condition of what is called 'absolute music'—painting in which color, pattern, line, exist for themselves, with the least possible reference to anything external. But if we are refused so much that has hitherto pleased or interested us in painting, what we get we get with a singular intensity. Clear your mind of prepossessions, forget about meanings and intentions, forget about nature, forget about form or substance or definition—let the artist play to you, and you shall find his airs ravishing in their sweetness."

The Art of the Musician

MUSICALLY the greatest need of this country is more intelligent appreciation of the art itself, more music lovers. Understanding of music can be taught, appreciation can be inculcated, the love of the best can be developed. It was with a realization of these facts that Mr. Hanchett prepared this book,* intending it to stimulate investigation of music—to emphasize the distinction between the real study of music and the study of the arts of playing and singing, which has so long been mistaken for it. Most of all he intends his book to help mature lovers of music to understand the aims and purposes of a composer, some of the methods of his work and to get some ground for fairly judging his attainments and results. In short, it is a treatise on how to listen to music that he gives us, and it is a very good one. There is abundant room for it, for the author is justified in lamenting "that the musical standards of persons of good, general education are so shamefully low," and any work that tends to assist in elevating the standards of church, theatrical and popular music should be widely welcomed.

Mr. Hanchett's method is a semi-technical one, dealing largely with the actual material of music, considering the different and varied qualities and possibilities of that material and what composers do with it and how they handle it. Yet technicalities are used only when necessary, and when they are demanded by clearness or accuracy ample explanation

is supplied. To get the greatest good from his book the reader should be able to read music readily, for his discourse is illustrated with copious examples in musical notation. The discussion of rhythm as "The Life of Music," of harmony as "The Soul of Music" and of melody as "The Beauty of Music" is both interesting and suggestive. Professional musicians and critics as well as the knowledge seeking layman might profitably ponder the author's remarks on the differentiation of time, meter and rhythm, so often are these elements confused. Thematic development, counterpoint and fugue, form building, classical and romantic music, musical education, are some of the other topics treated. While a book of 300 pages cannot be exhaustive on all these subjects, much of what the author says is helpful and illuminating to the student who applies the word to the examples given. And Mr. Hanchett succeeds remarkably well in making his pages interesting.

His suggestion of the title "mozarta" for the hitherto vaguely named specific movement form in the sonata is a good one and might well be adopted for the avoidance of confusion. He is liberal enough to point out that "the distinction between the romantic and the classical must necessarily be a distinction in tendency and motive, not a radical distinction in material and construction"; that "the living great men—Saint-Saëns, Grieg, Strauss, Elgar, Parker, Chadwick, McDowell—may be classics sooner than we think"; to go to Liszt for an illustration of counterpoint, and to see a large and legitimate field for the semi-mechanical instruments: "Hearing music requires practice no less than performing it, and a pianola can give the ear very good practice, indeed." His contention cannot be too much insisted upon that

"The appeal of music is to the emotions, but it is an intelligent appeal. Perhaps its greatest virtue is its power of lifting the mind above sordid cares and worries and giving pleasure, stimulus, peace and rest; but that power is multiplied many times by a thorough understanding of the structure and secret of the art. We have put too much emphasis upon technic, performance, display; too little upon expression, interpretation, education."

* THE ART OF THE MUSICIAN. *A Guide to the Intelligent Appreciation of Music.* By Henry G. Hanchett. New York: The Macmillan Company. \$1.50.

China in Law and Commerce

IN this admirable work* Mr. Jernigan, who has long held a high position in the United States Consular service in China, has contributed a volume which will be indispensable to every student of the civilization of the Far East. It may be classed with Arthur H. Smith's "Chinese Characteristics" and Prof. E. H. Parker's "China." The fifteen chapters which constitute the book are really separate monographs on as many leading features of the Flowery Empire. Seven are judicial in character and discuss government, law, family law, tenure of property, taxation, courts and extraterritoriality. Seven are industrio-economic and discuss guilds, business customs, banks, weights, measures and currency, land transit, water transit and railway transit. One chapter is of notable interest and scope. It relates to the physical features of China and the origin of its inhabitants. In regard to the former, when the author follows in the footsteps of Professor Marsh, little or no criticism is possible. But in regard to the latter, where he follows Kingsmill and the school which elevates ethnology over philology, exceptions may be taken to his theories. Thus, his statement that the Kings of Ch'u were by race Man-tsz is a mere repetition of the phrase of the Manchu princes, who called all the South Chinese "Man-tsz," or "Southern barbarians." The Cantonese, to whom the epithet was specially addressed, applied the same term to the My-u-ge, Miaos, or aborigines, and declared that they themselves were the real sons of Han, while the Manchus were "Northern barbarians," or even "foreign devils." If Man-tsz is to be used as a definite ethnographic term it must be to indicate or represent the pre-Chinese inhabitants of Southern China, and not the South Chinese.

Objection must be made to the author's theory that the Chinese are mainly Malays with a mixture of Aryan and Arimasian blood. This assumption involves an absurd rearrangement of the Indo-Gothic family and the use of the term Arinasp, the name of an alleged

Scythian tribe, to mean a race made up of a few so-called Mongol types. Our present knowledge is too limited to account for the origin of the Chinese. The only working hypothesis is that the Chinese, Manchu, Mongol, Korean, Turk, Hun and Finn are members of a family or race whose earliest name, Sushen or Seshun, is given by Confucius.

Barring these two questionable propositions of the author there is naught to be said but praise. The work is accurate, thorough, terse and comprehensive. It gives the reader a clear insight into the legal and commercial phases of Chinese civilization, and as these constitute at least two-thirds of the social life, it enables him to understand nearly all the so-called mysterious traits and habits of the people of the Middle Kingdom. In China, as everywhere else, the present is but the resultant of environment and irresistible forces working through the years. The Chinese environment was and is very different from that of other civilizations; the forces have been very much the same; the resultant has but perpetuated in sociologic form the differences of physical environment.

Curly. By Roger Pocock. Boston: Little, Brown & Co. \$1.50.

Arizona is a land that invites romance—with its mysterious desert, hazy and limitless, its fierce heat, its savage vegetation, rattlesnakes, horned toads and twenty years ago Indians, cowboys and bands of robbers. The story of *Curly*, told by a certain "Chalkeye," is romantic to a degree. The style in which the cowboy tells the stirring tale is crisp, vivid, vigorous and only occasionally marred by coarseness; the offense is in the expression alone, the thought is not coarse. We are astonished to find a band of marauders such good company, a robber chief such a gentleman in most essentials, his child an enticing young woman, in spite of range-riding, broncho-roping, herding, branding and corralling cattle, killing a man or two, escaping from prison, living among a gang of horse-thieves and murderers and doing many things that are far from the thoughts of the usual romantic heroine. There have been many stories of the

* CHINA IN LAW AND COMMERCE. By T. R. Jernigan. New York: The Macmillan Co. \$2.00.

Southwest of varying degrees of verisimilitude, but *Curly* has caught a certain rush and swing and verve that are all of the long-trail—the dash of the horsemen, the roar of the desert wind, the fierce loves and hates of the torrid painted wastes of rock and sand—not a little of its charm, much of its wild beauty, and a Spanish touch in the Mexican riders:

“Good boys; light-built riders, with big soft eyes always watchful, grave manners, gentle voices, gay laughter and their beautiful Spanish talk like low thunder rolling; brave as lions, true as steel; gorgeous in dull gold leather, bright gold straw sombreros, rainbow colored serapes, spur and gun aflash, reins taut and horses dancing, gone in a cloud of dust and glitter away across the desert.”

It is pleasant to hear a good word for the Mexicans from one who knew them so intimately. The ethics of the story are of the accustomed frontier topsyturvy kind, and we “sympathize with Justice, but not with Law, as “Chalk-eye” puts it.

The Elements of Psychology. By Edward L. Thorndike, Professor of Educational Psychology in Teachers' College, Columbia University. New York: A. G. Seiler.

This book differs from other brief psychologies in being pre-eminently teachable. The questions and exercises are practical and suggestive, the references to collateral reading are well selected, and the subject is divided into topics convenient for the assignment of lessons. To use culinary terms the meal is served *à la Russe* in separate portions, instead of in the English style of bringing the uncarved joints to the table. The teacher is thus relieved of much of the time-consuming and unprofitable drudgery of instruction. Besides this, the book is distinguished from its rivals by its comprehensiveness and balance. If Professor Thorndike has his hobbies—and we all know he has—he has resisted to an unusual degree the temptation to exploit them in a text-book. He has covered evenly the whole ground from Sensation to Conduct. The only marked instance of a disproportionate assignment of space is the introduction of a large number of illustrations of neurones, but this

will be pardoned when one sees what unusual photographs these are.

Beethoven. A Character Study. Together with Wagner's Indebtedness to Beethoven. By George Alexander Fischer. New York: Dodd, Mead & Co. \$1.40.

Mr. Fischer has nothing new to tell of Beethoven or his works, no new light to throw upon the character or the artistic nature of that composer. Why he calls his book a character study we cannot guess. It is no more specifically a character study than any ordinary biography is. He has familiarized himself with the original authorities on his subject and he has written out the record of the master's more important compositions, along with a statement of what was happening to Beethoven at the time. His method is straightforward enough, but his style is an exasperating journalese, without distinction of any kind. The appended short essay on Wagner's Indebtedness to Beethoven is a gathering of some of the more significant of the numerous references to be found in Wagner's essays and autobiographical writings and a mention of some parallelisms in the methods of the two masters; for example, in using trombones “when solemnity was required,” and in employing violins and wood wind instruments in the highest register, instead of the conventional harps, to produce “celestial music.” It is not of any special value or significance.

An Elizabethan Virginal Book. Being a Critical Essay on the Contents of a Manuscript in the Fitzwilliam Museum at Cambridge. By E. W. Naylor, Mus. D. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. \$2.00 net.

The Fitzwilliam Virginal Book contains nearly 300 pieces of clavier music, including dances, songs, arrangements, madrigals, fancy pieces, fantasias and 17 organ pieces, by more than thirty different composers, most of whom were Englishmen. Dr. Naylor says: “It is not going too far to say that if all other remains of the period were destroyed it would be possible to rewrite the history of music from 1550 to 1620 on the material which we have in the Fitzwilliam book alone.” He has made a careful

study of most of the pieces in the old manuscript collection in the hope that it may be of real use to students of the history of music and as well to students of the Elizabethan and Jacobean drama, "who daily increase in numbers and are often at a loss for musical illustrations such as are necessary for the representation of these works, even on a humble scale." The book contains a complete set of instrumental pieces, strictly contemporary with Shakespearean times, which are sufficient for almost any occasion of the sort, together with a description of the dancing steps which will be found useful for the same purpose, and it certainly possesses the unique value its author claims for it.

Minerva's Maneuvers. By Charles Battell Loomis. New York: A. S. Barnes & Co. \$1.50.

At last the place left vacant by the death of Frank R. Stockton is filled. If *Minerva* does not seem so funny as *Pomona* it is simply because she did not come first. There is the same dry, detailed manner of telling of absurd happenings, the same kindly view of the actions of all creatures, human and sub-human; the same wholesome, whimsical humor; the same absence of plot and problem. Mr. Loomis simply tells the story of a literary man and his wife who try to lead the simple life for a summer, but find occupation in the attempt to keep their cook, a New York lady of color, contented in the country by taking her riding, giving her nature-study lessons and providing her with a follower. It is a good book to read aloud, but only a chapter or two at a time.

M. Roosevelt, President des Etats-Unis, et La Republique d'Haiti. Par A. Firmin. New York: Hamilton Bank Note Co.

The condition of Haiti is not so bad as some of our Southern friends would make out if one of its native statesmen can produce a well written study of international politics like this. Mr. Firmin realizes that his country is looked upon as a test of the ability of the negro race for self-government and improvement and for that reason especially he argues

that it is of great importance that it should remain independent and be allowed to work out its own destiny. But he believes that the jealous policy of isolation adhered to by Haiti has been injurious and he hopes to see American capital and methods assist in the development of its immense natural resources. He endeavors to allay the apprehensions of his countrymen that President Roosevelt has designs upon the independence of Haiti, and in order to make them better acquainted with the United States he sketches the history of our nation and his own from the time of Columbus to the present.

Ivories. By Alfred Maskell, F.S.A. [The Connoisseur's Library.] Illustrated. New York: G. P. Putnam's Sons. \$6.75.

Notwithstanding the extensive use of ivory as a decorative material that has inspired the production of the Maskell volume on *Ivories*, it will surprise many people whose attention has not previously been drawn to the subject to find how intimate the connection of ivory has been with almost every other substance employed in the production and adornment of objects of art in all ages. These took various forms, prominent among which were the diptychs, which had secular as well as ecclesiastical uses, and were often beautifully carved; plaques, symbolic carvings, introducing animals, vegetables and fanciful shapes; pyxes, panels, book covers, chairs, tankards, tablets, altar decorations, crucifixes, statuettes, pastoral staves, crosiers, liturgical combs, caskets, drinking horns or oliphants, mirror cases and shoe-horns. A beautiful Flemish harp appears in one of the illustrations. Some consideration is given in the book to the working of ivory, to artificial ivory, its coloring and staining; to forgeries and to the great European collections. While the literature relating to the general subject of carvings in ivory is already extensive, the present volume will be found satisfactory and very comprehensive. The bibliography which it contains affords a ready reference to the authorities that cannot but be exceedingly valuable to the specialist. The eighty-eight illustrations which the book contains are all in photo-gravure.

Edward FitzGerald. By A. C. Benson. New York: The Macmillan Co. 75 cents.

This is a pretty good number of the English Men of Letters Series and very entertaining reading. The biographical sketch and general characterization are excellent, the specific criticisms of FitzGerald's writings sound and fair. There is only one drawback to the criticism as a whole: the writer seems hardly to know why FitzGerald should occupy a place in such a series at all. As a creator he was undoubtedly a failure, and so he was too as a translator or adapter, with the single exception of the *Rubáiyát*. But while he was by no means a great systematic thinker, his familiar letters reveal a vision of life and an attitude toward the world for which there is properly no other name than philosophic. Of this side of his character Mr. Benson makes far too little; he is too resolute to see him as a regretful straggler or laggard who drops out of a race he has not the vigor to pursue, and in this prepossession he fails to consider that gentle reminiscent regret is incident to age, whatever our previous courses, and that the man whose instinct it is to detach himself from vanity is a sage fully as much as he who does so by self-compulsion.

Terrence O'Rourke. By Louis Joseph Vance. New York: A. Wessels Co. \$1.50.

The story of the adventurer has an undying interest. Careless courage, especially as light-hearted as that of *Terrence O'Rourke: Gentleman Adventurer*; faith to a friend and to the lady of his heart, hot temper, a high code of honor, a superb physique, a handsome face and a fighting arm, combine to win the reader's heart. The breathless narrative of his adventures in Egypt and elsewhere ends appropriately in a racing motor-car rushing at top speed from the scene of the last of many duels—or we trust it proved the last, as few men could lose so much blood as the hero has done in the course of the story and safely spill any more of it. *Terrence O'Rourke* is a lovable Irishman with the few ardent faults and many impetuous virtues of his race, his adventures, well told, suggesting a fourth Mousquetaire, or a

modern Richard of the Lion Heart. The theme of the first part of the story is apparently suggested by the career of Jacques Lebaudy as Emperor of the Sahara.

Pebbles

A TALE is told of a Kansas minister, a great precisionist in the use of words, whose exactness sometimes destroyed the force of what he was saying. On one occasion, in the course of an eloquent prayer, he pleaded: "O Lord! waken thy cause in the hearts of this congregation and give them new eyes to see and new impulse to do. Send down thy lev-er or lee-ver, according to Webster's or Worcester's dictionary, whichever thou usest, and pry them into activity."—*Brooklyn Citizen*.

....Ethel, aged 6, was coming across the river with her mother for the first time in her little life to see the plunging horses. The bridge and the great ships below it and the forest of tall buildings were all very, very wonderful. But she managed to obey her mother and keep her lips shut upon her amazement until she beheld the, to her, amazing spectacle of horse cars in Park Row. This was quite too much, and nudging her mother she exclaimed in a horrified whisper: "Why, mamma, just see that trolley car pushing those two poor old horses along the street!"—*Brooklyn Eagle*.

....There was no limit to the humorous situation for which the late Right Rev. Thomas L. Clark, Bishop of Rhode Island, was responsible. Some years ago while attending a lecture in Boston he observed a man sitting three seats in front whom he thought he knew. He requested the person sitting next to him to "punch" the other individual with his umbrella. The polite stranger did so, and, the disturbed person turning his head a little, Bishop Clark discovered his mistake. It was not the person he supposed. Fixing his attention steadfastly on the lecturer, and affecting unconsciousness of the whole affair, he left the man with the umbrella to settle with the other for the disturbance, and this man being wholly without an excuse there was, of course, a ludicrous and embarrassing scene, during all of which Bishop Clark was profoundly interested in the lecture. At last the man with the umbrella asked, rather indignantly: "Didn't you tell me to punch that person with my umbrella?" "Yes." "And what did you want?" "I wanted to see whether you would punch him or not."—*The Boston Herald*.

Editorials

The Second Conference of The Hague

BEYOND question a second Conference of The Hague will soon be held. We presume that as soon as President Roosevelt returns to Washington he will provide that our Department of State send out communications to all the signatory Governments asking them if they are ready to attend such a Conference. It was Russia which declined, a few months ago, to enter on a Conference before the conclusion of her war with Japan. Now she will have no reason for declining, and all the other Powers then assented.

The United States is chiefly interested, as in the first Conference, in the question of arbitration, and the development of its scope and power. But there are other questions which have arisen out of the late conflict, and which now await settlement.

One of these—and few are more important—is the immunity from capture of mails and mail steamers. If mail steamers carry contraband they may be properly captured and confiscated, to the great injury of those whose letters are detained. There ought to be an agreement of nations forbidding the carrying of contraband goods on such steamers. The mails themselves ought also to be free from capture. The conditions are very different now from what they were a generation ago. Then belligerent communications and information had to go by the mails; now everything of that sort is sent by cable. It is so, at least in war, with mercantile orders for arms and other military stores. The mail steamer is quite too slow for Government use in time of war, so that the necessity has ceased for capturing and opening the mails going to a belligerent port. It would be well to make both mails and mail steamers immune from capture.

Another very important question has to do with the right of a vessel or fleet to remain in a neutral port in time of war. This is involved in the

prolonged stay of the Russian fleet in French ports, particularly in Madagascar and Tonkin. On this matter there is no settled law of nations. The United States, Great Britain and most other countries limit the time of stay to twenty-four hours, but the laws of Germany, France and Austria set no such definite limit. France only requires that the belligerent shall not make "continuous use of her territorial waters." M. Delcassé did not request the Russians to leave Hamranh Bay until he had received information that the Russian fleet was making such continuous use. The difference between the two theories is enormous, and a law of nations ought to be authoritatively settled.

Another matter of importance has to do with the sinking of captured vessels carrying contraband of war, as was done more than once by the Russians. Such action does away with prize courts. If a cruiser can capture a vessel, take on board its cargo, and then sink it, it constitutes itself a prize court without redress. We have already a rule than neutral merchandise in a neutral bottom even if going to a belligerent port is free from capture. But if a vessel can be captured and sunk because certain contraband goods are found on her, or goods wrongfully said to be contraband, then the innocent neutral goods would be lost with the guilty contraband. This must be corrected.

Another question is raised by the action of the Volunteer Fleet in the Black Sea, usually engaged in trade, and which passed the Dardanelles as trading vessels, and then blossomed out as ships of war. A vessel must be one thing or the other. It cannot be a trading vessel one day, with the right to stop at a neutral port as long as it will, and then leave and hoist a fighting flag. No more, in time of war, should a war vessel be allowed to hoist a commercial flag. It must remain one thing or the other.

The sinking of the Russian warships, the Variag and the Korietz, in Chemulpo

Harbor by the Japanese raises another question. That was in Korean waters. What right had Japan to enter those waters? The only right could be involved in the claim that Korea had no right to be called a Power, that she had no fleet to protect herself, and was the prize of the two Powers. The status in time of war of such weak or nominal countries needs definition.

The Conference of The Hague agreed that for five years it was inadmissible to drop explosives from balloons on a hostile force. That period is now passing, and a further decision in the matter is to be desired. Equally, the question of floating mines should be considered. Floating mines were used in the late war, very much to the danger of neutral shipping. Their use should be forbidden.

There are other questions that will arise, but these are important, and were discussed at the late meeting of the International Law Association at Christiania, and on some of them action was taken such as we have indicated. War is so terrible that everything should be done for its mitigation. We are not yet ready to agree with those who hold that it is a better policy to make it as horrible and destructive as possible, so that it will perish and end with its own enormity. Of that we have little hope. The Japanese war has not encouraged that hope.

Do They Think It Right?

THE investigation of the insurance companies has brought out some startling notions of ethics. Mr. Jerome says that "it may not have entered into the minds of the Equitable crowd that they were doing wrong. Their point of view, however, is," he thinks, "open to correction." Yes, and possibly to conviction.

We have another such case in the testimony of Mr. Perkins, who does not hesitate to let it be known that he, as Vice-President, has run the New York Life Insurance Company, and who is so certain that everything he has done is right that he does not want any lawyer to represent the company, as it has nothing to conceal, and will justify everything. So when the testimony was brought out that

the New York Life had contributed \$50,000 to the Republican campaign fund in each of the three last Presidential elections, he acknowledged it frankly, and declared that it was a right thing to do, and a good policy thus to protect the financial interests of the company against the mischievous doctrines of the Democratic platforms. We have to take his word for it that he really believes that it is right for a mutual insurance company to use its funds for political purposes. But we observe that he knows nothing about the purpose for which \$100,000 was sent to Albany, strongly suspected to have been expended for lobbying, to prevent the passage of unwelcome legislation.

Similarly, Mr. Perkins and the Treasurer of the New York Life, Mr. Randolph, argue strongly that they have the right as individuals to take a profit, by means of their official knowledge, from financial operations in which the company is engaged. This they regard as both honest and honorable graft, and very plausible arguments can be presented for that position, and it was declared that no man of standing could be secured to act as director of a company if he could not use his information for his own profit.

One of the most interesting of phenomena is the growth of the ethical sense. Virtues become sins, and sins become virtues. The instinct of duty, obligation, right and wrong, is permanent, but the intelligence which rationally decides what is right or wrong changes in every generation. Similar changes take place in the fields of philosophy, science and religion. The wisdom of one generation, expressed in the four prime elements of earth, air, fire and water, is the absurdity of the next. Astronomy inverts its basal idea with Kepler and Galileo. In theology we are in the process of revision, so that fifteen Methodist bishops are in doubt whether to save their faith or save their face.

The morals of the Old Testament had to be revised in the New, and we are still revising them. Zipporah was not far out of the way in calling Moses "a bloody husband," and David's harem was the pride of his people and the prey of his son. Abraham and Jacob may

have been patriarchs, but they were no saints, in the modern sense. They saw no wrong in what we would now call prison offenses. Samuel's slaughter of Agag would forever disgrace Oyama or Linevitch, but to him it was the command of the Lord. A Bedouin Arab proudly boasts that he is a robber, and very decent men of their day have been pirates and slave stealers, and in our day slaveholders. Saul persecutes to the death and thinks he is doing God service, and Hindu mothers murder their own children in the same obedience to God which made Abraham willing to do the same thing.

We need not, then, be surprised if, in the present advance of moral sentiment, some men linger behind, and believe it right to purchase State Legislatures and Presidencies with money, and in the process to bribe voters and legislators, on the old theory, the damnation of whose supporters St. Paul says is just, that they must do evil that good may come. But the ethical tide is rising, and the public unanimously condemns the contributions to political debauchery which are so bravely, or brazenly, defended.

Mr. Bryce on Navies

MR. BRYCE'S argument in the last issue of THE INDEPENDENT has attracted much attention. He argues that the present international combinations are so strong that they make enlargements of the naval strength of the nations unnecessary. Thus the treaty between Great Britain and Japan makes it quite useless for Russia, or any other Power, to attempt anything on the Pacific or in the Indian Ocean. If Russia wishes to enlarge her navy it must be for use in the Baltic or the Black Sea. Equally the agreement between Great Britain and France protects them against any other Power. Germany could do nothing against them. Germany, therefore, will gain nothing by increasing her naval strength, and the same is true of Italy, whose kindly relations to both Great Britain and France are a sufficient protection. It would seem as if this were a time, Mr. Bryce says, for the Powers of Europe to reduce

rather than increase their naval armaments.

But how about Great Britain, and the two Powers allied with her, France and Japan? At present the peace of the world rests on their alliance; is it not necessary, then, for them at least to keep up their superiority? It would seem so. There may be no need of increase, so long as Germany, for example, or Italy, does not enter into the policy of expansion, but it will be necessary to replace vessels that become old and unserviceable.

Yet there is always the further consideration that alliances do not always last long. It is hardly a year since France and Great Britain were on no friendly terms with each other. A war between them is conceivable, and we imagine that neither is likely to cease enlargement. The time may very possibly come before long when the renovated Chinese Empire, with a modern and strong navy, and supported by Japan, may provoke European nations to war, in which case a strong navy will be of the first importance.

Just now, when there is no emergency, no increase of navy seems to be needed anywhere in the world. It is desirable that this condition continue, and for this end we have State Departments, arbitration and the court of The Hague. But we cannot be sure this will last. Human nature is not yet perfected to the Christian, or the Buddhist, standard. A navy is like the pistol as described by the settler on the border, "not often wanted, but when wanted, wanted mighty bad." It is in the nature of an insurance. A man insures his house not because he expects it will burn or wishes it to, but out of fear that it may burn. So a nation neither wants nor expects war, but yet it knows that wars are possible, and in case of war the navy will be indispensable. For this reason we do not join those who oppose all expenditures for the navy, or even its enlargement. Of all nations we need a strong navy. The protection of the entire hemisphere, not to speak of islands in the Pacific, depends on us. At present, with Japan, we can assure peace in the whole Pacific, "*per ensem*,"

or we could do it with Great Britain. But so far as our continent is concerned, we need to be able to do it alone, and so we indorse the naval policy of President Roosevelt, who is a great peacemaker. May our children live to see the time when, thanks to a strong international court, we shall be able to turn our cruisers into commercial vessels, always excepting those which, by international agreement, shall be retained to enforce the decisions of the international court.

Why Not Honest Graft?

THE newspapers that are retained by the "money power" are of two easily distinguishable classes, namely, the reputable and the disreputable. The reputable sheets devote any amount of space to the exposure of every kind of wrongdoing except that which is indulged in by their own patrons. Many of them can be counted on for brave service in political reform campaigns. The disreputable sheets defend not only the financial misdemeanants, but also the political bosses and machines.

The respectable journals have of late been saying a good deal about the Tammany philosophy of "honest graft." The honest grafter, according to Senator Plunkitt, as reported by Mr. Riordan, never misappropriates public funds and never soils his hands with blackmail. He only watches out for opportunities, and makes the most of them. As an "insider" of the State or City government, he knows in advance what public improvements are afoot. If a bridge is to be built, or a street is to be graded, he quietly buys up the land that will be wanted for public purposes. He goes into the contracting business also, and stands ready to offer advantageous terms,—for himself.

With all due deference to our contemporaries of the respectable sort, we are moved to ask them to tell us, if they can, what there is wrong about Senator Plunkitt's nomenclature. If the graft that he describes is not "honest" why is it not?

Of course it is dishonorable. Writers as accomplished as those of the respectable press do not need to be told that

there is a distinction between the merely honest and the nicely honorable. To make use of public office to enrich one's self is a betrayal of trust, which, from the days of the Roman Republic until now, has been regarded as dishonorable. But if we are going to raise the issue of merely honorable conduct in the relation of private individuals to the public, it seems to us not quite honorable to limit the investigation to Tammany politicians. We can't help asking whether it is altogether honorable for respectable newspapers, in the interest of their owners or patrons, the "money power," to misrepresent great issues of public policy.

Let us be explicit. If it is dishonest for a politician, acting on inside information, to buy up real estate that is bound to increase in value through public effort, does the dishonesty consist in a private appropriation of wealth that ought to be covered into the public treasury or does it not? If it does, then all private wealth derived from real estate speculation in public improvements is dishonest. If it does not, we are forced to admit the alternative that there is one standard of honesty for mankind in general and another standard for the politicians. Which of these horns do the respectable newspapers prefer to repose on?

Our own modest opinion is that the "honest graft" of the politicians is dishonest, as thoroughly dishonest as anything can possibly be, and in holding this opinion we do not propose to dodge its logical implication. The graft in question is dishonest simply and solely because, in the last analysis, all private appropriation of wealth created by all members of the State through public activity is in its very nature unjust and dishonest, and cannot possibly be anything else. It is for that reason only that abutting owners are required to pay for street improvements.

This view of the matter brings us squarely face to face with the issue which the respectable newspapers are dodging or misrepresenting; the issue which, with all their might, they are striving to keep out of the approaching campaign in New York city. That issue is, Shall the enormous potential wealth of the New York streets and docks, of its

bridge approaches and ferrries, of its yet undeveloped underground, be given over to swell the fortunes of the multi-millionaires, or shall it be retained by its rightful owner, the public? If it is to be given over to individuals and corporations, and if such surrender is "honest," then we must confess that we see nothing dishonest in an appropriation of some portion of it by Charles F. Murphy and his Tammany henchmen. They have just as much right to come in for a share of it as the Belmont syndicate has. And as for the nicer point of honor, we are not yet convinced that it is any more dishonorable for a Tammany "insider" to make use of his first hand information than it is for the directors of a corporation to obtain wealth-begetting franchises in exchange for enormous contributions to campaign funds.

It is perfectly natural that the respectable organs of a corporate interest should try in every possible way to divert public attention from the issue of public ownership. And we are not surprised that they resort to such weapons as the cry of "socialism," "radicalism" and "confiscation." All this was to be expected. But we should have a higher opinion of their sense of honor if, while engaged in such a service for their masters, they did not at the same time raise their hands to heaven in denunciation of the very frank Tammany philosophy of "honest graft."

The Origin of Life Once More

At least as regards the notoriety that has been acquired it was a rather fortunate thing for Mr. Burke, the lecturer on biological subjects at Cambridge, England, that his announcement of a possible new origin of life under the influence of radium was made just at the beginning of the summer season. English journalists call it expressively the silly season, because, in the absence of real news, so many curiously interesting but insubstantial news reports find their way into the papers during this period. There is probably by this time not a weekly paper published in this country that has not noticed at considerable length the novel observation, its supposed significance and the far-reaching conclusions that may be drawn from it, if it

only prove to be as significant as some of the sensation-loving press writers have suggested.

In order to avoid even the appearance of exploiting its sensational qualities we have waited to discuss it until the original excitement had subsided. Of course, it is perfectly possible that the origin of life, even at the present time, may be discovered. Spontaneous generation has by no means been proved to be impossible. So far, however, all the observations that seem to point to its occurrence in this epoch of evolution have proved to be seriously defective. Biology must be considered as above all an advancing science, and it is with regard to the indefinitely little in living things that we have learned more during the last quarter of a century than in all the previous history of mankind. It must not be forgotten either that when so distinguished a scientist as Pasteur offered to demonstrate publicly that there was no such thing as spontaneous generation, tho his experiments were eminently conclusive to his audience of the time, he himself pointed out within a few years that they were so defective that any one might readily have demonstrated apparently the direct opposite from them. He had concluded that a single boiling would kill all life in an organic solution, yet he himself had to invent the process of discontinuous sterilization, by which nutrient material is boiled on several successive days, because some microorganisms in the spore stage resist the destructive effect of boiling water and may develop into ordinary organisms a little bit later.

While this shows the necessity for care in not considering that our present demonstration of abiogenesis is complete, still there are certain reasons why Mr. Burke's supposed observation would not seem to be as significant as has been suggested. It depends for its apparent meaning on certain appearances of life. Now morphology, or the study of the forms of living things, is the least reliable department of biology in the evidence it furnishes as regards the existence of living beings. For many years in medicine a number of curiously interesting appearances have been described as occurring within the cells of cancer growths in human beings. These phenomena have taken on the counterfeit

presentment of parasites of some low order of animal life to such a degree that a number of observers have been tempted into describing them as protozoa. Some of these supposed intercellular parasites have been described as having distinct nuclei, which took very different stains from that of the surrounding substance. Many micro-photographs have been made of these so-called parasites and artists have drawn their appearances very carefully, so that most medical men are thoroughly familiar with them. Within the last few years, however, there has come to be a very general persuasion that these appearances are illusory in as far as they are supposed to be parasites and that they really consist only of changes produced in the cells of cancerous tissues during the process of preparing and staining them for study.

Besides, as has been pointed out, in various medical journals, it would seem very probable that if the beginnings of new life were to be found in this stage of evolution they would occur in extremely minute bits of protoplasm much smaller than the appearances described by Mr. Burke. After all, it is generally recognized that at least one of the micro-organisms that has been carefully studied by bacteriologists is so small as to be quite beyond even the highest powers of the microscopes that we have at the present time. Professor Loeffler, the distinguished German bacteriologist, whose name is associated with the diphtheria bacillus, was commissioned a few years ago to study foot and mouth disease, an animal affection, which sometimes has been observed in human beings also and which is much commoner in Germany than in this country. The conclusion of his observations was that it was due to a microbe so small that it could not be seen by the microscope, tho it could be grown in culture media, and after passing through a number of tubes in the laboratory, growing in each one luxuriantly, could still be used to produce the same disease by inoculation on further animals.

Each form of microbe is a definite organism in the sense that it has an individuality of its own and a set of qualities which it transmits by heredity to its descendants. This involves the assumption

of a definite complex constitution of its own. If the primal material that represents the beginning of life is to be observed it would seem, then, as tho it should be smaller than any of the known definite forms of life at present existing and presumably developed from it.

Another difficulty that has presented itself with considerable force to medical scientists in discussing Dr. Burke's observation has been the fact that all forms of radiant energy used in medicine, from light through radium to the x-rays, produce destructive effects upon life, but never seem to have any stimulant effect. Rapidly growing tissues, the cells of which presumably have less vitality because of their very rapidity of growth, are destroyed by radium and the x-rays when other tissues are left unharmed. This seems to be the reason why these agents are effective in the treatment of certain forms of superficial cancer, where their direct effect upon cell life can be obtained without the hindrance of overlying tissues. That an agent like this, then, which has been known to kill seeds exposed to its effects for even a few days, should prove to be a generator of even a low form of life does not seem at all probable.

A Farm Idyl

FROM an outside standpoint hop picking is an idyl of rural life, one of those rare times when play and labor most harmonize. The fields are always in fertile limestone valleys—climbing the hills on either side until forest and orchard are crowded out, and the whole landscape is a succession of groves, all exactly fifteen feet high. The rows of poles in a well ordered field are the pink of precision, like the rows in an Ohio corn field, and you can look an eighth of a mile with unobstructed vision, diagonally, as well as straight down the lanes. When the vines are well grown they either droop in great branches of flowers or are run from pole to pole, on wires or cords. It is a quiet, cozy picture; not, however, without anxiety to the owner. For just as the harvest seems sure begins the danger. The hop louse, a green member of the aphidæ family, having reared several generations on plum trees

and thorn hedges, often comes in amazing numbers, to do its next and most destructive work in the hop fields. It is nearly impossible to cope with these insignificant creatures, altho spraying with kerosene emulsion will do much to reduce their numbers and vitality.

Occasionally an August tempest sweeps down the valley or rolls over some hill top and tumbles whole hop orchards into a mass of tangle and ruin, uprooting poles and tearing vines in such a way that repair is impossible. There is hardly a sadder sight ever presented in an agricultural section. The heavy top growth gives the wind special advantage in twisting, while not unfrequently scores of poles are broken off at the bottom, till the whole harvest, with poles, is a wreck. In one hour a farmer sees thousands of dollars snatched from his hands. Nor does this end the danger besetting hop growing. Picking should begin about September 1st. It frequently happens that a hot and wet season sets in about that date, bringing mildew, which sweeps through the fields, entailing enormous loss. It must be remembered that the hop, to be of value, must be a perfect flower. But if all is ready and pickers are in the field, the hop growers are still by no means through with anxiety. Several successive wet days will so hinder the picking and damage the quality of the hop that sometimes fields are abandoned just at the last moment.

The tribulations of the hop grower have not ended when the crop is housed for drying. A crop that varies in price from \$1 a pound to 5 cents a pound, and may so rise or fall inside a few weeks, introduces more of the uncertain and speculative than can be dealt with by the average man in any employment. It is not even possible to get at the conditions that will determine the market. When prices rise from 10 cents to 20 cents it looks probable that there will be farther rise before the need of selling. But for many years the price of hops has ruled much lower, with an occasional spurt. When on the rise the farmer is almost sure to hold his stock more firmly. He has known a dollar market; why may it not be reached again? A few make fortunes, but there is too much luck in the

game. Of late dealers have fared as badly as growers. The auctioneer has sold half the homes and farms of whole valleys. When money is made it is seldom spent wisely, because it comes so rapidly as to unbalance business judgment. Smart teams are an early symptom. Few farmers keep accounts, and the outgo, tho in small streams, soon balances and outstrips the inflow.

The season of picking is indicated by a rapid and alarming increase of tramps. They come from everywhere into the hop valleys. Then the pickers are collected. These have been engaged months before, and now dozens of long wagons, with seats down the sides, are driven to the towns and cities, and come back full. These loads sometimes number thirty or forty, laughing and shouting. Some of these are decent people of the cottage class, happy to get an outing and anticipating good wages. But the larger part are a very indifferent set, while some whole loads are either criminals or scoundrels. They will do mischief before they are sent back, and some of them will be arrested before picking is closed. Barns, orchards and hen houses will suffer. Gangs of prowlers will be about all night. They know no such thing as responsibility. On the whole it is a demoralizing time. Growers expose their children to influences that can never be neutralized.

Picking must be completed inside three or four weeks. One gang can pick several of the smaller farms in succession. When the company is respectable the work, altho dirty, is healthful and socially cheerful. It brings into cooperation a whole neighborhood of friendly people. Pleasant associations are formed. Evenings are socially spent, often with music and dancing, occasionally with reading. The odor of hops is soothing, and "hop sleep" is to many a novel luxury. But where there is a bad crew the night is filled with rioting and crime. Pickers sleep in barns, on cots, or under the huge sheds of old-fashioned farm houses; sometimes in tents or loosely constructed huts. These are pleasant resting places, provided a storm does not occur. Fires, however, are not infrequent.

Pay is from 50 cents to 90 cents per

hundred pounds. A fairly good picker gets in from 125 to 160 pounds a day; some do much better. A few will go up to 250 or even 350, and there is a record of 488 pounds. Families frequently work as a unit and collect from \$5 to \$20 a day. This would be a Godsend were these folk capable of appreciating the necessity of economy. In most cases the money is spent with astonishing carelessness, not lasting more than a couple of months, after which poverty pinches through the rest of the year. Pickers are divided into sections, while there are specially selected persons to pull the poles and do the weighing. It is the duty of some to see that no dirt or leaves get in with the flowers and that no cheating is performed in the weight. The hops are taken to kilns, where they are loaded into elevators and carried to drying floors. Here they are evenly distributed on the porous floor to a depth of fifteen or sixteen inches. A steady heat comes up from the fires below and passes out through great ventilators, which move about like a chimney top. On the furnace below is placed a quantity of sulphur. The fumes pass, with the heat, through the hops for three or four hours. The whole process lasts for about twelve hours, reducing the weight about one-third. Pressed, the bales weigh about 190 pounds.

The charm of hop picking is that it introduces an entire novelty into the ordinary routine of farm life. Perhaps there is some advantage in the fact that success in hop growing requires absolute accuracy and scientific work from beginning to end of the season. This is a good thing for the common farmer. But to the pickers the charm is almost entirely social. You will see old men with trembling fingers and unable to pick over fifty pounds in a day, and by their side boys that are stripping the hops to a tune of 250 pounds in a day. Small children are running about because they cannot be left at home, but most of these are able to pick a few pounds or run of errands. Farm houses and cottages in every direction are empty of inhabitants. You will find extensive hamlets where among a score of houses you will get no reply to your rapping and calling but the barking of dogs or possibly the response of some feeble octogenarian.

Diamonds Next to Dr. Darwin's Presidential Address at the meeting of the British Association in South Africa no paper had greater interest than that of Sir William Crookes on the diamond, read in the principal home of the diamond. The explanation he gave of the origin of the diamond is the same as that now generally accepted by geologists. It is that there were at some early period great vents, or pipes, that opened from the lower depths through which there was pushed up the contents of long molten matter, containing much molten iron. Here there had been an enormous pressure as well as the intensest heat, sufficient to liquefy carbon, which separated from the iron and crystallized into diamonds, just as in the meteoric iron of Arizona there have been found diamonds. Moissan's experiments in the artificial production of diamonds were on the same line of tremendous heat and pressure on the purest iron, with carbon made by burning sugar. The most extraordinary thing is the size of these vents, in one case nearly half a mile across, and these were filled by the coarse mixed blue clay which had been forced up through the pipes as a sort of mud volcano. The largest diamond yet found is the Cullinan, weighing 1 1-3 pounds, and next the Excelsior, over half a pound.

Fleas The native Africans knew from time immemorial, as Dr. Livingstone first told us, that the tsetse fly causes the disease which destroys their cattle; but it is only within the past few years that we have learned that human diseases, such as malaria and yellow fever, are caused by mosquitoes. Now the doctors are eager enough to find what other insects produce disease. Of all these fleas are now most suspected of being the means by which both leprosy and the bubonic plague are distributed. But there has been as yet no such study of the various species of fleas which infest animals and men as has been made of mosquitoes since their malignancy became known. In an article in *Nature* Mr. C. F. Baker, who is connected with the agricultural station in Santiago de las Vegas, Cuba, asks help in

this study. It is pretty well settled that somehow rats are related to the bubonic plague, but just how has not been stated. Some have said that the infection is caused by stepping barefoot on floors or earth infected by the rats. The puncturing apparatus of the flea is covered with intricate saw-teeth, very different from the smooth needle of a bee's sting. If a flea were to bite the buboes of one afflicted with the plague the bubonic bacilli would be sure to stick to these serrations and would be transferred to the next persons who were bitten. Fleas are very different in their method of biting from mosquitoes, says Mr. Baker. Where a mosquito is a glutton, and will at the first chance fill his abdomen with blood, the flea is an epicure, and will bite in a dozen different places, and not fill himself. A line of a dozen bites will sometimes be seen. Mr. Carter proposes to take what risk is necessary in the study of fleas of rats and other animals to understand their relation to leprosy and plague, and he asks help from other students. This would seem to be one of the cases which both our Agricultural Department and the Carnegie Institution are created for.

**Mr. Bryan's
Advice**

Mr. Bryan is an editor, and it is good journalism for him to write an open letter to the President, to be sent by the Associated Press over the country. What he asks is that the President, to whom he offers compliments, altho he thinks the Senate was right in refusing to approve his general arbitration treaties, should ask Congress for power to refer all disputes, before war, to outside Powers, or The Hague, for investigation, not arbitration, and the mere investigation would, he thinks, be sufficient to prevent war. This is well enough, perhaps, but it is insufficient. What we want is more than investigation: it is authoritative arbitration. Mr. Bryan is behind the times. Investigation is seldom needed. The facts are generally known. It is the meaning, or bearing, of them which sets nations by the ears. There is nothing that needs investigation between Norway and Sweden. No investigation was

needed before the Spanish War, for all knew what was done in Cuba. Mr. Bryan's letter concludes as follows:

"If the leading nations of the world would enter into an agreement to join in the creation of such a board and pledge themselves to submit all disputes to the board for investigation before declaring war, the danger of war would be reduced to a minimum. Few men have had it in their power to do so much for humanity. Will you improve the opportunity?"

We think he will not: for the very good reason that he is after larger game. He will soon call, or ask The Hague to call, the second Peace Conference of The Hague, which will have many questions to consider, and none more important than the urging and formulating of treaties of arbitration. That is where the investigation should be done, when it is to conclude something.

Jules Oppert Jules Oppert, who died in France last month in his eighty-first year, was one of the four great scholars to whom Assyriology is indebted for the first connected translation of cuneiform texts. Of the four the greatest was Major-General Sir Henry Rawlinson, devoted to the service of a soldier in India and Persia. At the foot of the list was the photographer, Fox Talbot, whose talbotypes were the best kind of photographic pictures of their day and who gave his spare time to studying the then mysterious wedge-shaped signs. The other two, Dr. Hincks, of Ireland, and Dr. Oppert, the German Jew, transplanted to France, were professional scholars, and as different as they could be. Dr. Hincks was modest, retiring, but extraordinarily keen in his search after the grammatical elements of the two principal cuneiform languages; while Dr. Oppert was assertive, if not quarrelsome and boastful. He remarked twenty years ago to the editor: "The difference between H. (a French scholar who had much antagonized his Sumerian theories) and myself is that he writes on a great many subjects he does not know about, while I know a great many things I don't write about." In the early fifties these four scholars were asked, by the skeptics as to the trustworthiness of decipherment, each to translate independently a long inscription of Tiglath

Pileser I, and have them compared. This was done, and the translations were first read by the President at a meeting of the Royal Asiatic Society, and they were published in parallel columns in its Journal. Their agreement confounded the doubters, but Rawlinson's was much the most complete of the four. Dr. Oppert was a most prolific writer of books and papers on his exploration of Babylon, and his error in making that city include an enormous area, so as to extend even to Borsippa, still prevails in maps. Of late he wrote mostly on Oriental metrology, astronomy and chronology.

Dr. Gladden's Resolution As was expected Dr. Gladden's resolution against "tainted money" was presented by him at the meeting of the American Board at Seattle. It reads:

"Resolved, That the officers of this society should neither solicit nor invite donations to its funds from persons whose gains are generally believed to have been made by methods morally reprehensible and socially injurious."

The resolution was referred to the appropriate committee and was later brought forward for action, and was defeated by a vote of four to one. But it was made perfectly clear that in no way would the Board indorse the character or the methods of givers. All it would do was to assure givers that their money would be used for the missionary and educational purposes of the board. And, as might be expected, Dr. Gladden showed no bitterness in his action. After the decision he expressed himself as still ready to do all he could for increasing the missionary activity and operations of the Board, which he can well do in his position as Moderator of the National Council. Certainly the discussion has been healthy, if not wholly agreeable.

Mr. Dixon, of "The Leopard's Spots," and Governor Vardaman find great comfort and support in their contentions as to the inferiority of the African race by

referring to the backward condition of Liberia, which is said to prove the incompetency of its people to carry on a Government. But Sir Harry Johnson, a first-class authority on Africa, has lately returned from his third visit to Liberia, and he expresses a very favorable opinion of its condition in *The Geographical Journal*. He is impressed not only by its natural wealth, but by the development of cultivation. He finds 3,500 square miles occupied by plantations, towns and settlements of settlers from this country, and nearly as much more cleared by the natives. The great wealth of the country is to come from the forests of rubber-producing trees and vines. There the arguments of caste and prejudice vanish away.

This is a rather pessimistic view to be taken by one who expects the Church to create the Kingdom of God in the world:

"The world outside of the Church has cut loose and has drifted out on a stormy sea. It has trampled under foot the Holy Scriptures, cast God out of the schools, torn asunder the bond of matrimony and even authority has now been assaulted. Socialism is rampant. And the men who have caused this cataclysm are now looking around for a haven of safety. They see only the Pontiff in Rome."

Possibly Archbishop Farley suffers from myopia.

Within a few weeks a son of Keshub Chunder Sen, the famous organizer of the Brahmo Somaj of India, has married the widowed daughter of a rajah. That is an extraordinary rebellion against an ancient rule in India, and the beginning of a domestic revolution which has the support of many advanced Hindus who do not themselves dare to more than speak in its favor.

They say that the American Peace Society, which has held up the banner in Boston for two or three generations, was in the field for the Nobel Peace Prize. But now they said in Brussels that it ought to go to President Roosevelt.

Insurance

The Insurance Investigation

THE committee of the New York Legislature which is investigating the life insurance business last week investigated the New York Life Insurance Company.

Mr. E. D. Randolph, Treasurer, stated that when the combination of the New York Life with the New York Security and Trust Company and the Continental Trust Company was effected, "a mutual examination" of the two companies was made, the result of which was a request by the trust companies that the New York Life relieve them of \$1,500,000 of New Orleans railroad stock in the assets and take up a participation of \$2,913,750 in one syndicate. Asked why the New York Life extended this relief, he replied that the latter had made more than \$3,000,000 on the sale of the 5,005 shares of New York Security and Trust stock, and the argument was made that with so handsome a profit it could afford to take over the other deals. It developed during the examination that the New York Life eventually disposed of the New Orleans and syndicate ventures at a loss of \$326,000.

Mr. Randolph showed that the Life company kept on deposit with the Trust company large balances, running in 1902 from a minimum of \$5,250,000 to a maximum of \$12,531,000. Asked as to the reason for the increase in the account, Mr. Randolph said he supposed it had resulted from loans and because money was put there on account of the interest paid on it, which subsequent examination showed was always one-half per cent. less than the rate obtained by the Trust company.

The International Navigation Syndicate deal of 1902, managed by J. Pierpont Morgan & Co., was taken up. The New York Life put up \$4,000,000 on this in installments. On December 31, 1903, \$800,000 of this was sold at par and on January 2, 1904, \$800,000 was purchased at par. The sale was made to,

and the purchase from, J. P. Morgan & Co. Mr. Randolph explained the sale on the ground that the company did not desire to hold in excess of \$3,200,000, but was unable to account for the repurchase two days later. He said the transaction was carried out by Vice-President Perkins with the consent of the Finance Committee. When pressed by Mr. Hughes, Mr. Randolph admitted that the sale was made in order that the company might show in its report to the Insurance Department on December 31, 1903, that it held but \$3,200,000 of the International Navigation securities.

A transaction involving the investment of \$10,000,000 in Chicago & Alton bonds in 1899 revealed the payment of that sum by the New York Life to Kuhn, Loeb & Co., and that it was a joint account with Goldman, Sachs & Co., the New York Life carrying \$5,000,000 for the latter for two years. When the bonds were bought there was a bill before the Legislature to make them a savings bank security, and it was upon an expectation that they would appreciate substantially in value that they were secured. The bill did not pass, and the company was left with \$5,000,000, which are now worth 86. If the bonds had been resold, Mr. Randolph explained, the company would have made a profit, instead of a loss.

The principal witnesses on Wednesday and Thursday were Mr. Frederic Cromwell, Treasurer of the Mutual Life, and George F. Baker, President of the First National Bank. They described in detail the system of syndicates which has grown up within recent years, and which, they insisted, the life companies were, from motives of expediency, forced to participate in.

Friday brought Mr. Randolph, the Treasurer of the New York Life, but he had not been under examination thirty minutes before the Committee struck a line of inquiry concerning two checks to the order of Andrew Hamilton, of the company's law department, that required

the presence of George W. Perkins, the Vice-President, who recited his career and rapid advance in the company's service from \$300 a year at age 16 to \$75,000 a year at age 40; asserted that he had organized the company's agency and financial departments; had brought hundreds of thousands of people into the company, and that he was the "most important one factor in it." He often commended Mr. Hughes with the observation, "That's a good question," and occasionally suggested to the committee points which should be covered by legislative action. He knew nothing about the checks for \$55,000 and \$45,000, given by order of the President to Andrew Hamilton, the Albany lawyer, but justified as correct the authority of the President to pay out \$50,000 or \$100,000, in his discretion, without consulting any one. He testified that the company had contributed \$50,000 to the campaign funds of each of the two McKinley campaigns and \$48,702 to the Roosevelt cause last year. He thought there should be a law compelling the companies to publish a schedule of all the policyholders' money they disburse. He explained that he alone had disposed of the \$800,000 International Navigation securities to J. P. Morgan & Co., with which he is a partner, on December 31, 1903, and bought them back on January 2 following. Asked why he sold and bought back, he said it was to "protect the company's situation." He refused to admit that the only situation there was to be protected consisted in showing but \$3,200,000 of these securities in the annual report to the Insurance Department, which had to be made of date December 31, 1903. He was asked to explain just where in this transaction of the sale and repurchase to, and from, his own banking firm he ceased to act as Vice-President of the New York Life and commenced to act as J. P. Morgan & Co. The answers were irrelevant, and one of the Committee explained that the interrogation had reference to the Biblical assertion that no man could serve two masters, to which the witness eagerly replied, "I serve but one." Mr. Hughes then quietly inquired, "Which one?" This drew

from Mr. Perkins an extended dissertation on the duty of a man in a public position to serve all the people.

Royal Arcanum Matters

ROYAL ARCANUM delegates and members of the Supreme Council held their final meeting at Put-in-Bay, Lake Erie, on Labor Day, September 4th. Several changes were made by them in the rate schedule of the order. According to the new plan members who have been suspended since June 1st have the option of securing reinstatement without medical examination. All members of the Royal Arcanum over 65 years of age, according to the Labor Day decision, may pay only one-half of their assessments under the new rate card and the other half will be debited against their certificates and will constitute a lien against them. Secretary Robson has issued a statement to the effect that options B and C have been made applicable to the present membership only, and new members have been restricted to a selection between the regular rate and option A. The proposal to create a fraternal fund by annual contributions of twenty cents per capita to assist old members in paying their assessments was referred to a committee with power to procure the necessary legislation, the plan being contrary to the laws of the State of Massachusetts.

The action of the Put-in-Bay meeting is not regarded by Arcanumites in all quarters as entirely satisfactory. A strong feeling against the decision exists in Brooklyn. In Boston itself, which is a Royal Arcanum stronghold, no little dissatisfaction prevails. The suggestion has been made in the Hub that the Massachusetts lodges unite in making application for a receivership for the order. The movement looking toward the application for the receiver originated in Alpha Council No. 1, which was the first lodge of the Royal Arcanum to be formed. There is every prospect that further trouble in the order will come.

Financial

Concerning "Syndicates"

VERY great confusion exists in the public mind as to the nature of the Syndicates with which the large insurance companies have been connected, as appears from the summaries given by the daily newspapers of the evidence elicited by the Legislative Committee now in session in New York.

These Syndicates are often spoken of as selling bonds to the companies—a wholly misleading statement—and the inference is suggested, if not actually stated, that the participants in such syndicates make money out of the companies by reason of their participation.

To comprehend what is a very simple affair when once understood, and only complex in appearance when not understood, let us describe the process by which, for instance, a railway company sells an issue of bonds: The Railroad needs, say, fifty millions of dollars. It sends for its banker and lays before him a list of the collateral securities by which the bonds are to be secured, discusses the rate of interest it proposes to offer, the duration of the loan, any special privileges or advantages which may be thrown in to make the issue attractive and the price at which it can afford to sell the bonds to net the Railroad the sum it wishes to obtain. These questions and others pertinent being decided, the usual course is for the banker to make an offer to take the entire issue at a fixed price, which, in some cases, may be from five to seven and half per cent. less than the price at which the bonds are to be offered to the public. To protect himself from loss and insure the success of the issue the banker, therefore, selects from among his business correspondents and friendly houses engaged in similar business and from among large investors those whom he thinks most likely to aid in marketing the bonds and offers them a participation in an underwriting syndicate to guarantee the entire sale at a fixed rate of commission, or share in the estimated profits of the sale. It will be perceived that the syndicate buys nothing; it assumes a risk upon the success of the banker in disposing of the bonds and is paid for it. If the public does not take all the bonds at the price

of the offering the unsold bonds are divided among the underwriters in proportion to their subscription. This is the modern substitute for issuing bonds without a previous guaranty. It insures the success of the scheme; the railroad gets its money in one sum and the banker sells the bonds at one time to many different investors. There is no partnership between the underwriters, but each receives the percentage or share of profits to which his subscription is entitled, and no more. It is of no consequence to any underwriter who his associates are, provided they are solvent; no one makes any money out of any other one of the syndicate.

A director, therefore, of an insurance company who joins with his company in an underwriting syndicate does not sell anything to his company and does not make any money out of his company. It is for each individual to decide whether under all the circumstances it looks well for him to engage in these enterprises or not. There are arguments on both sides.

The Western Union Telegraph Company has declared a dividend of one and one-quarter per cent., payable October 16th. The net revenues for the quarter ending September 30th are estimated at \$1,900,000, and the surplus, after paying dividend, is \$16,325,888.

....Dividends announced:

Otis Elevator Co. (Preferred), quarterly, \$1.50 per share, payable October 14th.

United Fruit Co., quarterly, $1\frac{3}{4}$ per cent., payable October 14th.

Atch., Top. & S. F. Rway. (Gen. Mort., 4's), Coupons, payable, October 2d.

San Francisco & San Joaquin Valley Rway., Coupons, payable October 2d.

Mergenthaler Linotype Co. (quarterly), $2\frac{1}{2}$ per cent., payable September 30th.

Chicago, Rock Is. & Pacific Rway., $2\frac{1}{2}$ per cent., payable October 2d.

N. Y. & Harlem R. R. (Preferred and Common), each 2 per cent., payable October 2d. (quarterly), $1\frac{3}{4}$ per cent., payable Oct. 16th.

Western Union Tel. Co. (quarterly), $1\frac{1}{4}$ per cent., payable October 16th.

Interborough Rap. Transit Co., 2 per cent., payable October 2d.

Amer. Typefounders' Co. (Preferred) (quarterly), $1\frac{3}{4}$ per cent., payable October 16th.

Franklin Trust Co., Brooklyn (quarterly), 3 per cent., payable September 30th.

Amer. Locomotive Co. (Preferred), $1\frac{3}{4}$ per cent., payable October 21st.

The Independent

VOL. LIX

NEW YORK, THURSDAY, SEPTEMBER 28, 1905

No. 2965

Survey of the World

**Mr. Foraker's
Speech in Ohio** At the opening of the Republican campaign in Ohio, on the 23d, Senator Foraker spoke at a meeting in Bellefontaine, and his remarks were regarded as indicating opposition to the President's views concerning reciprocity and the regulation of railway rates. He said:

"There can be no reciprocity treaties considered by the Senate unless the President first negotiates them and sends them there. The initiative is with him.

"But if he should find himself able to make such treaties the Senate, I am sure, would not ratify them unless it was found on examination of their provisions that they did not seriously injure any important American industry. The platform on which President Roosevelt was elected so declared, and I do not imagine he would disregard that declaration in negotiating such a treaty, and if he did I know the Senate would not ratify or approve his action in doing so.

"Reciprocity, then, should be confined to non-competing products and to such products as are able to stand a reduction of duties without injury to the industry that produces them. Each treaty must, therefore, be tried on its own merits, according to its own provisions, and for that reason no one can tell in advance what will be done in any particular case.

"If we are to sacrifice the protection of any one industry to secure larger markets abroad for some other kind of American products, it will be difficult to show why we should not dispense with protection as to all and thus go at once to free trade or a purely revenue tariff, the folly of which has been demonstrated as often as the experiment has been tried.

"What will be ultimately decided on with respect to it cannot be foretold, but it can be regarded as settled that no important changes, if any at all, are likely to be made in the tariff by treaties of any kind."

Sooner or later, he continued, there would be revision of the tariff, for the

Republican party would not hesitate to make changes in rates when changed conditions required this to be done. But that party would not reduce duties to increase revenues by stimulating importations. Turning to the railroad question, he remarked that it had been charged that rates were too high; that rebates were secretly given, and that discriminations were practiced. It was proposed that all these evils should be cured by conferring the rate-making power upon the Interstate Commerce Commission. Rates, he said, were "not higher than what is reasonable and just under all the circumstances." The granting of rebates had been practically discontinued, and the Elkins law had been found to be ample, if properly enforced, to accomplish its purpose. There were many forms of discrimination, but what appeared to be discrimination was found upon investigation in many instances to be due to the law of competition and to be the result of natural causes and conditions which neither Congress nor the companies could control. Undoubtedly there would be legislation to prevent discrimination, but it would be unwise and unjust to confer the rate-making power upon the Commission. Having said that the companies were employing 5,000 skillful men in making freight rates, he continued:

"A better way may be found of making these rates than that which is now in vogue, but I do not believe it possible for Congress to provide it by intrusting such a complicated, delicate and vitally important duty to any such agency of its creation as is that which has been proposed. There are numerous difficulties of a practical character that must arise

the moment the Government undertakes such a duty.

"To take control of the rate-making power is to take charge of the revenues of the roads, and that means that the Government is to assume the responsibility not only of determining what rates shall be charged, but also of necessity how much money a railroad shall be allowed to make, and thus determine also of necessity what improvements it shall be permitted to make, what extensions it may build, what equipment it must provide, what new tracks it may lay, and what kind of service it shall render; for rates are so interdependent that there is no such thing possible as changing one without affecting many.

"Any other notion is a delusion refuted by conditions and experience. In short, if the Government is to determine how much money a railroad shall be allowed to make it must of necessity determine also what expenditures shall be permitted. None of these things can be escaped, and none of them can be done by the Government so well as they are now being done by the companies themselves."

Mr. Foraker is an active member of the Committee on Interstate Commerce and will probably take a prominent part in framing any rate bill which that committee may report. At the same meeting Vice President Fairbanks said that a Republican Congress would readjust the tariff whenever readjustment should be essential to preserve the integrity of the protective system. Existing laws had not put an end to unjust favoritism in railway traffic, and they must be strengthened.

Beef Packers Admit Their Guilt.

In Chicago, on the 21st, four officers of the Schwarzschild & Sulzberger Packing Company, who had been indicted with the officers of the other great packing companies, but not for exactly the same offenses, unexpectedly pleaded guilty. In this plea they admitted that they, as charged, had conspired to obtain unlawful rebates from the Rock Island and five other railroad companies, had solicited such rebates, and had received them. The four officers are Samuel Weil, vice-president of the company; Beth S. Cusey, traffic manager, and Cusey's two assistants, V. D. Skipworth and Chess E. Todd. It appears that Mr. Weil was suffering from nervous prostration and unable to stand the strain of a trial. An understanding with the Attorney-General had been reached. Under the law, the defendants could have

been imprisoned for two years. In consideration of all the circumstances, the penalty of imprisonment was not imposed. Mr. Weil was fined \$10,000, and each of his three associates \$5,000. The money was promptly paid. There remains against all of these men an indictment charging that they unlawfully interfered to prevent certain persons from giving testimony before the grand jury. It was said in court by the District Attorney that these men and their packing company had obeyed Judge Grosscup's injunction and withdrawn from the combination commonly called the Beef Trust. Therefore, they had not been indicted for unlawful combination in restraint of trade, as the other companies had been. In attempting to compete with their former associates, however, they had solicited and obtained rebates from the railroads. They were indicted for this under both the Sherman and the Elkins laws. It is announced that the railway companies which gave them rebates will be prosecuted, but indictments must be procured from a new grand jury. Officers of some of these companies deny that rebates were given. Railroad men who oppose the projected rate legislation which the President desires point to this case as evidence that existing laws are sufficient. Others say that for a long time there have been laws against rebates, but that these laws do not provide for a prompt and fair regulation of unjust general and open rates, or for the control of private car lines and the rates granted to manufacturers' terminals and side-tracks.

Panama and Costa Rica

The State Department was informed last week by Mr. Lee, Consul General at Panama, that Señor de la Guardia, Panaman Minister of Foreign Affairs, was about to visit the capital of Costa Rica, with the purpose of negotiating a treaty of annexation with that country. It is said at Washington that the offer about to be made by Panama will cause no surprise in Costa Rica, and will be accepted. The proposed union has already been discussed by diplomatic representatives of the two countries. It is understood that the peaceful consolidation of two or more of the Central

American republics would be regarded with satisfaction by our Government, for the protection of whose rights on the Isthmus after any changes of that kind due provision was made in the Canal Treaty. Señor Calvo, the Costa Rican Minister at Washington, says that the overtures of Panama will be cordially welcomed in his country. Annexation, he adds, would be advantageous to both countries, as well as to the United States. The area of Panama is 32,000 square miles; that of Costa Rica is 23,000. United, the two countries would be nearly as large as Iowa or Illinois, and their population would be about 700,000.—The Canal Commission and the Board of Consulting Engineers will sail for the Isthmus from New York on the 28th. After their arrival at Colon they will be lodged on the steamship "Havana," which will lie every night at some distance from the shore. All possible precautions will be taken to exclude mosquitoes. A special train will be used daily by the visitors in their inspection of the Canal route.—Mr. James J. Hill, of the Great Northern and Northern Pacific railroads, said last week while addressing a meeting of farmers in Minnesota, that the Canal would be "an expensive toy," of little use in extending American foreign trade.

Politics in Cuba.

The election of boards of registration thruout the island, on the 23d, was accompanied by very little disorder, but it had been preceded on the afternoon of the 22d, in Cienfuegos, by a bloody contest between the police of that city and a group of Liberal politicians. Accounts of this affair appear thus far to come exclusively from Government officers, and Liberals assert that they are not entirely trustworthy. The police had information that explosives had been secretly placed in the Hotel La Suisa, and probably in the rooms occupied by Enrique Villuendas, the leading orator of the Liberal party in the Cuban House of Representatives. By order of a local court a search was made. The police, while ascending a stairway, were confronted by Villuendas and his associates,

who shot and killed the Chief of Police, Señor Illance, and two policemen. By a volley in return, Villuendas was killed. Six men lost their lives, and four times as many were wounded. The Rural Guards then surrounded the house and order was restored. In the evening several carloads of Guards were sent to the city from Havana. Three dynamite bombs were found in Villuendas's rooms. There was a Liberal plot, the Government asserts, to destroy the municipal buildings in Cienfuegos. The conspirators had attempted to corrupt the secretary of Chief Illance, and he had betrayed them to his employer. Therefore the search was made. Villuendas had received twelve bombs, but only three were found. At an extraordinary session of the House the Liberals (having a majority) adopted resolutions censuring the Government and holding it responsible for the loss of life. Governor Gomez, the Liberal nominee for President, asserted that the killing of Villuendas was a premeditated murder, and denied that there had been any bombs in his possession. At the election of registration boards the Liberals at some places refrained from voting, alleging that they were intimidated by the police and the Rural Guards, acting in the interest of President Palma and the Government. The Moderates were successful generally thruout the island, and the result foreshadows the re-election of Palma in December.

Latin America

In Nicaragua there is considerable excitement over the fact that an American citizen by the name of Albers has got himself into trouble. The Nicaraguan side of the case is to the effect that Albers refused to pay the tobacco tax, and told the tax collectors that if they entered his house they would do so at their own risk. He thereupon armed his employees, raised the American flag on his roof, and threatened the authorities with trouble if anything should be done. He was at once seized by the authorities and kept under semi-imprisonment during his trial, when the American Consul at Managua, Mr. Donaldson, addressed a letter to the Presi-

dent of the Republic asking for Albers's liberty. The President would not interfere while the matter was before the tribunal, so Mr. Donaldson sent a peremptory note to him, which caused the Nicaraguan Government to cancel his exequatur. Whether this be the true version or not we do not know, but the case has been referred to the State Department at Washington, and Minister Merry, now at Costa Rica, may be conveyed by the "Princeton" to investigate the case and take whatever measures may be necessary. In Venezuela, President Castro is at last in serious difficulties with France. He has broken off entire relations with the French Chargé d'Affaires, M. Taigny, who protested against the shutting up of the land stations of the French Cable Co. and the expelling of the company's manager. President Castro firmly refuses to allow the offices of the company to be reopened, and it is said he has already placed an order for guns and ammunition in case of war. Judge Calhoun, the Special Commissioner of the United States at Caracas, has had several conferences with the Venezuelan Government on the subject, but so far nothing has resulted. In Paris the semi-official *Temps* urges that the United States and France make a joint naval demonstration at La Guayra similar to the one made two years ago by Italy, Germany and England. As the United States has grievances of her own against President Castro, France thinks we could legitimately join her in the necessary coercion. At Washington the impression seems to be that the administration will have no objection to France coercing Venezuela up to the point of permanently occupying territory. In the meantime the suit of the Venezuelan Government against the New York and Bermudez Asphalt Co., now pending in the Venezuelan courts, has temporarily stopped while the testimony of several of the witnesses here in this country is being taken before United States Commissioner Alexander in this city. The company's side has not yet been given, but some of the witnesses, who were former employees of the company, testify that orders had been given to afford aid to the revolutionists, and furnish them with food and supplies. An engineer of the company said that

the company's cars had been used to convey revolutionists from place to place, and disclosures were made by a former bookkeeper that indicated that a "Government relations" account has been carried on the books of the company. The suit is for \$111,000,000 damages against the company for aiding in the Matos revolution.

Movements for Peace

The Czar has announced his intention of inviting the foreign powers to a second peace conference at The Hague. This is somewhat surprising, in view of the fact that President Roosevelt took the initiative in suggesting a second Hague conference a year ago, and that the proposals of Secretary Hay were favorably received by all the nations addressed, except Russia. It is, however, explained from Oyster Bay that Baron Rosen, on his visit to the President September 13th, informed him of the Czar's wish to call the second conference as he had the first, which was held in 1899, and that Mr. Roosevelt gave his hearty approval of the Czar's proposals.—The Universal Peace Congress opened its session in the Kursaal, at Lucerne, September 19th, with 340 delegates in attendance. Elie Ducommun, of Berne, who received the Nobel Prize for his efforts in behalf of peace, was elected president. Among the American delegates were Rabbi Louis Grossman, of Cincinnati, and Benjamin F. Trueblood, of Boston. A resolution was adopted favoring the neutralizing of maritime routes.—Mr. Witte on his return to Paris was somewhat coldly received on account of his pro-German sympathies. He had an interview with President Loubet, and then went on to Berlin, where he met Emperor William at his hunting lodge. He is reported to have remarked to Paris friends, who asked about his American experiences:

"We made peace in order to get rid of the mosquitoes. I understand now why the American national temperament is so very nervous. Americans suffer stoically one of the greatest torments known to human flesh."

—Mr. Plançon, secretary of the Russian Peace Commission, has arrived at St. Petersburg with the treaty, which will be engrossed on parchment for the signature of the Czar. Mr. Takahira

sailed on the "Dakota" from Seattle September 20th with the Japanese copy. Baron Komura, who has recovered from the fever, left New York with Baron Kaneko September 27th for Vancouver.

Russian Affairs

The first step in what may be a permanent peace between the warring races in the Caucasus was taken at Baku on September 24th, when representatives of the Armenians and Tartars met in conference at the request of the Viceroy of the Caucasus, and signed a preliminary peace agreement. A general congress of the representatives of all the different factions will be held in October to consider methods of putting a stop to race riots. There is still much disorder in the district, but owing to the large number of troops which have been brought in, danger of a general rebellion is believed to be over. Fifteen thousand Persian workmen have been expelled from the oil region, and Russians and Armenians are leaving in large numbers, as it will be some time before work can be furnished, on account of the destruction of the wells and refineries. The members of the municipal government, physicians and engineers have fled from Baku, and the water supply of the city is suspended. At Tiflis a strike in the woolen shawl factories has thrown 8,000 workmen out of employment.—Prince Ivan Obolensky, Governor-General of Finland, is reported to have resigned on account of the danger of assassination. A little over a year ago he was appointed Governor-General to succeed General Bobrikoff, who was killed by Ernst Schaumann, a young Finnish patriot. His administration has been even more cruel and obnoxious to the Finns than that of his predecessor, and his life has often been threatened. Russian troops are being hurried into Finland to prevent an insurrection and quartered in private houses in the cities. In Helsingfors 4,500 troops are to be placed, 900 in Viborg and 900 in Vasa. At Vasa an attempt was made recently to blow up the residence of the Governor. Finland is not at all pleased by the announcement made in the Czar's manifesto that there will be representatives from Finland

in the new Duma to participate in legislation dealing with all questions "common to the Empire and the Grand Duchy." This would deprive the Finns of their constitutional right to make their own laws, and would reduce still more the powers of the Finnish Diet. The Congress of the Representatives of the Zemstvos was permitted to meet at Moscow, notwithstanding a general prohibition of such discussion of the Duma. At a former congress the Zemstvoists had declared their intention to boycott any such national assembly which does not have effective legislative powers, but now more moderate counsel has prevailed, resulting in the passage of the following resolution:

"The Zemstvo and Municipal Congress considers that the National Duma will not give national representation in the true sense. Having in view, however, that the electoral assemblies, uniting a great part of the social forces of the empire, may serve as rallying points for the general movement looking to the attainment of political freedom, this congress recognizes the necessity for those Russian citizens who are united on the political program formulated by the Zemstvo congresses, to seek to enter the Duma in the largest numbers possible for the purpose of forming there a united group with the object of obtaining guarantees of personal liberty and equality."

The Hungarian Crisis

The strain between the Hungarian Kingdom and the Austrian Empire becomes increasingly greater, and negotiations seem to have reached an absolute deadlock since the leaders of the Coalition majority, feeling themselves supported by the results of the last election, are uncompromising in their insistence upon the use of the Magyar as the language of command in the Hungarian regiments, and the Emperor-King is equally firm in his belief that in making such a concession he would be false to his trust as the responsible head of the military forces of the two nations. Baron Fejervary, who has for three months and a half headed a cabinet repudiated from its inception by the Diet, has at last given up the attempt to govern Hungary, and on September 12th the cabinet resigned. Brief and ineffectual as was the existence of the Fejervary Ministry, it introduced into the controversy a new factor of consid-

erable importance, that is, the question of universal suffrage in Hungary. Baron Fejervary was unable to secure the assent of the Crown to this feature of his program, and this was the ostensible cause of his resignation, but Mr. Kristoffy, his Minister of the Interior, has initiated a public agitation in favor of the reform which receives the enthusiastic support of the Socialists and gave them an opportunity to show their strength by a demonstration at the opening of the Hungarian Diet September 5th. A petition for universal suffrage bearing half a million signatures was handed to the President of the Chamber, Mr. Justh, and a well organized crowd of 50,000 workmen bearing banners with such inscriptions as "Give us rights, that we too may have a Fatherland," and "Political rights against economic exploitation," marched to the square in front of the House of Parliament to make a personal appeal to the Deputies. This in a way cuts the ground from under the Kossuth-Apponyi Coalition, whose claim of being the true representatives of the Hungarian people is somewhat weakened by the fact that in a population of 17,000,000 there are only 900,000 voters, and the Magyars, who insist that their language shall be the only official one, are really in a minority in Hungary. The Fejervary proposals, by granting the franchise to all Hungarian male citizens who can read and write in any language, will strengthen the power of the minor races of Hungary. Upon the assembling of the Hungarian Chamber, Baron Fejervary announced that his resignation as Premier had been accepted by the Crown, and that he had been requested to continue provisionally in office until His Majesty should have an opportunity to consult with the Coalition in regard to a ministry acceptable to them and the majority. He then read a rescript proroguing the House until October 10th. Mr. Kossuth thereupon made a protest against such prorogation as illegal, and reiterated the Banffy resolution, which called upon patriotic citizens to refuse to pay taxes or supply recruits to the army until a constitutional government was established. Baron Fejervary and his colleagues then left the House, followed by Count Tisza, ex-Premier, and the Liberal party. The members of the Coalition,

forming two-thirds of the House, remained, and unanimously adopted the resolution. On September 23d the Emperor-King called before him at his Vienna palace the leaders of the Coalition, Franz Kossuth, Count Julius Andrássy, Baron Banffy, Count Zichy and Count Albert Apponyi, and in the German language spoke in severe terms of the injury and misfortune they were likely to bring upon Hungary by their irreconcilable attitude. He asserted in the most positive terms that he would make no concession in regard to the language of command in the army or foreign service. The Hungarians were then curtly dismissed and referred to Count Goluchowski. They refused to consult with him, on the ground that he was an Austrian, and the King then appointed Count Bela Cziraky instead. After a brief and fruitless interview with him, the Hungarian leaders broke off negotiations and left for Budapest, where they were received with great enthusiasm by the people. A torchlight procession of a hundred thousand persons passed before the headquarters of the Independence party in the evening, and were addressed by Franz Kossuth and Count Apponyi.

Sweden and Norway Agree

The conference at Karlstad, Sweden, between the representatives of Sweden and Norway reached an agreement on the afternoon of September 23d, by which the peaceful separation of the two countries is insured. Some concessions were made upon both sides, and an interesting feature of the agreement is the extension of the powers of The Hague Court. Sweden and Norway agree for a period of ten years to submit to The Hague all matters of dispute except those which affect the independence, integrity and vital interests of either. So far this corresponds to the usual provision in recent arbitration treaties, but while all the other treaties are weakened by the fact that either country may consider that any particular question in dispute is of such vital importance that it ought not to be referred to arbitration, the new Swedish-Norwegian treaty provides that in case of such difference of opinion The Hague Court is to decide as to whether the point

at issue is of such vital importance that a country may refuse to submit it to the International Tribunal. The agreement may be terminated by two years' notice from one of the parties. The question of the fortification of the frontier, which seemed at times likely to break up the conference, has been settled by the establishment of a neutral zone, fifteen kilometres wide, on both sides of the southern portion of the frontier of the two countries. Within this neutral zone neither nation shall station armed military forces, and no fortifications, war ports, or depots for the army or navy can be maintained in the zone. The Norwegian fortifications now existing within the neutral zone are to be demolished within the next eight months to the satisfaction of a commission composed of three foreign military officers. The fortifications at Fredriksten, Gyldenloeve and Overbierget are to be allowed to remain, but in a demolished condition. The nomadic Laplanders are to be allowed to pasture reindeer in Norway until the year 1917. In regard to inter-traffic, each country agrees not to interfere by prohibitory import or export laws or by transit regulations with commerce between the two countries. When the Swedish Riksdag and the Norwegian Storting have accepted this agreement King Oscar will rescind the active union and declare Norway an independent state. It is not probable that he will allow one of his family to assume the throne of Norway, and it is questionable whether Prince Charles of Denmark will accept the Crown. The decision of whether the new government shall be a monarchy or republic will be left to a referendum of the people. Public sentiment is said to be increasingly in favor of a republican form of government.

German African Colonies The natives are still on the war path in both the German colonies of Southwest Africa and of East Africa, and there is no immediate prospect of either insurrection being quelled. It is estimated that some \$60,000,000 have been expended in military operations in Southwest Africa, and the new outbreak on the other side of the continent will also require a heavy outlay, for the terri-

tory to be controlled is greater and more difficult of access. The outbreak there was begun by the Wangoni tribe of Zulul, living by Lake Nyassa, which attacked Bishop Spiess and four missionaries, including two nuns, who were on their way from Kilwa, on the coast, to Liwale in the interior. Bishop Spiess tried to convince them of the peaceful nature of the mission, but the whole party was massacred. The native guard fled at the first attack, leaving the missionaries defenseless. The Wangoni tribe is estimated at 36,000 men, and has been joined by another tribe, the Wapangwa, from the northeastern shore of Lake Nyassa. The insurgent natives in the southern part of the colony have been defeated without loss on the part of the German troops, but an expedition of 300 or 400 miles into the interior against such warlike people as the Zulus is not a promising undertaking, particularly in view of the discouraging results of the campaign in German Southwest Africa. General von Trotha, Governor of this district, is now to be removed because his methods of subduing the revolution were both inhuman and ineffectual. He issued orders that every male Herero caught within the German frontier, whether armed or not, should be shot at sight, and in their treatment of prisoners, and women and children after an engagement the German troops are reported to have committed barbarities which almost equal those of their opponents. General von Trotha's methods aroused so much indignation in Germany that the Imperial Chancellor, Prince von Bülow, ordered the repeal of his proclamations. General von Trotha was then indiscreet enough to publish a letter in the colonial press in which he blamed the Government for restricting his operations and in that way encouraging the natives. General von Trotha has now been again outwitted by Hendrik Witboi, who evaded the head of the German columns and attacked the convoys in the rear, near Kietmanshoop, and practically annihilated the escort. The Witbois captured 1,000 head of cattle and 120 wagons loaded with supplies and ammunition. The newly appointed Governor of German Southwest Africa, Herr von Lindequist, formerly Consul-

General at Cape Town, has announced his program for the conduct of the war. He will make a distinction between the different tribes and endeavor to break up their alliance by favoring some and relentlessly pursuing others. The Witbois will be hunted down without mercy unless they surrender. Of those captured, the leaders will be hanged and the rest placed at hard labor. The Hereros will be granted amnesty if they surrender within a month, and will be placed upon a reservation for which they will pay rent. The Ovambos in the North will be asked to surrender the leaders who organized the insurrection, and if they prove recalcitrant the country will be opened up for colonization with the help of a railway, and the natives will be confined to reservations. It remains to be seen whether Herr von Lindequist will be any more successful than his predecessor in carrying out his policy.

Chinese Reforms The departure of the missions of the Chinese Government for study of foreign countries has been checked by an attempt to assassinate members of the embassy by blowing up the train in which they were to leave Peking. A bomb was exploded in the private car which was to take the embassy to Tientsin. Four minor officials were killed and twenty other persons wounded, altho none of the members of the mission were seriously injured. Wu Ting-fang, Under-Secretary of the Foreign Board and former Minister to the United States, was slightly wounded by the explosion. He was not a member of the commission, but was at the station to see them off. The assassin, who was inside the car, was blown to pieces. It is variously rumored that he was a Chinese anarchist, or was acting in the interests of the Chinese conservatives, who wish to prevent the departure of the mission and consequent reforms in the Government. Four missions were authorized by an imperial edict of July 16th, to visit the principal countries of Europe and America to study their Government, educational methods, and industries, with a view of adapting such as seemed desirable to Chinese condi-

tions. The commissioners expected to spend a month in Japan and then sail for America. It was uncertain, on account of our Chinese exclusion law, whether they would visit the United States. If not, they would pass thru Canada to Europe. Following the custom of Japan, a number of picked young men will be educated at Government expense in the different countries, tho probably not in the United States on account of the bitter feeling against this country prevailing now in China. The Chinese boycott against American goods is distinctly broken, at least in Shanghai, where 40,000 casks of American oil were publicly sold last week. American goods now enter North China in freedom. It is reported that a plan has been adopted for complete reorganization of the Chinese army. The empire will be divided into twenty military districts, each with four regiments of infantry, one regiment of cavalry, and engineers and artillery. All the men will be enlisted for nine years and will be thoroughly drilled and equipped along modern methods. This is expected to give China an army of 500,000 men by 1910. Yin-chang, the Chinese Minister at Berlin, has been recalled, and will be given a command in the reorganized army under Yuan Shi-kai, Viceroy of Pechili, who is leader in the reform movement in China. It is made known from Washington that the Chinese Government (some weeks ago) made a formal protest to the Russian and Japanese Governments against two of the conditions in the Portsmouth treaty of peace. The provision that Manchuria shall be evacuated within eighteen months is regarded as altogether too long a period, as China holds nine months as quite sufficient for the withdrawal of troops. The treaty of peace provides that both Japan and Russia may protect their respective portions of the Chinese Eastern Railroad in Manchuria by a guard not to exceed fifteen men to each kilometer of railroad. China considers herself quite competent to maintain order in Manchuria and objects to the permanent maintenance in Manchuria of such a number of foreign soldiers as this provision would permit.

A German View of the United States

BY THE RT. HON. JAMES BRYCE, D.C.L., LL.D., F.R.S.

AUTHOR OF "THE AMERICAN COMMONWEALTH," ETC.

PROFESSOR MUNSTERBERG is a German by birth, who has lived for a good many years as professor in the oldest and most famous of American universities. He has felt himself called upon as a new citizen in one nation who has not forgotten his attachment to the land of his birth, to try to make each of the two peoples understand the other. Thus, having some time ago published a book called "American Traits," in which he defended certain German ideals and criticised certain tendencies which he observed in America, he thereafter composed another book, which appeared in the German language in Germany, and sought to convey to the Germans a further idea of the American people than they had formed for themselves. This is the book,¹ which, translated from German into English, now appears under the title of "The Americans." One can see from the turn of many of the sentences that it is translated from a German original; and its substance shows it to be addressed not to Americans, nor to Englishmen, but to the original countrymen of the author. He realizes their point of view; he knows what are the faults they see in America, what are the misconceptions they are likely to form. He sets himself to remove these misconceptions, and by palliating or explaining these faults to lead them to a fairer or at any rate a more indulgent judgment of the American people. Of his new country he is not only a friend but almost an advocate, bringing out the strong points and touching tenderly the weak points which the institutions of the United States present. The optimism of the New World has got into his blood. The lights are full and strong, the shadows few. He is on the whole justified in taking this line, because he may thus rectify the balance. Europeans, and Germans perhaps more

than most other Europeans, are so apt to judge America harshly, perhaps chiefly thru want of knowledge, that it is well to incline a little to the side of leniency and hopefulness in any description or analysis meant to be read in Europe. But Americans themselves will make some deductions from the large balance of merits to their credit which the kindly author reckons up.

The book is divided into four parts, respectively entitled, "Political Life," "Economic Life," "Intellectual Life," and "Social Life." Similarly, it is based upon the delineation and illustration of four principles, in which the author finds the essence of the American character, and of the features of American life. These principles he calls "The Spirit of Self-Direction," "The Spirit of Self-Initiative," "The Spirit of Self-Affection," and "The Spirit of Self-Assertion"; and it is to the chapters analyzing each of these four "spirits," rather than to the description of the institutions and habits in which he finds each of them reveal itself, that the author himself attaches most importance.

This is quite a German method of proceeding, and indeed the book all thru is an interesting example of the German way of approaching concrete phenomena thru abstract notions. The American man in his essential and distinctive properties is first conceived and described as a Norm, and from this Norm all the attributes which he shows, and the things which he makes and the acts he performs are deduced. The method is ingenious and suggestive. Neither the analysis nor the deductions always carry conviction, but coming as they do from a writer who possesses abundant knowledge, together with an acute and fertile mind and a lively style, they are well worth reading. Whoever writes about another country needs to have not only knowledge but also sympathy. He must try to put himself in the position of those whom he de-

¹ THE AMERICANS. By Hugo Münsterberg, Professor of Psychology at Harvard University. Translated by Edwin B. Holt, Ph.D. London: Williams & Norgate.

scribes and sees things thru their eyes. Thus he becomes able not only to understand, but to explain; and as his explanations will be helpful to the outsiders for whom in the first instance he is writing, so, too, will his criticism be more acceptable to the natives of the country dealt with, for they will perceive that he sees them, if not as they see themselves, yet with a comprehension of how they see themselves.

The book is so big a one and deals with so many topics that it is impossible to give in a short article any general account of its contents, especially as it is not only a philosophical analysis of the American nature, their *Wesen*, as the Germans would say, but is also full of remarks on current events and prominent personages. There is a good account of the Pennsylvania coal strike of 1903-4. There are portrait sketches of the President of the United States and the president of Harvard University, nor do any two men in the American continent better deserve to be portrayed. To the English reader the most interesting chapters will probably be those upon labor questions, upon the universities, and upon the phenomena of social life, particularly those entitled "The Self-Assertion of Women" and "Aristocratic Tendencies." Of these two subjects the former is one which always excites the curiosity of Europeans. For the sake of giving a specimen of Professor Münsterberg's style, let a paragraph from his description of the American woman be quoted:

"The American woman is a tall, trim figure with erect and firm carriage; she is a bit like the English girl, and yet very different. This latter is a trifle stiff, while the American girl is decidedly graceful; the lines of her figure are well molded, and her appearance is always aided by the perfect taste of her raiment. In the expression of her face there is resolution and self-control, and with the resolution a subtle, mischievous expression which is both tactful and amiable. And with her evident self-control there is a certain winsome mobility and seemingly unreserved graciousness. The strength appears not to contradict the grace, the determination not to be at variance with the playfulness; her eyes and play of expression reveal the versatile spirit, fresh enthusiasm and easy wit; yet her forehead shows how earnestly she may think and desire to be helpful in society, and how little contented simply to flirt and to please men."

This description suits one type; but there are many (p.559) types of women

in the United States, and some quite unlike the one which is so admiringly delineated here. Our author is rather sweeping in his generalizations, yet he does not overstate the difference between the position women hold in America and that to which they are relegated in Germany.

We have looked with interest to see what he has to say in this connection upon two subjects wherein American experiments and American experience have been much appealed to, viz.: the extension of the suffrage to women and the legislation which has, in nearly all the States of the Union, made divorce so much easier than it is in England or Scotland. On the former subject Professor Münsterberg expresses a view which seems to be now generally held by Americans, including American women of the educated class, in the Eastern and Middle States. He thinks that women suffrage has not, where tried, tended to make politics better. He holds that the present drift of public opinion is against it. He sees no likelihood of its being much more widely adopted in other States than the four (he speaks only of three) which have already enacted it. His treatment of the divorce problem is hardly commensurate with its importance; nor does he sufficiently recognize the evils which a lax law brings in its train. But he points out that the frequency of divorce in many parts of America is by no means the index of a declining morality. Marriages made heedlessly in youth, together with nervous tension producing irritation and a chafing against the bond, are the real sources of what is, be the cause what it may, a regrettable phenomenon. He holds, and he is probably right in holding, that the people of the United States as a whole stand on a high moral plane, that their minds and tastes are pure, that marriage is much less of a commercial affair than in Europe, and is more generally grounded on affection and nothing else. The rest of the chapter defining the position women fill in social and in intellectual life is well worth reading, and on the whole true, tho one may find some little humorous exaggeration in this account of the wife of the day laborer:

"The man pushes the baby carriage, builds

the kitchen fire, and takes care of the furnace, so that his wife can attend to getting fashionable clothing; he denies himself cigars in order to send her into the country in summer. And she takes this as a matter of course. She has seen this done from her childhood by all men; and she would be offended if her husband were to do anything less. The American woman's spirit of self-assertion would be aroused directly if social equality were to be interpreted in such a ridiculous way as to make the man anything but the social inferior." (P. 572.)

The last chapter describes the growth in the United States of a social differentiation which is working for the separation of classes according to their culture and their manners, and which is vesting a measure of authority in the classes that may, in a social sense, be called "Upper." It is, however, pointed out that the increasing significance of these distinctions is compatible with the maintenance not only of that complete political equality which was long ago achieved in America, but also of the sentiment of human equality, the feeling of the old Puritans that all men are alike in the sight of God, the

feeling expressed in the Declaration of Independence that by nature all men have certain primordial and imprescriptible rights. The chapter is interesting, if a trifle sketchy, as indeed the whole book is interesting. It is perhaps rather "viewy." It mingles philosophical theories with a running fire of remarks on the events of yesterday or to-day in a way which may sometimes bewilder those who do not know America at first hand. But it is always vivacious, always cheerful, generally acute. And it ought to effect the object which the author had mainly in view, that of enabling dwellers in the European continent to take a fair and sympathetic view of the Americans. For Englishmen to understand the United States is much easier. Many as are the differences that have developed themselves during two centuries and a half between the two branches of the old stock, there is still a solid groundwork of common modes of thought, common beliefs, common habits.

LONDON, ENGLAND.

Fiat Tua Voluntas

BY WILLIAM ADDISON HOUGHTON

And is Christ risen indeed, and shall we rise
To share His final triumph evermore,
Entering in through Him, the only door;
Gathered to those unto salvation wise?

God grant it! Yet our being's inmost core
Harbors a lingering doubt; so dead is death,
So seemingly extinct all life with breath,
The soul with the quick vesture that it wore!

But Thou, God, art; and Thou art God—and love!
We trust that love's unfathomable deep!
We yearn for the immortal world above;
Thou knowest if boon or bane that life would prove;
Will'st Thou the grave for aye its tenant keep?
Thy will be done! Give Thy beloved sleep.

BOWDOIN COLLEGE, BRUNSWICK, ME.

Native of New Guinea—Photographed by Herr Roeber, of Sydney, Australia.

A Ride Into German New Guinea

BY POULTNEY BIGELOW, M.A.

Author of "History of the German Struggle for Liberty," etc.

HERBERTSHOEHE is the capital of German New Guinea, and from here I started off on horseback for a ride thru the jungle in search of information on matters not detailed in official reports.

The road was the show one of the island—we would call it rather a bridle-path; half the way it led thru thickly matted jungle, the other half afforded beautiful views of the volcanic ranges which are in the South Seas features as common as the kopjes of the South African veldt.

My objective was the police station of

Toma, some fifteen miles in the interior, and incidentally I sought explanation for the strange but universal dislike for Germany entertained by the Papuan natives. Here are a few memoranda made on the spot:

November 23d, 1904: Not a single sign of water did I see; not a native village; occasionally a few huts indicating great poverty; occasionally groups of natives tramping along with loads; the moment they caught sight of me they ran into the jungle; it was the act of animals whose first instinct is fear of the enemy. I had no means of

letting them know that I meant no harm—I felt like apologizing to each naked man and woman that I met. Passed also some convicts working under guard; the convicts looked about the same as the alleged free and innocent—leastways I could see no difference. Those in an official character, police or runners for the Government, wore a yellow military cap—the motor car sort of thing. These men invariably took off their caps and stood at attention for some fifty yards before I passed them—had been evidently carefully drilled.

Passed a couple of white men's houses, plantations, mostly of corrugated iron, the Johannesburg type—very hot looking and uncomfortable; no evidence so far that any German planters care to make themselves comfortable, as they do in Borneo, even if they know how, which I am inclined to doubt.

The jungle was alive with noise—impossible to say what; the human cries seemed as those of monkeys, but then out here there are birds that yell like humans and insects that scream, not to mention monkeys, parrots, etc. It made an orchestration different from anything I have known in the backwoods of America.

In many of the fields were gangs of natives working in that listless manner so different from the energy and concentration of the Chinaman.

At a sharp turn of the road I came upon a tin or iron roofed little house—it was not good enough to call a bungalow—the plantation of a Herr Wolff, now famous because a year or two ago his wife and child were murdered by the natives. He was to have been killed also, but happened to be away at the moment. By reason of this murder the Government confiscated an immense tract of land in the neighborhood, drove away the natives and planted at Toma a police station with fifty native soldiers, and my friend Herr Polizeimeister Fitsch was in charge.

Close to the police station is a little tin German Catholic mission station, a branch of the big cathedral at Herbertshoehe. But since the massacre of the ten missionaries on July 13th, 1904, and in spite of the fifty policemen and Herr

Polizeimeister Fitsch, the white section of the mission has decamped and taken refuge under the German coast battery at Herbertshoehe, leaving the further recruiting to be performed by a black so-called "teacher" or native servant, who is well looked after and who in turn is expected to look after the material interest of the mission no less than for the souls that may be involved.

How this recruiting is done was explained to me by the Polizeimeister himself, a broad, deep and heavy specimen of the German non-commissioned officer, whom I found in the undress uniform of hot weather—slippers, bare feet, trousers and gauzy undershirt. He was full of work, mainly involving shouting to various natives who crawled about leisurely in their different spheres. The Polizeimeister had a sweet, happy looking wife, who left her work at the wash-tub in order to welcome me. Both were from East Prussia, on the Russian frontier, and when I enumerated the different points of his native soil at which I had touched, all between Memel and Rominten, he thawed out immensely and his wife asked me what I liked for dinner. Off went Frau Polizeimeister to swelter in the kitchen, altho one hundred and fifty natives were there from which she might have picked out any dozen by way of "help." And this itself casts a side light on housekeeping in German New Guinea.

While the lady of the house was away bending over pots and pans, Herr Polizeimeister told me something about his official duties. He said that his life would be a picnic were it not for his missionary neighbors. "Whenever there is trouble for the police or the courts nowadays, depend upon it," quoth he bitterly, "the missionary is at the bottom of it."

As he spoke around from the back of the house appeared a policeman with a loaded rifle, leading an old man with white wool and whiskers, behind him a young woman looking like the stage "Topsy" out of "Uncle Tom's Cabin." She had been at some time presented with the long garment intended to cloak her from neck to ankles, but had obviously slid from grace, had succumbed to temptations of various kinds, and had parted with so much of this garment that when

she appeared before the Polizeimeister her long garment had reduced itself to something like a short red cape, exposing her stomach and the lower section of her breasts. Her waist was encased in the "*lawa lawa*," or breech cloth. In her present rig it was as tho a lady had come to breakfast in Mayfair with a towel round her waist and another round her neck. The head of this lady was stained yellow.

Behind her walked a naked black native, who was pointed out to me as the

tract between families, so all errors under that head fall in the same category, and to treat family affairs in New Guinea according to the white man's code is as dangerous to the public peace as tho the police of London should attempt to put into prison every man who became merry on a Saturday night.

"And this is what makes my life difficult here," lamented the good Polizeimeister. "This is none of my business; it is a matter for the family to settle after their own customs. Now, they

This picture shows the dress and equipment of the German Native Police throughout the New Guinea Possessions. The handcuffed prisoner is on his way to be shot for alleged participation in a conspiracy to kill the members of the Roman Catholic Mission near Toma. The similarity of these natives to our negroes is striking.

lady's first husband. The native with the white whiskers and wool had, according to the priest, tampered with the affections of this lady. To judge by externals this fact in no ways ruffled the equanimity of the husband, who walked close behind his wife. All three appeared on good terms among themselves; their only grudge was against the missionaries, who had meddled with what is here regarded as a strictly family or tribal affair.

As marriage is itself a matter of con-

come to me, these missionaries, and compel me to send soldiers to seize these people, to drag them from their village, to rouse suspicion and hatred of the Government, and I must send them fifteen miles to the capital under escort. They must be locked up and wait trial and then punished; and even if *they* are not punished *I* am, for I have all the work and responsibility, and more than that, there is constant risk of stirring up the native passions in some way

we may not at the moment suspect!"

"No doubt," said I. "Then why don't you simply send these good people back and tell the missionary to mind his own business?"

"A nice job that would be for me! They would complain to the Government; it would be reported at home; I should be punished."

"Punished for what?" said I with surprise.

"The missionaries have secured a law that compels me to arrest the natives when they bring charges of this nature against them, and it is just this sort of thing that is making the colonial work very difficult. The country about here has lost much in native population since I first came here, six years ago. At that time there were villages all about; now we have the greatest difficulty in getting work for the plantations; the natives disappear, partly because they dislike our Government and partly from disease. It's been noticed all about here that the natives die out as soon as they come in contact with us." And then he pointed to a lot of about a hundred natives who had come up for muster before going to the fields to work.

Amongst them were a dozen children of twelve or so; many of them were feeble looking, a large proportion had diseased skins, ring worms, etc. They were indeed a poor lot compared with such negroes as I have seen working timber on the Mozambique coast or in the mines of Johannesburg and Kimberley.

"These are the best we can get, and glad to get them; they are scarcer and scarcer; the Chinese won't come." And no wonder, for here the planters have the right to flog their coolies, and worse than that, the whole tone of the administration is on the side of the planter, and is not disposed to inquire too closely into the details of harshness. Consequently we find but few Chinese on plantations; they prefer the life of a trader or handicraftsman.

Here at this station there was but one language between master and servant, the ubiquitous Pidjin English. The good Polizeimeister had been, he said, repeatedly commanded to use only native language, but found Pidjin English easier, as all the natives knew it already.

The dinner was delicious—a genuine simple German meal, such as I might have enjoyed in a village of East Prussia; a sort of gruel soup, then corned beef hash and yams, which here serve in lieu of potato—that was all. There was no bread, no butter. The Frau Polizeimeister not only prepared it and cooked it, but also brought it from the outhouse in the broiling sun, waited at table, and did everything else. No servant came into the main house while I was there. She had a help called "Mary," who, however, appeared to be capable only of rough work, and remained in the kitchen outhouse. All women here are called in Pidjin English "Mary." It is an old form, going back to early times, when every sailor or trader who struck this beach looked for a native wife and promised that he would "marry" her. And so the word came to represent the *ewig weiblich* in these parts.

When we rose from the table we found three naked native women squatting patiently on the ground in front of the veranda. Before each was a little bunch of yams. They sat there in silence, waiting for some one to notice them and make them an offer for their produce. The Polizeimeister said that he bought every scrap that came in; he could not get enough. In past years he used to have abundance, but nowadays food was scarce; it looked as tho the natives disliked trading with the white man.

He went into the house, took out some tobacco, and for each pile of yams tossed down into the sand enough tobacco for a couple of pipes full. Not a sound was uttered; the white man threw down what he chose, the black woman took it and went away without a word, the kitchen black slavey picked up the yams and took them to the house. This was marketing in New Guinea.

One woman did attempt something in the shape of a grumble, but the Polizeimeister paid no attention, but went into the house, and the matter was ended.

Of course, there are two sides to this form of bargaining. If the white man gives too little he may overreach the native for once, but the black will avoid his house the next time. Therefore, it is good policy to be just.

I was sorry to say good-by to the warmhearted Polizeimeister, for he was

evidently a hard working, conscientious official, in daily and nightly danger of his life—to say nothing of his sweet wife, who had been married to him but six months.

He told me that after all his years out here he could not say that he had a single friend among the natives; that he could not guess what they were thinking about; that so far the only means he knew of for commanding their services was to impress them with the white man's power to punish.

On my way back to Government House I had not ridden more than an hour when I fell in with a great concourse of natives, all naked save for the trifle of cloth about the hips, the "*larwa larwa*." In the midst were my friends from Toma, the three natives being escorted by the black policeman. He had a rifle, but otherwise there was no sign that one or the other was a prisoner. The whole countryside population was escorting them as a sign of honor, for the man accused by the missionaries was a chief, and it was a pleasure to the natives to show their respect for him.

The Polizeimeister here holds the same sort of authority which a superintendent of police holds in a British colony. He must be a man of much experience with natives; he is likely to be appealed to on all imaginable subjects. In British colonies I have found army officers and men of social importance holding such positions. But here is a "non-com." who is obviously not calculated to impress the natives by his grandeur of demeanor, particularly when they see his wife carrying in a soup tureen across the blistering yard. Herr Polizeimeister told me that when he took up this appointment for the second time he brought out his wife on the promise (of the Governor) that he should have a pension. Today my friend is not entitled to a pension, and what is worse, as he told me pathetically, his wife would get nothing should he be killed tomorrow; and under the circumstances it

Typical Jungle Scene—Photographed by Dr. von der Hellen.

is highly probable that he will die a violent death.

The Polizeimeister had a bungalow built for him by some one who had obviously never been in the tropics, the walls all tight up and down and round, like a European house intended for a stove. There was not a breath of air to be got save by drawing the long chair immediately across the threshold, and of course blocking up the way.

Afterward I called on Planter Wolff. He looked anxious to sell out and go home. The murder of Wolff's wife and child had its home. The Police Director in Herbertshoehe told me later in the day that the origin in a quarrel over some ancestral tombs on land claimed both by Wolff and the natives. Wolff had agreed (according to native account) to respect these graves, but had not, so said the native chief. There was also a bit of boundary dispute along with it.

On my return to Herbertshoehe I inquired of Herr Adelman, the Governor of the Prison, about the old native and the young wife and the first husband whom I had passed on the way with the large native escort.

Adelman said indignantly: "The

judge dismissed the case; the matter had already been settled before the native authorities; fines had already been paid; and the poor people had been dragged down and humiliated for nothing! *Die verfluchten Missionaren!*"

MUNICH, GERMANY.

The Emotions of an Anonymous Writer

[The writer of the following article is well known to our readers, some of whom endorse her views and many of whom do not. That is all the hint we can give.—EDITOR.]

I DO not remember at just what age I became a literary aspirant. The earliest documentary evidence which I possess of serious effort to enroll myself among American authors is a novel begun by me at the age of ten. It progressed to its twenty-fifth chapter, and its plot was "of an originality"! (I came upon it one day last summer, tucked away in a box with some cherished paper dolls, and I stained its penciled pages—they were not too clean, anyway—with a few teardrops of tribute to the youthful promise so scantily fulfilled). I cannot say just what cause led to my abandonment of this monumental work before its completion. It may have been due to my decision to go on the stage, or to my first experience of the pangs of unrequited love, both which things befell me about the time of my twelfth year; or possibly to the inconsiderateness of a father with a highly convincing way of indicating his belief that geometry and Latin had more definite claims upon a young lady's time than literature. I am sure it could not have resulted from any loss of confidence in my genius, for I clearly remember the secret scorn with which I received the well-meant suggestion of a married cousin who had been favored with the perusal of a few of my chapters, that "even if I never had the book published it would interest me when I was grown up to read what I had written when I was a little girl." I assented, being a polite child, but I said in my heart that I would "show her."

As I advanced through my teens I at

intervals essayed the short story, but, having on all occasions made myself the heroine, I found these efforts to be such revelations of the most intimate secrets of my inner self that I had not the courage to show them to my mother, much less to an editor. However, as time passed I found my productions, from which all romance was now sternly eliminated, in considerable demand for college magazines and the like, and finally I ventured to try them, always written upon one side of the paper only, and with stamps enclosed, upon editors of more pretentious sheets. They never wasted my stamps. Sometimes my articles came back with only the heart-chilling printed slip, sometimes with the unpalatable rejection overlaid with a meringue of sweetened explanations, which were, no doubt, satisfactory to the editor.

Finally I gave it up. Then one day I read a magazine article which aroused my uncontrollable indignation, and then and there I sat down and wrote a letter to the editor setting forth my opinion of any man who would print such stuff. A reply from the arbiter of literary destinies himself came back in an early mail—and I was afraid to open it. When at last I broke the seal I fully expected one of the thunderbolts of Jove to fall out, but no! He had found my abuse "delightful"; he confessed further that he remembered with approval the manuscripts which he had been systematically returning to me in past months, and, in short, wouldn't I like to become a contributor to his magazine?

A new era of life began for me. At

last I was "discovered"; I had become a literary possibility. (This bit of autobiography is given to other aspirants for what it is worth. When you have striven in vain to take the editorial fortress by finely turned phrases and a meek demeanor, try a bit of abuse, put, of course, into such a form that the editor knows you would not have him print it for the world. It may not always work, but the experiment only costs two cents.)

The editor asked me to give him a list of subjects which interested me. When I did so, he calmly passed them over, but remarked that he had been much interested in some chance observations of mine upon a topic quite foreign to them all; suppose I try an article on that—anonymously, of course, because it was a ticklish matter to handle. In the innocence of my heart, I did it. And when the article was trimmed and polished to his taste, I thought that shining Fame stood very near me. I well remember that on the beautiful (altho raining) day when the letter came which said that my production "would do," I met on the street a distinguished authoress, who recognized me with a charming smile (which she does not always do, by any means; she is "so provokingly near-sighted"), and I felt that she knew me at last by that subtle something which marked me as one of her own kind. I dreamed bright dreams under my umbrella of the day when I too could wear six inches of my skirt-binding trailing on the pavement without exciting unfavorable comment, and could see the rich and great flock to my receptions, ready to rend their purple and fine linen in the scramble to clasp my hand and drink my cups of tea.

My article came out in due time, and was answered; it also got a press comment or two. Then my editor sent me for review a book dealing with the same topic: It stirred me profoundly, and I took no pains to disguise my approval of it. When that review was published I began to realize something in addition to the sweet intoxication of seeing myself in print. It was that I stood committed to a position upon a question of considerable public interest, and that I had taken the unpopular side. Especially is it unpopular in the community in which I live,

move and draw my salary. That salary, as it happens, is largely conditioned upon my enjoyment of public approval; what is still more fraught with solemn import, that salary alone stands between me and the poorhouse. Therefore I remain anonymous. For I cannot get away from the influence of my maiden effort. New phases of the subject constantly come to my notice, and arouse feelings which clamor for utterance. If I myself could suppress them, my "discoverer" is ever ready to break down my resolution with the subtly flattering suggestion that I am peculiarly fitted by circumstances to treat this theme. And so I have written upon it not once but repeatedly, and in what I have said I have gone from bad to worse, if the quantity and quality of criticisms evoked may be taken as an indication. And every criticism does but tempt me to say more.

Yet a few months ago I did by a mighty effort break loose from the shackles of a compelling habit. I did write an article in which I invaded a wholly different field. There is a familiar, though homely, saying anent the relative comfortableness of the frying pan and the fire; those who prefer classical forms of expression may choose to paraphrase it by allusion to Scylla and Charybdis. No matter which way your taste for metaphor inclines, you can enjoy a practical application of the conditions thus proverbially described, if you will simply turn your attention from the matter of pointing out certain imperfections in an institution beloved by a part of the people to that of suggesting the possible fallibility of one revered by the public as a whole. I believe that I may modestly assert that if my name has not been a household word during the past few months, it is only because households have not known by what name to call me. In the absence of such knowledge, "that woman" has seemed to serve very well for fervid commentators scattered from Atlantic to Pacific, as well as a few across the Canadian border. Unquestionably, fame is mine; if any one doubt it, let him look at my trunk of clippings and letters, which stand as witnesses to prove how widely I am read. Yes, Fame has come to me—and I must turn her out of doors. Who could have made me

believe three years ago that she was so uncomfortable, even dangerous, a being to consort with? For—yet—I am afraid of her. A year or more ago an irritated critic boldly challenged me to “come out in the open” and repeat there what I had said behind the screen of anonymity, and my own moral deterioration came out then and stared me in the face, and has squeaked “Coward” at me ever since. I began to write with all the becoming illusions as to having a “message” for the world, a message far removed from any sordid considerations of pecuniary gain; but how can I deny that I—I, who have been said to show at my best behind a runaway horse, who can even face a dentist with a cheerful countenance—am after all so little brave, so far from being that stuff of which reformers are made, that I rate my convictions below a paltry hundred dollars a month. Truly, the necessity of bread and butter doth make cowards of us all—at least, I hope it does. I like to believe that, after all, other “aspirants,” including the above-mentioned critic, are not insensible to considerations so vulgar as three meals a day and an occasional new hat. If they fancy that they are, let them consider that, even so, their position differs from mine in this: with them the being known as the authors of even the most startling sentiments is, after all, the thing which secures a continuous provision of the bread and butter; with me that is precisely the thing likely to cut off the supply. For, if I have not been guilty of the unlovely act of wounding the hand which feeds me, my indiscretions might at least suggest to the power behind that hand the expediency of extending it in another direction. And my literary notoriety is not of a sort to assure support should my regular means thereof fail. The peculiar disadvantage of anonymous writing is that, brilliant tho your efforts be, each separate bit is a thing by itself, the product, so far as the public knows or cares, of as many different pens, and so no editor meets you with favorable inclinations toward the promising author of “a notable series of articles.” Each new editor must be approached by you as a stranger; upon the merits of the single article which you offer him must you stand or fall. (I am

skeptical about the assertion that established authors must meet these same conditions.)

Nor does society take you up, so that you may hope to avert starvation by dining out. I am not holding receptions as yet, and I have about come to the conclusion that the distinguished authoress spoke to me because she mistook me for someone else.

Meanwhile, living upon the crust of a volcano is not without a certain interest. Not the least of it is the pleasurable excitement of observing my friends’ general unconsciousness of my imminent prospect of being engulfed. For instance, the morning when I opened the daily paper toward whose existence a fraction of the previously mentioned salary contributes, and found the entire first column of its editorial page devoted to *me*, and then listened with what serenity I could to the rejoicings of fellow-breakfasters that their favorite sheet had made mincemeat of “a woman who didn’t know what she was talking about,” I derived a sinful joy from knowing how much more crestfallen than I they would feel if they could learn that they had been discussing the woman in her own hearing. Sometimes the temptation to throw the bomb of confession almost overcomes me with its uncanny fascination. It would be fun; but then how unpleasant to be gathered up in fragments afterward, and how melancholy for my family. I am always strongly moved by that thought of my weeping family. They regard my career with very considerable apprehensions as it is; only a few weeks since my mother, a gentle soul, wrote me wistfully that “she had hoped that the next thing I wrote would be something that wouldn’t offend anybody.” And, aside from considerations of filial regard, I sometimes think myself that it would be pleasant to write something which might serve as Sunday reading for the young without being issued in an expurgated edition, if I could find some nice ladylike editor who would print it. They do appear to accept polite literature from some writers, but not from me. Did not an article come back to me this very day, upon which the most pronounced criticism was that it was not as *sensational* as my

last one? *Such* is the standard which I seem to have set for myself. A beautiful predicament, truly, for a respectable woman and a church member!

Not that my experiences have been uniformly unpleasant. A few friends and relatives, dwelling in places safely remote and proven above all suspicion of the "leaky ear," are in the secret, and their comments upon my work are usually as amiable in intention and not so unfortunately ambiguous as that of the friend who wrote, after the appearance of my first article:

"Clara and I called on your Aunt Mary Tuesday, and she gave us your article in the ——— to read. Of course, we found it *a great deal more interesting than we should have if we hadn't known who wrote it.*" (The italics are not hers.)

There was, for instance, the young man from the far West, who, when calling upon us, quoted my own statements to me with qualifying earnestness until the uncontrollable mirth of the household brought him to an amazed and interrogatory pause. I suppose he is still thanking his stars that his comments had happened to be commendatory. And last month a clergyman, one of the boys of my youth, wrote me: "Why in the world don't you try fiction or something that you can sign, so that we can brag about knowing you?" I suppose that his pride in my acquaintance might be modified if he had noticed that one of the leading papers of his Church had referred to me as "a moral pestilence." I chance to belong to that

same branch of faith myself, and, in view of the above, I am sometimes much touched by the courageous indifference to the possible dissemination of pestilential germs displayed by my pastor and the church officials in accepting both my presence and my money. Perhaps they do not realize the risk they run. I suppose I do not, in my outward semblance, suggest the Plague personified. In truth, the fact almost eludes my own inner consciousness, except when I read my press notices.

Why have I written all this? Partly to relieve my mind, but mainly as a warning to those for whom there is yet hope. My advice to those is briefly this: If you are going to be an iconoclast, look the part. Do not wear the conventional garb, or teach a Sunday-school class, or honor your father and mother. Thus you will avoid becoming settled in any undeserved but comfortable niche of respectability from which some startling printed utterance may rudely dislodge you. 'Twere better not to have known this shelter than to lose it. Or, if you think it fun to fool the public—and that it possesses elements of the humorous, I do not deny—first secure a generous bank account, which can stand the strain of any discrepancy between the vagaries of genius and the public capacity for sympathy. Then may you afford to recognize sensationalism as your "mission," and the bright bird of fame may rest upon your shoulder unperturbed by the vulture of starvation playing a grim peek-a-boo from the other side.

Florida for a Winter Home

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OLD FARM DAYS," ETC.

I T was early in February when I entered Florida—the coldest month of the year. A bad frost had just made havoc with oranges and other semi-tropical fruits. These frosts come about once in ten years, making orange growing so problematical that it cannot be set down as a specially secure industry, until you get quite well down toward Tampa. At Orlando the orchards are generally in good condition; but in Lake County, a little farther north, without the care most people are unprepared to give, orange groves are a failure. I saw at least twenty deserted groves and homes to one that has prospered. Those who made openings in the pine woods, and planted these orchards, came along between 1880 and 1890. They were most of them from city life—not a few ministers, lawyers and physicians—with borrowed capital, and no farm experience. A heavy frost came in 1886, but everything was on the boom till the winter of 1895, when the severest freeze Florida has ever known destroyed not only the fruit but the trees, and turned thousands of people into beggars. They had used up all their capital, and no more could be borrowed. Most of them flocked out of the State, leaving cottages and groves behind for their creditors. A few, with more grit, skill and capital, fought out the battle, and adjusted themselves to changed conditions. These people have either fine groves (protected by huge fires when frost appears) or they have turned to other employments.

All up and down the Atlantic border of the State you find the transformation already well worked out. Everyone has become a truck farmer. One crop of lettuce is sown in November or December, and sent North in January; another immediately prepared for and harvested the last of February. Celery is then put in, to be sent North in June. After this third crop, crab grass is allowed to grow as a fodder crop, and hay crop—to be

plowed under for the next season's trucking. These folk have a wonderful advantage in the way of irrigation. They have only to bore down from ten to twenty feet to strike water, that will gush up in flowing wells, and has only then to be guided about their gardens. Every little back yard is a lettuce garden or a celery bed. Money comes in readily, and thrift is apparent. But you and I are after winter homes, and are not likely to be satisfied with this flat land—rich as its prospects may be. All of these regions are dotted with resorts, many of them very beautiful with their magnolias and palms. Tourists rarely go outside this section; and as a consequence their reports concerning Florida mean nothing more than what they see here near the coast. Burroughs speaks of the "tourist infested" region with some justice.

Passing rapidly through these border counties, I started for the center of the State—where the conditions are totally different. The land thruout Lake County lies in great rolls and swells, and these occasionally rise to the height of hills. Down in the hollows lie lakes—sometimes only lily ponds—sometimes half a mile, or several miles, in length. Circumstances directed me to the banks of Lake Lucy, a clean, clear body of water, half a mile across, and about two miles from the village of Sorrento. On the banks were several residences, and others were in sight. Some of these embraced superb orange groves, the trees loaded with golden globes, while grape fruit was pulling others down toward the ground. My neighbor, Mr. Hawkins, whose summer home is in Brooklyn, N. Y., said cordially, "Always help yourself, and to all that you can use." He has spent some twenty winters here, but while keeping up his own orchard, does not advise any more orange planting.

The soil is sandy, and of various degrees of strength and quality. It is, however, easily enriched. I do not know

any part of the United States where Nature has provided more material for food, and at the same time for soil renovation. The velvet bean stands perhaps at the head of all legumes—growing from thirty to seventy feet in a season. It must be mowed early for hay; then it can be foddered for several weeks; and finally plowed under to enrich the soil. The only difficulty is that the farmer must be quick enough not to let everything grow out of his power of control. The hay, including the bean itself, is relished by all sorts of animals, and for feeding quality is far ahead of any of our Northern forage plants. Cow peas are but little behind the velvet bean for all sorts of purposes—furnishing excellent food not only for animals but for fowls. Bermuda grass is another marvelous product in the way of hay; but it is so exceedingly rank that in the course of three years the roots have to be cut with disc harrows or the sod plowed under. Beggarweed is another splendid plant for horses—either cut green or as hay; and is nearly as valuable for cattle and swine. Orchard grass thrives finely, and in some sections vetches and alfalfa. Now add to these cassava, a coarse sort of sweet potato, with roots two or three feet long, yielding ten tons to the acre, and you begin to see how very easily this part of Florida can take care of itself—so far as feeding domestic animals is concerned. Our Northern grains do fairly well, but are hardly needed—except oats, which produce good crops—especially after velvet beans. The real key to the situation lies in these wonderful legumes, with nodules on the roots that collect nitrogen from the air, and so enrich instead of exhausting the soil. I do not say that Florida farmers are appreciative of their advantages; but many of them—even the Crackers—are waking up to scientific methods of soil culture. One of these natives I found to be decidedly the most wideawake farmer about Sorrento. The State has yet to get rid of a few more of the get-rich-quick orange growers, and add a few more well trained Northern farmers. Yet I found the folk frank, cordial and good neighbors. The negro element is not large, nor is it of the poorest quality.

For vegetables I had sweet potatoes

every day, dug freshly from the soil, when wanted. Irish potatoes grow equally well, but are planted in January and February. A good neighbor sent me bunches of carrots one foot long, fresh pulled out of his garden, and they were delicious. In fact, I found that a Florida vegetable garden might include everything that we grow at the North, especially crisp lettuces and celery. On the higher lands watermelons absolutely "cover the ground" in June. They were planting the seeds of these melons in February. They are shipped to Northern markets, reaching New York a couple of weeks ahead of the Georgia crop. It was not an easy matter to find out exactly what hardy fruits could be grown, because so much attention had been given to semi-tropical sorts. I think a dozen people told me that raspberries and blackberries would not thrive in Florida, but after a while I found a man who was growing Cuthbert raspberries successfully, and I found blackberries of the trailing sort in great abundance. As for strawberries, some varieties do superbly—not always the varieties that thrive best in Northern gardens. Peaches and plums were in blossom February 15th, and could speak for themselves. Pear buds were just opening on March 1st, and tho slightly affected by the frost, promised a heavy crop. Only this must be borne in mind, that our Persian peach stock and our European plums and pears had better give way to Chinese peach stock, and to pears from the sand-pear stock. From these, however, superb sorts are being rapidly developed, so that nothing is lost by the change. Indeed, I think there is nothing more interesting about Florida than the fact that it opens new fields of horticultural research. Several varieties of apples, including the Red Astrachan, Grimes Golden, Dutchess, Bismark, Newtown Pippin, Gano and more of our very finest winter stock, do well in Lake County.

Now add to an almost complete collection of hardy fruits such tropicals as loquats, oranges, grape fruit, and you see what we have for a Florida orchard. Mulberries do wonderfully well, yielding enormous crops for birds as well as human beings. Fig trees stand in rows

alongside Japan persimmons, while walnuts and pecans constitute groves of their own.

Beside the Scuppernong grape, a strictly Southern type, almost all our best grapes do well in Florida. Among the rest Brighton, Niagara, Herbert, Moore's Early, and Diamond are very thrifty and prolific. It is not well to plant moderate-growing sorts, like Delaware, unless the vines are kept carefully trimmed and trained. There is a wild olive, flowering finely in early February, and furnishing the bees a very acceptable feast. It is of no value for fruit. I do not yet feel quite sure about gooseberries and currants, yet I believe that they can be grown, with common sense. Of course, our small fruits cannot be stuck down into the warm, sandy soil, without proper mulching. Mulch, which is so very important here, is even more important where the soil easily dries and where the sun is fervid.

All this while we are in the woods. In every direction the pine forest spreads itself, and homesteads are simply clearings, while roads are trails that connect these homes, or reach away to the towns. You are traveling all the time under great pine trees, that lift themselves with straight shafts, twenty inches in diameter, and forty feet to the limbs—often fifty or sixty. The soil is never muddy, but the sand makes wheeling with narrow tires somewhat difficult. Quite unlike what you would expect, these pine woods are everywhere green with grass, and most abundantly carpeted with flowers. There are no swamps in this part of the State, except the margins of one or two streams. The lakes are everywhere free from marsh, and the water is even wholesome for drinking. Most of the lakes abound in fish, and these destroy the larvæ of insects. I saw but two mosquitoes while in the State. There are snakes, I suppose, but not any more than are found in New York and Illinois. Harmless small lizards bask in the sun, as I have seen them in Connecticut. Alligators are in the larger rivers, but I do not know that there is any more harm from them than the loss of an occasional duck. But I saw wild ducks sitting on the water of Lake Lucy and white herons, as if they had no fear from any-

thing below. Quail fly up from every sly place, and deer are said to abound in the hummock land.

Water can generally be reached at a depth of fifty to one hundred feet, and the more progressive farmers raise this with windmills into tanks. I found the cost of drilling such a well to be very much less than in our clay soils at the North—rarely exceeding fifty dollars for the well, and perhaps another fifty for the windmill. It is easy to reach surface water at depths of fifteen or twenty feet. Whoever builds a home in Florida should certainly make sure of a thoroughly good well at the very outset.

There is no stock law in Florida, and cattle run the woods freely—owned largely by Northern cattle kings, who get rich by making the State a free pasturage. The Cracker element favors this disposition of the land, because it allows them also free range for their horses and cattle. To secure a fresh growth of grass each year, fires are kindled in the dry weeds and underbrush. I was there just in time to see these fires, in long lines of flame, sweeping through the forests. Occasionally a tree that has a weak spot catches the flame, and creates a column of fire until it crashes to the ground. These fires destroy millions of young pines that are just starting; but worst of all, they burn up annually all that accumulation of vegetation which should be carefully preserved to add humus to the soil. It is necessary to plow fire lines eight or ten feet wide around homesteads and orchards, in order to keep out the flames.

The turpentine men have come into the State recently, after exhausting the supply in Georgia and the Carolinas, and are leasing or buying all the pine trees possible. The trees are tapped ruthlessly, by slicing off great chips with an ax—a process that is repeated again and again, until after about three years the tree is ruined. The result will be a total change in the face of the country, and whatever pine lumber is left will be greatly enhanced in value. Sawmills follow the turpentine gatherers, and lumber from Georgia pine is at present very cheap. It is a good time to purchase, anticipating the results of the destruction.

I was awakened every morning by the

mocking birds—a bird after all not to be compared with our catbird for sweetness of song. Mourning doves could be heard in the distance at daybreak, and Bob Whites sent out their cheery notes from the edges of the gardens. A little later and one could distinguish the notes of the cardinal bird—a most superb neighbor, building nests close by the houses. As my visit was strictly economical, I made no special study of the ornithological and botanical features of the country, altho my son found his entomological researches very fascinating. It was warm enough at midday to take off our coats and sit in the shade, while butterflies of gorgeous hue flew about us, and the mocking birds came near enough to exhibit their natural curiosity and shout all sorts of melodies. A soft breeze was invariably blowing either from the Gulf or the Coast, and never a northern edge to it. Toward night the temperature invariably cooled down, so that we were spending our evenings around a hearthstone, where we had burning a pile of pine knots and pine cones. Robins were with us by the thousands; but about the 20th of February they began their return flight to the North. It was a curious sight, about five o'clock in the afternoon, to see the flocks moving off, so many thousands of them as to darken the skies. This was kept up for three or four evenings, after which only a few stragglers were seen.

The fact is that Florida is a great open field for Northern farmers. It is not so tropical as has been represented. Only the southern tip of the State can be assigned to pineapples, mangoes and similar fruits—altho most of these can be grown around houses in sufficient quantities for home use. The soil is sandy, but nowhere else in the world is there better provision by nature for adding to the humus—when a class of men gets

there with sense enough not to burn it up.

Talking with all sorts of men, I found almost a unanimous conviction that the land should hereafter be planted with something besides oranges. Newcomers should only have a few trees for home use, and with them a few lemon trees, and loquats, and pineapples. I can say advisedly to a host of Northern farmers, Go to Florida. That is, go to Florida if you are willing to learn, and have the good sense to adjust yourself to new conditions. There are very few residents there now who have fairly tested the State or comprehended its marvelous possibilities. You do not have to spend a month getting ready for winter, and another month getting ready for spring. You can grow something at all seasons. Cows can be pastured or soiled for twelve months. Land, of the best quality, can be procured for from five dollars to fifteen dollars per acre. Houses, such as climate and comfort demand, can be erected for from five hundred to a thousand dollars. There are no coal bills, and your wood practically costs you only the expense of cutting. You are not being worn out by the severity of rough winters. I was myself astounded at the simplicity of the problem, and shall build a home for myself and family at once—where we will spend five months of the year.

The true policy, of course, is to create homes. Go there, not to get rich, but to live well. Grow what you can eat and use, before you begin to grow for market. Buy as many acres of pines as you can afford, for within twenty years pine lumber will surely be scarce. Build a neat and comfortable house, and not a picnic arbor nor a shanty. Then sit down and study the condition of things, and the situation, and adjust yourself to modest home-growing.

CLINTON, N. Y.

In and Around Mukden

BY J. H. DE FOREST, D. D.

[This is another of Dr. De Forest's interesting articles on his trip through Manchuria under the auspices of the Japanese Young Men's Christian Association.—EDITOR.]

BETWEEN Liaoyang and Mukden, a distance of forty miles, we pass thru one of the greatest battlefields in the world, where the two battle lines along the Shaho River hugged each other for months until at

of ceaseless fighting, where their loss in killed, wounded and prisoners was over 150,000. This is called the Mukden Battle.

I was in Tokyo at the war office in March when the news came that the

"What part did you have in the fight?" I asked Colonel Watari. "O, very little," he modestly replied. "I captured some 200 Russians out here and the white horse their officer rode." "Please mount and let me snap you." And here he is, a common combination of a Japanese officer on a Russian horse.

last another Kuropatkin defeat and hasty retreat that left 13,333 dead Russians on the field, and resulted in the Mukden-Fusan battle line of one hundred miles. This ended in a far more overwhelming defeat and utter rout of the 350,000 Russians during fifteen days

Russian line was contracting and breaking under the deadly assaults of Oyama's invincible armies. A month later I was riding slowly in a freight car thru the Shaho region, every mile of which was strewn with signs of the fierce struggle, and where some of my warm Japanese

The brilliant, scholarly Major Yamaoka, who was sent to demand the surrender of Port Arthur, August 16th, 1904; and was severely wounded in the Mukden battles of March, 1905.

Mrs. Yamaoka, daughter of Baron Hosokawa, head of the Peeress' School.

friends had met their fate. Trenches were seen in every direction, and the underground holes in which the troops of both sides had burrowed during the intense cold. Every culvert and bridge was barricaded and guarded by Japanese soldiers, lest some Chinese hireling should dynamite the track, and thus break the one slender line of Japanese communications. Captured guns and broken carriages of every description were collected here and there by the railroad. And I caught sight of some of those huge siege guns that had made Stoessel feel weak and that had pounded to death the Russian battleships in Port Arthur. These same guns had been transported north and had brought dismay into the ranks of the enemy 'way up in the Shaho fight.

A battlefield is an impressive sight, with its pieces of guns and shells, caps, cartridge-boxes, boots, clothing, and desolation in general. But I saw one ludicrous pile of things, a brass band, the pieces of which were of enormous dimensions. They were heaped up against a wall and had the appearance

of having suffered with bullet wounds and shell explosions much like their former owners.

Every portion of the way was full of exciting sights, made more exciting by the vivid explanations of the officer in the car. The one thing conspicuously absent was villages. All that region had been swept clean of houses. Scores of flourishing villages had disappeared, and even the ancestral graveyards, now treeless, were almost beyond recognition. Hundreds of thousands of Chinese refugees had fled for their lives, utterly ruined by the battles of aliens waged upon their farms. I found 50,000 of these in Mukden alone, and it is deserving of permanent record that 10,000 of these were being successfully cared for by one missionary, Dr. Christie, of Scotland.

We reached Sakaton, fifteen miles south of Mukden, and from there had to ride in Chinese carts, for the retreating Russians had blown up the long railroad bridge across the Hunho River. Heretofore they had left millions of dollars worth of beautiful brick and stone

dwelling and stations and barracks in Dalny, Newchwang, Liaoyang and all along the way, intending to come back before long and take possession again after driving the little Japs into the sea. But after the Liaoyang experience, they got discouraged about coming back again, and from there north they blew up bridges and destroyed things generally.

At Sakaton I had a memorable experience of joy and sorrow. Every one has read of the brilliant herald whom Nogi sent to Stoessel in the early days of the siege demanding the surrender of Port Arthur. He was Major K. Yamaoka, one of the ablest and most cultured of the younger officers in the Japanese army. A master of European languages, and thoroughly conversant with the war history of western nations, it was a delight to listen to his sustained conversations. He was in the war with China, and later shared in the march of the allied armies on Peking. Just before this present war broke out, he told me in a modest way that he thought the soldiers of Japan were not inferior to those of

Russia, and he was confident from what he had witnessed that the Russians were a far more cruel lot, capable of bayonetting even women and children with the glee of demons. He added in subdued yet determined tones, "We will sacrifice everything, even wives and children, but we will never yield to Russia."

Well, this officer, beloved by so many foreigners too, was in the Mukden battles and was shot in his right temple, the bullet passing behind his right eye and coming out of his left. I heard this news at Newchwang, and when I reached Liaoyang the surgeons there kindly searched the records of all their hospitals and assured me that the Major had not come there. So at Sakaton I asked my military host if he had heard anything of Yamaoka, and he replied, "O, he came here yesterday and is now over in that house." Our carts were already provided for us to ride to Mukden, but I begged permission to stay over one night with the Major. When in Tokyo I had called on his wife, the daughter of Baron Hosokawa, and had taken in my arms the tiny little baby

A common sight from the cars as you go from Dalney to Mukden. These Russian guns were "presented" to the Japanese, who think they are hardly worth taking.

Gen. McArthur, Col. West, Capt. Lynch, on the porch of the Llama Temple at Mukden, April 10th, 1905.

boy born since the father went to Manchuria, and that would be good news for the wounded man.

It was astonishing to find the same power of brilliant conversation in a man through whose head a shrapnel shot had passed. He owned up to no pain as he sat in bed and talked for an hour. "How did you feel when you were hit? Did you faint?" I asked. "Not a bit of it. I was perfectly conscious, but I thought I had been struck with a stick. So I sat down and began to feel around and I found my left eye hanging in shreds down my cheek. But I thought I could distinguish the troops and some trees with my right eye, and so when these bandages are taken off, I fancy I shall see. And if I can fairly well distinguish objects, I'll be back again on the battle line, where I'll stay to the finish. The hole at first was over half an inch in diameter, but it's already nearly closed up."

As he talked he occasionally passed his hand slowly over his eyes and temple, and I could not but notice anew what I had long known, the delicacy and shapeliness of the Japanese hand. How can such a woman's hand with such slender fingers wield the sword with such fatal effects? When talking with some officers later on, I spread my broad, thick, stub-fingered hand on the table and challenged them to show theirs, which they did with a jolly laugh at the contrast. It is this lady hand that makes Japan famous for its art and its surgeons, and its swordsmen too.

On leaving the hospital, I privately asked the surgeon whether there was any chance of the Major's recovering sight with his right eye, to which he replied, "No, never. But we let him talk." He is in Tokyo now and has been promoted to Lieutenant-Colonel. But whether he ever sees again the faces of wife and boys and friends or not, I feel sure that the world will hear again from that gifted brain.

The next day we rode thru one of those blinding sand storms into the ancient capital, and to Field Marshal Oyama's Headquarters, where his aide-de-camp, Captain Tanaka, gave us a pleasant welcome. The Marshal, busy as he was just at this time with interviews and consultations with his generals and the Chinese authorities, found time to receive me. I had never before met this illustrious warrior, but there flashed into my mind a description of him by a certain disgruntled war correspondent ten years ago, at the capture of Port Arthur, stating in effect that Oyama's blood-thirsty face was all aglow over the barbarous slaughter of the garrison, including women and children. Nothing of this ferocity was apparent in the genial face of the old gentleman at Mukden. Marchioness Oyama, when a little girl, was sent to New Haven, and was for a while a member of Dr. Leonard Bacon's family, where I had seen her. He too visited New Haven about the same time.

With a fatherly look, he remarked that I was in danger of being annoyed as a possible Russian, and so he ordered Captain Tanaka to provide a badge that would protect me. He inquired about the success of the Y. M. C. A. work among the soldiers. Then I was located in the Russian Bank that was, and the next five days were filled with most interesting excursions under the guidance of gendarmes and commissioned officers.

Major-General Fukushima, of whom the readers of *THE INDEPENDENT* already know, is the Chief of Staff, and I heard from him briefly about the series of recent battles. On my speaking of Likampo as the key to Mukden, he said it was a key, there being several others. He told in racy English about the capture of the baggage and whole commissariat in its disastrous retreat. The wagons covered the plains in a mass fifteen miles long and three wide, and were by all odds the richest bag thus far taken in the war. In speaking of the effect of the war on the Chinese, he emphasized the one word that every Japanese loves—"education." The Chinese will never wake up without education, and it will probably be a long process.

Well, this is rather a long introduction to Mukden. But, after all, Mukden is little else to the spectator than a great city with low, unattractive brick houses on the main streets and everywhere else only mud hovels packed thick along the vilest streets. I saw a row of carts, each drawn by three horses, stuck helplessly in the mud not a block from the Marshal's Headquarters. That Mukden mud! If the ordinary plains produce *kow-liang* twelve feet high, the streets of Mukden, if put to farming purposes, ought to raise pumpkins a mile in diameter. I saw two dead horses one day lying in the gateway, and they had been whipped to death for not dragging their carts thru this bottomless mud and filth. The beastly black hogs that rooted in the black mud of the streets, the dead horses

on the wayside, and the living horses stuck in the mud, maddened under the murderous lashes of their drivers and wishing they, too, were dead—this is the chief picture I carry in my mind of this slimy city of 200,000. Such a condition of things was a real peril to the Japanese army, and, knowing this, the military administrator had levied a sanitary tax on the city, the first one probably the people had ever heard of. That is one of the things included in that word so highly prized in Japan—"education." But for this zeal of the Japanese for healthy conditions, the present heat of 95 degrees in the shade might breed a pestilence that would imperil the army. So I go on to Likampo.

Two springless Chinese carts and a mounted gendarme were provided for Mr. Fujioka and myself. One would think that a village only twelve miles from Mukden, where three days' desperate fighting had left over 3,000 dead on the field, and where vast quantities of ammunition and stores were captured,

The temporary grave of Lieut. Col. Yoshioka on the place where he fell.

could be easily found. But apparently there are no roads in Manchuria, at any rate there were none in the regions where the battles had been fought. Of course the villages had disappeared. Thousands of impressed carts, loaded and empty, in lines that in some cases extended five miles, drawn by a mixture of mule, donkey, horse and bull, the four kinds being sometimes hitched to one cart, the drivers of which had no lines, but flourished ten-

his best man, the color bearer of his regiment, Lieutenant Kishiwada, to conduct us over the field.

What a horrible fight it was around and in this village! I began to see how this insignificant hamlet that is not on the maps was one key to the Mukden victory. It was of course valuable as one of the fortified outposts in the Russian line, but far more than that, it was necessary that the Japanese should by a

Cavalry Horses and Bivouac Shelters of the Third Japanese Army Division in a valley near the village of Luchupo, about four miles north of Port Arthur. The broad top shaped object faintly seen in the distant field at the left, beyond the trees, is a tethered balloon, used for reconnoitering. Copyright, 1904. Underwood & Underwood, New York.

foot poles with ten-foot lashes, were going over the plain in various directions, dodging the trenches and the wide, swampish mud holes. The Chinese of whom our guide inquired could only point in the direction of Likampo, and that we already knew. It took four hours to get there, but it paid. Our coming had been telegraphed to Colonel Watari, in charge, and as he was of the Sendai garrison he gave us a warm welcome, and detailed

desperate attack hold as many Russians as possible here, while General Nogi swung his division far around in the rear ninety miles north, where he eventually surprised the retreating army and nearly ground it to powder. The Japanese at Likampo had a terrible task to perform. With only one brigade they had to attack and defeat a whole Russian corps behind trenches. It was fearful odds in point of numbers, five Rus-

sians to one Japanese, but it was yet more fearful in that the Japanese could not approach by counter trenches, because the ground was frozen several feet deep. So they did the impossible in this way—they crawled up on their bellies thru the snow, pushing sandbags in front to protect their heads, until they could get close enough for bayonet work. They held every inch of ground gained, and fought without sleep for three days. They at last reached the village, where they fought for the possession of the houses one by one, until the gateways were clogged with the corpses of Russians and Japanese piled one on the other. Every officer of the Thirty-third Regiment was either killed or wounded. At the crisis Lieutenant-Colonel Yoshioka made his name immortal by penetrating the Russian lines, where he came face to face with the Russian Chief of Staff, and with one descending stroke of his sword cleft him from shoulder to stomach, but he also fell at the same time riddled with bullets.

Deeds of exceptional merit naturally receive the written encomium of brigade and division commanders, but it is rare indeed that a name is heralded thruout the whole twelve divisions of the army. There are only three such, I was told, and Yoshioka is one of them. He with his 4,000 men held 20,000 Russians for three days and nights, inflicting a loss of 8,000 in killed and wounded, and meanwhile Nogi was making that marvelous flank march of ninety miles in four days. Not only did Yoshioka defeat this superior force, and enable Nogi to flank the Russians, but he won one of the strategic roads to Mukden. But his regiment was virtually annihilated. That is the price Japan is willing to pay, if necessary, for every victory. And this

is all I studied up of the hundred mile battlefield.

While in Mukden I lunched with our General MacArthur, Colonel West and Captain Lynch, who were living in what was left of the Llama Temple in the suburbs of the city. The wide temple hall had been stored full with Russian rifles, bicycles, cooking utensils and stores. But the retreat was so sudden that the stores could not be carried off, and so the Russians burned this historic building. The priest's quarters in the rear escaped the fire, and there we lunched; and I may add, at the expense of the Emperor's private purse. The Diet, in voting the war budget, made no provision for the foreign military attachés. The Emperor therefore generously takes them all as his guests. I know very well that no Japanese would wish this Imperial act to be coarsely trumpeted abroad, but I think a courtesy that involves the comfort and even luxury of scores of foreigners on the battlefield for months, and even years perhaps, is of international significance, and may well be mentioned with sincere appreciation.

My regret on leaving Mukden was that I could not accept the rare privilege of visiting the newly forming battle line toward Kirin. But it was no small thing to have seen a section of the battle line where more than three-quarters of a million men made a desperate fight of two weeks, the shock of which resulted in a total of 250,000 killed, wounded and prisoners. It was the greatest victory that Liberty confronting Despotism ever won. It was one more irrevocable step forward and upward in the universal struggle for what the Japanese call *Seigi Jindo*—Righteousness and Humanity.

MUKDEN, MANCHURIA.

A Little Owl of Florence

"NIL INVITA MINERVA."
(*Stemma Vecchia.*)

BY E. I. PRIME-STEVENSON

AS I came down the dingy Via della Spada, in Florence, that humid, grey morning, my glance fell on the display of limp pigeons, depressed canaries, and nondescript song-birds, all the worse for shop-wear, and all huddled in filth and gloom together, in the narrow shop of a bird-fancier. Then I caught sight of a less familiar captive—a remarkably small brown owl, only about as big as my hand, staring out from a dirty cage, with that look of mingled misery and indignation that wild birds often have when suddenly shut into noisy and close incarceration. Now, a wood-bird of almost any sort, brought captive to a town street, means an abominable crime to me, as to most persons. Under Italian conditions, the unlucky prize is simply a martyr. Besides this, all owls happen to have a positive, honorable sort of claim on my humble self, because of what may be called family reasons; on the strength of a certain usage now some hundreds of years old, and, more than that, thru a tradition not merely hundreds but thousands of years respected, as runs "the tale of Troy divine."

This little fellow looked up at me with a specially melancholy reminder, I thought, of what was just my bounden pagan duty. So after a short but voluble wrangle over the price of the creature (a dicker purely for the sake of principle), I bought the object of my solicitude for a lira and a half—some thirty cents—and brought him away with me. The little owl, so the dealer informed me, had been "sent over from Vallombrosa" a few days earlier. "An owl from Vallombrosa" sounds well. His vendor also remarked that the captive was wonderfully tame ("*meravigliosamente addomesticata*"). In denial of which statement, the owl at once bit me. But such little owls have no great biting powers; and I did indeed note that this one was by no means so agitated as might be during his traverse

over the Piazzzi Santa Maria Novella to the hotel where I was wintering. He stared at me all the way, with a certain degree of sedate gratitude and friendliness, I fancied. At any rate, within an hour, there he hung, in a fine new cage, in the pleasant court of (appropriately named) the Hotel Minerva. And so for several weeks was I interested in one of the most amusing, unconventional, and companionable pets that have come to my hand; and I am sure that his memory is green in the vicinity of the arid Piazza Santa Maria Novello today, and also that his owl-biography deserves print. During the carrying of him to his new environment, I had fixed on a dignified and Hellenic name for him, and also had remembered that servants of even the best hotels are not too delicate in their curiosity. So when the little owl was hung up on the vine-grown wall of the Minerva's court—he looking down at me the while, with a most odd, stolid approval of all that I did, I thought—over his head was written in Italian as "choice" as Hamlet's taste would have accepted—"My name is Zeno. I am very wise, but also timid. Please do not tease and frighten me." And I am bound to say this pathetic injunction was respected, day by day. Never was any queer little bird more kindly entreated, even by Italians, who love pets in general, and hate owls in particular, as being "unlucky" things. The only exception to the rule was on the part of one extremely clever member of the Minervian establishment. This was the big white house-cat, named Galileo. Galileo had private and cattish ideas as to owls—far removed from those of a humane nature—and Galileo could not (so far as I know) read. But fortunately Galileo, though often prowling about Zeno's cage, and even staring up at him at short range, in a most offensive, cold-blooded, calculating manner—to the excessive perturbation of Zeno—was never

able to compass a tragedy that, I am sure, over and over again was earnestly rehearsed, or near to that.

This little owl was of the "*civetta*" species, common all over Italy. Whether Shelley's "aziola—a little downy owl" is identical, I cannot say. Zenino's color was a dusky brown, with white flecks. He was only a few inches high, as I have said. But he had already his full growth. He belonged (I hope I should write "belongs," for I should be sorry to feel that over such a tiny pattern of dignity and wisdom and harmlessness, the preterit yet is needed) to the "semi-nocturnal" sort. This made him much the more interesting; because instead of being somnolent and stupid all day long, and brisk only as nightfall came on, Zenino—for so he soon was addressed with true Italian affection in diminutives—was as lively as a grig in daylight hours, save for a few forty-winks episodes, now and then. Moreover, as far as I could ever discover, Gabriele, the hotel cook, was correct in declaring that Zenino "slept like a good Christian all night, and disturbed nobody." I had feared that Zenino would hoot and tu-whit, to-whoo, in the darkness, which (Shakespeare to the contrary) is not at all "a merry note" to nervous guests in an inn. But no such bad manners. His only sounds, first and last, all the time that I had him consisted of three sorts. The first was a wonderfully pretty, soft, descending chirrup. It ran down through nearly an octave of the minor scale; almost always pitched in A, as I took pains to ascertain. This ejaculation came when Zeno was really interested in anything but, *nota bene*, without being frightened by it; or if he was contented, pleased, and found the outer world generally going well for him. This swift chromatic gamut was also his regular, almost never-failing salute to myself, or to any one else that he came to know and to trust—I dare not ascribe any really warmer sentiments to him, for he was reticent to the last as to such. Even if I went to his cage late at night, or spoke to him early in the morning, before removing the thick cloth that protected him from Florentine winter cold, I could scarcely say to him "Zenino! Zenino! Art thou

asleep?" before this clear, soft answer came. I knew that his wonderful yellow eyes were wide open, even in the gloom, watching for the visitor. Of his other sounds later, for the benefit of anybody else who chances on an owl as a pet and who may be (as I was) rather perplexed at the diet problem, let me say here that Zeno lived exclusively on raw beef-heart, cut up into the smallest possible dice. Mice, I could not purvey him; and I am by no means sure if he could have moused one. He would not touch any other sort of raw meat than the heart, so long as I had him; not even liver, nor sundry more aristocratic portions of an animal. He was fed always at about five o'clock in the evening—a lucky remembrance on my part of the customs in German zoological collections. He promptly began eating, when the fare was put before him; and when he had had enough, nothing would make him long play the polite glutton. After some weeks he would also eat, in the early afternoon, a very few bits from my hand; but only as if for civility's sake and to show that there was no hard feeling on his part—nor stomach-ache. He ate (in the whole dusk, or evening) a cube of beef's heart about two inches square, a single pound lasting him several days. The dealer assured me that Zenino would "never drink water, never!—*civette* never drink water." This was not at all the case; for Zeno supped down about a half a gill daily. I found, what was more to my surprise, he presently developed a vague liking for a bath! This I used to give him when he was privileged to pass a morning up in my room—from the window of which he would survey the Piazza below with a intense but cultivated interest that cannot be described in its solemn drollery!—bending, turning, quirking his round head with vast shrewdness, now and then looking over at me. Contrary to my expectations, too, Zeno was a remarkably cleanly pet; and when his cage was put in neat order for the day, not to speak of his own small person, he showed a distinct sense of neatness in his housekeeping, highly commendable in Italy.

As time passed on, Zeno became a still more friendly little companion. He

was almost daily brought up into my room. His cage being set on my writing-table, only a few inches from my hand, he would remain on his perch, often for an hour, making almost no bodily, general movements, but perfectly alert to the smallest motion I might make, and following my pen or pencil with keenest observation. Sometimes it seemed to me that he really would—could—speak. Ah, that quintessentially wise, deliberate, judicial, pyrrhonic, pagan stare! But Zeno never spoke, that is, any recognizable human vocables, though now and then emitting that soft, half-plaintive, half-pleased owl-remark in his swift half-tones. An excellent understanding came to us—to a certain degree, that is to say. Also, I took great pains that he should become used to the sound of his owner's voice. To that end, I thought the most delicate and literary attention that could be paid to any owl alive (and obliged to hearken) was to read good books to him, in his native idiom. So we went through together cheerful scenes from Goldoni, fragments of Metastasio, Alfieri, Tasso and Guarini; and even discreet passages from Dante. All which Zenino seemed greatly to approve. But, on the other hand, I discovered that Zeno had no taste for modern literature whatever. He certainly gave me to understand that he thought D'Annunzio, for instance, merely a shallow, lurid, over-advertised bore—little more than a terribly super-rated spinner of phrases. And his poor opinion of several contemporaries—Bracco, Negri, Deledda, Giacosa, and Arturo Graf—was unmistakable. I read him once an article by Matilda Serao, from the *Giorno*, and he became so nervous that I had to soothe him by a long excerpt from Sophocles. Apropos, how far he understood languages other than Italian I never could quite decide; for altho I am perfectly convinced that owls know almost everything—as do cats—without the trouble of learning anything, still Zenino had had but a country up-bringing in Vallombrosa, despite its convent and Miltonic magnetism. I have not forgotten the afternoon in which I tried him with a specially favorable bit of Ibsen. Then and there came the only time in which I ever saw Zeno first yawn, next cast up two or three of those queer little pellets that

owls so expertly reject—and then, in a few moments more he fell down from his perch, having had a perfect exposition of sleep come over him! The humiliated look with which he picked himself up, and hopped to the perch again—yet as if he blamed me for such an accident—was eloquent of a tacit criticism.

Even in the kindest captivity, time hangs heavy on any self-respecting little owl's feathers. Zeno passed his day in alternately intense tranquillity, or in fits of restless fussery. When nobody was visibly about and he had nothing else to think of, he would prove (in a way that went to my heart) how strong in his tiny brown bosom was the wish for freedom. He would hop back and forth on the cage floor, fluttering at the bars sometimes, with frantic monotony. Or for an half hour he was peering out from below the door, with a new, fierce light in his topaz eyes—making no sound the while, but restless, until the restlessness was painfully infectious to my own nerves. But then if any one would go to him and talk to him, the result was his being diverted from this unrest, and his waxing quite cheerful once more. A fine way of keeping him from these useless paroxysms was to appeal to his intense curiosity. A bit of wood, a stone, a gay fragment of tile, laid in his cage would engross his little brain for hours. Perched above it, eyeing it now from one side, now another, studying its every detail from a safe distance; or else, if satisfied it was harmless, testing its traits by pokes with his furry foot and bites with his beak, would Zenino show his philosophic seriousness of head-piece. At such times he was extremely droll. But all words fail when I would describe how he used to behave when a mirror was in sight—and his image in it. First and last, he never grew used to that sort of thing; and, in fact, I gave up allowing him ever to be near to what seemed to trouble, to terrify, to bewilder him so extraordinarily. Even philosophy failed Zeno then; and had the mirror been the Gorgon-shield of his divine patroness, Minerva herself, matters could hardly have been more agitating. He would swell himself out, every feather on end, till he was as big as two normal Zenos. Then, alternately crouching down and stretching up to his

full seven inches, his eyes glaring and his beak clapping, he would try to attack this double—in a perfect fury! Indeed, Zeno was a regular little fire-eater at heart, quite as becomes all distant relatives of the birds of prey, bigger or little. I have mentioned the dangerous, suave manners of Galileo, the great cat. In spite of all that I could do, of course Galileo found divers chances greatly to frighten Zenino—once being caught just in act of a most noble spring that perhaps had not been wholly in vain. But with Galileo in view, my small Zeno would swell his whole panoply out to the fullest feather, would open to their widest his wings, stare back at his foe like an eaglet, and hiss like a very cat himself, in defiance of all Galileo's claws and teeth! The sight of that tiny caged creature's helpless bravery had something splendid in it! But everybody in the hotel took pains, I am sure, that such tests of it should not often occur.

I think there never was an owl, even in an Athenian temple, a more general favorite—omens or not in contrariness to the sentiment. And also I came to believe that every man, woman and child in the neighborhood of Boccaccio's famous rendezvous, Santa Maria Novella, knew of our Zenino's existence, and took personal interest in it. Perfectly amazing to me were the daily inquiries from strangers, tradespeople, the clerks in the postal station, the school children in the Piazza! "Come sta, la Sua civetta? Va bene Suo Zenino?" I met such amiable inquiries continually. Great, too, was the interest in the domestic regimen of the Minerva, when, as the Winter advanced, and Zeno grew tamer and tamer, he was actually allowed to flutter about my room for an hour daily. Really this license was amusing enough to figure where I began to think Zeno otherwise might figure—in the daily papers, which in Florence have mighty little of which to write. To see Zenino put his round, big-little head on one side, to decide if the cage-door was *really* open—to mark his sedate hop-hop, "down and out"—to see him walk along the table on his toes, peering at me as if for final leave—to watch him flit up softly to the window cornice, to the clothes tree, sidle about, often force his way into some cranny not at all made for

his occupancy—these were memorably vignettes in the story of my ownership of him. He loved to hide, and being so small he could hide well. Once I looked for him in vain for ten minutes, not being able to trace him at all, till suddenly I perceived his round orbs staring at me from over the top of an old shoe, where he had crept. I may add that there was always a terrible battle between us when the time came for Zeno to be restored to his cage, and so to be sent downstairs for the evening and bed. He would hiss, sprawl, struggle, bite and claw my hand like a perfect little devil! What was more, sometimes he would not allow me the slightest liberty with him for the rest of the afternoon, conducting himself with a manner aggrieved, irritable—as of one who has been scandalously abused and hounded. But, as above-mentioned, his bites were not perceptible, compared with a parrot's geometric nippings.

Just here, perhaps, I may as well answer the question lurking at hand as to whether Zenino really ever became "perfectly tamed." I cannot, I am sorry to say, reply in the affirmative as clearly as vanity would make me wish to do. He certainly grew to tolerate his master and some other acquaintances. Olinto, a young waiter from the dining-room, was in Zenino's good graces. For Adolfo, a handsome young Tuscan, who was busy about the hotel court, he seemed to have also a rather distinct approval—in fact, Adolfo and Zeno used to have conversations together; and Adolfo, too, was successful in making Zeno promptly to go thru that curious "bowing" evolution of body, so funny at all times on the part of the owl family. Zeno certainly loved to have his head scratched. If one made plain overtures that way, without sudden movements of the hand, parrot-like he would allow the scratching for as long as the hand could conveniently keep on. But—his temper was, first and last, uncertain! The unexpected was always happening with it. He never lost his fierce little spirit. He was *ad finem* a caged wild birdlet of prey, resenting his predicament, and hating at heart his best friends. I know that others have had more successful personal relations with owl pets, and I am sure I did all that patience and real affection could

do to win Zeno's distinct regard. But I cannot say I ever achieved it in full.

As the time drew on for me to pass onward to the South the disposition of Zeno became an acute problem. For while regretful to give him up, I felt that he would prove an impossible addition to my luggage and one's travel-cares. My idea had always been to take him to the green alleys of Florence's "Cascine," when the time for parting would be ripe,—and so to set him free, in his proper woodland haunt—that he might fly, forgive and forget. The severity of the winter, too, would then be over, and no danger of turning out my pet upon a cold world to shift for himself. But friends reminded me that the season was subject to inclemencies; that Zeno had not acquired—probably—many really useful experiences in independent bird-life—that never had any owl been so much petted, now to his own future peril; and that Italians shot owls with peculiar conscientiousness. So a medical friend kindly took Zenino off my hands. Whether the medical friend liked Zenino, on further acquaintance, as much as had

been indicated when the matter of the transfer was mooted, and whether Zenino liked his new home and patron—as he certainly ought to have done—these queries I cannot decide, though often even now they haunt me. At any rate, my intimacy with this little protégé of Pallas Athene had been a beguiling one; and certainly wholly not a case of "*Minerva nil invita*" so far as my efforts went. If Zeno lives, caged or free (for the new possessor was also owner of a suburban villa, and had expressed pleasing ideas of letting Zeno flit where he would, as warm weather came on)—I wish him well; and also all the field-mice that were not possible for him when in town-confinement. In that little brown, downy, orbic head of his, behind those marvelous eyes, of inscrutable gaze, were I am sure, many "thoughts of great value, worthy cogitations." If I failed to improve, better my chances of such sagacious company, combined with such an odd and shy ornithological personality, why, the fault surely was mine alone in venturing out of my intellectual depth.

MUNICH, GERMANY.

The New Capital of Australia

BY HENRY STEAD

Editor of the "Review of Reviews for Australia."

AFTER many delays and much argument, recriminative and otherwise, the site for the Federal Capital of the Commonwealth of Australia has been definitely decided upon.

When Federation was brought about, one of the conditions was that the Capital of the Commonwealth should be in New South Wales territory. This was arranged in order to secure the adherence of the Mother State to the Union. In order, however, to compensate Victoria for this, it was also agreed that Sydney should not be the Federal Capital, nor should it be within a hundred miles of that city. Until the place was selected it was agreed that the Federal Parliament should meet in Melbourne. The Victorian Parliament gave up its fine building

to the Federal legislators free of charge, and at present occupies makeshift quarters in the barnlike Exhibition Building. The Federal Government departments have found insufficient abiding places in what were at one time private houses forming a terrace near the House of Parliament.

There was no real attempt made to fix upon a site for some little time, more urgent matters requiring attention. The Victorian members were, however, credited by their New South Wales colleagues with a desire to postpone the question indefinitely in order to keep the Capital in Melbourne. However, toward the close of the first Federal Parliament the matter was taken in hand, but nothing definite was done, as the Senate and

the House of Representatives disagreed on the site. The former always insisted upon Bombala, the latter finally selecting Tumut. The bill went thru all right when the site was left blank, but a deadlock resulted in attempting to fill it in.

Pretty nearly every town in New South Wales considered that it had a claim to be selected as the Capital, but it was not long before only three districts were left as the real candidates for the site. These were what he termed the Western, the Southern and the South Eastern. The first, situated just west of the Blue Mountains, was that area surrounding Lyndhurst. Tumut was the principal place in the second, and Bombala in the third. Lyndhurst was championed by most of the New South Wales members, being close to Sydney. Victorians favored Tumut and Bombala, one of the chief reasons being that both could be reached without having to traverse New South Wales territory, as the limit of the capital area could be made to march with the Victorian boundary.

Four commissioners were appointed to report upon the seven chief Capital sites. Mr. Howitt, the celebrated explorer, the Victorian representative, is now in London preparing his book on the native races for the press. New South Wales, South Australia and Queensland each sent one representative as well. In their report the commissioners arranged the sites as follows: First, Tumut; third, Lyndhurst; sixth, Dalgety, and seventh, Bombala. According to this report, therefore, apart from political reasons, a worse selection could not possibly have been made than the Bombala district. Very severe criticisms were made on the report, the most effective being that by Mr. Alexander Oliver, president of the New South Wales Land Appeal Court, who was appointed State Capital Site Commissioner by the New South Wales Government. Mr. Oliver died some two months ago, and his death is everywhere regretted. He was the only man who gave a really thoro estimate of the cost of the proposed Federal buildings. He studied almost every work of reference in the world on the subject, and his estimate, £2,117,500, is regarded as accurate. In his report he put Bombala first, Tumut second, Dalgety fourth and

Lyndhurst fifth. Thus do experts disagree!

Federal members during the last two years have visited the different sites in parties which were personally conducted over each by its special advocate. Mr. Sydney Smith, Mr. Reid's able lieutenant, was the champion of Lyndhurst, Sir William Lyne of Tumut, and the former Minister of Defense, Mr. Chapman, of Bombala. These visits occurred so frequently that they were derisively termed "picnic" parties in search of the "Bush" Capital.

It was a difficult matter to decide between the sites, and members were assisted by numerous tables and pamphlets giving exhaustive particulars about the different districts. As far as accessibility went, Lyndhurst stood easily first and Dalgety last. Lyndhurst is situated on a railway connecting direct with Sydney and Melbourne, so that no expenditure in railway communication would be required. Tumut is already connected with Sydney by rail. To complete its communication with Melbourne would cost £50,000. Dalgety is 32 miles from the nearest railway station, the Sydney line terminating at Cooma. To make that connection would cost £142,000. To link up with the Victorian railways a line would have to be built over very difficult country to Bairnsdale, a distance of 120 miles. This would cost £1,414,000. That is to say, that before the Capital can be shifted to Dalgety, £1,656,000 will have to be spent on absolutely necessary railway works.

The next important item was that of water supply. Tumut came first, the cost for water works (gravitation scheme) being £201,000. Dalgety comes second, with £328,000, and Lyndhurst next, with £428,000. This is estimating that a supply of water for 50,000 persons will be required. The value of the land which has to be purchased by the Commonwealth from New South Wales is least round Dalgety, being only £2 10s. an acre. Land at Lyndhurst is valued at £3 an acre and at Tumut £4 an acre.

The actual site was chosen by ballot, the result of the first vote being:

Southern district.....	21
South Eastern district.....	22
Western district.....	25

The Tumut site was thus knocked out by one vote. A second ballot resulted as follows:

South Eastern district.....	39
Western district.....	28

Thus the Bombala district was chosen by a large majority. It was at first proposed to omit the exact location from the Bill, but it was finally decided to insert "within seventeen miles of Dalgety" and the Bill was passed in that form. The Senate, which had previously inserted Bombala in the Bill it sent to the Lower House, now substituted Dalgety, and the Bill became law. The question of the area to be acquired is still undecided, and negotiations are to be opened with the New South Wales Government on the subject. Originally it was thought, and all reports seem to have assumed, that the area required would be some 4,000 acres, but the Bill asks for about ten times as much. It says that the area should certainly not be less than 900 square miles. This area would secure access to the sea at Eden and to the Victorian frontier. Although the Labor Government during its short life, was able to accomplish little in the way of legislation, its resolute attempt to settle the vexed question of the Capital site deserves all praise.

If the Federal Government secures the 900 square miles it asks for, Dalgety will be far the cheapest site from the Federal point of view. The resumption of the land will cost £1,440,000 as against £2,304,000 required for the Tumut district. The absolutely minimum cost, not allowing for any extras at all, of making the Federal Capital at Dalgety would be:

Land purchase.....	£1,440,000
Water supply.....	328,000
Public buildings.....	2,117,500
Railway works.....	1,656,000

£5,541,500

It would be pretty safe to say, therefore, that a sum of £7,000,000 would hardly suffice for the establishment of the Capital.

Dalgety itself is a small village in and near which live 200 people. It is situated upon the Snowy River, one of the prettiest in Australia. The views from the proposed site are extensive and picturesque. Mt. Kosciusko (7,328 feet) in the Snowy Range, the highest point

in Australia, is in full view, 40 miles to the West. Water supply will be drawn from the Snowy River and its tributaries rising in the Snowy Mountains. The suggested site, which has an altitude of 2,650 feet is two miles west of Dalgety, 31 miles south of Cooma and 65 miles west of Twofold Bay. The soil is poor, and a considerable portion of the surrounding district is granite country. The land is estimated as being able to support one sheep to two acres. There is a fair amount of building material in the district in the shape of granite, basalt and bluestone, and in addition there is a cream colored sandstone found within 10 miles. There are large outcrops of limestone, and abundance of clay suitable for brickmaking. The greater part of the area consists of undulating, treeless country, but extensive supplies of messmate, box and mountain ash for building purposes can be obtained within 30 miles of the site, and there is plenty of timber nearby, suitable for firewood. Dalgety is the coldest of all the sites inspected, the lowest reading ever observed being 14°, the highest 104°; Lyndhurst varies between 98.4° and 15.4°; Tumut between 106° and 27°. As Parliament usually sits during the Winter, members, especially those from Queensland, will feel rather chilly.

The South Eastern district is the only one which has access to the sea, and this will undoubtedly be of great advantage to the new Capital. The harbor at Eden is a good one, as fairly large ships can berth there. One objection to Bombala was that it lay too near the sea, and could be easily captured by a hostile force. Dalgety is 24 miles further inland, and although out of range of the guns of a fleet, is still not far enough inland to be safe should an enemy be prowling round the coast.

The desirability of having a "Bush" Capital at all is often called into question, but there is little doubt that it would be better for the Commonwealth to be governed from a place which is entirely separated from State politics. It is quite impossible to avoid a Victorian tinge being given to Federal matters when members read Melbourne newspapers every morning, and are surrounded on every side by Victorian interests.

There is no denying, however, that Melbourne is more central than Dalgety can ever be. As things now are, South Australian members leave Melbourne on Friday night, and return from Adelaide by the Monday night express, in time for the assembling of Parliament on Tuesday. The New South Wales members do the same, the journey to Sydney being comfortably performed in a night. West Australian, Queensland and Tasmanian members cannot, of course, get home for week ends, and live in Melbourne during the Session. It would be impossible for the South Australian members to get from Dalgety to Adelaide for the week end. Victorian members would have to make a journey they are now saved, and New South Wales members will not have a very

much easier journey than they do now. Many members have businesses that require their supervision, and it is probable that many of the best Representatives will find it impossible to remain in the House. That will, of course, speedily adjust itself when the "Bush Capital" becomes a reality. At present no one seems to think of living permanently in the new capital. Members will go there to legislate for four days a week during the session, but for the other three days, and during recess, the Bush Capital will apparently be deserted except by those tied there by administrative duties. Of course, if a race course can be arranged in the Federal area, members might remain, but to the average M. P., and indeed to most Australians, a town without its weekly races is to be shunned.

SYDNEY, AUSTRALIA.

To an Old Heart in a New Cause

(GEORGE S. BOUTWELL)

BY WILLIAM ROSCOE THAYER

I MARVEL not that Youth,
Impassioned for the Truth,
Cleaves but to her, as bridegroom to his bride,
Not heeding praise or blame,
Indifferent to fame,
Craving her smile—well worth the world be-
side.

But when in Age I find
Young courage and young mind,
And eyes that see their morning vision clear,
Like him but lately dead,
Who after four-score led
Our battle-charge, I wonder and revere.

Tho Prudence bade, "Beware!"
He answer'd straight, "I dare!"
And swept like retribution on the foes;
Put compromises by—
Half-truth is still half-lie—
Nor barter'd his convictions for repose.

He heard but to despise
The precepts worldly-wise
That check the vanward impulse of the soul—
The sly, corrosive doubts,
The cynic sneer that flouts
All virtue and denies the unseen goal.

Years never palsied him
With disillusion's grim,
Nor taught the lie that numbers most avail;
He held that not to fight
For Freedom and for Right,—
Our captains—is the coward's way to fail.

He was not overborne
By ridicule or scorn,
Nor daunted by the dangers of the time;
He even could resist
The friends whose love he missed
And comrades of the causes of his prime.

To suffer and endure,
To keep the spirit pure—
A fortress and abode for holy Truth—
To serve eternal things,
Whate'er the issue brings,
This is not broken Age, but ageless Youth.

MAGNOLIA, MASS.

Literature

A Socialistic History of France

HITHERTO Socialists have confined their attention largely to the formulation and criticism of economic doctrines or to the study of particular industrial institutions. It is true that, for the purposes of illustrating their social philosophy, they have occasionally entered the historical field, and that Marx and his followers have rendered history a real service by the emphasis of economic forces rather than political and diplomatic affairs; but until the present time socialists have not attempted any historical work on a large scale, or applied their doctrine of the economic interpretation to a long and complex period of national history. It is therefore with considerable interest that we receive the first instalment of *The History of France Since 1789*, which is being published by the distinguished French Socialist, M. Jaurès, and his collaborators.* Five large volumes bring the story down to the close of the Directory, 1789-1799.

Tho the intention of the authors is to emphasize the fundamental economic forces underlying the development of modern France, their plan does not exclude the consideration of other important factors in social changes, as well as political and military events. Notwithstanding its polemical title, this work is singularly free from partisan bias; and to corroborate the opinion of the eminent student of the Revolution, M. Aulard, it is a monumental contribution to the literature of the period.

The theory of the Revolution elaborated by M. Jaurès may be briefly stated: For the destruction of medieval feudalism a highly centralized monarchy was necessary; feudal and ecclesiastical privileges were curtailed only so far as the interests of the monarchy demanded, while the remaining rights burdened the people; the bourgeoisie, founded on industry and commerce, began to develop a class consciousness and restlessness at the aris-

tocratic and medieval restrictions on their political and economic activities; the peasants were not so oppressed with taxes and feudal obligations that they were devoid of hope or intelligence; the reckless expenditure of the nobles and court forced a financial crisis which the monarch could not meet without appealing to the nation; the hopeless incapacity of Louis XVI made the quiet transition to a constitutional state impossible; France was forced into a republic and into radical measures before the mass of the people was prepared for them; hence a social cataclysm which gave ardent politicians full scope for ambitious intrigues.

While M. Jaurès does not underestimates the work of Voltaire, Rousseau and the other publicists in preparing the Revolution, he protests against the common opinion that it was the result of abstract theories rather than concrete abuses. In this connection his treatment of the Fourth of August is interesting. He holds that the nobility made no voluntary surrender of their privileges on that famous night; but that burning chateaux and revolutionary ferment thruout the country forced them to make some concessions, while they exacted full indemnity for all the important privileges they abandoned. M. Jaurès makes a thoro exposition of the process by which the August decree was carried out, and of the nationalization and distribution of the Church property. His study of the social and political ideas prevalent in Europe is particularly illuminating. There was a great deal of intellectual unrest in Germany, but most of it was rendered innocuous by the patronage of petty princes. Lessing left reforms to the slow process of the ages; Kant expected them from governments, not from the people; and Goethe was looking backward, not to the future, not to the universal liberation of man. English and French conditions are contrasted at great length and with remarkable insight; the doctrines of Adam Smith and the physiocrats; the principles and policy of Pitt; the radical literature of Paine, Mackintosh, Cowper, and

* HISTOIRE SOCIALISTE, 1789-1900. *Under the Supervision of Jean Jaurès. La Constituante, La Législative, La Convention. By M. Jaurès. Thermidor et Directoire. By M. Deville.* 5 vols. Paris: Jules Rouff and Company. 47 fr. 50.

Wordsworth, and the reactionary writings of Burke are carefully examined.

After the establishment of the constitution and the abolition of feudalism as a restrictive economic system, the social work of the Revolution was accomplished. Hence the history of the Revolution is the story of political struggle and party fortunes. War was declared to keep up revolutionary enthusiasm and to test the real attitude of the King suspected of treason to the nation. Louis XVI was found wanting; in the inevitable conflict between monarchy and the new principle of national sovereignty there was no compromise, and the King was sent to the scaffold. The innumerable party contests after the death of the King and during the Terror M. Jaurès attributes to no essential differences in economic principles nor clearly defined antagonism between the people and the bourgeoisie. In the contest for power one party appealed to the masses and the other to the middle class, but the fundamental economic theories of Robespierre did not differ from those of the Girondists. The revolutionary measures of the Terror had no economic foundation: they were therefore abnormal, and a reaction to an orderly bourgeoisie state was inevitable.

M. Deville in the fifth volume takes up the story at the fall of Robespierre and writes the history of the reaction and the government by the Directory. Tho he gives some attention to commerce and industry, political and military events naturally predominate, for the economic and social work of the Revolution was practically finished before 1794. The conflict with England for commercial supremacy engaged the energies of France, and domestic politics were party intrigues which culminated, to the great joy of the speculators and the traders, in the accession of Napoleon as First Consul.

Holding that history has a moral function, our authors draw some lessons from their researches into this period of turmoil. They advise the French people that professional militarism is a danger to the nation, that avoidable but none the less disastrous conflicts may be precipitated by the intrigues of ambitious leaders, that social revolutions are not made but can result only from a redistribution

of economic power which disintegrates the old order, and finally, that especially during a crisis leaders should avoid stirring up mob passions.

Islam in Conquest and Government

THE story of the way in which the sword of Islam won its vast dominion and is yet working havoc in Eastern Europe is told in a volume by Mr. Wollaston and a series of essays edited by Mr. Villari. The former work* is intended for the general reader rather than for the scholar. About half of it is devoted to a disjointed and perfunctory account of Mohammed and the conflict between the Cross and the Crescent. The historical part breaks off at the middle of the sixteenth century and the remaining centuries are dismissed with a page or two of generalities. More entertaining and useful are the concluding chapters, which deal with the principles and practices of Mohammedanism. The Koran is described and analyzed and the leading ideas on God, angels, resurrection, paradise, hell, prayer, alms, ceremonials and civil and criminal law are concisely stated. The famous Mecca pilgrimage and the sects of Islam are the subjects of the final chapters.

The second work† has a totally different theme and purpose. It is designed to furnish a description of the real conditions in European Turkey, to urge the importance of the Balkan question and to suggest policies for action. Mr. James Bryce writes the introductory chapters, in which he reviews the general situation. To this distinguished publicist the Eastern Question is the problem of discovering the best means of removing or mitigating the evils of Turkish government and facilitating the inevitable extinction of Ottoman rule in the Balkan regions. He has no faith in the possibilities of reform by Turkey, and proposes two solutions: the incorporation of oppressed nationalities into the territories of surrounding Christian Powers or their erection into independent States. While

* *THE SWORD OF ISLAM.* By Arthur N. Wollaston. New York: E. P. Dutton & Co., \$3.00.

† *THE BALKAN QUESTION.* Edited by Luigi Vitari. New York: E. P. Dutton & Co. \$3.00.

Mr. Bryce has no indiscriminate faith in the principle of nationality, he believes that there is more of promise in the recognition of it than in the extension of the sway of one or two huge military empires. All the essays in the collection are by writers qualified to speak on their respective topics. Mr. Pears, of the Consular Bar in Turkey, describes the government of that country; Mr. Bourchier discusses the attitude of the Balkan States toward the Macedonian situation; the history of Turkish reforms since the treaty of Berlin is reviewed by Mrs. Victoria Buxton. The races, religions, Turkish misrule and insurrectionary movements in Macedonia form the topics of three chapters by Luigi Villari, Dr. Tatarcheff and Mr. Frederick Moore. M. Valentine Chirol, the well-known writer on Eastern affairs, examines the attitude of European Powers in general toward the Balkan problem, while the policies of France and Italy in particular are described by M. Victor Bérard and an anonymous Italian Deputy. In conclusion, Mr. E. Hilton Young outlines a scheme of reform and Mr. Arthur Ponsonby pleads for the abandonment by Great Britain of the traditional policy of bolstering up the Ottoman Power. The burden of the book is that the Macedonian situation is unbearable, that Turkish government is as usual "atrocious" and that only a vigorous show of force will bring about a satisfactory reform or reconstruction. Taken as a whole the book is a valuable contribution to our literature on the Eastern question. To be sure, it is a piece of liberal propaganda and tells only one side of the story, but it is nevertheless a lucid explanation of a very complicated situation. It is highly probable, however, that the call for aid will fall on unhearing ears. There is no Gladstone in England now, and when the "Turkish atrocity" was mentioned in Parliament last winter Mr. Balfour dismissed interference as the gratuitous invitation to trouble. Germany is too happy advancing her economic interests in Turkey to risk offending the Emperor's friend and brother, the Sultan; Austria is interested, but is rather busy with domestic race questions, and Russia will be some time recovering from the effects of her engag-

ing occupation still further East. It is a fond but unhistorical tradition that nations intervene in the interests of humanity alone.

✱

The Gospel for India

The foremost merit of President Hall's *Barrows Lectures** is their supreme tact, their gracious Christian courtesies. It is by no means an easy assignment to be directed to go to the educational centers of India and present to cultured and convinced Hindus the essential doctrines of the Christian religion. It demands a clear and comprehensive grasp of one's own faith, an understanding of the exceedingly difficult and abstruse conceptions in which the Hindu mind is steeped, and, above all, patient and persistent effort to keep one's self in sympathy with a people from whom one is separated by age-old differences. That President Hall has performed this mission with signal success, that he was heard by learned Hindus with unflagging interest to the end, and that both Hindus and missionaries and Christians in America have united to secure him an immediate second appointment for a second course of lectures is exceedingly high praise, and makes one open the volume containing his lectures with earnest anticipations.

An impression from the first page, and one which continues to the last, is the superbly skillful approach to an audience which disagrees, and which is expected at the close still in large measure to disagree. Stopping just short of flattery, but never missing an opportunity of appreciation, the author keeps himself *en rapport* with his "learned hearers," and advances his Christian argument, never with apology that might o'erleap itself, yet never without utmost adaptation to the critical minds before him. If the savants of Calcutta and Lahore did not hear a great Christian philosopher, they at least came in contact with a true Christian gentleman and saw exemplified a Christianity which perhaps they failed to hear described.

For, to speak plainly, these Barrows

* *Christian Belief Interpreted by Christian Experience*: Lectures delivered in India, Ceylon, and Japan on the Barrows Foundation. By Charles Cuthbert Hall. Chicago: The University of Chicago Press. \$1.50.

lectures fail in the clear statement of essential Christianity as notably as they succeed in Christian courtesy and Christian spirit. They declare God as "Life in the utmost wealth of attributes, in the opulence of self-consciousness, in the infinitude of self-expression," and set forth as the object of Christian faith an "ineffable Unity" of "self-realizing, self-satisfying Personal Distinctions." One has but to ask himself what Zaccheus the publican and Peter the fisherman would have made of such declarations to realize how far this philosophical formulation of Christianity is removed from the thought of its founder. Despite, therefore, the "honors" that have justly come to the lecturer, and the conscientiousness of his "labors," and the "vigor" of his spirit, we find him guilty of certain "errours," as well in his conception of the essentials of Christianity as in the spelling of certain English words. The successful interpretation of Christianity must be by the true reading of its history and not by its mystification in the terms of the Hegelian philosophy.

Mr. Robert A. Hume, whose lectures on missions at Andover and other theological seminaries are published under the title *Missions from the Modern View*,* is a missionary of Ahmednagar, India, and a man of the same courteous gentleness and broad-minded tolerance as the last Haskell lecturer. He conceives Christianity as a growing religion, and accepts cordially and outspokenly many of the principles and conclusions of the newer theology. Yet, to judge from his enthusiasm, the "nerve of missions" has not been cut. He maintains, on the contrary, that "no one thing now causes more dislike to foreign missions among large numbers of the best Christians than the supposition that the average missionary believes and teaches to non-Christians that there is no salvation except for those who definitely express their faith in Christ." He speaks continually of "God's Hindu children," and describes phases of Hindu faith as that which God has taught the people of India hitherto. Especially suggestive is the chapter on what Christianity is likely to learn from contact with

the East, and the changes and developments it may undergo in the hands of the Eastern peoples. The concluding chapter is an account of a conversation of the missionary with an inquiring Hindu, setting forth in a graphic and interesting way the precise content and method of missionary preaching.

Chinese Life in Town and Country. Adapted from the French of Emile Bard by H. Twitchell. New York: G. P. Putnam's Sons. \$1.20.

Under the above title M. Bard has given in compact and readable form the impressions and knowledge gained during a four years' residence in the Middle Kingdom. The characteristic and chief value of the book is its freedom from bias. The author does not flatter the reader's pride by enlarging upon the weak spots in Oriental civilization and its inferiority to Occidental; neither does he indulge in the would-be cynical practice of extolling the East at the expense of the West. He takes the facts as they are, summarizes them skilfully and presents the results with the easy grace of a French man of letters. So well is the condensation performed that the work might be accepted as a handbook for the traveler; and so charming the writing that it might be approved as a bit of good summer reading. Most of his information has been gathered at first hand. For his other facts he depends properly upon the best authorities. Owing to this method, the little volume is singularly free from inaccuracies. The last chapter is devoted to an "Outline of the Nation's History," which summarizes the 4,500 years of its annals in 62 pages. It might have been better to have devoted the space to the subject of the book. The photographic illustrations have been selected with discrimination and good taste.

The Weird Picture. By John R. Carling. Boston: Little, Brown & Co. \$1.50.

A melodrama on paper; a fantastic mixture of mud artist, veiled lady, secret passage, mysterious disappearance, poisonous perfume and bloody murder. Those whose blood is yet uncurdled and whose detective sense has never been baffled by literary mystery might try this.

* *MISSIONS FROM THE MODERN VIEW.* By Robert A. Hume. With an Introduction by Charles Cuthbert Hall. New York: Fleming H. Revell Co. \$1.25.

Modern Masters of Pulpit Discourse. By William Chaver Wilkinson. New York: Funk & Wagnalls Co. \$1.50.

In this volume Professor Wilkinson, of the University of Chicago, has gathered from the *Homiletic Review*, *THE INDEPENDENT* and other journals a series of articles containing his personal impressions of great preachers of England, France and America, seventeen in all, including such names as Beecher, Talmage, Brooks, Newman, Spurgeon, Moody and Gunsaulus. Professor Wilkinson's sharp criticism of some revered personages and his keen analysis of some popular bits of pulpit rhetoric will offend certain sensitive individuals, but to disprove the justice of them will not be found easy.

Literary Notes.

A BOOK on gentlemanly dress and etiquette, entitled "Good Form for Men," by Charles Harcourt, is published by J. C. Winston, Philadelphia. (\$1.00).

....Mrs. Humphry Ward's great novel, "Sir George Tressady," first published ten years ago in two volumes, is now reissued by Macmillan in a single volume at \$1.50.

....Two little pocket reference books, one giving "Mottoes and Badges," of Families, Regiments, Colleges and States, and the other a biographical dictionary, "Who Was He"? are sold by Dutton & Co., New York. (50 cents).

...."The Handbook of Princeton," by John Rogers Williams (Grafton Press, New York, \$1.50), gives just the information wanted by the visitor to the University, and is well illustrated in line and half tone.

....The history of the Old Pine Street Presbyterian Church, from its founding, 140 years ago, to the present time, has been written by its eighteenth pastor, the Rev. Hughes Oliphant Gibbons. (Philadelphia: John C. Winston Company.)

....Dr. Morgan Dix's "History of the Parish of Trinity Church in the City of New York" has now reached its third volume, covering the rectorship of Dr. Hobart, 1816-1830. The inclusion of a number of letters and original documents gives the work a general historical value in addition to its ecclesiastical interest. (Putnam, \$5.00.)

....Those who wish to embroider their remarks with old saws and poetical quotations will find very handy two volumes published by

Putnam's Sons, New York, "Proverbs, Maxims and Phrases" and "Classified Quotations," a book of toasts and menu quotations. With one of these books in his pocket one can prepare an impromptu speech in short order. (\$3.50, full leather).

....The latest issues of Putnam's dainty little editions of French classics are Benjamin Constant's "Adolphe," with a preface by Paul Bourget, and Octave Feuillet's "Roman d'un Jeune Homme Pauvre," with a preface by Augustin Filon. (\$1.00, limp leather).

....A guide to the Italian and Spanish "Paintings of the Louvre," by Dr. Arthur Mahler, is published by Doubleday, Page & Co. (\$2.00). It contains 166 well printed illustrations, and gives a complete list and critical discussion of all the Italian and Spanish pictures down to the Renaissance exhibited in the Louvre galleries.

Pebbles

....A BUSINESS TALK.—"Miss de Simpson," said the young secretary of legation, "I have opened negotiations with your father upon the subject of—er—coming to see you oftener, with a view ultimately to forming an alliance, and he has responded favorably. May I ask if you will ratify the arrangement, as a *modus vivendi*?" "Mr. von Harris," answered the daughter of the eminent diplomat, "don't you think it would have been a more graceful recognition of my administrative entity if you had asked me first?"—*Chicago Tribune*.

....WON HIS BET.—General Miles, in company with a friend, was walking down Pennsylvania Avenue, when a person entirely unknown to the veteran soldier rushed up to him, and grasping his hand, said, warmly: "Well, Nelse, old boy, I'll bet anything you don't remember me!" "You win!" coldly and laconically replied Miles, as he released himself from the grasp of the stranger and resumed his walk.—*Woman's Home Companion*.

....Bishop Doane of Albany was at one time rector of an Episcopal church in Hartford, and the services at this church Mark Twain would occasionally attend. Twain one Sunday played a joke upon the rector. "Dr. Doane," he said at the end of the service, "I enjoyed your sermon this morning. I welcomed it like an old friend. I have, you know, a book at home containing every word of it." "You have not," said Dr. Doane. "I have so," said the humorist. "Well, send that book to me. I'd like to see it." "I'll send it," Twain replied. And he sent the next morning an unabridged dictionary to the rector.—*Hartford Post*.

Editorials

Accounting and Accountability

THESE are trying days for "the pillars of society," as Mr. Ibsen calls them. The function of a pillar is to hold up something, and a pillar of society is expected to hold up "the existing order." Now the most important structural part of the existing order is an oligarchical industrial organization. A major part of industrial capital is owned by a small minority of that group which is called "the business world." The individuals composing this minority used to be called "captains of industry." The designation is no longer sufficient. The captains have become monarchs of industry and no longer even constitutional monarchs. They are absolute monarchs.

It has always been the theory of these monarchs, big and little, that business must of necessity be conducted on other than a democratic basis. Their favorite defense of the existing order is that mills and railroads cannot be run by town-meeting methods. The joint stock corporation has served their purposes well as a contrivance to bring the investments of many individuals into one big pile. But they have found ways to prevent this heterogeneous lot of investors from becoming in any sense a democratic body. They have contrived from the first to rule it aristocratically or monarchically—of late to rule it absolutely.

So ruling, they have done what absolute monarchs always do: they have forgotten the distinction between "mine" and "thine"; they have grown oblivious of the rights and interests of those whose property and lives they hold in trust, and they have ceased to render a true and full account of their stewardship. So it has happened that this absolutist plan on which modern business is conducted, this existing order, which its beneficiaries have defended as not only the best possible, but even as the only possible order, turns out to be an arrangement on all fours with political absolutism—a system for the easy exploitation of the struggling and toiling subjects of these mighty and self-sufficient potentates.

In the light of this disclosure it has become difficult for the pillars to uphold the existing order without some shaking of the knees. They can no longer appeal to truth, to reason, or to common sense. The town-meeting plan of doing business may be clumsy, but it at least is fair and above-board. The monarchical plan turns out to be morally rotten. The pillars cannot fail to apprehend that as between a clumsy and wasteful system, which might possibly be improved upon, and a dishonest system, which robs and crushes, the mass of mankind will prefer the former.

This state of affairs provokes a radical question. We say a question, for while it is convenient to frame the issue in two questions, the two are at bottom one. How have the monarchs of industry acquired their absolute power? How have stockholders become a negligible quantity? The absolutist's answer to both of these questions is a reassertion of his original proposition, that democracy is unworkable in business. The two questions, therefore, resolve themselves into this one, namely: To what extent is democracy more unworkable in business than it is in politics?

The off-hand reply that most men offer is that business calls for mental grasp, resourcefulness, shrewdness, vigilance, and unfailing judgment, and that comparatively few individuals possess these qualifications. Are we then to acknowledge that these qualities are not called for in statecraft? Does it require talents more exceptional to manage the affairs of a railroad or of an insurance company than it does to manage the affairs of a commonwealth or of a nation? The suggestion is preposterous. "But," we are immediately told in explanation, "actual government is not conducted by the many." It is conducted as business is, by the selected few; and, as a rule, the selection in politics, as in business, is a sort of natural selection. Men do not become Presidents, or even Governors, until their executive ability has been demonstrated in minor offices.

This explanation accepted, the further question at once presents itself: In what,

then, does democracy in the political world consist? The answer is not far to seek. It consists in the accountability of the governing functionaries to the people which has entrusted them with office, and which may at stated intervals pass judgment upon them at the ballot box.

Here we come to the very heart of the matter. Are not the managers of business enterprises accountable to the body of stockholders as truly as executives are accountable to the people? Where lies the difference? Why are politics in fact democratic while business is in fact monarchical? Is it because in the joint stock corporation one man may hold more shares than all other stockholders collectively, and may out-vote them all, while in the State each elector has one vote and only one? This is indeed a vital difference, but it is not the only one, nor in our judgment the one that makes democracy unworkable in business.

Democracy succeeds in the State because in the political system accountability is enforced by a full and truthful accounting; that is to say, because the electorate obtains through the newspaper press and other organs of public discussion full knowledge of the actual conduct of government. Without this knowledge by the electorate accountability would cease, and democracy, in spite of universal suffrage, would immediately become in fact, whatever it continued to be in name, a monarchical absolutism. In business, on the contrary, there is no such knowledge in the possession of stockholders. There never has been. The transactions that make up business are still regarded for the most part as private and privileged. Often the most important decisions of managers are never made known to the body of stockholders. Books are imperfectly and even crookedly kept. Quarterly and annual statements do not enlighten. In a word, corporation accounts are not true and adequate disclosures of the conduct of corporation managers, and accountability is therefore not enforced by accounting.

When in the business world, as in the State, accountability is enforced by accounting, we shall hear no more about

the impossibility of democracy in the economic realm. The "existing order" will be a very different thing from what it is today.

✱

Campaign Fund Contributions

A LIFE insurance company's money ought not to be used for political purposes. Not a cent of it should be contributed to the fund of a political committee. In the case of the New York Life, not even the consent and approval of the company's directors or trustees was procured. In three Presidential campaigns nearly \$150,000 was given to the Republican committee, and the three contributions were made by the company's president entirely upon his own responsibility. He had no right to do this. We do not question his own explanation as to his motives, but his act was a breach of trust. The executor of an estate, or the president of a savings bank, who should so use the funds under his control, would be in the same position. If he had so used his own money, and had publicly urged policyholders to follow his example, he would have been clearly within his rights.

Policy-holders' money so expended should be restored to the company's treasury. Mr. Alton B. Parker, for many years the chief judge of New York's highest court, says that these contributions were unlawfully made. Others think that no law was violated. We should like to see the matter tested in the courts, in the suit of a policyholder or of the Attorney-General of the State.

The duty of the officers of savings banks, life insurance companies, and other fiduciary institutions, with respect to political contributions from their trust funds is, we think, very clearly defined. The money of other corporations should not be used in this way without the authority of a vote of the directors. In many corporations, having a large number of stockholders of various political affiliations, no money whatever should be given for partisan political purposes. Individuals, of course, may lawfully give of their own money as they please.

What is the duty of political committees? Surely, they ought not to solicit

contributions from life insurance companies or other corporations of a fiduciary character, and publicity should be required by law for all their receipts and expenditures. In his first message after last November's election Mr. Roosevelt recommended the enactment of a law on this subject:

"It should go as far as under the Constitution it is possible to go, and should include severe penalties against him who gives or receives a bribe intended to influence his act or opinion as an elector; and provisions for the publication not only of the expenditures for nominations and elections of all candidates, *but also of all contributions received and expenditures made by political committees.*"

Legislation, both Federal and State, is needed. It is easy to see what corporations and committees ought to do, but there must be laws to keep them within the limits suggested by good morals and a due regard for the public welfare. In several States there are laws relating to political contributions and the expenditures of candidates and committees. There should be such a law in every State, and the local regulations should be supplemented by a Federal statute. In the Legislature of New York, a bill for such an act was passed last winter in the Senate, but not in the House. So far as the election of members of the national House is concerned, Congress has power to deal effectively with the question.

It has been said that a presidential campaign cannot be reached by an act of Congress, because, while the President is a Federal officer, the electors by whom he is chosen are officers of the States and are elected as such. But this was not regarded as a formidable obstacle by the late Senator Hoar and his associates in the Senate Committee on Privileges and Elections, four years ago, when with one accord they approved and reported Senator Chandler's bill "to prohibit corporations from making money contributions in connection with political elections."

That bill, upon which no further action was taken, made it "unlawful for any national bank, or any corporation engaged in interstate or foreign commerce, or any corporation organized by any laws of Congress, to make a money contribution in connection with any election to any political office," and "for any corporation whatever" to make such a

contribution "in connection with any election at which a Representative in Congress is to be voted for." As presidential electors are chosen at the same time with Representatives, this proposed law would, the friends of the bill thought, restrain all corporations from contributing money to the presidential campaign fund. Such was the opinion of Mr. Hoar (chairman of the Judiciary Committee), and two of his associates in the Elections Committee who are now on the bench.

During the coming winter, at Washington and at the State capitals, legislation requiring publicity for the receipts and the expenditures of political committees, and making it unlawful for corporations to contribute to campaign funds, should be carefully considered. It is not necessary, and it would be unjust, to assume that any considerable part of the party campaign funds is expended in the bribing of voters. But we are of the opinion that politics in this country would be much cleaner, and that the public welfare would be promoted, if full publicity were required and if corporations were forbidden by law to put their money in the campaign treasuries.

October Wives and Husbands

October and June are the two most popular months for marriages. Therefore, some advice to the newly-wedded may be pertinent—if advice were not always impertinent! We would call the attention of these very dear young people, loved by all the world, to the fact that there are two kinds of love; one, so exacting, jealous, and consuming that its baleful flames scorch everything they touch; the other, a wiser love tho not less warm, whose cheerful fireside blaze kept within bounds, hurts nobody. There is a jealousy, not at all of the vulgar sort, which wearies and exasperates altho it claims to be a proof of love. It is jealous of everybody and of everything; of all past experiences and acquaintances; of one's profession, occupation or pre-occupation; of every absorbing pursuit, and abstracted thought. It demands, "All, all, all or nothing!!" and altho it frequently by its exactions attenuates the unswerving love of its objects to nothing, it is not satisfied. Much talk of "sharing the lives of

others," whether by parents, philanthropists, socialists, or lovers, is pernicious nonsense. Lives may be shared to a certain point, and there the process should stop. Each human soul has a right to its reserves and delicacies and decencies. There are places where "angels fear to tread," and justly so, but where our friends try to rush in. A soul should have a holy of holies where the high priest of love alone may enter, and he not more often than once a year. The flame of a pure passion may burn away veils of reserve, but the inner altar ought to remain draped to even the nearest and dearest of friends.

It is the attempt to penetrate to the innermost shrine made in the name of love, which so soon causes disenchantment and disillusion. There is a love which is ever too exigent in its claims and there is a wiser love which gives the largest liberty.

One love is the sort which craves constant companionship, which will never leave the loved one alone. But the beloved *likes* to be alone sometimes, and really needs it. "Watchful love" is the spirit that drives young people to desperation, often, by its unceasing surveillance. Not that they wish to do anything wrong—but they justly resent being spied upon, and having their hearts and minds pried open to see what is in them. It is the feeling that sends the mother to her room in tears when the boy trots off to school for the first time alone. We excuse it in her, because we know, as she knows, that she is losing her baby who was so sweet and dear, but it is less easy to excuse the young wife who acts in the same way when her husband starts off for the office, with his business face, after the return from their wedding journey. Dear girl! you can "share his life" all the better for not perching around and watching it all of the time. Allow him a few dignified reserves. We know you would like to be a mouse in the wall of the office or in your husband's pocket, all day, just to look at the dear boy at work—but it is better for both that you cannot.

The selfish, jealous, exacting type of love is not confined to the feminine half of our October newly-wedded couples.

by any means. If she wishes she could read all his letters and thoughts, he wants to know every crystal fact of her former life—that incredible time before they knew each other. He wants to share her present life, also, in its minutest details. Friend Benedick, leave some refinements of concealment to her discretion. Do not brush the bloom from her present infatuated fancies or past innocent maiden memories by constant handling.

Many unpleasant and disagreeable things in life have their root in love. The inquiry: "What did you do with that last 25 cents I gave you?" may be prompted by his desire to share every experience of her life, however trivial—but it does not sound that way. Intimacy without courteous reticence to soften it, is unbearable. A mother should knock at her child's door before entering as soon as the child is old enough to be grateful for the courtesy. Husbands and wives should observe every rule of good breeding, in their life, necessarily so intimate. A great love must be a wise love as well in order to grow and broaden and deepen with the years. And it must be a courteous one. Be interested, but not prying; give and exact liberty of action and then the beauty of these golden October days will be only a shadow of the supreme loveliness of family life.

American Science and Discovery

In an address in Berlin, after his return from the Exposition at St. Louis, Professor Waldeyer, of the University of Berlin, showed much familiarity with American scholarship in science and discovery, and gave the highest recognition to our progress.

He told his German hearers that it is an error to suppose that in this country material interests are supreme. He reminded them of our great universities and public libraries, freely used by all classes; of our public schools, which reach the highest university; our museums, collections and laboratories, which equal or excel anything in Germany. Professor Waldeyer finds that in climate and in racial types America is no whit behind Europe, and accordingly our scholars

have taken high rank as biologists, economists, jurists, philologists, philosophers and historians.

He is especially impressed with the magnificent equipment of our scientific institutes, of the great universities, and of the Smithsonian Institute. He calls attention to the provision for the study of biology, which is his own special department:

"I find that over there they stand equal to us in all essential points, in the kind and method of scientific work, in the value of the same, in the equipment and arrangement of laboratories, in materials for instruction and in the form and mode of imparting knowledge. Visit the great workshop of Alexander Agassiz in Cambridge; the anatomical institutes of Huntington in New York, at Columbia University, and of Mall in Baltimore; the Peabody Museum, so brilliantly filled by Marsh, at Yale; the anthropological museum in New York, etc., and you will say that I am right. J. Orth has recently made a similar statement. In a few years the new buildings of the Medical School at Harvard will be ready; . . . it may be prophesied that in them we shall have the best to be seen anywhere."

But yet, lest we should be too vain of our young advancement, Professor Waldeyer points out where Europe still has kept the great advantage.

All these, he says, are the discoveries of the last fifty years, many of them of the past few years. And what can America show to equal them? We are not sure that he gives America full credit for some of these discoveries or applications; but it is a fact that the more important and revolutionizing discoveries of the last fifty years have come from the laboratories of Europe rather than from America, altho we had a fully equal chance for them. If the telegraph and telephone are American, they hardly balance the more numerous discoveries which Professor Waldeyer mentions. We have nothing to set against Darwin's work in the theory of the origin of species, much as we have done to develop or perfect it. Indeed, we may say—and it is a confession—that our students have been more busy in developing and perfecting, or even repeating, the work of their European teachers than they have been in working out new and larger principles which are fruitful of great results. They have been unexpectedly lacking in originality and enterprise. It is leaders we want in science, not men

so busy in teaching classes that they have no time for investigation or for large generalizations. What American chemist can we put by the side of half a dozen Europeans. We have our great collectors in botany and paleontology, who have vastly enriched the knowledge of their science, but hardly do they count with the philosophers who seek for laws, rather than enumeration of species, out of which the greater philosopher will deduce the laws of life.

But, as we so often say, we are yet a young country. The outlook is most hopeful. Our young scholars need to go to European universities less to learn their science than to enlarge their acquaintance of men and methods and language and gain stimulus for research.

A Victory for Arbitration

If Professor Waldeyer tells us that America has made very few great discoveries in science, we may console ourselves with the knowledge that the greatest discovery and invention in statecraft of modern times came from America. It is The Hague Court of Arbitration. It is an institution of American birth set up in the Netherlands, and its wings overshadow the world. The last magnificent victory of arbitration is achieved, in the settlement reached between Norway and Sweden. The two nations agree that for the period of ten years, all questions that do not affect the integrity, independence, or vital interests of either, shall be finally settled by the Court of The Hague. So far there is nothing new; everything is left in the hands of the two powers in a quarrel; but either could declare that it was a vital matter that was in dispute. That is the nature of the treaties of arbitration that Great Britain has indulged in with France and other European States. It is very pretty, but it means comparatively little, because there is no sort of dispute which can arise that may not be regarded as a matter of honor, to be backed with the cry "Fifty-four, forty or fight!"

But Sweden and Norway have taken another step forward. They have voluntarily and in advance absolved them-

selves from this method of escaping arbitration. They have agreed that if there be a difference between the two powers, as to whether it be such a vital matter of honor, it shall be left to The Hague Court to decide this also. Thus either party can insist that they both go to The Hague. This is further than any arbitration treaty has gone before, and it is an example of immense value, and one, too, that is safe.

For what are the questions that so affect national honor that they cannot be referred to The Hague? Are they questions of territorial boundary? Such disputes have often been referred with perfect safety and justice. Is it independence? But who can imagine an independent nation's independence denied or threatened until after war? Or should a weak nation like Rumania or Korea be threatened by a stronger, like Russia or Japan, its cause would be safer in the Court of The Hague than in the field of war. The time will come, we trust, when the next step will be taken, and nations shall agree that all questions in dispute shall be referred to The Hague, with no reservation; and then cannon and cruisers will become archæological curiosities, the monuments of a past inconceivably barbarous age.

Educating Adults

MODERN progress is in no way more invaluable than in its grasp of the idea that, if the State shall make provision for the training of those between infancy and twenty-one years of age, it should not stop at that point; but should afford the elements of free instruction and culture for all persons through all their years. The school thus becomes a life affair; not all of it inside schoolhouses, but much of it there even for those of old age. This is not a new idea, but is as old as Plato and as Solomon. It is the rejuvenation of a principle that was likely to be submerged by the very fecundity and richness of inventions for teaching the young. Froebel's best thought was not in connection with the kindergarten, but in relation to the education of adults, and making the whole community a unit of intellectual and moral co-operation. He insisted that edu-

cation "never ends"—either at the home or in the schoolhouse. Our own Commissioner, W. T. Harris, never tires of insisting that the school should be considered, not as an entity by itself, but as a supplement to home life.

The experiment was made six years ago of using the schoolhouses in New York City for evening lectures—for those of all ages. One hundred and eighty-six lectures were given the first year, to an attendance of about twenty thousand persons. The attendance at these same schools which closed their lectures last June, was over one million, and the lectures reached the schedule of 4,645. They had been largely systematic and consecutive. Topics of public and immediate interest had been taken up; such as Conditions Favoring Tuberculosis, and First Aid to the Injured—questions of household importance. History was a favorite topic, especially American History; but human evolution in all its phases had been considered. Electricity and general physics were considered, as bringing the common people into a better understanding of the new power of the age. Municipal duties, protection and free trade, labor and capital, municipal ownership, were all discussed. The ablest teachers in America had been subsidized for help; among the rest President Eliot, and Superintendent Maxwell, with professors of Columbia and other universities.

In one sense this is university extension, altho, instead of carrying food to the people, the people are invited to come to the food. Other cities have expanded the same conception, laying emphasis upon local needs. The aim has been to keep in full key with people of moderate information and intelligence. Among the attendants generally reported are "apprentices, sewing women, newsboys and day laborers." One attendant in the New York Schools writes that the result has been for him a great uplift of his whole being that he never dreamed of. "In a nutshell, I have outgrown myself." This is about what all education should aim at, to make the pupil of any age outgrow himself. Dr. Leipziger reports letters of appreciation from the attendants of one Lecture Center as including one carpenter seventy-

years of age, a painter sixty-four years old, housekeepers, bookkeepers and others from fifty to eighty years of age. The result is shown in many ways beside the help that it gives to individuals; affecting quite as surely and wholesomely homes, and the whole community.

In the country the application of education to adults can even more easily be assured. The town school building is central; it ought to be, and, before long, it will be a garden school. From its peculiar relation to the whole community influences will ray out to homes to make them more beautiful, and to make more ethical public sentiment. Schools of this sort will be the center of influence of the township, and the natural source of authority for isolated people. It is found that evening lectures are well patronized, while evening schools are less needed and called for than in the cities. Farmers' boys do not require such instruction as the trade boys of the cities stand in need of. Library work will always constitute a marked feature where population is scattered. We have only as yet got a glimpse of what the new school is going to be as a community affair, but we see enough to know that it is to affect the adult population quite as strongly as the children.

Man's last years logically should be his best years. They should be full, not only of accumulated experiences, but of knowledge; and with these an uplifting capacity. Old age will come more slowly to one who is always keeping step with his age. The world has no real faith in the doctrine that it must retire from its active list all those who have reached the age of thirty-five or forty. Even our Aryan ancestors, of three thousand years ago, drew the line at fifty—at which age the citizen became a "forest dweller," that is an instructor of rightness and an example of virtue. We are not only lengthening infancy, but greatly extending mid-age, while old age is pushed beyond the eighties. It is just that the schools should recognize this tendency and open their doors to all periods of life. Put Cicero's "Essay on Old Age" into the schools as a text book. Encourage the citizen to retain his youth, and by no vice to devitalize himself. Here the school and the church meet to-

gether, for the central thought of Christ was, I came that ye might have more life. An opportunity for the richest and fullest life is what society ought to insure every citizen. The best pension for old age is accumulated and accumulating wisdom.

The Grange in Politics

No organization outside of politics has ever secured a position of such social and political import as the Grange. The fact that it is national and rapidly increasing its membership makes its utterances of peculiar import. The National Grange has recently approved and adopted a very remarkable report of its legislative committee. This report presents briefly those matters which the Grange desires shall be acted upon by Congress. A careful study of the points taken will convince an unprejudiced reader that the committee was at the same time conservative and radical. It will be easily granted also that great wisdom has been shown in the statement of the questions considered. The document altogether may be set down as one of the ablest and most judicious public papers of the present day. It seems quite possible to do a large amount of our social discussion apart from political campaigning—divorced from office-seeking. We shall observe that the questions considered are commercial or agricultural, or are both of these; and in all cases industrial. Most of them should never enter the field of partisan debate.

It must be remembered that rural free mail delivery was in the first place secured largely through the influence of the Grange. It is now desired that no stop be put to the extension until every square mile of the United States be covered. The revolution already worked is the most remarkable in the social history of America. Over two hundred thousand miles are daily traversed by the carriers; but as yet they do not reach over one-seventh of the rural population.

The establishment of postal savings banks has been repeatedly urged by THE INDEPENDENT. We are still strongly convinced that this economic measure

is the most important that can possibly be enacted for the welfare of the poorer population in our cities, and for the scattered rural population, which does not easily reach the ordinary savings bank with its dimes and pennies. Character as well as business prosperity depends very greatly upon a bank account and a habit of saving. The National Grange lays great emphasis on this subject. It indorses no particular bill, but desires that Congress take up the subject at once and give us needed legislation.

The election of United States Senators by the direct vote of the people seems so rational a measure and so much demanded by political history that we do not wonder that public sentiment is developing in favor of such a measure and that the Grange indorses it. The House of Representatives has acted favorably on the proposition on two occasions and many of the State Legislatures are on record in its favor. There is a very general conviction that the removal of this election from our State capitols would tend enormously to the purification of our legislative bodies.

Concerning the regulation of corporations, the Grange conceives that the wisest course would be an Amendment to the Constitution granting Congress more extended power of control. It would not disturb the most profitable use of capital in legitimate business; but would bring huge combinations under such control as to prevent fraud. It is evident that the platform stumbles at this point and covers a great financial problem with confusion of words. The solution of the relation of corporate capital to the public is not yet found.

To enlarge the duties and powers of the Interstate Commerce Commission is most reasonable. The Commission as at present organized is powerless to enforce such rules in regard to interstate traffic as have been found essential to the business prosperity of the country—rules that at the establishment of the Commission it was supposed could be enforced. A bill to remedy this matter has been before Congress and should be passed.

Doubtless a subject of vital impor-

tance to the people of the United States, tho. the evils may be exaggerated, is that of preventing the adulteration of foods. Repeated investigation shows that many articles of food that undergo transformation after they leave the hands of the farmer suffer adulteration. Some of these foods reach the consumer in a state highly dangerous to health, if not to life. It is not a question that concerns simply protecting the manufacturers of honest products from the misbranding and false naming of adulterated goods but the protection of the great body of consumers from wasting their money on articles of an inferior or deleterious quality. The Grange has placed much emphasis on this important question.

Besides indorsing the speedy construction of an Isthmian Canal, the Grange demands national aid in the building of public highways, and the construction of a ship canal from the Mississippi River, by way of the Great Lakes, to the Atlantic Ocean. Appropriations for building roads will meet with a good deal of opposition from judicious legislators, but the construction of a ship canal is meeting the approval of all classes and industries. The Gulf of Mexico has become the American Mediterranean. New Orleans and Galveston are rivaling New York and Philadelphia as export cities. Six great lines of railroad carry the freight of the Northwest down the valley, instead of sending it to the seaboard, as formerly. The Great Lake system is tapped by Canadian waterways, so that by twenty more miles of deep waterway lake boats can go directly to the ocean. The Atlantic States are deeply concerned in a ship canal.

The Grange is wise also in the emphasis which it places on the extension of foreign markets. The Agricultural Department at Washington is doing a vast deal to make our products more familiar in the markets of the world. Our apples and cereals are now reaching the Oriental markets from the Pacific Coast almost as freely as the European markets to the East. Secretary Wilson tells us that up to the present time the trade balance in favor of the United States is more than two-thirds due to the shipments made by our farmers. It is true

that manufacturers are also learning the same lesson and competing all around the globe; but the farmers are far in the lead, and it is probable that they will stay there for some time to come.

The Guilty Beef Packers

The four officers of one of the Chicago beef companies who pleaded guilty last week were associated with the other defendants in the Beef Trust case, but had not been indicted for violating the law as to combinations in restraint of trade. In obedience to the injunction they had withdrawn from the combination, and therefore were entitled to some consideration. It was for soliciting and receiving freight rebates that they had been indicted. If they were guilty, it follows that the six railroad companies that gave them rebates are also guilty. These companies are to be prosecuted. The conviction of these four defendants proves, the opponents of Mr. Roosevelt's railroad rate policy are saying, that there is now law enough to deal with the evils which he has attacked. This is not true. There is law enough for the prosecution of those who receive or give rebates, altho the penalties may be too light. But these laws do not provide remedies for the evils due to the use of private car lines and terminal tracks, or for a prompt substitution of a reasonable open rate for an open rate found to be unreasonable and unjust.

Co-operation and Competition.

In his testimony—perhaps we had better call it his speeches—before the committee investigating the insurance companies, Mr. Perkins, Vice-President of the New York Life Insurance Company, and also of the firm of J. P. Morgan & Co., put into terse and emphatic language a theory of political economy and finance which the great leaders of finance have pretty thoroly adopted, but which other people do not yet accept. He said:

"Competition is no longer the life of trade. That old-fashioned theory has been exploded. Co-operation is the life of trade now. The life insurance companies are the biggest syndicates in the world. Whether it is Vanderbilt who takes out a \$1,000,000 policy or

the man who takes out \$1,000, the money all goes into the same treasury."

Doubtless there is truth in this statement. At any rate, co-operation it is that rules business in this country now, as all over the world. Syndicates and trusts grow larger every day, and the field of competition is narrowing. We began it politically by shutting out foreign competition against our own products, and now the trusts shut out the small producers, and tell us it is for our advantage. Laborers tell us the same thing, that competition must go, and that co-operation is the only protection of labor. Each year shows us larger combinations in both production and labor, larger syndicates, bigger trusts, huger labor unions. What will be the end of it? Is it well to limit the reach of co-operation, so as to retain place for competition also; or shall we go on to the end, when all the people and all the production are united in a single force, which can be nothing less than the National Government, which can be nothing less than Socialism?

The treasurer of the New York Life Insurance Company, Mr. Edward D. Randolph, wishes us to correct a statement in which his name was included with those who argued strongly that they have a right as individuals to take a profit, by means of their official knowledge, from financial operations in which the company is engaged. He calls our attention to the following extract from his testimony before the committee, which we are glad to publish to his credit:

"I have never had any participation in any syndicate, either connected with the company or at any time. I have never been in any syndicate. I have never derived a penny of profit in any name or form from the company except my salary. I have never had a speculative interest either inside the company or outside the company during my entire connection with the company. My salary has been my sole source of revenue and my sole receipt of revenue of every kind from the company."

To General Porter, our late very distinguished and eminent Ambassador to France, we owe an apology for the doubt we expressed as to the identity of the body which he claimed to be that of Paul Jones, and for consequently underestimating the debt of gratitude our people

owe to him for his patriotic and successful efforts to find the body and secure it for interment in the United States. No one now can reasonably entertain a doubt that the identification of the body was thoro and complete and satisfies every possible historical and scientific test; and that General Porter deserves the lasting gratitude of the American people for bringing back to American soil the greatest American hero, who died and was buried abroad.

A hundred protests from organizations of every sort have gone to the Mikado against approving the treaty. But a hundred thousand fools do not balance the four wise old statesmen who concluded that just now peace is better than war, and that good fortune must not be trusted too far. It was an ancient Eastern king who threw into the sea his most precious jewel because he was terrified by his prolonged good fortune, and who, when it was brought him the next day in the stomach of a fish, took it as a warning of the terrible calamity that followed. The Japanese may not be more superstitious than other people, but they did well to stop before the tide turned against them.

We have heard much of Belgian cruelty to the natives in the Congo Free State; and it has been charged that the native rebellion in German West Africa was started by the cruelty of the German officials; and now we have the arraignment by Count de Brazza of the Governor-General of the French Congo, said to have hung up women by their feet till they died, and responsible for the death of an enormous number of natives. And Count de Brazza is noted for the humanity with which he treated the natives in his explorations. It is so hard, it seems, for white Christians to think of people of other races as equal human beings.

As long suspected by all but the most adventurous scholars, we shall have to give up the pleasant notion that the ruins found in Rhodesia are the remains of works erected by the Phenician traders.

A careful investigation, reported by Mr. Randall McIver before the British Association at its meeting in Bulawayo, showed that these were not Solomon's mines, but that the ruins were the work of natives, who had a strong kingdom some five hundred years ago. Thus the pretty rainbows pass away.

Under the new law, all children in Pennsylvania must go to school until they are 14 years old, and only by special exception from the school superintendent can they be kept from school between 14 and 16 years of age. Farmers can no more keep their children home to work in the fields than those in the city can send them to the factories. It is an excellent result of the law that it has increased by ten per cent. the attendance in the schools.

Is it a competent public school system which allows that in one of the largest and best known cities of our Union, for an excluded third of her children no teaching is provided, beyond the fifth grade? Is it strange that in that city the number of pupils who attend such schools is considerably less than it was eighteen years ago?

President Castro, of Venezuela, seems to have a fine faculty of getting into trouble. We shall be glad to let France take a hand with the President-Dictator; and we hardly expect that the United States will be particularly eager to help Venezuela again out of her difficulty.

Verily China is moving fast in the road of progress. She has discovered anarchists, and has annexed the bank as a political engine. American sympathy will go to our old friend, Wu Ting-fang, who was one of the company injured by the explosion.

That is special legislation by which, under a new act, the races may be separated in the public schools of Kansas City, Kan., and we do not wonder that its constitutionality is to be tested in the courts.

Insurance

The Insurance Investigation

ADDITIONAL details regarding political campaign contributions on the part of the New York Life were brought out last week. According to testimony furnished by President John A. McCall, not only ex-Judge Parker, but the Chairmen of the Democratic National and State committees, as well as other friends of the Democratic candidate for President, solicited financial contributions to their campaign fund last fall. Mr. McCall is reported to have said:

"My life was made weary by the Democratic candidates chasing me for money in that campaign. Some of the very men who today are being interviewed in the papers and are denouncing those men who contribute to campaigns, their shadows were crossing my path every step I took, looking for money. One—the candidate himself, Parker; the Chairman of the Democratic National Committee, if he should show us his books for that corporation money, as Chairman of the Democratic State Committee—it would give you a fit. He never rejected a dollar in the world. He would take every dollar that was paid to him."

This statement when shown to Judge Parker was denied by him in the following language:

"My attention has been called to certain testimony said to have been given today by Mr. John A. McCall while a witness before the Insurance Investigating Committee in reply to Mr. Hughes' question whether he thought 'that in 1904 the interests of the policy holders were so seriously endangered that the company ought to contribute.'"

"It is evident that Mr. McCall was laboring under great excitement in making his reply, for it is very incoherent, but if his answer is intended to convey the impression that in the campaign of 1904 I, either directly or indirectly, solicited from him or his corporation, or any other corporation, any money or valuable thing, his statement is absolutely false."

"On the contrary, I repeat now what I said before the election, that I expressly notified and directed the Chairman of the Executive Committee of the National Committee that no money should be received from corporations."

William F. Sheehan, who was Chairman of the Executive Committee of the Democratic National Committee in the last campaign, said emphatically concerning Mr. McCall's charges:

"There was not a single man connected with the Democratic National campaign that solicited a dollar from Mr. McCall. If any such person made any such solicitation Mr. McCall should name him."

The disclosures to which reference has just been made, as well as those concerning syndicates the plan and scope of whose operations were explained in THE INDEPENDENT last week, were brought to the attention of the convention of the National Association of Life Underwriters at a session held at Hartford on September 20th, and a direct censure of certain officials of companies whose methods have been laid bare by testimony given before Commissioner Armstrong was narrowly averted through the adjournment of the convention.

The Equitable replaced the New York Life "on the rack," and operations of three syndicates not reported by Mr. Frick or Superintendent Hendricks were discovered. More transactions of "James H. Hyde and associates" were also brought to light.

The Life Insurance Companies and Yellow Fever

VARIOUS life insurance companies have done much toward the suppression of the recent outbreak of yellow fever in New Orleans. This has been accomplished not only by a campaign of education undertaken by the interested companies, but also by means of substantial money contributions on their part to the fever fund. Prominent among the companies who made cash contributions to the fever fund were the following: The Pacific Mutual, \$1,500; the New York Life and the Penn Mutual, \$1,000 each; and the Mutual Life, the New England Mutual, and the Virginia Life, \$500 each. A circular letter signed by Walter Parker, editor of the New Orleans *Vindicator*, sets forth that the fever epidemic has not increased the death rate of the Crescent City above the normal; that the city is cleaner today than it ever was; that in the opinion of J. H. White, who is in charge of the work being done by the United States Government toward suppressing the fever, the situation is quite as encouraging as could have been expected, and that in districts where measures to exterminate the contaminating mosquitoes have been promptly and scientifically applied, the fever scourge has speedily been completely overcome and the "plague" conquered.

Financial

Enlarged Erie System

THE tendency toward consolidation in the railway world is shown once more by the Erie's purchase of the Cincinnati, Hamilton & Dayton road. When J. P. Morgan & Co. bought control of the Dayton from the Hollins syndicate, a few weeks ago, some thought that the property thus acquired would be taken jointly by the Pennsylvania and the New York Central. But it all goes to the Erie, which thus increases the length of its lines from 2,315 to almost 6,000 miles. As the Dayton controls the Père Marquette and the Chicago, Cincinnati & Louisville, the enlarged Erie system will include a network of roads in Michigan, together with additional lines, touching many important points in Ohio, Indiana and Illinois.

The World's Wheat

THIS season's first European official estimate of the world's crop of wheat (that of the Hungarian Minister of Agriculture) has not been carefully prepared and is misleading. It makes the output of the importing countries 872,000,000 bushels, against 860,000,000 last year, and that of the surplus or exporting countries 2,315,000,000, against 2,248,000,000 in 1904. Still, the exportable surplus of these last-named countries is less by 20,000,000, according to this estimate, than it was last year. The most important errors are to be seen in the quantities allotted to those countries which have wheat to sell. Thus, our own crop is in the list at 675,000,000 (it will exceed 700,000,000) and our small crop of last year has been increased by 30,000,000. Russia's crop is estimated at 557,000,000, against 561,000,000 in 1904. But recent reports indicate a very large decrease this year in that country. Altho it is well known that Canada's output is much larger than ever before, it is entered in the tables at last year's figures. Our surplus for export this year is estimated at only 119,000,000, while last year's is placed at 167,000,000, altho the official reports made it only 43,000,000. Evidently, the whole series of estimates is of little or no value. Probably we shall be able to export not less than 175,000,000

bushels, and facts which the maker of the Hungarian tables overlooked indicate that deficiencies abroad will create a fair demand for the North American surplus.

Financial Items

....The world's production of tin in 1904 was 92,243 tons, and a little more than 40 per cent. of it was consumed in the United States.

....Kansas farmers will soon begin to harvest the most valuable crop of corn ever grown in the State. It is said to be worth \$75,000,000.

....Mexico's foreign trade report for the last fiscal year shows that the imports were \$85,761,081, of which \$48,303,167—an increase of nearly \$6,000,000—came from the United States.

....According to the most recent German statistics, there were in the world, on January 1st, 537,105 miles of railroad, valued at \$43,000,000,000. America's share was 270,386 miles, and Europe's 187,776.

....Reports from Alaska say that a mining expert has found on the Tanana and White Rivers enormous deposits of copper, the formation in some places resembling that of the Lake Superior mines, while in others the pure metal appears in slabs and ledges.

....Dividends announced:

Amer. Woolen Co. (Preferred), quarterly, $1\frac{3}{4}$ per cent., payable October 16th.

New York Central & H. R. R. R., $1\frac{1}{4}$ per cent., payable October 16th.

New York Air Brake Co. (quarterly), 2 per cent., payable October 17th.

Amer. Telephone & Tel. Co., \$1.50 per share, payable October 16th.

Union Typewriter Co. (1st Preferred), $3\frac{1}{2}$ per cent., Payable October 2d.

Union Typewriter Co. (2d Preferred), 4 per cent., payable October 2d.

Union Typewriter Co. (Common), 3 per cent., payable October 2d.

Buffalo & Susq. R. R. Co. (Common, quarterly), $1\frac{1}{4}$ per cent., payable October 2d.

Westinghouse Elect. & Mfg. Co. (Preferred), $2\frac{1}{2}$ per cent., payable October 10th.

Nat'l Park Bank (quarterly), 4 per cent., payable October 2d.

Am. Chicle Co. (Preferred, quarterly), $1\frac{1}{2}$ per cent., payable September 30th.

Am. Chicle Co. (Common), 1 per cent., payable October 20th.

Southern Pacific Co., interest on various bonds, payable October 2d.

The Independent

VOL. LIX

NEW YORK, THURSDAY, OCTOBER 5, 1905

No. 2966

Survey of the World

The Railway Rate Question

After beginning his journey around the world, Mr. Bryan addressed to President Roosevelt an open letter commending him for his determination to insist upon railway rate legislation. "You have," said he, "the contest of your life before you, and I desire to render you all the assistance in my power." The railroad magnates, he continued, expected to prevent the passage of the desired bill. "The railroads have been at work all summer circulating literature against railroad legislation, and the Senate contains a number of members so intimately connected with railroad interests that they cannot be expected to take the people's side":

"The railroads will try to persuade you; if they fail in this will try to scare you; if they fail in this, also, they will try to defeat your recommendation. It will embarrass you to have strong party leaders against you; you may even be embarrassed by having so many Democrats co-operating with you; but you must reconcile yourself to both. In this fight your strength lies in the fact that you have a large majority of the voters of all parties with you. Pass over the railroad representatives and appeal to the people. Compel the opponents of railroad legislation to meet the issue in the open. There is no logical or even plausible argument against the legislation which you recommend. Extortion in rates, unfairness in discrimination against persons, discrimination against places, midnight tariffs and rebates galore—all these iniquities have resulted from lack of regulation. They are intolerable and must be stopped. Will you use the great influence of your high office to secure the regulation now, or will you leave the honor to a successor?"

The Democrats, if they had no higher purpose than to secure control of the offices, might wish the President to lead the

railroad element of his party, Mr. Bryan added, but they were citizens first and Democrats afterward—more interested in securing needed reforms than in securing credit for them:

"If in your fight you deem it wise to attack the Trusts you will find that they have few friends—none worth cultivating. If you are willing to help reduce the tariff where it shelters a Trust you will find the Democrats ready to aid you, and with them an increasing number of Republicans. If, encouraged by the success of your efforts in the anthracite strike, you decide to urge the establishment of a permanent board for the arbitration of differences between labor and capital, you will find a growing force behind you.

"Stand by your guns! You have developed a reform element in the Republican party; you must lead it or suffer the humiliation of seeing the leadership pass to some one else. Your words have excited great expectations which must be met, for you will be measured by your own words. Go forward; you owe it to yourself, you owe it to your party, and more than all, you owe it to your country."

—On the other hand, Mr. Richard Olney, former President Cleveland's Secretary of State, has published in one of the periodicals an argument against legislation empowering the Government to make rates, pointing out what seem to him to be the economic and commercial objections, and adding that the proposition presents legal and Constitutional difficulties of a most serious character. Mr. William E. Chandler, formerly Senator from New Hampshire, has published a series of letters in which, while advocating the President's policy, he predicts the President's defeat in the Senate by "the money power." Testifying before the Commission last week, two railroad presidents, Mr. Stickney and Mr. Ripley,

asserted that the beef packers, owing to the concentration of their interests and the magnitude of their business, were able to dictate rates to the railway companies, thus securing rates far below those set forth in the published schedules.

More Convictions in Land Cases

✱
Congressman John N. Williamson, of Oregon; Dr. Van Gessner (his partner in the live stock business), and Marion R. Biggs, formerly United States Commissioner at Prineville and now an attorney in that place, were found guilty by a jury in Portland last week of conspiracy to suborn perjury by inducing persons to file fraudulently on Government land, and by hiring them to do so, under an agreement that these persons would afterward convey title to Williamson and Van Gessner. This was the third trial of these defendants, the first and second having ended in jury

disagreements. The other member of the House from Oregon, Binger Herrman, formerly Commissioner of the General Land Office at Washington, will soon be tried on similar charges, having been indicted in Oregon and also in the District of Columbia. The case of Senator Mitchell (recently convicted at Portland) is before the Supreme Court on appeal. Speaking of Williamson and his associates, and of the sentences to be imposed, Secretary Hitchcock said last week:

"I hope that they will be given the limit of the law. Whenever a little fellow who is hungry or in need is convicted of a crime, no mercy is shown to him. I don't know why any mercy should be shown to public officers who wilfully and knowingly violate a public trust. These men did these things with their eyes open. The crime was premeditated. They deliberately went about the work of enriching themselves at the expense of the people, and their conduct was disgraceful. We are only beginning our war on this class of criminals. I have reason to believe that the extent of this offending has been very great. We have many men indicted in Idaho, New Mexico and elsewhere. We intend to pursue the investigation to the end, no matter whom it strikes."

Additional indictments were announced on Monday last, the men so accused being E. N. Wakefield, formerly a partner of Williamson; Charles A. Graves, a surveyor; O. L. Parks and Robert B. Foster. They will be tried for conspiracy to obtain Government land by fraud.

Washington Topics

✱
The President left his summer home at Oyster Bay on the 30th, and returned to Washington, where his reception on Pennsylvania avenue was of an extraordinary character. No President at the end of his summer vacation had ever been welcomed there by so many people or with such expressions of admiration and respect. On the 18th inst. he will start for the South. After leaving St. Augustine he will visit Mobile, Tuskegee, Birmingham and Little Rock. New Orleans will be the last city on his list. He will be there on the 26th, and will avoid

A New Portrait of John Mitchell, President of the United Mine Workers of America. As Leader of the Anthracite Coal Miners He Will Demand an Eight Hour Day and Recognition of the Union After the Expiration, on April 1st Next, of the Existing Contracts.

all quarantine complications by returning to Washington by water on a warship.

—Letters which passed between the President and Senators Heyburn and Dubois, of Idaho, last summer have now been published. Mr. Heyburn opposed the President's policy as to the establishment of forest reserves in his State, and sent him some newspaper clippings concerning the local political aspect of the question. Mr. Roosevelt wrote in reply:

"When I can properly pay heed to political interests I will do so, but I will not for one moment sacrifice the interests of the people as a whole to the real or fancied interests of any individual or of any political faction. The Government policy in the establishment of the National forest reserves has been in effect for some time; its good results are already evident; it is a policy emphatically in the interests of the people as a whole, and especially the people of the West. I believe they cordially approve it, and I do not intend to abandon."

—The Democrats of Maryland, at their State Convention, declared by resolution that the restriction of negro suffrage by the Constitutional amendment upon which the people are to vote was the "only issue" of the present campaign. Senator Gorman said that if the amendment should be adopted he would retire from politics "and die a happy man."—Secretary Shaw intends to retire from the Cabinet in February next.—In Connecticut, Edwin W. Higgins, of Norwich, a lawyer, has been elected by the Republicans to the seat in the House made vacant by the election of Mr. Brandegee to the Senate.—At the recent annual meeting of the Association of Military Surgeons, in Detroit, the Seaman prize of \$500 for the best essay on "the prevention of disease in the army and the best method of accomplishing that result," was awarded to Major J. R. Kean, whose essay was a plea for the re-establishment of the canteen at army posts.—Speaking of our export trade with the Orient, Secretary Taft said, upon his return to San Francisco, that our merchants were at a disadvantage because they did not send the right goods or use suitable packages. Our consular service, he added, should be reorganized, being now painfully inadequate in comparison with that of Germany. He has since explained that he was not criticising the consular officers themselves, but had in mind their "miserable pay" and the poor and insignificant

establishments, with respect to employees and quarters, to which they were restricted by the action of Congress.

Chicago's Street Railways

The two street railway companies in Chicago, one being in the hands of a receiver, have made a proposition to the City Council. In return for a twenty years franchise they offer to waive all their claims to a ninety-nine years franchise and to reconstruct their entire plant. They will give transfers, substitute overhead electric trolley for cable (with underground trolley in the heart of the city), sprinkle and sweep the streets occupied by their tracks, pave a strip sixteen feet wide in those streets, make full reports of earnings, and pay for the grant as follows: Three per cent. of gross earnings the first three years, five per cent. for the following two years, seven per cent. for the ten years thereafter, and ten per cent. for the remainder of the term. The work of reconstruction is to be subject to the approval of the city's Commissioner of Public Works, and the city is to have the right to buy the entire system at some time (to be specified) before the expiration of the term for the cash value of the physical property and the value of the unexpired franchise as determined by arbitration. It is estimated that the city would, in twenty years, receive from \$28,000,000 to \$35,000,000, and that the companies would expend \$45,000,000 upon the improvements which they promise to make. Mayor Dunne vigorously opposes such a settlement of the controversy, but the action of the Council cannot be foreseen. For several weeks past the Council has had before it the Mayor's project, which provides that a franchise—for the streets in which the old franchises have expired—shall be given to a corporation controlled by trustworthy citizens who are in favor of municipal ownership. It is said that this project is not acceptable to a majority. The Mayor appears to have lost a part of the political support which he had when he was elected and for some time thereafter.—The Street Railway Association, at its recent annual meeting in Philadelphia, was reorganized under the name of the American Street and Interurban Railway Association. President W. Caryl Ely was re-elected.

In his address he denounced municipal ownership of street railways, and it was said that the main purpose of the reorganization was to facilitate in various ways the exercise of the association's influence against the ownership and operation of railways by municipalities.

Cuba's Political Quarrels

José Miguel Gomez, Governor of Santa Clara province and candidate of the Liberal party for the Presidency, has withdrawn his name from the Liberal ticket and advised his followers to appeal to the United States for intervention. In a letter to his party's Executive Committee, on the 27th, he said:

"It is impossible to continue the campaign within the bounds of the law. The Government has won a complete and overwhelming victory. With Liberals by the hundred in the jails, and with the rifles of armed forces and even the daggers of hired assassins against the breasts of unarmed voters, the problem confronting me is whether I should continue to lead my followers to the polls and permit them to become the victims of this sort of treatment. One other road is open, that followed by other nations in analogous circumstances, namely, the right of revolution, but Cuba stands in a peculiar position, as an armed conflict would inevitably bring foreign intervention. Before this was accomplished, however, our material prosperity would be in grave danger, and property, which is to a great extent in foreign hands, would be destroyed, while the neutral elements would suffer."

Therefore, he continued, altho he had the courage to rebel against Spain, he declined to accept the responsibility of plunging the country into war. Two days later, at a meeting of Liberal leaders, he attacked the Government with great bitterness, asserting that it had caused the assassination of prominent Liberals, taken possession of municipal governments, and prevented Liberals from voting at the election of registration boards. Cuba, he said, was in a reign of terror never equaled during the worst times of Spanish tyranny. Criminals had been pardoned by Palma in order that they might murder Liberals. Congressman Villendas had been murdered in Cienfuegos. He himself had almost miraculously escaped assassination in Santa Clara. From his province a thousand men had fled to Havana to escape persecution, and 800 men had been imprisoned in the province for political reasons. The Palma

Government, he continued, had brought the island near to financial ruin, had used the public funds lavishly in politics, had employed workmen and appointed teachers merely that they might vote for Palma, and had won the preliminary election by fraud and murder. There was no hope of fair play at the election in December. Therefore the United States should be asked to intervene. In response to his appeals, the Liberal leaders decided to present a memorial to President Roosevelt. Their grievances were laid before Minister Squiers, who said he thought the United States would not meddle with local politics. He advised Governor Gomez to make a campaign and rely upon the courts. Gomez replied that the courts were controlled by Palma. He sailed for New York on the 30th.—The Government denies that its influence was exerted unjustly at the preliminary election, and asserts that two Italian anarchists, named Bove and Grau, were leaders in a Liberal conspiracy to use dynamite in Cienfuegos and other places. It shows that the Chief of Police, who was killed at Cienfuegos, was shot in the back and had not used his own revolver. Eleven Liberals in that city have been indicted for sedition. Upon a similar charge Colonel Ferrara, Gomez's secretary, has been arrested. He is also accused of burning the city hall in Vuel-tas. President Palma has expelled from the island, as a "pernicious foreigner," an Italian named Pennino, whose public speeches incited revolt. Secretary Andrade remarks that the Liberals are angry because they were outvoted, and calls them "a mere conglomeration of greeds."—On the 1st the Liberals declined to accept Gomez's resignation, and decided to register for the December election.

The Philippine Islands

Upon his arrival at San Francisco, Secretary Taft gave to the public a statement concerning his visit to the islands. Conditions there, he said, were not entirely satisfactory, but evidence of progress was to be seen in a more efficient Government, the elimination of inefficient men, economy, and the substitution of Filipinos for Americans in the public service. The controversy over the lands of the Dominican friars has been settled by an agreement that gives the Govern-

ment immediate possession. Owing to complaints about the conduct of the constabulary, some changes will be made in this branch of the service. Inquisitorial features of the new internal revenue system may hereafter be modified, and some of the taxes may be reduced. The depression of agriculture (due to cholera, locusts, the loss of cattle, etc.) will continue for some years. Some young men of education had been advocating immediate independence. Therefore, it was necessary to declare the policy of the Administration and to point out that independence was not possible for a generation. The Secretary heartily commended the self-restraint and moderation of the Democratic members of the party, who patriotically agreed to refrain from political argument and to leave all statements of policy to himself, as the representative of the Administration. Senator Patterson, one of the Democrats, says the gulf between Americans and Filipinos is widening. He fears the Philippines are a smoldering volcano.—The most destructive typhoon known in the Philip-

pires since 1882 swept over a part of the archipelago on the 26th ult., causing much loss of life and property. In Manila many buildings were unroofed and five natives were killed by dislodged electric wires. The gunboat "Leyte," one of those captured from Spain, was sunk in the harbor. On the coast of Samoa a coast guard ship, also named "Leyte," was wrecked, and eleven Americans and twenty-four natives were drowned. The loss of the hemp-growers is estimated at \$1,000,000.—Miss Alice Roosevelt, with those members of the original party who had been traveling with her, left Seoul on the 29th for Yokohama, having received every possible courtesy during her stay of ten days in Korea.

The Separation of Norway and Sweden

The treaty of separation of Norway and Sweden agreed upon September 23rd by the representatives of the two countries in the conference at Karlstad is now being considered by the legislative bodies at Stockholm

The Conference at Karlsbad Which Arranged a Plan of Separation Between Norway and Sweden. The Norwegian Delegates are on This Side of the Table; the Swedish on the Further Side.

and at Christiania. The Swedish Riksdag, called to meet in special session, opened on October 2nd. Neither the King nor any member of the royal family was in attendance, nor was the diplomatic body represented. Premier Lundeberg read the speech from the Throne, and in ten minutes the question of separation was referred to the First and Second Chambers and the session adjourned. The elections for the Second Chamber of the Riksdag concluded on October 1st. The Socialists gained several seats and now hold 14. The chief issues in the election were the extension of the franchise and the adoption of proportional representation. The First Chamber is in favor of proportional representation, but the Second Chamber, as constituted by the late election, will be opposed to it.

In the Norwegian Storting this special committee, to which was referred the Karlstad agreement, has reported in its favor, and there is no doubt of the adoption of the treaty as arranged. It is proposed to decide upon the future form of government of Norway at a constituent Storting to be summoned before the middle of November and to postpone the final decision of the matter until after the elections of 1905. In the meantime Norway will seek recognition by the Powers as an independent state, regardless of its form of government. Björnstjerne Björnson, the veteran novelist, who has always been a strong Republican, now advocates an elected King, as he thinks it would make little difference whether Norway has a King or President:

"An elected Norwegian King would, like the Kings of Great Britain and Italy, live among us like a great nobleman and feel like

a hereditary President. The difference between such a kingdom and a republic would only be formal. The modern kingdom is only a transition form, but this transition will give more security to a dynasty with powerful connections than the dangerous isolation in a republic.

"Like Garibaldi, we republicans must choose to serve a King, hoping to get as highminded a monarch as Italy did in his day."

With the assuming of the Venezuela office of Secretary of State by Mr. Root Venezuela now comes in for a good deal of attention on the part of the Administration. M. Jusserand, the French Ambassador, has returned from Paris and has begun a

series of conferences with the State Department, where announcement has been made that the situation has not entered an "imminently critical" stage. Mr. Calhoun, the special representative of the Administration to investigate the situation in Venezuela, is on the ocean returning from Caracas, and it is not expected that anything will be done until he returns. In the meantime, Judge Penfield, who knows the ins and outs of the Venezuela situation as well as any one in the country, has sailed for Europe

on a mission to investigate the commercial relations between Europe and South America; but probably one of his most important duties is to inform Ambassador McCormick of the Venezuela situation, so that France and the United States can the better act together in whatever course they may decide to pursue. Assistant Secretary of State Loomis, who leaves the Department this week, has cast a parting shot at ex-Minister Bowen by giving out to the press a

Premier C. Michelsen, Who is Now at the Head of the Norwegian Government.

letter from President Roosevelt, in which the President states that the late Secretary Hay was on Mr. Loomis's side in the recent departmental investigation. —In New York the employees of the New York-Bermudez Asphalt Co. testified that the company had nothing to do with the Matos revolution, altho some of their former employees testified just the contrary last week.

The Anglo-Japanese Treaty The new treaty of alliance between Japan and Great Britain, which was signed on August 12th, before the conclusion of the Treaty of Portsmouth, which it doubtless influenced, has just been made public. Since the document is short and its wording is of such great importance, we give the text entire:

"A—The consolidation and maintenance of general peace in the regions of Eastern Asia and India.

"B—The preservation of the common interests of all the powers in China by insuring the independence and integrity of the Chinese Empire and the principle of equal opportunities for the commerce and industry of all nations in China.

"C—The maintenance of the territorial rights of the high contracting parties in the regions of Eastern Asia and of India and the defense of their special interests in the said regions."

The text of the treaty is as follows:

"Article I.—It is agreed that whenever in the opinion of either Great Britain or Japan any of the rights and interests referred to in the preamble to this agreement are in jeopardy, the two Governments will communicate with one another fully and frankly, and will consider in common the measures which should be taken to safeguard those menaced rights or interests.

"Article II.—Should either of the high contracting parties be involved in war in defence of its territorial rights or special interests, the other party will at once come to the assistance of its ally, and both parties will conduct a war in common and make peace in mutual agreement with any power or powers involved in such war.

"Article III.—Japan, possessing paramount political, military, and economic interests in Korea, Great Britain recognizes Japan's right to take such measures for the guidance, control, and protection of Korea as she may deem proper and necessary to safeguard and advance those interests, providing the measures so taken are not contrary to the principle of equal opportunities for the commerce and industry of all nations.

"Article IV.—Great Britain having a special interest in all that concerns the security of

the Indian frontier, Japan recognizes her right to take such measures in the proximity of that frontier as she may find necessary for safeguarding her Indian possessions.

"Article V.—The high contracting parties agree that neither will without consulting the other enter into a separate arrangement with another power to the prejudice of the objects described in the preamble.

"Article VI.—As regards the present war between Japan and Russia, Great Britain will continue to maintain strict neutrality unless some other power or powers join in hostilities against Japan, in which case Great Britain will come to the assistance of Japan, will conduct war in common, and will make peace in mutual agreement with Japan.

"Article VII.—The conditions under which armed assistance shall be afforded by either power to the other in the circumstances mentioned in the present agreement and the means by which such assistance shall be made available will be arranged by the naval and military authorities of the contracting parties, who will from time to time consult one another fully and freely on all questions of mutual interests.

"Article VIII.—The present agreement shall be subject to the provisions of Article VI and come into effect immediately after the date of signature and remain in force for ten years from that date. In case neither of the parties shall have been notified twelve months before the expiration of the said ten years of an intention of terminating it, it shall remain binding until the expiration of one year from the day on which either of the parties shall have denounced it, but if, when the date for the expiration arrives, either ally is actually engaged in war, the alliance shall *ipso facto* continue until peace shall be concluded."

Russia in Persia

Despite Russia's supposed all-absorption in her great foreign war and in her domestic troubles, she has nevertheless found the time and capital to construct a line of over 1,000 miles in length across the arid and unpopulated steppe into a land of plenty. From Orenburg, in South-eastern Russia, the line stretches southward as far as Tashkent, on the very border of British India. From here the distance to the Persian Gulf is only 430 miles, and a railroad could be hastily constructed in case of need to Shahbar, an excellent harbor, that would furnish Russia with a well equipped naval station only sixteen days from the military centers of Odessa and Moscow. As it is, without the outlet on the Persian Gulf, Russia has acquired control over a country of an entirely new character to her. Raw cotton for the mills of

Moscow and products of the tropics will now be found in the limits of her empire. The activity in railroad building is by no means on the wane. Plans are being made to link the Tashkent region with Siberia by means of a line running thru the now useless iron and coal mines of Salaiire, and joining the transcontinental system 2,000 miles to the north. Ultimately, Teheran, the capital of Persia, will be connected by rail with Europe. Already 100 miles of the road are completed from Tiflis southward. Along with the news of this great railroad activity comes the report that the Russian Government has definitely decided to double-track at once the whole line of the Trans-Siberian Railway. It is interesting to note that Prince Khilkoff, the efficient executive in these activities, is essentially a product of the American school of railroad engineers and financiers.

Hungarian Politics

The situation in Hungary is complicated and hard to understand because there are so many factions acting at cross purposes. To get a clear idea of who they are and what they stand for it is necessary to give a list of them, the players in the cast of the great drama now being enacted. There is first, Franz Josef, Emperor of Austria and King of Hungary, firm in his determination not to grant the demand of the Hungarian Nationalists for the use of the Magyar language in the Hungarian army, and also firm in opposition to the granting of universal suffrage in Hungary. Second, there is Baron Fejervary, acting Premier of Hungary, who cannot govern because he has the Coalition majority against him, and who cannot resign because there is no one to take his place. He is supported neither by the Sovereign nor by Parliament, for he has offended the former by proposing to grant universal suffrage and is opposed by the latter because he will not favor the Magyar language in the army. Third, there is the Coalition of four parties, which in the last election unexpectedly and decisively overthrew the old and established Liberal party. This Coalition is composed of very heterogeneous elements, and can probably hold

Franz Kossuth, the Leader of the Hungarian Coalition of Independence Parties.

together only so long as it is in opposition and out of power. The four factions which it includes are, the Independence party, under Franz Kossuth, the New party under Baron Banffy, the Clerical People's party under Count Aladar Zichy, and a group of deserters from the old Liberal party under Count Julius Andrassy. The Coalition is working for Magyar supremacy in Hungary against Austrian influence on the one hand, and against the minor races of Hungary on the other. Fourth, there are the Socialists, who by their creed are in every country not nationalists, but internationalists, and who, therefore, care little for the empty symbol of Magyar words of command in the army, that means so much to the Coalition leaders. But the new issue, that of universal suffrage without racial language or property restriction, seems to them something worth fighting for, and they are rising against the Hungarian leaders who stand in the way of it. Just now the strife between the Socialists and the Nationalists of the Coalition takes the form of rival torchlight processions, which end in

street fights. The Coalition authorizes political "passive resistance" to the Government by advising the people to refuse to pay taxes. The Socialists order a general strike, which may be considered an industrial passive resistance. Both recommendations, in so far as they have been followed, have had no better result than to increase the general disorder. Both factions are calling their followers from the country to the capital for purposes of demonstration, and, if the Emperor-King has any intention of ruling Hungary with an iron hand, he is likely soon to have a good pretext for the use of military power. An attack was made upon the headquarters of the Coalition at the Royal Hotel in Budapest on the night of September 27th by a crowd of 1,500 Socialists, who were beaten back by the police, aided by 150 adherents of the Coalition. But they rallied again and the two factions fought in the streets, while a violent thunder-storm raged. Knives were used freely, and between 40 and 50 persons were stabbed or otherwise injured. On the opening of the Austrian Reichstag, Baron Gautsch von Frankenthurn, the Austrian Premier, declared the Government was always prepared to execute loyally its agreement with Hun-

gary, but such action must be reciprocal. He never, he said, as a matter of principle, interfered with the internal affairs of Hungary, but occasions might arise when the Austrian Premier must be heard in those affairs. This veiled threat has increased the suspicions of the Hungarian Nationalists that there is a plot to extend Austrian domination over Hungary. Count Stefan Tisza, former Premier and one of the leaders of the moribund Liberal party, has in the name of his party called upon the Government to explain by what right the Austrian ministers, Baron Gautsch, the Premier, and Count Goluchowski, the Austro-Hungarian Minister of Foreign Affairs, have for intervening in the internal affairs of Hungary by advice about electoral reforms.

Witte's Return

Neither the Czar, Government officials, press nor people received Mr. Witte on his return with that enthusiasm which, in American opinion, he seems to have deserved. He was greeted at the station in St. Petersburg by a small crowd and a few minor officials, such as Baron Nolde, Secretary to the Committee of Ministers, and General Durnovo, Adjutant to the Minister of the Interior. These were more than accompanied him to the train when he left in July, but the absence of all of the Ministers and municipal authorities excited comment. The Czar telegraphed to Mr. Witte immediately to meet him at Bjoerkoe on the royal yacht, the "Polar Star," with the words, "I congratulate you on your return from Washington, after brilliantly carrying out my mandate, which was of the greatest service to the State." As a reward for his services, Mr. Witte has been made a Count, and it is believed that he will be chosen as Premier of the Empire, with the privilege of selecting certain of the ministers, or as one of the papers puts it, he will be commissioned to conclude another and more difficult treaty of peace—between the Government and the Russian people. The new proj-

The Houses of Parliament at Budapest in which the Battle for Hungarian Independence is Now Being Waged. The Danube, Which Divides the City, is in the Foreground.

ect for a Duma endows that body with the right of interpellation of Ministers, which will naturally lead to the formation of a responsible Cabinet after the manner of other European countries. The Zemstvoists have joined forces with the Peasants' Union, and will endeavor to control the Duma when it assembles. The censorship upon the publication of the proceedings of the Zemstvo Congress has been practically abolished, so the Russian people have now for the first time the right to hold political meetings and to publish their discussion.

The Bengal Boycott

The announcement some months ago that the British Government intended to divide the Bengal Presidency into two provinces, each under a Lieutenant Governor, created intense indignation among the Bengalis, who regarded it as an insult to their patriotism and a wanton aggression on the part of their British rulers. On August 8th the Bazaar was closed and all races united in a protest against the proposed action. Students paraded the streets with black flags, and the indignation meetings held in several places were all overcrowded. The Maharajah of Cossimbazar presided over the main meeting, which adopted resolutions declaring that the partition was unnecessary, arbitrary and unjust, and was in deliberate disregard of the entire Bengal community. In case the Government persisted in carrying out the plan, a boycott of all British manufactures was to be resorted to. It was hoped that the project would be dropped when Lord Curzon resigned, but the Indian Office in London issued a proclamation of the partition on September 1st. The difficulty of administration of such a large population and area was the reason for the change. The new province is to include Assam, comprising 25,000,000 people, and Dacca is to be its capital. The Bengalis, finding that their protests were disregarded, resolved to attack the English at their most vulnerable point by carrying out their threat of a general boycott. Fifty thousand Bengalis assembled in the Kali Ghat, on the banks of the Ganges in Calcutta, and took an oath in the holy presence of the Goddess Kali not to use foreign goods, buy articles in foreign shops

when available in native shops, or employ foreigners on any work that can be done by their countrymen. The priest of Kali then placed upon the forehead of each the mystic vermilion symbol.

Religious Revival in Norway

In Norway a deep religious awakening is making itself felt, but in a two-fold direction. One is in opposition to the State Church and the other co-operating with it. The former is that known as "Churchless Christianity," and is generally regarded as a Norwegian adaptation of the spiritualizing movement in the Swedish Church, the "awakening" in the latter, however, not antagonizing the State Church, but seeking thru its many "Mission Societies" (*Missionsforeniger*) to elevate the spiritual condition of the Church at large. The Norwegian movement is characterized by an intensive opposition to everything in the State Church, its ceremonies, the dress of the clergy, etc. Its adherents' name for the State Church is "Babel." They are opposed to all sectarianism, and receive as members Methodists, Baptists, and adherents of all phases of religious thought. They call themselves "God's Free Children" (*God's Frie Born*). They are already divided into two classes, the Irreconcilables, who are extremely radical in their teachings and tenets, and the Moderates, who at least profess to be still adherents of the Lutheran Confession. The ideal, tho, of both sections is an *ecclesiola in ecclesia*, a small band of like minded aiming at a higher spiritual life than that produced in the State Church. The second movement is headed by a young peasant, Albert Lunde, who was a lay preacher, and spent several years in studying church life in America. His purpose is to work in connection with the Church, and his evangelization and revival services which in Christiania are attended by audiences of five thousand and more, have the approval of the leading pastors of the State Church. His sermons are characterized by simplicity and the presentation of the great gospel truths, without any fanaticism or radicalism. The movement is spreading rapidly, and Lunde recently, upon invitation, went to Stockholm to inaugurate a similar crusade.

The American Victory at Waterloo

BY HAYNE DAVIS

Secretary of the American Delegation of the Interparliamentary Union.

AT the same moment when Roosevelt's efforts ended in the peace of Portsmouth, Richard Bartholdt, of St. Louis, won at Brussels a great victory for peace throughout the world. About 300 members of various Parliaments (19 in all) were assembled there for the Thirteenth Session of the Interparliamentary Union. Among them were many of the great men of Europe, notably Cremer, of England, the creator of this International Congress, composed of those national lawmakers who are resolved to substitute arbitration for war. It consisted of Mr. Cremer alone eighteen years ago; now it contains 2,500 of the 18,000 national lawmakers.

Mr. Bartholdt proposed:

1st.—Granting to The Hague Court the right to try and determine questions of the kind included in treaties of arbitration, so that this International Court can act, within its proper sphere, however, limited, as any other Court does.

2nd.—That the several Governments of the world agree to choose men who shall be charged with the duty of considering at all times what amendments ought to be made to the law of nations, and of assembling periodically to confer together in order to make such suggestions to the nations as meet with the approval of their own body in conference assembled.

Mr. Bartholdt pointed out that granting jurisdiction to the Court of the Nations at The Hague necessitates providing a body of law which this Court can apply to the cases which come before it. He called the body that ought to be created for this purpose a Congress. Others preferred to call it a Conference, as the American word sounds too much like giving it power to lay down law for the nations. Mr. Bartholdt wants it to have power as soon as European nations can get their consent to this, because this is the only thing that can lift the burden of war expenses from these oppressed people, or that can prevent this same bur-

den from being laid on the American people. But he gladly let them name the baby as they agree with him to let it be born. Once born, he is sure it will grow and acquire in due time the power it must have in order to fill its proper place in the world's legal machinery.

Count Apponyi, of Hungary, one of the greatest statesmen of the times, rose in the conference to such height that the skeptical and reactionary thought could not assert itself at all. When he had replied to the able presentation of the American plan, accepting the principles underlying the plan, and moving the creation of two Commissions, one to consider each of its branches in all its details, a great victory for the American idea was won. Not a voice was raised against Apponyi's motion, the Commissions were appointed and all the members required to pledge themselves to report their conclusions within three months.

The eminent men who are to pass upon all the details of this great proposition are:

For the treaty of arbitration:

Von Plener, formerly a member of the Austrian Cabinet, and one of the great statesmen of the Austrian Empire, as President of this Commission, and Bartholdt (United States), La Fontaine (Belgium), Brunialti (Italy), Von Krabbe (Denmark), Gobat (Switzerland), and the seventh member to be named later by France.

The Committee on the International Congress is headed by the eminent Englishman, Stanhope, and is composed of Count Apponyi (Hungary), Marquis Pandolfi (Italy), Bartholdt (United States), Horst (Norway), Baron Descamps (Belgium), and the seventh to be named from France.

All these men have made their way through the warfare of politics to places of eminence in their own nation and are worthy to consider the basis of which their several nations, and all other na-

tions, may become possessors, in their relations to each other, of these principles of political liberty which they have each won at great cost for themselves individually.

Seventeen American Congressmen supported Mr. Bartholdt in making this memorable stand for principle, and as the delegation was leaving the Belgian Parliament House, where this victory was won, they were greeted with the glad tidings that peace between Russia and Japan was secured. So great was the joy of the American delegates on account of these two great achievements, accomplished by America at the same moment, that they gave a great banquet at the principal hotel of Brussels—the Bellevue. The victory here was no smaller than the one at Portsmouth, but better eyes are needed fully to understand this. The victory here was due principally to Mr. Bartholdt's bold and wise action, just as the Peace of Portsmouth was to President Roosevelt's. So the banquet was given in Mr. Bartholdt's honor.

In his opening address on this memorable occasion, Mr. Moon (Member of Congress from Pennsylvania) declared that it would be unworthy of themselves and of the truth if the other delegates from the United States failed to acknowledge that they had assisted at the finish in winning this victory, and that they were grateful for the opportunity to do so, but that Mr. Bartholdt had put forward the plan, conducted the campaign, stood strong against the adverse and skeptical thought which it had encountered at the beginning, and was entitled to the glory of this great victory for American principles won in the very heart of Europe.

He said furthermore that Mr. Bartholdt had done more than any man living to carry into the practical politics of the nations a plan which can establish law and order where war and carnage now reign, and that for this he is entitled to the gratitude of the people, not only of America, the nation that he serves in Congress, but of Germany, where he was born, and also of all nations, for all will some day inherit benefits from the ideas which, during this Conference, he has forced into the European mind.

The other delegates heartily endorsed the words of Mr. Moon, and when Mr. Bartholdt rose to reply a great demonstration was made.

He said it was true that a great victory had been won for the political principles on which the American Union is founded; that undoubtedly direction, right direction, had been given to the thought of Europe; that it was a great privilege to have had part in such a work destined to bear good fruit, and at no distant day; and that he had been enabled to stand firm by reason of the presence and supporting influence of the other delegates.

Moon, of Philadelphia, Slayden, of Texas, Norris, of Nebraska, Waldo and Goldfogle, of New York, supported ably different parts of the plan proposed by Mr. Bartholdt.

Mr. Bartholdt and the other seventeen delegates worthily represented the United States, worthily represented this cause which is greater than any country.

The power of the principles they stood for made them irresistible. But it would not be right to ignore certain influences which made themselves felt from America.

During the session of the Conference, cablegrams were read endorsing the plan, notably one from the great Mohonk Conference on International Arbitration, signed "George Gray, President." George Gray is a member of The Hague Court. This Mohonk Conference of which he was president contained members of the Supreme, Circuit and District Courts of the United States, of the Supreme Court of nine States, Members of Congress, representatives from thirty-two Chambers of Commerce and fourteen periodicals or papers, of twenty Universities or other institutions of learning; also representatives of the Bar and of the religious organizations of America.

Cablegrams from the St. Louis Merchants Exchange and from the Colorado Springs Chamber of Commerce, endorsing this message from Mohonk, were received and read to the Conference; others were received but could not be read.

The fact was stated in Conference, that, since January 1st of this year, through the activity of one man well-

known in America and not unknown to Europe, 122 audiences, composed of representative Americans, assembled in that number of cities, situated in twenty States and two Territories, and averaging about 1,000 persons, had enthusiastically voted for this plan and instructed the Mayor of the City to appoint a committee to send the resolution to the Representative of the District in Congress, to the Senators of the State, and to the President of the United States.

It is Captain Richmond Pearson Hobson who has made this movement so well known among the American people since the Session of the Interparliamentary Union at St. Louis, last September.

These unmistakable manifestations of approval by the masses of the people and by representatives of the Judiciary, the Bar, the Press, the Churches, and the business organizations of America, not only strengthened the American delegates, but profoundly impressed the European delegates.

When the council of war was held here before the fall of Napoleon at Waterloo, the city was in a turmoil of excitement.

Today the streets are streaming with people who have no idea of the true significance of what has happened.

But some day Brussels will be more famous for this Conference than Waterloo has been able to make it.

BRUSSELS, BELGIUM.

Views of an Igorrote Chief

BY FOMOALEY PONCI

[The genial exponent of the simple life who furnished the following article by talking through an interpreter to a representative of THE INDEPENDENT, was a large, plump Filipino whose age was probably forty-eight. He was clad in two necklaces, two bracelets, some tattoo marks and a loin cloth. He speaks no English and therefore only his ideas and statements of fact are given. In regard to figures he is quite impressionistic, "a thousand" representing any very large number. He is the leader of the band of Igorrotes who so delighted the crowds who visited Coney Island this summer.—EDITOR.]

I AM Chief Fomoaley, of the Bontoc Igorrotes, and I have come here with my people in order to show the white people our civilization. The white man that lives in our town asked me to come, and said that Americans were anxious to see us. Since we have been here great crowds of white people have come and watched us, and they seemed pleased.

We are the oldest people in the world. All others come from us. The first man and women—there were two women—lived on our mountains and their children lived there after them, till they grew bad and God sent a great flood that drowned them, all except seven, who escaped in a canoe and landed, after the flood went down, on a high mountain.

Three times a year our old men call the people together and tell them the old stories of how God made the world and then the animals, and lastly men. These stories have been handed down in that way from the very beginning, so that we know they are true. The white men have some stories, too, like that. Perhaps they

may have heard them from one of us. At any rate, they are wrong about some things. There was a white man who told us that the place where the canoe landed after the flood was a high mountain on the other side of the world, but we know better, because we can see the mountain from our town. It is close by us and always has been there, and our old men point it out when they tell the story.

I was born in a hut in that town. I don't remember my father. He was killed in battle when I was very small. I had four brothers and three sisters. We did no work except a little in the fields, where the rice and sweet potatoes grow, or getting fruit in the woods. I swam and ran and played with the other boys. We had small hatchets and spears and bolos made of wood, and we hunted animals and birds and fought each other.

When I grew up to be a man I went out and took a head, and then I got married.

Among our people a young man must have taken a head before he is made a

warrior. Our young women will not marry a man unless he has taken a head. We take the heads of our enemies. Sometimes these are the people of some other Igorrote town, sometimes they are the little black people who shoot with poisoned arrows, sometimes it may be some family that lives close by and has taken

I got my head among the black people by waiting near a spring until a man came to drink. I shouted, and he shot at me with arrows, but I caught them on my shield. Then I speared him and cut off his head with my bolo.

When I returned to my town I went straight to the house where the girl lived,

Two Bontoc Igorrote Warriors To the left Chief Fomoaley Ponci, and to the right Bolinget Ofool. They Both Have Tatooing on the Breast which Signifies That They Have Cut Off the Head of an Enemy.

a head from your family. We used to get heads from the Spaniards when they were in our island, but now they have gone away. The Americans don't like us to take heads, but what can we do? Other people take heads from us. We have always done it. The women won't marry our men if they do not take heads.

but she would not look at me till I showed her my head. That pleased her very much, because it showed that I was a warrior and could kill enemies. So we were married.

Soon after this there came a white man to Bontoc, who said that we must go and work for his people and give them things

—our buffalos, our rice and sugar cane and sweet potatoes. They were not going to do anything for us.

This white man was a Spaniard. Our chiefs laughed at him and said that they owed us things instead of us owing them. We were there for a thousand lives before the Spaniards came, and they were in our island yet. We never tried to make them pay.

The Spaniard went away angry, but came back soon with a thousand others to fight. And all the men of Bontoc went out to meet them.

Our town is far up in the mountains and there are no roads, only paths thru the woods, and the Spaniards could only come a few at a time. We waited for them in the narrow places and rolled stones down on them and killed plenty. Some others we killed with spears and some with bolos. They burned some of our houses and spoiled some of our fields, but they had to go away and we paid them nothing. We got nearly a hundred heads.

The Spaniards came again and burned more houses and spoiled more fields, but we killed more of them and they stopped coming.

We did not owe them anything; why should we pay what they call taxes? We were the owners of the island. We let the Spaniards come because there is plenty of room for everybody.

They caught a few Igorrotes and were very bad to them, whipping them to make them work. Some they whipped to death because our people will not work. They do not like it. God never meant us to work. That is why he makes our food and clothing grow all about us on the trees and bushes.

Our God is the great God who lives in the sky and shines through the sun. He makes our rice and sugar cane grow and looks out for us—he gives us the heads of our enemies. We have heard of the white man's God, but ours is better.

A long time ago, a white man all dressed in black came to our town and told us about the white man's God. He was small and fat. He could not run or jump, he could hardly walk and there was no hair on the top of his head. He

had a book with him and he told us many things that were in that book.

Our Chief asked if his God looked like him. He said "yes"; we did not think he could be a good looking God. We never saw our God, but he must be much better looking than that man was.

That man told us that God had a son who died for us, and that we ought to leave our God and go to him. But our Chief said: "We did not want him to die for us. We can die for ourselves."

No, we will be true to our own God, who has always been good to us. We never give him anything. How could a man give anything to God?

The fat white man told us that if we were very good and did what he said, we would go to the white man's heaven, up in the sky. He said that people there could fly like birds, but that they spent all their time singing praises of the white man's God.

We did not think we'd care to go there. Our own heaven, where the fruit is always ripe and the game is plenty, suits us far better.

The fat white man who told us about God and heaven was a Spaniard. He said that God had sent him to us but we didn't believe it. A man from our town had been among the Spaniards and he said that they told lies.

If the Spaniard's God is good, why did he not keep them out of our country. They cannot be good men or else they would not want to make us work for them and they would not try to kill us. When the Spaniards came to fight us they had guns that only went off in long times. They had to put something in at the top of the gun and poke it down with a stick before they could shoot.

We laughed at them; our spears were so much quicker.

The Americans came and drove the Spaniards away. They have guns that go bang-bang-bang-bang, as fast as a man can talk. They are our friends, for they do not burn our houses or kill our people or whip them to make them work. That is the reason why we are over here, because the American people are our friends and want to learn our civilization, so that they, too, will not have to work. Our civilization is so much older

Group of Igorrotes, Showing Village as a Background. This Group was Photographed at Luna Park, Coney Island.

than theirs that it is no wonder if they do not know some things.

The first American that came to our town made us laugh, tho we liked him. He was very kind and gave us many presents, and all he wanted in return was beetles and bugs and birds and bats and snakes. We watched to see if he would eat them, but he did not. He put them in boxes and bottles, and when he went away he had enough to load two buffaloes. He spent days watching the ants and bees.

The children of the place followed him, and he made us all laugh many times because he chased butterflies with a net on a long stick. He could run fast and caught many.

Some of our men who had been in the big city where the Americans live, said that the Americans often make themselves mad by things that they drank. They ran about the place shouting or fighting till they fell down asleep.

This man who came among us must have been mad, but he did no harm, so we liked to have him among us. When he could get any one to interpret for him he was always asking questions. He wanted to know all about our religion and about the animals in the forest. He had a book and a little stick that made a

black mark, and when we told him anything he made black marks in the book, and he said that these marks would always tell him what we had said. That was part of his madness.

One day he went to the chief with a paper on which he had been making a picture of the country, showing our town and the mountains. He wanted to know where the river went to after it left the mountains. The chief showed which way it went for a day's journey, but he wanted to know where it went after that. But the chief said:

"What does it matter where the river goes?"

He was very mad, for he said that the world is round and that the sun does not go round it. We know better than that, because we can see the sun moving, and besides our old men have told us the story of those things that has come down to us from the very beginning.

If he was not mad, why should he, a stranger, be troubled about where the river ran? It was not his river. It was our river, and if we did not care, what did it matter to him?

An American came to us about two years ago. He was a very good and kind man. He gave us plenty of beads

and looking-glasses and brass wire, and he wanted some men and women to go with him to America. He wanted enough to go with him to a place where all the American people were gathered, that they might build a village and show our ways of living. He got plenty of Bontoc men and women to go, and when they came back they had so many wonders to tell us that it took six of them three days and three nights, standing up before our people talking all the time, and then they said that they had forgotten or left out much.

They said that the Americans had small suns, so many that they could not be counted, and these made the whole country light on the darkest night. They said that the people traveled about in houses on wheels, and these houses went of themselves like flying birds with all the people in them. They told us that many of the Americans' houses were as tall as the tallest trees. We didn't think that was good, because who would want to climb a tree?

All the time that the travelers were

telling of the wonders that they had seen a great feast was going on in our town. it was the greatest feast ever heard of among us. The people of the other towns were all invited, One hundred and fifty buffaloes were killed for the feast, and there were pigs, goats and all sorts of fowls, as well as sweet potatoes, rice, fruit and nuts, and the chiefs ate twenty-five of the finest dogs.

The best dog is a male about four years of age. If he is healthy and fat there is nothing so good when roasted with sweet potatoes. Short-haired dogs are the best. We eat dogs when we are going to war because they make us fierce and help us to hear, see and smell well.

There was dancing every day while the big feast was going on, and the people that came from the other towns stayed for a week. When it was all over I went away from Bontoc with a lot more men and women to come to America to see all the wonders. It was the first time I had ever been more than a day's journey from Bontoc. We went thru the great forests, and it was very hot when we got down

Igorrotes in Characteristic Attitudes. The figure at the left is a tom tom beater. The one at the right is about to throw a spear, while the central figure shows a woman about to dance in American not Savage Costume. Photographed at Dreamland, Corey Island.

from the mountains. Up in our mountains it is cool, but in the valleys so hot that some of the people fall like dead.

There are no roads, but just thin paths thru the woods, and these are blocked with creepers that have thorns on them. The white men went very slowly; the thorns caught them and the creepers held them back as if they were big snakes. It made us laugh many times to see the way the white men tangled themselves up in the creepers. We were twenty days reaching the big water (130 miles), and then only half a day going the same distance in a fire canoe of the white men. We got to the big city of the white men where the Spaniards used to be, but where our friends, the Americans, now are.

We just had time to look at it and see that it was very wonderful when we had to go on a canoe that was as long as a man could run while he held three breaths. It was so big that it could have held all the people in our town. There were many people in it, and they lived all the time in different parts of that big canoe.

There was a place in the middle of it where a great fire burned all the time; a fire so great that it looked to me like the fire that is inside the burning mountain. I was afraid that it would burn us all up, but the white men knew how to shut it up.

It was this fire that made the canoe go. I don't know how, but that was the way. We went very fast all the time; just as fast at night as in the daytime. We never stopped at all. After the first day or two we saw no land. I would never have believed there was so much water. How could any man tell where we were going, yet our canoe rushed ahead all the time. There was a man up above who told the canoe where to go. But how did he know? For many days we saw no land, yet we kept on night and day. Even in dark nights when there was no moon or star we went on just as fast. We talked among ourselves, but we could not understand how the white men knew.

After a long time we came to America, and then we saw city after city, all packed with wonders. At every place the white people crowded about us

and stared as tho we looked very strange. We were carried for many days in houses that went on wheels and flew along like birds. And now it seemed as if the land would never end. We must have come nearly a hundred days' journey in a week. But at last we reached another big water again and then we stopped right on the shore of this great city of Coney Island, where there seems to be always feasting.

All about us there is always music, but it is not good music, not so good as ours.

Great crowds of people came to see us every day and we show them how we live. They are good people, but they do not look well. They all wear clothes, even the children. It is bad that any one should wear clothes, but much worse for the children. We pity them. They cannot be well, unless they leave their clothes off and let the wind and the sun get to their skins. Perhaps they are ashamed because they don't look well with their clothes off. They are thin and stooping and pale.

That is because they work so much. It is very foolish to work. Men who work hard do not live long.

Everything we want grows in the forest; we make our houses out of cane, rattan and leaves, our women weave our loin cloths, and we get our food from the trees and from the fields of rice and sweet potatoes and sugar cane.

Why cannot the Americans live like that? I would tell them about our ways if I could, because I feel sorry for them; they look sick and they should never put clothes on the children. If God had meant the children to wear clothes he would have clothed them himself.

Maybe many of the people cover themselves up because they know that they do not look well without clothes; they are too thin or too fat, or they are crooked. That is why the women hide their shapes, I suppose. But if they lived as our women do they would soon look as well as ours look. Our women by climbing about the mountains have large limbs and look handsome.

I have seen many wonders here, but we will not bring any of them home to Bontoc. We do not want them there.

We have the great sun and moon to

light us; what do we want of your little suns? The houses that fly like birds would be no good to us, because we do not want to leave Bontoc. When we go home there, we will stay, for it is the best place in all the world.

The most wonderful thing that I have seen here is the stick that you talk in and another man hears your voice a day's journey away. I have walked all

around and looked at the back, but I can't see how it does it. But we don't need that; we can call as far as we want to by pounding on a hollow tree with a club.

This is a fine country and I like all the people, but I am going back to Bontoc to stay there till I die. I don't know when I'll die; some people with us live to be very old—maybe, 300 years.

CONFY ISLAND, N. Y.

Däi Nipon

BY FLORENCE EARLE COATES

Apart from all,
 "Child of the World's old age,"
 Heedful of naught beyond the billowy wall
 That closely girt her island hermitage,—
 She pondered still, with half-awakened look,
 The early lessons of the great World-book,
 Nor cared to turn the page.

But a new dread
 Possessed her. To invoke
 Aid of her gods she tried,—uncomforted
 That countless barrier-waves about her
 broke;
 And when, with bold command, in Yeddo bay
 A squadron anchored,—oh, prodigious day!—
 The Orient awoke.

Tho one long blind,
 At first, in fruitless quest
 Must grope her course, yet, with enlarging
 mind,
 She quickly clearer saw; and from her
 breast
 Sent forth brave sons—of her strange hunger
 taught—
 Who, one by one returning, to her brought
 The wisdom of the West.

Then we beheld,
 With awe and wonderment,
 Goliath by this stripling nation felled,
 Which—rising by no tedious ascent—
 Swift as the upward flight of wind-swept
 flame,
 Leapt from obscurity to dazzling fame,—
 Star of the Orient!

Yet has she won
 Sublimar victories,
 Who, high enlightened all excess to shun,
 Has not exacted final penalties,
 Nor forced a brave and fallen foe to drain
 Humiliation's brimming cup of pain,
 Down to the poisoned lees.

In lieu of things
 Ephemeral—less worth,
 She has revealed the sweep of her strong
 wings:
 Has gained the suffrage of the grateful
 earth;
 Choosing to give herself, as war departs,—
 Destructive war,—to the enduring Arts,
 Which were her own at birth.

This is her Day!
 War-clouds no longer lower
 Above her, in her sun's resplendent ray
 Revealed,—as wise as dread: for not that
 hour
 When, once impregnable, Port Arthur fell,
 Nor that of which a vanished fleet might tell,
 So loud proclaimed her power!

O, great Japan!
 Who, staying griefs appalling,
 Hast shown thyself magnanimous to man,—
 The World, that long has felt thy charm en-
 thralling,
 Has laid full many laurels on thy brow;
 But with a new, diviner accent now
 She hears the East a-calling!

GERMANTOWN, PA.

The Need of Leadership in Unions

BY HENRY WHITE

[It will be remembered that Mr. White was until recently the leader of the United Garment Workers of America, one of the most important labor organizations of the country. His views on union leadership, however, were the cause of his resigning his position just previous to the general strike in the garment industry described in the following article.—EDITOR.]

THE impression which the serious reverses suffered by the unions of late creates is that of a mass moving along without direction, impelled by its wants and feelings and indifferent to the fast-gathering opposition. 'The labor war about ended in Chicago, which plunged the second largest city into a turmoil comparable only to the railway strike of '94, was precipitated by a strike of nineteen tailors employed by Montgomery Ward & Co.

This tailor strike was part of a general strike for the closed shop begun in December in the custom branch of the clothing trade of that city. The local Federation of Labor decided to force a settlement through the formidable teamsters' union, and concentrate its power against the Ward firm because of its large business in general merchandise.

On April 6th the teamsters employed struck. This proving ineffective, the attempt was made to isolate the firm by stopping the delivery of goods. Wherever firms sought to deliver supplies of any kind the truckmen quit work, and the ban in turn was put upon such firms. The strike spread to the principal dry-goods houses and soon over four thousand men were involved. So intense was the feeling that several thousand public school children left their studies when coal was delivered by non-union drivers. The local leaders threatened to call out the union men of all trades, and a paralysis of the city's business seemed imminent. The local Employers' Association took up 'the cause of the firms affected and deter-

mined to establish the open shop in the teaming business. A trucking company with a large capital was formed to compete with the team owners who were in alliance with the unions.

What is significant is that the strike was declared, according to C. P. Shea, the leader, at a meeting attended by only thirty-five members. An action fraught with such consequences to the union cause was thus taken without interference on the part of the union chiefs. When the strike was apparently lost, Mr. Gompers appeared and offered to mediate.

This sympathetic strike was the outgrowth of the strikes inaugurated in the clothing trade in New York in June, 1904, and involving over 40,000 workers. The officers of the United Garment Workers of America were agreed as to the inadvisability of the strikes when proposed. The members believing the existence of the union threatened by the open shop resolutions adopted by the National Employers' Association, and incited by the philippics of the union leaders against the open shop, voted to strike. The general secretary, after all suasion failed, tendered his resignation, to take effect upon the declaration of the strike. His associates yielded to the demand of the lay membership and a strike was precipitated which brought a prosperous national union to the verge of ruin—one which, perhaps better than any other, demonstrated what unionism could do to uplift a body of workers so unfortunately situated.

What is especially noteworthy is that

the disastrous outcome of the New York strike did not deter the unions in Chicago, St. Louis and Boston from entering upon similar contests under like circumstances and the officers who, contrary to their judgment, sanctioned the first strike, permitted the others to take place although vested with ample authority to prevent them. The executive officers of the American Federation of Labor, also, while realizing the futility of the strikes and expressing their disapproval privately, made no effort to dissuade the members from their ill-fated course. The general secretary was urged by President Gompers to return to his post and yield to the decision of the majority whether "right or wrong." According to the highest authority in the unions, therefore, it is the duty of an executive officer to do the members' bidding, even tho in his opinion it will lead to certain defeat, instead of standing his ground with the hope of averting disaster.

The strike in March of the five thousand subway and elevated railway employees in New York was a repetition in its main features of the others. A few days after the strike was ordered, the heads of the three national bodies having jurisdiction over the men, repudiated responsibility for the strike for the reason given that it violated a contract with the Interborough Company. As this strike was meditated for some months, during which time the officials mentioned were often consulted, it is not apparent, therefore, how their responsibility for this calamitous occurrence can be evaded. Before the crisis came their good offices as members also of the National Civic Federation, of which August Belmont, president of the Company, is chairman, were sought. The fact, therefore, that, with their intimate knowledge of the circumstances preceding the strike, they did not assert their authority to prevent it, points out again in a most striking manner the cardinal weakness of the unions, and incidentally casts much light upon the manner in which strikes are entered into. No one can doubt that with their moral influence alone, had they taken as firm a stand before the strike as they did when it was evident that it had failed,

this distressing affair would not have occurred.

In pleasing contrast to these occurrences is the action of John Mitchell, by which the threatened strike in the soft coal fields in January, 1904, was averted. Before the general vote was taken on the proposition Mr. Mitchell announced his intention of resigning in the event of the decision being favorable to the strike. The resolution was narrowly defeated. Had Mr. Mitchell been less resolute and his sense of responsibility less keen, an industrial war in all probability would have been inaugurated that would have greatly exceeded in disastrous effects the anthracite strike and the union cause might have suffered a staggering blow.

Every strike reveals how much the outcome is due to the quality of the leadership. Who will doubt that the success of the most significant labor uprisings in recent history, namely, the dock strike in England and the anthracite coal strike in this country were primarily due to the leadership of John Burns and John Mitchell, respectively? There are unions which owe their character to leaders, a conspicuous example being the Brotherhood of Locomotive Engineers, of which the late Chief Arthur was the guiding spirit. Yet leadership is presumed to be incompatible with the democratic purpose of unionism. The very democracy of the union curiously enough becomes its stumbling block, not because of democracy but rather owing to the manner in which the principle is applied. Workingmen wholly without administrative experience and accustomed to being directed have suddenly thrust upon them questions of vast concern requiring quick decision. It is supposed that they are qualified for this responsibility because of the virtue and wisdom which reside in the members.

The union constitutions inspired by men of extreme democratic views provide every safeguard for keeping the power in the hands of the membership. Some unions, as for instance the Typographical and Cigarmakers' international unions, even select the officers by referendum vote. In the matter of form, at least, labor unions have gone furthest in the direction of democracy, and perhaps no other single institution does more to

develop democratic sentiment in the nation. Yet in practice, the officers manage to have as much sway as in other organized bodies, only their authority is indirectly obtained and in consequence their responsibility is less.

The union's democracy becomes a sort of shield by which the officials are enabled when convenient to dodge responsibility and shift it upon the rank and file. While not loath, ordinarily, to assume authority, yet, when a crisis occurs, they presume to show much deference to the wishes of the majority and assume the *rôle* of its "servant," in the sense of a mere agent. If, perchance, disaster follow the union's action, he is, of course, not to blame, as, forsooth, he was simply carrying out the will of the members; but if victory should result, he will not be found backward in claiming the credit.

Unions suffer from the same mock democracy which is characteristic of our political system. Apparently the people govern in all things, but, in reality, it is the forms of self-government which are largely gone thru. Were the officers chosen with a full knowledge of their power, a better class would in all probability be selected. This may explain to an extent why local government is more satisfactory in Europe than here. Owing to the inability of large numbers to participate in the details of government, they are obliged to delegate authority to leaders. In this way the mass makes up for its deficiencies. Its capacity for self-government is measured, therefore, by its ability to choose capable leaders. The extreme application of the democratic principle defeats the purpose of democracy.

No matter what the theory upon which the union is founded, the fact is that its fate is in a large measure in the keeping of the chief. The militant side of the union cannot be overlooked. To become an economic factor it must adopt methods that will make it effective as a fighting force. Even political parties formed to uphold democratic principles find it necessary, in order to cope with opposing parties, to invest discretionary authority in the hands of the managers. Their choice being between ineffectiveness and the risk of bossism, they choose the latter. The union, despite its ideals,

would have no existence were it not for its practical purpose. It is the prospect of immediate benefits that chiefly induces workmen to join, and they naturally look to the leaders for results.

Leadership does not preclude majority rule, but it does modify it, to the extent of the body requiring the approval of the officials in matters of an executive nature, as in case of a proposed strike. Unquestionably the members should pass upon its desirability. The corrupt and despotic manner in which union power has been used in the case of Sam Parks and his successor, Wensheimer, prove that. The power to order any one on strike without his consent would be tyranny. As, however, it is impossible for the members to know all the circumstances attending a proposed strike, it would be the part of wisdom for them to obtain the sanction of the officials, who by virtue of their positions are able to form a competent opinion. For that reason it is essential that the responsible heads be clothed with the veto power. The necessity for such checks, the members themselves in calmer moments—and particularly after a defeat—recognize, and they adopt constitutional safeguards to secure deliberation and delay. Many unions make strikes subject to the indorsement of the local and national executive boards, yet when the members are aroused they straightway ignore their own precautions. Then the need for independent-minded officials becomes apparent to oppose the clamor and enforce the sober judgment of the membership.

The peculiarity of masses of men is to press on, moved by their immediate wants, until checked. It is not to be supposed that workingmen will display greater sagacity than most people—to forego what is seemingly within their reach for the sake of remoter and larger ends. The mass cannot for that reason correct its course unaided by those who by reason of their station command a broader prospect. If history has taught anything, it is that great numbers cannot direct themselves, that upon a few falls the responsibility of finding the new way.

The quality which should distinguish the leader of today, as shown by the events narrated, is the courage to advise

and stand firmly against the impulsiveness of the members. The benefits of unionism have become so evident that workingmen now organize without much urging. The movement has gained a momentum so great that the chief difficulty consists in keeping it in check. Self-restraint is the unions' evident need, and to that restraint the leader must contribute most. A prominent unionist known for his scathing denunciations of David M. Parry and his employers' association told the writer confidentially that if it were not for the fear Mr. Parry inspired and the counter-pressure of his movement, the members could not be restrained. He depended, like his compeers, upon the opponents rendering a service, but at the risk of the union's destruction, that he could and should perform himself.

What the occasion demands also is a type of labor official sensitive to the responsibilities of his calling, as distinguished from the partisan or special pleader with a vision confined only to the union claims. The latter has accomplished his mission. His intensity of purpose and extreme methods were needed to arouse the stolid mass into resistance to unjust conditions. As such he rendered an invaluable service, but this class of leader must now make way for one who, while seeking every possible advantage for his people, has a conception likewise of the limitations of business.

Another serious aspect to this lack of personal responsibility of union representatives is the effect upon the employer. An employer is not so much averse to the union as he is to dealing with an aggregation of men not conscious of responsibility for their acts as a body. He insists upon treating with the agent of the union as he would the agent of a business concern. He expects him to be able to carry out any understanding or agreement, and insists upon the representative holding his constituents to the terms of a bargain. With the rank and file he does not want to deal, and unless he has confidence in the willingness and ability of the union official to control the membership, he would rather submit to great losses than make a concession, believing that such a con-

cession would be regarded as a sign of weakness and an evidence of his capacity to make further concessions. Where, therefore, a union has established a reputation for responsibility, it has acquired an invaluable asset.

Union leadership today means vastly more than it did a decade ago. The unions have no longer separate employers to contend with, each looking out for himself and reluctant to risk the loss incident to a strike, but closely federated employers actuated by a common policy, ready to suffer great losses in order to maintain it. Guerrilla tactics will no longer suffice. The generalship on the employers' side must be matched with like generalship. The consequences of a strike are so grave as to make diplomacy an essential element. It is the reserve strength of the union, the probable rather than the actual results of a strike which the modern leader must look to for results.

The leader can no longer turn to account the rivalry between individual employers. Owing to the advantage a dispute with the union afforded competitors, the employer was made by the union leaders a whip to drive the workers into line. And so with only a nucleus for a union the membership was often built up and kept in control. The growing strength of the open shop movement has made such artificial aids impracticable.

A leader is wanted to give the union a turn in an economic direction to guide it away from a course obviously in conflict with industrial progress. The unions, left to their own resources, will naturally oppose to an ever-greater degree anything which tends to disturb the particular group they represent, no matter how much society may be benefited.

To divert the union from its dangerous course there must be leaders with the foresight to point out the consequences of an uneconomic act and make clear that restrictions upon the output, if such a policy could succeed, must eventually tend to reduce the workers' earning power; that instead, the members should direct their efforts toward securing a just share of an ever-enlarging product.

The rapid evolution of industry, the

counter-movement of employers, the expansion of the union movement and the larger social responsibility it begets call for leaders of statesmen-like qualities.

So high are the requirements and so acute the need for competent leadership as to make the future of the trade unions insecure.

NEW YORK CITY.

The Scandinavian Crisis: Monarchy or Republic?

BY JOHN LUND

[The author of the following paragraphs is one of the veteran statesmen of Norway. He was President of the Lagting, or Lower House of the Norwegian Parliament, from 1893 to 1900; he is Vice-President of the Nobel Committee of the Norwegian Parliament, which awards annually the Nobel Peace Prize; he is Director of the Norwegian Board of Customs, and Director of the Bergen Bank of Norway.—EDITOR.]

WILL Norway become a Republic or continue to be a Kingdom? That is the question asked me. My reply is that if the Norwegian people were to vote on the subject, I feel sure that the majority would pronounce for the Republic. But for the moment, the nation is bound to await the final reply to the request made by the Norwegian Government and Parliament, asking King Oscar to permit one of his sons to mount the Norwegian throne. I ought to add, however, that this invitation is scarcely more than an act of courtesy to the aged monarch. When a final answer is made to this overture, the question of Monarchy or Republic can then be taken up by the Norwegian people.

For the last five or six hundred years, during which time we have been in a Union, first with Denmark and later with Sweden, our kings have always resided in the sister State. So we have really seen very little of monarchy. On this account, and especially since our union with Sweden, which dates from 1814, political power in our land has been more and more absorbed by our Parliament. Thus, on one occasion, when Parliament considered the King was not ruling legally and in accordance with the constitution, it did not hesitate to reduce his yearly appanage. Then it deprived him of the absolute veto power; and so it went on till the Norwegian King had become only a sort of decorative figure-head, all real power having passed into the hands of our Parliament.

So recently, when King Oscar II. would not respect and rule according to the Norwegian constitution, our Parliament simply acted in its usual independent fashion; and when he could find no ministers to assume the responsibility for his having rejected the consular bill voted by our Parliament, why this body simply dethroned him. Then as an act of courtesy, as I have already said, we offered the throne to one of his family. As is well known, King Oscar has referred this proposal to the Swedish Parliament, which has not yet given its opinion in the matter.

Thus it will be seen from what has been said that the monarchical institution has long ago played out its part in Norway, and if it should happen that in the end, we should decide to give it another trial, this act will be due more to the fact that we are face to face with surrounding powerful monarchies than that the monarchical idea awakens any special sympathy among the Norwegian people.

Another consideration favorable to the monarchical solution of the difficulty is found in the fact that if we decide to take a king, our Parliament can settle the matter in accordance with the constitution just as the constitution stands; whereas, if we conclude to establish the Republic, our constitution will have to be modified, after the voice of the whole people has been heard on the question.

BERGEN, NORWAY, September, 1905.

The Royal Carriage in which Lieutenant Isobe Escorted Mr. Fujioka and the Author to Chuzan.

Liaoyang

BY J. H. DE FOREST

Special Representative of THE INDEPENDENT in the Far East.

RIDING on a slow freight train from Niuchwang to the north, one sees on the left the broad prairies of the Liao River, where grows that famous *kowliang* which figured largely in the Liaoyang battles, and on the right the low range of treeless mountains that used to be the shore of a great inland sea. But being on a continuous battlefield two hundred miles long, one thinks little of the exceedingly fertile prairies. It is the near mountains and hills converted into forts and cut in every direction with trenches of defense and offense, and on which you could see whole acres whitened with the cartridge papers of recent fights, and spotted with occasional pieces of Russian and Japanese uniform, that command one's undivided attention.

At last the train approaches Liaoyang, skirting the western foot of Mt. Shuzan (spelled Chuzan by

some), four miles south of the city. This is the last of the series of hills that curve around the south and west of the great walled city. Kuropatkin had strongly fortified them all, but as Shuzan

was the key to the city on the southern side, it was here that one of the desperate struggles took place, and therefore it was the one place above all that I desired to visit. Colonel Kawamura, the military administrator of the captured city, kindly provided us with the best of Chinese carts, and guided by Lieutenant Isobe we started for the battlefield.

On our way across the plain we stopped at one of the earthworks, a low fortification braced with lumber and furnished with bomb-proof holes. Here I saw for the first time those barbarous and deadly wire entanglements stretched over contiguous holes in the bottom of which were sharpened stakes to impale those who

J. H. De Forest, who writes: "As I was at the close of my Manchurian trip."

might fall into them. I saw at Port Arthur any amount of wire entanglements, but I saw no holes. These deserve special notice, for they are not only what the Chinese call "tiger traps," they are absolutely inhuman and savage man-traps. As the soil is alluvial, holes can be dug with almost perpendicular walls six feet deep and in rows so close that the earth between them is but a few inches wide. If you place three rows of drinking glasses as close together as possible you have on a small scale an exact reproduction of these holes. Now cover these tiger traps with barbed wire stretched on posts about a foot above the holes, then add a deep trench just behind which is the fort with its machine guns and sharpshooters, and how is it possible that an attacking body can run across the plain under fire, and then within a dozen rods of the fort tear up the wire nets, get across that treacherous belt of holes, enter the open trench and take by assault the steep fortifications? Lieutenant Isobe stood there in silence, looking at where so many of his comrades had perished, and then I heard him exclaim, "I don't see how they did it!"

But what we were looking at was really small work compared with what was done at the base of Shuzan. When we reached the belt of holes there, we found long sections of them filled ap-

parently with earth, but the lieutenant said they were filled with the dead of Oku's army. Three times his troops charged that fatal belt only to be shot down in heaps by the Russians in the trenches close by. Lieut.-General Burnett of the English army told me that when Napoleon made such a deadly charge it was his custom to give the survivors three months for regaining confidence in themselves before using them again, but General Oku made three successive charges here, but was repulsed with frightful loss, and when the hopelessness of it impressed him, he sent to headquarters for instructions and was told to keep it up, regardless of cost. So he ordered the fourth assault, which was successful simply because Kuroki's army, that had crossed 140 miles of mountains from the Yalu River and had driven the Russians before him all that distance, had made a flank movement on the north-east of the city, and this had compelled Kuropatkin to make immediate retreat. So when Oku's devoted men, who like all Japanese troops refuse no command though it seems certain death and even useless death, too, charged the manholes, there were no Russians in the opposite trenches to shoot them down. The whole Russian army was on the go towards the rear, eager to get across the Taitz River and away from Liaoyang.

The Unbroken Western Wall of Liaoyang.

Kuropatkin does what the Japanese never do, he plans for a retreat. The conspicuous proof of it here is the broken walls of the city. Liaoyang is two miles square, surrounded by a wall thirty feet high and about as broad at the top. There is only one narrow gateway on each side, wholly inadequate for the movement of troops. So Kuropatkin had wide breaches made in those historic walls on purpose that his troops might be able to retreat rapidly. The broken places have since been partially filled with sandbags.

It must have been common talk among the officers that retreat would sooner or later be in order. For the Russian railroad engineer, who resided in the well built brick house in which I was afterwards entertained for nearly a week, remarked to Dr. Westwater* shortly before the battle, "When Oyama comes, present him this house with my compliments." How an educated man of recognized official standing could talk thus flippantly over the prospective defeat of his own Russian army is a marvel, and an index of the lack of patriotic spirit.

The lack of confidence between the Russian soldiers and their officers, of which so much has been written, is illustrated by the part the *kowliang* played in the battle. Colonel Kawamura told me that he swung his regiment around on the west among this dense twelve foot millet that covered the plains. Tho he rode his horse he could see nothing, and had no means of knowing where he might meet the enemy. When at last he emerged, it was to find himself in the center of a strong Russian position, where he had to fight with fearful odds until the whole Russian line was in full retreat. The Russians never put their troops into the *kowliang* at all, lest they should desert, or disappear without fight-

One of the Breaches in the Northern Wall thru which the Russians Retreated. Now partly filled with sandbags.

ing. This eight days' battle, continuous night and day, however, has been vividly described by many who witnessed it, and so I will pass on to other things.

The most profoundly impressive sight in Liaoyang was the hospital work consequent upon the Mukden battles. From March 1st to April 4th 53,070 sick and wounded, of which 2,547 were Russians, were treated in the series of hospital buildings around the station. Trains after trains came night and day with their depressing loads of victims, and tho the Japanese army is always prepared for such emergencies, it caused a severe strain on the whole medical staff.

When I went to the central hospital at the appointed time I found the entire staff of surgeons assembled. One of them apologized for asking me to wait half an hour, since they were all going to the funeral services of one of their number. I replied that I had attended many funerals of soldiers in Sendai, and

* A Scotch missionary of twenty-five years in Liaoyang, honored by Chinese, Russians and Japanese—a noble character.

The Bomb Proof Holes in an Earthwork Two Miles South of Liaoyang.

if they would permit I should be pleased to express by my presence the sympathy of an American. So they took me to the morgue, where a temporary altar was erected, before which three Buddhist priests were waiting in canonicals. Around the inner square stood the surgeons, while the nurses and Red Cross contingent formed the outer square. The priests chanted in unison a portion of their burial service, then one stepped forward and read from their sacred writings, after which three personal friends of the dead read their "Words of Condolence" before the bier. I noticed in these eulogies that the deceased was a man of remarkable devotion and self-sacrifice. Then followed the usual advance of the friends one by one to burn incense and make the parting bow. As I stood among the surgeons I was invited to take my turn in burning incense and saluting the dead; but as that act, even tho I had no objection to

it, has no meaning to me, it flashed into my mind to step forward and raise with both hands a little silk flag of the United States that I carried in my pocket, and thus reverently express my own and as far as I could the sympathy of our nation.

It was a very novel substitution, but it won the hearts of the surgeons and nurses and priests, too. One of the priests brought me a box of war cakes such as the Japanese delight in: by dissolving them in hot water the flag of the Rising Sun floats victoriously, while the Russian war ship goes to the bottom. The surgeons not only showed me all I could see in the hospitals, but they asked me to be photographed with a chloroformed patient undergoing a severe operation, and tho I have seen blood I had to keep my eyes away from the deep gash in his thigh. They photographed me also in the midst of the sick and wounded. They even asked me to be taken with an open Bible in my hand among the corpses at the

morgue as if speaking a word of comfort there. Finally they begged for some written message that could be printed with this photograph and given to all the patients. So I wrote the following:

"These men are not dead. In giving their lives for their noble Emperor and their Island Empire they made the supreme sacrifice in the cause of righteousness and humanity. And I, an American, standing by these silent forms, reverently honor their courage and loyalty, and rejoice in the splendid victories they helped to win. These men will live, not only in the memory of their own people, but in the history of the world's progress. Their deeds will hasten the age of peace between the East and West. I call to mind the great words of the Christ: "He that loseth his life shall find it."

I was deeply touched by the uniform kindness and unselfish work of the medical staff. Much is printed about the Japanese soldier, but comparatively little is said about the surgeons. Dr. Hayakawa told me that Dr. Kubo was a strong,

healthy man in January when he joined the Liaoyang hospitals, but when that rush of 53,000 sick and wounded came, he could not take any time for sleep, saying that the lives of those men depended on his exertions. Of course something happens to such self-forgetful men, and in this case it was the fatal *kakke*. For nearly a month he clung to his arduous duties in spite of increasing fever, when suddenly his life went out. On my return to Japan, knowing how much any relic is prized, I sent to his widow the little flag as a token of a stranger's sympathy.

funeral of Dr. Kubo and heard their farewell words, I realized as never before the greatness and unselfishness of the work of the surgeons of the Japanese army. Their ability, too, is unquestioned, as can readily be inferred from the fact that there had been only 365 deaths among those 53,000 patients.

By the time I reached Liaoyang I had heard and seen enough of the conduct of the soldiers to have a definite opinion of their morale. In the half hour interview that His Excellency Count Katsura, the Premier, kindly gave me, he wished me

Two Rows of Tiger Holes, over which Barbed Wire is Stretched. Two Miles South of Liaoyang, in the Kow-liang, and so Invisible until the Japanese came right onto them. Taken by Dr. Westwater immediately after the Battle, Sept. 6th, 1904.

I have seen thousands upon thousands of sick and wounded in the hospitals of Sendai, on transports and Red Cross ships in the waters between Japan and China, in hospitals and on trains in Manchuria. Yet because there was a smile on so many faces, I failed to perceive how great their sufferings were. But when I visited the severely wounded in the Liaoyang hospitals and saw the effects of prolonged pain that had erased all smiles, I realized the great sacrifices made. When I stood with the surgeons at the

to look carefully into the condition of the army and write up the bad as well as the good. Perhaps a paragraph comparing the two armies may not be unfair.

I do not like to write down the Russians, for I know there are many splendid men among them. Yet I heard too many stories of brutality for which their officers must be held responsible. I was shown photographs that came from Marshal Oyama of flattened bullets that had been extracted from the wounds of Japanese. The use of these cruel dum-

In the Midst of the Sick and Wounded at Liaoyang with Dr. Hayakawa.

dum bullets is condemned by the civilized world, yet Russians were using them to some extent. Scores of stories of Rus-

sians stabbing and braining the wounded are told not only by Japanese officers who saw the deeds done or afterwards

In the Midst of the Dead at Liaoyang, April 7th, 1905.

saw the mutilated corpses, but also by such war correspondents as Palmer. Lieutenant Futami, who had been in twenty battles, told me not so much in indignation as in sorrow and astonishment, that in the Mukden battles he was wretchedly fooled by a squad of some twenty Russians coming towards them waving a Japanese flag, followed by about a hundred more with a white flag. So he at once unhesitatingly sent out a small detachment of men with an officer

several instances of Chinese women being violated by Japanese soldiers. Of course they stole chickens and pigs, a custom that all armies have rather sanctioned.

But I doubt whether any cases of mutilation of the dead, any use of bullets other than the inch long slender steel bullet which is a trifle smaller than the regular Russian one, any wanton firing on the Red Cross, any inhuman treatment of prisoners, or any use of flags of

The main railroad 2 feet wide from Antung into the mountainous region towards Liaoyang. The tiny cars are 4 feet by 6. This vast transport system in this region would fare hard, but for the United States, for all this railroad truck came from America.

and interpreter to meet them. The interpreter was instantly killed and five others were wounded, while behind the white flag a Russian brigade loomed up and made a fierce assault. I heard similar stories at every place I visited. Undoubtedly there were instances of brutality on the Japanese side. Two Japanese soldiers came very near taking the life of the great and good Dr. Westwater with their bayonets while trying to loot his premises. The French priest in Liaoyang was also looted. I heard of

truce for purposes of treacherous attack, will be discovered against the Japanese. I have been with critics of the Japanese soldiers, but I have never heard any serious charges of treachery and brutality. Indeed the record is badly one sided in all that makes war a hell, while it is exceptional in favor of the humanitarian spirit of the soldiers of Japan taken as a whole. In other words, there is order of a very high grade in the Japanese army. Again and again I heard of the regular moral teaching that is given the soldiers

before and after battles and under every new situation. They are warned against any self-congratulations and swelled head over their victories. They have the best teaching their officers can give them, and the best example of officers who sincerely try to live up to their teachings. While writing this paragraph, a letter comes from an officer at the front with these words: "I am educating my company with the compositive soul of Christ and of Japan (Bushido). My men are in good health, doing heavy work every day. And they are faithful about their profession, glad to work for the Emperor and for their nation."

This was the spirit I found wherever I went, among the generals as well as among the lieutenants. One general, on being told of some instances of the violation of Chinese women, did not smile and say it was to be expected, but in sorrow he said he did not see how it was possi-

ble with all all the instructions earnestly given and with every precaution that could be taken. There is evil in every army. I saw Japanese soldiers frequently strike the Chinese coolies with whips. I heard of a few instances of trial by torture. But when the Chinese fault finders were asked, "Is it as bad as it would be were Chinese soldiers here instead of the Japanese?" they every time said it was not so bad. Where spies abound and the safety of strategical plans is involved, torture with a people who live under the system is not to be absolutely condemned. I know of instances in our own army during the Civil War of forty years ago, and everybody knows what happened in the Philippines under our army officers a few years ago. Take it all in all, the Japanese army is clean, physically, financially, and in my judgment it is morally on as high a plane as has ever been attained by any army.

LIAOYANG, MANCHURIA.

Above the Battle

BY KATHARINE LEE BATES

HONOR and pity for the smitten field,
 The valorous ranks mown down like precious corn,
 Whose want must famish love morn after morn,
 Till Death, the good physician, shall have healed
 The craving and the tearspent eyelids sealed.
 Proud be the homes that for each cannon-torn,
 Encrimsoned rampart have been left forlorn;
 Holy the knells o'er fallen patriots pealed.

But they, above the battle, throng a space
 Of starry silences and silver rest.
 Commingled ghosts, they press like brothers through
 White, dove-winged portals, where one Father's face
 Atones their passion, as the ethereal blue
 Serenes the fiery glows of east and west.

WELLESLEY, MASS.

Good and Evil of College Fraternities

[In submitting the following article the author, who is a graduate of a great Middle Western State University, writes: "I wish it to be anonymous. Were my name and fraternity known some persons would say I felt as I did because I belonged to the fraternity I did. They would say all was well in all the other fraternities, etc. But they are all alike save in minor differences."—EDITOR.]

A YEAR ago a discussion of the expediency of the college Greek letter fraternity would have seemed almost as academic as a discussion of the expediency of the British kingship. While many possess doubts as to the justification of the kingship and look upon its ultimate abolishment as certain, they regard this consummation as too remote to be the occasion of any present agitation. While many collegians look upon the abolishment of fraternities as desirable and possible, they have not believed it is likely to happen at many colleges. Discussions of the virtues and vices of these organizations have become little more than exercises in dialectics, seldom of practical intent in any more important contingency than the attempt to influence some freshman and his parents debating over proffered membership. Within the year, however, a movement has begun which will at least bring the fraternity question into active discussion and force the fraternities to defend their reputation, if not their right to exist.

Inhibited by faculties, opposed by fellow-students even to the point of personal violence, included in the anathema pronounced by the general public in the anti-Masonic days against all oath-bound societies, the pioneer fraternities in the twenties and thirties led a precarious existence. Without much more of a definite purpose than the fun of being mysterious, so delightful to a generation which enjoyed Ann Radcliffe, these societies speedily had imitators, which, extending the number of fraternity men, weakened opposition of the students, and fraternity alumni becoming members of the faculties, opposition declined there, all while the fraternities were changing from hidden cliques to actual brotherhoods. The anti-Masonic agitation dying away, the opposition of the public ceased.

Spreading during the forties from the original seat in New York and New Eng-

land into the South and then the West and giving rise to yet other orders there, the fraternities in those sections encountered the charge that they were undemocratic. They were. In the forties and fifties they had to exist *sub-rosa*, if they were to exist at all, in most of the Western colleges and many of the Southern. That the charge of aristocracy and narrowness was not made against them in the East at this time may be seized upon by some as an indication of a lack of the democratic spirit. The truth is that in general they were not undemocratic in the East, nor are the contemporary chapters of the region open to the charge in the degree that Western and Southern chapters are. At Bowdoin and Colby, often the whole student body is enrolled in the fraternities. At Wesleyan and Trinity, nearly all belong, and at some of the other New England and New York colleges the percentage of fraternity men runs so high as eighty-five. At Harvard the four or five fraternities are completely overshadowed by local clubs, and at Yale the idiosyncratic system does away with many of the objective disadvantages and many of the subjective advantages. It is at the minority of the Eastern colleges that the system becomes aristocratic thru enrolling percentages of from but forty to sixty. In the South, the percentage in rare instances exceeds or reaches fifty, and in the West is seldom so high as forty, is more often twenty than forty, and often still lower. Where the percentage of fraternity men is small the purely social idea prevails, the man's tailor is a prominent factor in his eligibility, real personal worth tends to be disregarded, the literary and educational side of the chapter is not strongly developed. We understand, then, why the fraternities are so generally lauded in the East, while in the West and South they have been so often forbidden by faculties and even by State law. This brings up the question of their legal right to live, perhaps not entirely pertinent to a

discussion of their moral right, yet of interest in itself and beyond that as regards the possibility of abolishing them by other than suasion, should abolishment be found desirable.

The Supreme Courts of California and Indiana have decided that they cannot be forbidden in State universities, that a college regulation to such effect discriminates against a "class of citizens" and is unconstitutional. This in response to suits brought by students at the University of California and Purdue University, the State scientific institution of Indiana, the legislature having forbidden fraternities at the University of California, the trustees at Purdue. The decisions stated that the fact of fraternity membership should be no more recognized by the faculty than Masonic membership is recognized by civil authorities. Yet after this decision, the State universities of Illinois and Missouri banned fraternities for periods of ten and twenty years, and even now various State universities deal with them as bodies instead of individuals, overlooking the fact, often deeply resented by non-fraternity students, that to recognize them even to punish them is recognition and becomes the basis of demands for privileges. It is of course apparent that private colleges can deal with them as they please, that State law can neither prohibit nor protect them in private colleges any more than it can interfere with conditions of membership imposed by churches.

Some four or five years ago, an anti-fraternity movement was started in the University of Arkansas and a league formed that extended to many Southern colleges, State and denominational. In Arkansas, the league succeeded in securing the passage of a law banishing fraternities from the State university, forbidding fraternity men to hold faculty positions, and fraternity students from receiving any university honor, this second redundant provision intending to cover fraternity men initiated before their chapters were dispersed and who came from other colleges. Yet the fraternities continue to exist; some of them even own chapter houses. The faculty elects to consider that the honors forbidden the fraternity men shall mean of-

fice above first lieutenant in the university battalion! The Attorney General has pronounced the law unconstitutional, but it remains on the statute book, which suits the anti-fraternity element, and is ignored, which suits the fraternity element. In Mississippi, the work of the league resulted in a law banishing fraternities, but this was rescinded by the same session which passed it, leaving the fraternities operating under onerous restrictions, but still alive.

It is customary, in repelling criticisms of the fraternity system, to recount, as I have done, somewhat of the opposition the system has encountered and the way it has triumphed, presumably proving that opposition to it was founded upon ignorance and vanished when the real character and aims of the system became thoroughly realized. Oberlin and Princeton are now the only important colleges that forbid fraternities, and, save in the non-essential matter of a Greek name, Princeton's clubs are indistinguishable from fraternities.

Today the majority of the fraternity chapters occupy houses, and if they do not in all instances own the house, it is safe to say they are accumulating funds to purchase or build. The chapter-house feature is made much of by the educators who commend fraternities. Managing the house gives the members both a sense of responsibility and business experience. The discipline acquired in adjusting your temper to that of the other members of the common household is valuable, the necessity of managing some of your mates teaches tact. In the matter of "rushing," as the campaign for new members is called, you learn to make up your mind about men quickly, to judge quickly. Again, you exercise tact in making a favorable impression upon the man you rush, and if you have a personal interest in him, in seeing that he makes a favorable impression upon the society. To be sure, tact here is likely to degenerate into finesse. In some institutions the fraternity will give you a good deal of political training, tho in general fraternities are far less in politics than is popularly imagined. In some institutions they hog all of the offices and portion them out among the various chapters, leaving the independent students

very little. But this is rather looked down upon in most colleges, and the fraternity men enter politics entirely as individuals. There is much training in diplomacy in the smaller and medium-sized institutions. In the very large institutions the fraternities are somewhat lost. Each lives to itself a great deal, an isolated monastic community. But in the institutions small enough for the students to know each other there is the same contest among fraternities that there is among the European powers. The balance of power must be maintained. The strong must not get too strong and the weak must be bolstered up.

In general, the life in the chapter houses is morally good. Few chapters permit drinking and gambling on the chapter premises. Some whole fraternities are fast and brag of it as their proudest glory. Andrew D. White, a strong defender of fraternities, always made an exception of one, which he mentioned by name. It is true that some fraternities never try to make their chapters behave, that some try all the time and others attempt it sporadically. My own is one of the sporades. Under some presidents, a close watch is kept upon all chapters and the "sporty" ones are called to time; threatened, sometimes. We have more lively chapters than the average, and yet, thanks to a pretty close supervision by the fraternity council, the society is far from being the worst behaved. Without exception, every society has some disorderly chapters. Some chapters are disorderly year after year, choose their members from the sporting element; others pass into temporary occultation and out again. Frequently a chapter which could hardly be called a circumspect organization is collectively better than the average of its component individuals. Even a lot of pretty bad fellows can often be kept within some sort of bounds through fear of injuring the reputation of the society. Fraternities are really quite strong on prudential morality. However, the very great insistence upon prudential morality may make the member fall into the bad habit of looking at every moral problem from no other side than that of expediency. Taken by and large, the fraternity does

not corrupt the conduct of its members. If it is at all open to the charge of disorderly behavior, that is because it is composed of men who would incline to frivolity even if no such thing as a fraternity existed. In the colleges where the percentage of fraternity men is sixty and less, the members are from the wealthier students. They have more money than they need, have been indulged at home, perhaps have an example in their parents before them. In college and out, virtue often springs from a narrow purse. The fraternities merely collect a moneyed element which would in whatsoever event study less and play more than the poorer students. It must be admitted, tho, that in the fraternity you are often tied to men you would repudiate in a state of free society; must countenance, condone, and palliate the conduct of boors and drunkards, if such there be in your society, and they certainly do get in at times. Such men may be expelled, but an expulsion always seems a travesty upon your oaths. Some of the strongest societies expel men very easily. Others almost never expel a man, no matter what he does. In my own society, only conduct so bad, so disgraceful that a father would turn his own son from his door will cause a chapter to cast out a member. Tho this results in the retention of some unworthy members, I must say I like this strong sense of brotherhood and believe the society is better for it after all. The ties of blood are seldom stronger.

One is unpleasantly aware in giving the good points of the fraternity system that he is talking solely of the benefits it confers upon its own members, that it is purely selfish, that often its members have more pleasures than other men because thru it these other men have fewer. It is perhaps significant of a decay of true Americanism that the long line of eminent gentlemen who defend the fraternities so warmly, almost apoplectically, calmly ignore this.

Some educators affect to see in the chapter-houses grouped about the university an approximation to the English university system of separate colleges. This is not so far-fetched as might appear at first blush. Each chapter is more than the twenty or thirty lads in college. It is

a strongly bound unit of several hundred men of all ages. As the English university graduate is an alumnus not only of the university, but of some constituent college, so is the fraternity alumnus not only an alumnus of the college, but of his chapter. The chapter performs a valuable service in keeping him interested in the college. As a contributor to the house-fund, he has a vital interest in something connected with his alma mater. Once or twice each year he gets a circular letter from the chapter with news of the college and alumni. His record is kept by the chapter. It is a clearing house for information concerning all of its members. No matter how long he has been away, he finds somebody in the college town who knows who he is, who is glad to see him. His name has been read in the old minute books. Traditions concerning him have been told around the fireplace, and he out of college these twenty-five years, perhaps. When he enters the chapter-house, he gets a warm clasp of the hand. The boys proceed to pick out his picture in the groups hanging on the wall. In my chapter they call you by your old college nickname, or by your given name, unless you are too frostily dignified, and make you a boy again with them, an elder brother, but a brother. When I go into the house of my chapter and they call me, fifteen years out of college, by my given name, it warms the cockles of my heart and my blood flows faster. Your old college name in the mouths of college boys. How sweet it is! Here is time defied, here is the one place in the world where the fountain sought by Ponce de Leon ever flows, perpetual youth realized. The chapter is eternally young, eternally joyous, and to have an eternal welcome to it is a precious privilege.

In some chapters there are literary exercises. Complete success in this respect means complete supplanting of the old open literary society, so this cannot be argued as a plea for the fraternity. It is not a desirable substitution. In a great many chapters there is a system of supervision over the class work of members. In some this merely takes the form of a "class officer" chosen to look after men who are lagging, who counsel with him and his instructors, get his marks, which

perhaps are read in meeting. But in some few chapters the marks of all members are read in meeting; there is personal exhortation and appeal to personal and fraternity pride. The chapters which do this have made remarkable records in scholarship, and wherever you find one that has carried on the system long—and some have been doing it for half a century, have half a century's marks in their archives—you will find that the alumni list has a notable number of scholars and distinguished men of affairs. Every chapter teaches social polish, taste in dress, *savoir faire*. Whatever else they fail to do, they all certainly do this.

In my own case, my fraternity has seconded the education given by my college. I do not refer to the chapter, but to the fraternity, which is one of the nine or ten fraternities which can truthfully call itself "national." I know that several fraternities in nowise entitled to this designation, thin lines strung along our Northern border, with cool effrontery claim it. Geography is not debatable. One may speak disrespectfully of the equator, but hardly call its location into question. The sectional fraternities, until recently, bragged of their sectionalism. There were no noble men but New Englanders, New Yorkers and Pennsylvania Dutch. They had no part in that very substantial work of uniting all sections of the land performed by the national fraternities. Their lack of catholicity is now seen to be a disadvantage, and occasionally the organizations which a decade ago got into a fine fury of contempt for those which had chapters in Dixie, or could consider the barbarous West, are now from their hyperborean fastnesses proclaiming themselves "national." I have found the gatherings of my fraternity, with their hundreds of educated men drawn from every section of the country, highly instructive. The resulting acquaintance and friendships have made me know the country as I never otherwise could. In a material way, my membership has been a social advantage, has brought me into the life of many communities.

In the Central States and South you find that the public is surprisingly familiar with fraternity badges and inclined to accept them as social guarantees, that

is, if the society is represented in that section. The sectional fraternity member is here at a disadvantage. The name of his society, perhaps famous in the section where it exists, means nothing in the region where fraternities mean most. The fact of membership not only means a kindly reception by members of your own society, but members of other societies also. Individually, of course. You would not introduce yourself to a chapter of another fraternity, but in traveling you may approach an individual, or in meeting him in the ordinary way you find it makes a difference. The fraternities are broken up into alliances, groups. Most of these groups run in threes. While the individual chapters may squabble, the allied fraternities as a whole stand by one another, say nice things of one another, and tell how much better their group is than some other group. My own group is a very large one. It includes all but one of the national fraternities, which is partially included in another alliance, tho logic forces it in with the rest of its class. As the national fraternities had to meet widespread criticism for their policy of wide extension, and as they now feel that their judgment has been triumphantly vindicated, the alliance begun in times of trial and continued in the hour of proud victory has drawn them together into a closer union than exists in any other group. I have personally found this fortunate, since it has enabled me to know many people from many parts of America whom I never otherwise could have known. It is true that outside my group I have sometimes found that a chill reception met me from a member of another, but as this frigidity is found in but a small section and my life has not been parochial, I am quite satisfied to belong to a society which believes that men from Maine and Texas, Minnesota and Louisiana are equally worthy of enrollment in its ranks.

I said I thought the fraternity system was about to enter a period of criticism and perhaps attack, that it would have to defend its reputation, if not its life.

A movement has been gaining force for over a year now against the amazing raft of pestiferous little high-school and even grammar-school fraternities, presenting as they do nearly all of the

evils and very few of the virtues of the college societies. The daily press of the country has made onslaught, in city after city the boards of education have forbidden them, and woman's clubs of every degree have passed adverse resolutions upon them. It has been so easy to sweep them away, so surprisingly easy, that the opponents of the college society will take courage. When the public has heard all the allegations against them, it seems impossible that the question will not be asked if the college societies are not guilty of some of the things which have caused the abolishment of their high-school imitators. The inquiry will surely extend to the college society, whose membership cheapened, whose badge discredited by these inane organizations, will shortly find its repose if not existence threatened by these societies which have already taken away the chief value of the visible token of membership, its indication of the college man. I take this to be the reason why you so seldom see the college fraternity badge now in the North. The high-school fraternity has not yet invaded the South.

The nation is beginning a war upon privilege. We were almost on the verge of *vehmgerichte*, of *carbonarii*. New Harmodiuses and Aristogeitons would soon have been killing our new Pisis-tratidæ. But we have begun the movement thru forms of law. The privileged organizations in college must answer the questions that privilege will be asked everywhere. In the attempt to restore democracy the Greek letter fraternity, in the form in which it exists at present, will have something to reckon with. If the malignant growth of narrowness and class feeling is so entwined about its vitals that no surgical operation can remove it without endangering the subject's life, it will remain to cause death ultimately.

As for myself, I am a disciple of the French Revolution. As such, I really have no place in defending the Greek letter fraternity system. And yet I love my fraternity, I love my chapter. As I think what they have meant to me, I feel the force of Charles Dudley Warner's words when asked to write a defence of his fraternity: "Defend my fraternity! I could as soon think of defending the sunlight, and I cannot get

myself into the proper mood to do either." As a disciple of the French Revolution and a believer in the brotherhood larger than the largest college fraternity, I would that the college fraternity might be for all. Much as I love my fraternity, I deplore the reactionary tendencies for which the system stands. We can never rid the world of selfishness, of privileges, but if we could keep one corner of it free for noble ideals, if college could still

be a place of noble illusions, life would be better in this country. In monarchical Britain, in despotic Russia, the university has been the well-spring of democracy that has refreshed the nation. Alas, in this country the Greek letter fraternity sullies the fount. I dismiss as matters of no moment, and not worthy the time to explain or refute them, all things else said against the system in the face of this most serious charge that it vitiates the spirit of college democracy.

The Christ of the Andes

BY SEÑORA ANGELA DE OLEVEIRA CESAR DE COSTA

[It will be a pleasure to our readers to read the story of the extraordinary monument to eternal peace erected on the summit of the Andes, and on the border-line between Chile and Argentina. This colossal statue of Christ, lifted nearly three miles above the level of the sea, commemorates the conclusion of the most remarkable treaty of peace and arbitration ever made between two spirited nations, one which is accepted as the example to the world. The statue is cast from bronze of old cannon which the Spaniards left at the time of Argentine independence. The sculptor is a young native of Argentina, Mateo Alonso. On the monument is the inscription: "Sooner shall these mountains crumble into dust than Chileans and Argentines shall break the peace which, at the feet of Christ, the Redeemer, they have sworn to maintain." The conception of such a monument came from the hearts of Bishop Benavente and Señora de Costa, and it was she who, as President of the Christian Mothers' Association of Buenos Ayres, undertook the work of securing funds and having the statue created. This was accomplished, and it was set up March 13, 1904. We are glad to be able to give a portrait of Señora de Costa. We shall be happy to send to her any contribution that our readers may wish to make to the humanitarian purpose connected with the monument.—EDITOR.]

THE erection of a monument commemorative of the international peace between Argentines and Chileans was a logical outcome of the events which were being unfolded on one side and the other of the Andes.

War seemed inevitable: diplomatic methods having proved insufficient, there seemed no other way for the solution of the question of boundaries than that of the *ultima ratio* of force. In order that the national frontiers should be defined, it was necessary to stain with human blood that strip of disputed territory upon the crest of the Andes. The armies were ready to begin the campaign; the navies equipped to put out to sea.

At the supreme moment of giving the signal to advance, the oppressive sense of the tremendous responsibilities which war imposes obliged the public men of that side and this of the Andes to meditate upon the disastrous consequences of the solution by arms.

The question having been lifted to this

plane of calculations and probabilities, reason must needs triumph over the impulses of passion. Chileans and Argentines rising above the vainglory of national self-love, renounced the solution by force, and instead of asking the decision of the dispute from the unconscious and brutal mouths of cannons agreed to receive it from the lips of an international tribunal.

The ultimate end of war—but one which war does not always realize—is the triumph of reason and justice. And here reason and justice triumphed without tears, or blood, or barbarous horrors. What victory more worthy to be immortalized in marble and bronze?

The penetrating idea of the commemorative monument was in the national atmosphere, and I had but to condense it in my spirit to give it tangible form. If the idea is mine, it is in the same way as belongs to the sculptor the statue which he brings forth from the block of marble where it was sleeping invisible; and

I even dare to think that the idea had to issue from the brain of a woman, because it is an idea of sentiment, and in all time men have reproached us for thinking with the heart.

Moreover, everything which tends to perpetuate peace by its prestige and glorification specially interests and affects us women—that is to say the mothers, wives, daughters, the betrothed of those who must fall sacrificed on the battlefields. War may dazzle men with its lightning flashes of military glory. For us women it represents only tears

and pain; that is why the Latin poet called it "accursed by mothers."

The erection of the monument to international peace gave rise to these additional questions: What character shall the monument have? Where shall it be placed? What shall it represent as a symbol?

Thereupon, that it might have its real significance, it must be of official character and raised by the Argentines and Chileans, represented by their respective Governments. And thus being international, where should it be placed if not

Señora de Costa.

The Statue of Christ. From a photograph taken on the day when it was accepted as an International Monument.

on the boundary line of the two nations, and on the summit of that mountain range which had seemed destined to serve as a theater for the exploits of the heroes of war?

The object of the monument is to glorify peace, justice, human brotherhood; and who could better personify those virtues than He who preached them in His life with divine words and sanctified them with His death in the martyrdom of the cross? Who could more rightfully occupy the highest summit on earth than He who for twenty centuries has occupied in the history of humanity that topmost summit which touches the sky and is called "Golgotha"?

In this way and from one deduction to another I succeeded in giving complete form to the idea of the monument to Peace represented in the *Cristo Redentor* (Christ the Redeemer), whose splendid statue was lying in this city, having been ordered by the illustrious Bishop of Cuyo,

Monsignor Marcolino Benavente, to commemorate the Holy Year (1902), and which, for lack of means, it had not been possible to place on the Inca Bridge. (Bathing place in the mountains).

But the idea is worth little or nothing unless it is transformed into a real action.

For the rest, it may be said that I had to contend with obstacles which seemed insurmountable for a woman. But I have a moral quality which I may call Saxon: I am persistent and tenacious in all that I believe true, good or just. I have always thought that there is no force more powerful than an energetic will which knows how to desire with faith.

Is it not with that secret that the great Republic of the North has discarded from

General View of the Monument as it Appears upon the Summit of the Andes, 14,000 feet above Sea Level.

its political and scientific vocabulary the word "Impossible"?

I soon placed the idea under the auspices of the religion represented by the first dignitaries of the Church, and of the social beneficence represented in the society of "Christian Mothers." Accompanied with such prestige, we knocked and not in vain at the doors of the Argentine and Chilean authorities, who adopted the idea and took the responsibility of bringing it to fulfilment.

travelers, surprised by the snow-storms of the Andes, perish every year during the winter for lack of timely and effectual assistance. "Christ the Redeemer," who immovable from His pedestal of granite contemplates those dramas of despair and death, asks of all mankind the foundation in those solitary deserts of a humanitarian establishment similar to that of the Monks of Saint Bernard in the Alps.

This is the work in which I am now

The Monument from a photograph taken immediately after the Ceremony of Unveiling on the 13th of March, 1904.

The image of Christ is now standing on the summit of the Andes, as a symbol of brotherhood and peace among men. But that is not enough. Peace is the united expression of a divine religion, of *love* and *charity*. Where charity is lacking, the peace cannot be a true one, because it lacks that sentiment of human solidarity which makes us feel the misfortunes of others as our own. There on that very lofty summit numbers of

engaged, and which I pray that God will be pleased to grant. I have already the concession made in my name for the accomplishment of that object of the necessary land for the foundation of the Monastery-Refuge. I do not doubt that the Argentine and Chilean Governments will lend their aid for its support and preservation; but I lack the money for the construction of the building, which needs to be of a material adequate to the

ends which it is to serve, and to the severities of temperature which it must sustain.

It will be costly, but for the attainment of a work of mercy of humanitarian character and so universal, it is requisite and to be hoped for that people of all nations shall contribute generously to its realization.

Climatic and meteorological observatories can also be built there, as it is one of the greatest heights reached by the foot of man (10,500 feet above sea-level; the monument is at 13,000 feet).

The first power that I meet on my way is the great, opulent and philanthropic Republic of the United States of the North, and with the confidence inspired

by its proverbial generosity, I stretch forth my hand soliciting its pecuniary tribute towards the erection of the refuge in the Andes, commemorating the thought of Universal Peace.

This will be another link in the fraternal chain that shall unite us, and "In union is strength."

You and your friends who are making so beneficent a propaganda on behalf of that religion of love and charity, having found the practical form, will assist me, I do not doubt, in imploring abundant help for the "Christ of the Andes." I dare to hope that even the Government and the people of North America will not be indifferent to such an appeal, for the Love of our Lord!

BUENOS AYRES, ARGENTINA.

The Legend of Ishtar

BY GRACE DUFFIELD GOODWIN

ISHTAR goes seeking the lost,

On through the cold and the heat,

Listening by night and by day

For the sound of his feet.

Queenly, gold-girdled and proud,

She sues who was wont to command;

Through the storm and the darkness she seeks

For the touch of his hand.

Gray grows the gloom of the dawn,

Where the night lingers starless and wild,

And her longing is fiercer than thirst

For the lips of the child.

At the sullen, shut portals of Death,

In the black Halls of Silence and Pain,

For the price of the crown that she wears

She would clasp him again.

Is it days, is it hours, is it years

Since he left her to wander alone?

Just to bend down her face on his hair

She would barter her throne.

Her jewels she flings at the gate;

Her girdle, her sandals she gives,

Her garment of gold, her gold hair,

Just to know that he lives.

One moment the portals unclosed;

One moment she sees him in bliss.

O. Ishtar, each mother on earth

Would be beggared for this!

PAWTUCKET, R. I.

Literature

George Frederick Watts. From Barrington's *Reminiscences of George Frederick Watts*. Macmillan Co.

George Frederick Watts

MRS. RUSSELL BARRINGTON first met George Frederick Watts in the studio of Dante Gabriel Rossetti more than forty years ago. A few years later she received some painting lessons from him. Then she became his next-door neighbor, and for nearly thirty years, until Watts's death in 1904, their friendship was of the closest and most intimate kind. Probably from the fact of intimate association no other living person is so well qualified to tell what manner of man this great English artist was*; and

she has succeeded in giving us a very life-like portrait of the frail little man, who looked as if he were not long for this world, whose slight physique was all but consumed by the fire of his genius, whose passion for work was the only passion he knew, and who yet lived to the ripe age of eighty-seven years, working, working always, with astonishing productiveness, and creating colossal and wonderful "anthems" in form and color. She pictures him in his scant hours of rest and relaxation, when the light failed and he could no longer see to paint, as well as at work; shows him at his frugal

* G. F. WATTS. REMINISCENCES. By Mrs. Russell Barrington. New York: The Macmillan Co. \$5.00.

supper of "the cold remains of the dull little pudding made without sugar which had been hot for his dinner in the middle of the day, and a tumbler of milk mixed with barley water—Summer and Winter, never any change"; tells of his self-centred individuality in all his work, of his solitude—how he lived best in "the reposeful sense of seclusion and the monotony of the accustomed in all outward matters, which left his mind free to absorb itself in work"; of his diffidence, his constant self-depreciation, of the strain of sadness in him, of his tender-hearted sensitiveness, of his childlikeness in the enjoyment of simple pleasures, of his worry over the lack of money, of his love of nature, love of color, love of music; tells how he came to adopt Titian's method of painting, and a thousand and one other things about him. And for the most part the things she tells are of more than passing interest to all who would understand and appreciate the genius of a remarkable man and a great artist, tho at times it must be admitted she rather overloads her pages with minor details. It does not take anywhere near all that she has written to convince the reader that Watts had a very distinct personality, and was possessed of great charm. He wrote once that the two things his experience had proved to be worth living for were to do as much good as possible for humanity and to have friends.

On the whole, the portrait Mrs. Barrington gives us recalls Mr. Chesterton's paradox on Watts, that he was meek, but he claimed to inherit the earth, tho in all probability Mrs. Barrington herself would be rather shocked by that witticism.

There is little direct criticism of Watts's pictures, tho the author's praise and appreciation are tempered by a recognition of some of the master's faults, chief among which was his inability to let well enough alone—to realize when a good thing was finished; he would go on trying to improve his pictures until many of them were spoiled in the process. His great aim was "to give his entire life unremittingly and with single-hearted earnestness to his work; to endeavor by so doing to substantiate ideas which he conceived might and ought to be expressed in the language of art; to use his gifts in

the cause of raising art to the same level of culture in England as that on which great poetry and great music stand; in fact, to bring the same high faculties of the human mind and spirit to bear on creations in painting and sculpture that are the sources of the more purely intellectual and abstract expressions in writing and sound." Only a few months before he died he wrote, apropos of his distaste, "almost pain," of finding himself forever being brought before the public notice, that he never wished nor worked for it, and if circumstances had permitted would have done his work as Pictor Ignotus, leaving it to say what it might when he should have done with it; and he added that he was full of maladies, some big enough to be serious, and others serious enough to be great inconveniences, but he was able to work, and as eager to improve as ever, and that's about all. He was then eighty-seven!

The book is written pleasantly, interestingly, tho without any great distinction of style—but it is only fair to add that there is no pretension of style. The book is illustrated with forty reproductions, in color, in photogravure and in half-tone, mainly from lesser paintings, drawings and designs by Watts, most of which are in the possession of the author, and reproductions of which are probably not to be found elsewhere.

Religious Education

The Crown Theological Library contains some of the most notable theological productions of recent years, such as the English translation of Professor Delitzsch's *"Babel und Bibel,"* Harnack's "What is Christianity?" and Herrmann's "Faith and Morals." With its latest volume this Library enters the field of religious education.¹ Eleven eminent professors and divines, all British, except Dr. Ladd, of Yale, contribute essays on the principles and methods of the religious instruction of children. The writers represent widely different denominations and schools of thought; there is the Calvinistic Welshman, Dr.

¹ THE CHILD AND RELIGION. *Eleven Essays by Prof. Henry Jones, M.A., Prof. George T. Ladd, D.D., Rev. Canon H. Hensley Henson, B.D., and others.* Edited by Thomas Stephens, B.A. New York: G. P. Putnam's Sons.

Cynddylan Jones, who finds it in his heart to write that children die because all "lie under guilt"; Professor Beet, who is under the ban with the English Methodists; also a Swedenborgian, a Jewish Rabbi, as well as an Anglican, and an English Independent. Much that is enlightening and helpful is suggested, especially by Professor Jones on "The Child and Heredity," and by Dr. Ladd on "The Child's Capacity for Religion," but the volume as a whole reflects the confusion which characterizes present English thought on the subject of religious education, and will be found somewhat disconcerting by those seeking light on practical difficulties. The views most widely held in America find best expression in the excellent essay of Dr. Horton on "The Religious Training of Children in the Free Churches."

Dr. Brumbaugh, Professor of Pedagogy in the University of Pennsylvania, is already known to many Sunday School teachers through his articles on teacher training in the "Sunday School Times." These articles, with additional material, are now brought into book form.² They make a very good text-book in pedagogy for Sunday school teachers. Much of the reproach visited upon the Sunday school has been because the teachers have not known how to teach, and because they were usually persons who had not the smallest inkling of the principles of instruction which have become a commonplace with teachers in the day schools. Dr. Brumbaugh has endeavored to provide means to remedy this defect, and he has done his work well. The volume can be used either as a handbook for private study or a text-book for teachers' classes.

The Education Code of Great Britain, says: "The purpose of the public elementary school is to form and strengthen the character, and to develop the intelligence of the children entrusted to it." Mr. Waldegrave's handbook,³ which is issued for the Moral Instruction League, is designed to assist teachers to form and strengthen character, and to make the teaching of morals in elementary schools

effective and interesting. While written especially for English use it will be found valuable and suggestive to any one whose duty is to take pains for the moral instruction of children. The illustrations from history, biography and natural science alone give it a value above that of some more pretentious manuals.

Labor and the Present Regime

Dr. Abbott in his latest volume¹ gives us a running survey of the industrial problem, and thereupon considers its solution under three proposed plans—regulation, reorganization and regeneration. He believes, with Spencer, "that there is going on in our time a movement toward the dissolution of existing forms and a reorganization on what may perhaps not unfitly be termed a socialistic basis, and that this movement is irresistible." But he is wholly unable to see in the coming changes the disaster predicted by the great Individualist philosopher. Rather he believes the movement "has in it the promise of an industrial prosperity and an intellectual, social and spiritual development far transcending any that past history has afforded." Yet he separates himself sharply from the orthodox Socialists; and passing by political regulation and economic reorganization, he rests his hope mainly upon ethical regeneration. Christ, he asserts, did not "condemn the acquisition and accumulation of money. On the contrary, He explicitly commended it." What He condemned was "the notion that money or the things which money will obtain are to be valued for their own sake." The ideal of society to which he looks forward is evidently one wherein the buying and selling propensities of humankind are nobly restrained by a constant reference to the teachings of Jesus.

The Adams-Sumner volume on *Labor Problems*² is excellent in many respects. It is professedly designed for undergraduates and teachers, but the general public may find in it also a range of subject-matter and a felicity of treatment which should make it popular. Covering

² THE MAKING OF A TEACHER. By Martin G. Brumbaugh, Ph.D., LL.D. Philadelphia: The Sunday School Times Co. \$1.00.

³ A TEACHER'S HANDBOOK OF MORAL LESSONS. Arranged by A. J. Waldegrave. New York: E. P. Dutton & Co. \$1.00.

so wide a field, it must necessarily touch but briefly upon all but a few of its many topics. A carefully chosen bibliography, however, informs the student where he may read more exhaustively. The book will not escape criticism: its over-positiveness on many controverted questions lays it open to the censure now of Socialist and now of Individualist. A book professing exposition alone might well avoid decisions on disputed points, and fulfil its mission by giving, first, authenticated data, and then the contentions based thereon by the various schools, leaving the decision to the reader as a just judge leaves a verdict to a jury. The work closes with an expression of skepticism regarding panaceas. "We may be moving toward Socialism or we may be moving toward Anarchism," it says; "but whithersoever we do move, Socialism, Anarchism and every other ism must stand or fall on the wisdom of its immediate proposals. The hope of the hour is in specific social reform." All of which may be true intrinsically, and yet carry a false implication. Society moves by "mutations," in De Vries's term, just as does Nature; and an impending "specific social reform" may be as revolutionary as the abrogation of the feudal privileges of the French nobles in 1789 or the abolition of slavery in 1863. The old phraseology of uniformitarianism, which has been worn threadbare in its application to sociology, must give way to a new one based on modern science, which now recognizes evolution *per saltum*.

The Autobiography of Andrew D. White*

Time's abstract and brief chronicle for the last three-quarters of a century is here presented, from within, by one who was precocious once, and has been competent always to understand and influence it; and, as a result, we have an interesting and instructive book, but not a popular biography.

The conception of the book is careless if not loose, the material neither disciplined nor homogeneous enough to win acceptance as literature, despite an ease

Andrew D. White.

of style, richness of reference and trenchancy of judgment that stimulate and entertain.

In brief, this is not one book, but parts of several—a general repertory of lost things—political reminiscence, historical monographs, travel biography and autobiography—and would be much the better for the separation plainly indicated in the divisions of the subject-matter. In this it might appear to exhibit the defects of its method of composition and publication ("at divers times, in sundry places"), and of the author's temperament and habits of work, enforced by peremptory occupations and the exactions of a delicate tho elastic health. Yet the book must be consulted and will be consulted with pleasure and with profit, both for material and personal reasons. Here we have inside history, a diary of events, a gallery of men—if but the summary sketches of a traveler and social acquaintance, the agenda of a statesman and a scholar; and withal a crop of positive opinions, which seem to have played the part in this life that wild oats do in others. The book is practical,

* AUTOBIOGRAPHY OF ANDREW D. WHITE. 2 vols. New York: The Century Co. \$7.50.

sensible, efficient, the topics modern and important, and if at times there seems too singular a minuteness of record and impression, yet we must then remember that it is autobiography, written for the author's "children and grandchildren." Here is the record of a sustained and useful life, much mingled with its times; a nature seminal rather than substantial, vital than muscular, more characterized by molecular energy than mass momentum; yet ever effectual, enduring and accomplishing, more than most, thro wise anticipation, timely initiative, quiet persistence and skilful social tact. Thruout this career the person counted much, the sound mind, the trained and innate judgment, the cultivated taste, the early and enlarged experience of men and civilizations—child of good fortune as he was, well born, well bred, accrediting fortune also by industry and ideality as well as happy temperament. For faults, perhaps the author is too markedly pragmatic—over-clearly defining the influences upon him and derived from him, and too determined to instruct; roseate in his discernment and appreciation of persons and of tendencies, sanguine and even "easy" in his public judgments of congenial individuals; yet acrid, pungent, positive enough in conscience, and not without plenty of pet antipathies, generally justifiable, most unambiguously expressed, and distinct social methods named and blamed.

As stimulator and initiator, guide and director, overseer and organizer, and wholesale civilizer, he literally and spiritually has *served the world*, from the standpoint both of country and humanity, in thought and act. Such men of tact and training, taste and insight of ideal principle and personal influence and power of practical manipulation, are too few always in our America, men of conviction earned and deserved, and with that passion that marked him from the beginning to enact their thoughts into the daily doings of their countrymen and thus affect the fate if not control the course of the American State. Our grateful praise should be proportioned to our need, which ever, alas! is greater than the majority perceive.

A large part of the book is devoted to the development and realization of the

"Cornell Idea," by which, the author says, "more than any other work of my life, I hope to be judged." In the closing chapters we are given a review of the "Religious Development," both of himself and of the age (1832-1905), filled with extraordinary anecdotes, tart characterizations, churchmanship exceeding broad and narrow, humanity entirely tolerant and genial; with the resultant impression of himself as a non-dogmatic, inwardly religious man, a believer in the Church and lover of its service, when done decently and in order, but unrestrained against sectarianism, vulgarity and sham. Moreover, these pages are enriched with reminiscences of many eminent men, foremost among them the then hated Unitarians, Theodore Parker and Samuel J. May, as authors of his character and builders of his life, and comprising an admirably suggestive study of Bismarck, a royal eulogium of William II, the Roosevelt of Germany, an interesting interpretation of Pobiedonostseff, and a direct but unsympathetic portrait of Tolstoy.

There are numerous anecdotes thruout the book, some forced and throwing suspicion on the quality of humor in the author or on his judgment of his audience, and some extended ones of ludicrous interest. And certain obsessing topics repeatedly appear ingrained thru much experience, namely, the sensation-mongering of the newspaper press, the prostitution of American citizenship, abroad and at home, deficiencies in the diplomatic service and in the opportunities for instruction for public office, mob control of conventions, the prevalence of crime in America, the vulgarisms of revivals, the frantic yet self-defeating oppositions to progress of sectarian ignorance and selfishness. Altogether this is a full book, with something for everybody, putting one in touch on many sides with modern times; an adequate narrative of an exceptional career, which yet owed more to personality than opportunity, tho both were present; a character bent on action, easily exhausted, but "always at it," adroit, tenacious and beneficent, using the resources of scholarship and manners to the end; with purposes early perceived, clearly pursued, mainly attained; a book, therefore,

that will do good, even as its author did good, and so doing, will fulfil, we are certainly sure, the dearest wishes of his heart.

The Breath of the Gods. By Sidney McCall. Boston: Little, Brown & Co. \$1.50.

Sidney McCall undertakes with admirable courage to write a novel which shall be a portrayal of Japanese character in its nobler aspects. She has succeeded in depicting a Japanese woman far above the geisha standards of John Luther Long and Onoto Watanna; but in her work one sees an unbounded admiration of traits not fully comprehended, rather than a keen and sympathetic understanding of the Japanese ideals and their visible exponents. But if she has not succeeded in exposing to our gaze the real soul of Japan, neither has any other novelist, and from the conflict of Eastern and Western customs, ideals and virtues she has constructed a powerful romance, and the reader is made to comprehend and to sympathize with very diverse types of character. The book contains the materials for a much better Japanese tragedy than Belasco's success, "The Darling of the Gods."

United States, 1607-1904. A History of Three Centuries of Progress in Population, Industry, Commerce and Civilization. Vol. II. Colonial Union. By W. E. Chancellor and F. W. Hewes. New York: G. P. Putnam's Sons. \$3.50.

The general character of this work was indicated in our review of the first volume. Messrs. Chancellor and Hewes have set out to produce a history of the United States by a system of division of labor. Mr. Hewes writes on the "Industry" of the period covered by a particular volume, and Mr. Chancellor does the rest, which, however, is analyzed into "Politics," "War" and "Civilization." Thus in the present volume, which deals with "the historically neglected period from 1697 to 1774," the section on "Politics" is cut into chronologically parallel accounts of the Westward movement, of the growth of Colonial Union, of the Navigation acts, of the development of the Revolutionary ideas in the Colonial mind and of

"political history"—i. e., lists of Governors and their secretaries. At the outset of their work the authors cast aside the burden of being scholarly. In Volume I few exact citations of authorities were given, and in the present volume there are only two such cases. Notes of all sorts have declined in bulk from twelve pages in Volume I to five in the one under review. The lists of authorities—grouped for specific chapters in Volume I, but bunched together in this one—are almost invariably of secondary works. All this is, of course, acknowledged and even avowed by the authors; their work is to be that of composition: they are *writers* of history, not historical investigators. They are, however, nothing of the sort. For, by the device of theme splitting, above described, they have gotten rid of *the* great task of historical composition; that of narrative, the marshaling of multitudinous and varied forces to show their interaction and final synthesis in historical development. Messrs. Chancellor and Hewes have given us simple chronologies of events of a similar character. Thus the "Perspectives" at the close of certain chapters are more valuable than the chapters themselves, being completer chronologies. Of course, even chronologies have their value if they give us a store of new dates and facts, and such is the case with the chapters on industry, in so far as one can rely upon Mr. Hewes's personal judgment as a statistician, for he never cites any authorities. Dark sayings, easy verdicts, drippings of philosophy and misquotations in the style of "popular lecturers" are characteristic of the book. A few examples will suffice: On page 14 we learn that the slave trade gave Africa a setback of a thousand years. This assertion is followed by a homily on the evils flowing from greed for gold, such as sweatshops and stock exchanges (p. 15). On page 19 we learn that the negro has affected us "negatively and reflexively rather than positively and actively." This sage remark should be put alongside the explanation of John Law's career on page 121: Law's father was a goldsmith, Law himself represents "the swing of the pendulum to the opposite extreme." Startling dicta abound. The sleep of a sentinel "cost France Quebec

and the New World" (p. 276). "A clear plurality of the American people are either pure Scotch-Irish or have more of that blood than of any other" (p. 39). Slavery is asserted on page 15 to have been much crueller in the eighteenth century than in the nineteenth"; by way of proof it is asserted that one million slaves were imported by the Colonists in the former century; yet in 1760

man interest, just what is most interesting to those who visit them, as well as to those who cannot. Nine good photogravures from famous historical paintings, and a large number of architectural half-tones, one of which we borrow, illustrate the handsome volume. As to its scope and contents we can do no better than to quote the author's own words, that the reader will find

TOMB OF PHILIPPE POT. Formerly at the Abbey of Cîteaux, now in the Louvre. From "Romance of French Abbeys" (Putnam's).

they owned only 276,000. On page 206, however, we are relieved to learn that our feelings were harrowed up for nothing, since the heaviest importation of negroes took place between 1765 and 1774, and in the latter years there were over 500,000 of them in the Colonies.

Romance of the French Abbeys. By Elizabeth W. Champney. New York: G. P. Putnam's Sons. \$3.00.

The author having found three volumes of romance in the châteaux of France, now turns her attention to the abbeys and has given us a pleasantly readable mixture of history and legend, of all that gives to architecture its hu-

"legends of the Saints Bernard and Francis from Clairvaux and the Abbey of Montmajour; a tale of the Knights Hospitallers; a story of the ambition of one of the artisan monks of Cluny; an echo of the terror of the Inquisition, which lingers still about the dungeon walls of Carcassone, and the portal of Saint Ouen; the tradition of the flowering of a woman's love in the Gothic arches of the abbey church of Brou; a fantasy from Saint Denis of the childhood of Saint Louis; a burlesque from the playwrights of the miracle spectacles from Fécamp; chronicles of passions which wrapped like flames the abbey fortresses of Vezelay and Mont Saint Michel during the strife of Huguenot and Leaguer; and from the lovely ruin of Saint Wandrille a story of the revival of faith in the Jesuit missions at a time when France was most faithless."

Chronicles of the City of Perugia; 1492-1503. Written by Francesco Matarazzo, translated by Edward Strachan Morgan. New York: E. P. Dutton & Co. \$1.25.

A fascinating picture of the moral, social and religious conditions of society in a typical Italian city during the Renaissance. The fifteenth century lives in these pages, with its mixture of barbarism and elegance, combats and pageants, blood and festival. The narrative of the old chronicler is woven about the Baglioni, the rulers of Perugia, the most famous *condottieri* in Italy, and equally renowned for strength, valor, beauty and crimes of the most hideous description. Indeed, most of the story is taken up with the bloodthirsty deeds to which the Baglioni seem impelled by a sort of fatality, now in fierce struggle with the burghers, now with hostile nobles, now with one another. It is their horrible family tragedies, especially, that throw such a sinister splendor—a sort of reflection of the destiny of the Atreidæ—over the “high and mighty” Baglioni. It relates the period when the strenuous life was at its hottest degree of individual intensity; and every member of this surprising family appears to deserve, so to speak, to have his own individual history, so distinctive are the details and shadings of every character.

Hours in a Library. Four vols. Free Thinking and Plain Speaking. One vol. By Sir Leslie Stephen. New York: G. P. Putnam's Sons. \$1.50 each.

These are the first issues of a new edition of the works of the late Sir Leslie Stephen in eleven volumes, handsome books in print and binding. The *Hours in a Library* are familiar to all lovers of good literature, but the essays collected in the other volume have long been out of print. They consist mostly of trenchant criticism of those Christians who cling to rites the meaning of which has departed, and who “interpret” to suit modern views the phases of creeds outworn. In a preface Mr. James Bryce tells of the personality of this “most lovable of men” as Lowell called him, and Mr. Herbert Paul discusses his literary productions, with this conclusion:

“With his sanity, his lucidity, his thoroughness, his tolerance, his singular fairness of mind, Leslie Stephen is sure to rank among the

best critics of his generation. No judge who ever sat upon the literary bench has held the moral standard higher or shown more reverence for goodness, whatever the outward form it assumed.”

The Library of Literary Criticism of English and American Authors. Edited by Charles Wells Moulton. Eight vols. Buffalo: The Moulton Publishing Co. \$5.00 per volume.

One of the most delightful of pastimes is to browse in a large library among the old reviews, especially enjoyable when one strikes the contemporary criticism of an author now ranked as classic. But when one wants to get the critical opinions about a particular author it involves long and tedious research, and some of the best things that have been said about him are liable to be missed after all. Mr. Moulton and his assistants have therefore saved us all a lot of time for collecting in these volumes criticisms, reviews, discussions and personal views upon all books of importance in English from 680 to 1904, except those by living authors. They are arranged chronologically, so it is an easy matter to turn to any author and see how the world has treated him from the time of his first appearance upon the stage to the present. Prefaced to each volume is a series of quotations on books and authors in general. As we have reviewed this work twice before while it was being published [Vol. LIV, p. 1961; Vol. LV, p. 271], it will not be necessary to say more of it now that it is completed. It is indispensable to the library of any educational institution where serious work in literature is done.

The Colonel's Dream. By Charles W. Chesnut. 12mo. pp. 294. New York: Doubleday, Page & Co. \$1.50.

This is a Southern story, but not of the Before-the-War type. It is frankly up to the times, with the clash of races and the convict camp, and the decayed old gentry. The Colonel of the Confederate army, hardly yet a man, goes to New York, gets wealth, returns to live in his native village, and tries to put in practice some of his acquired Northern ideas of thrift and fair treatment of all. He finds helpers; there is a love romance; but he fails, and, amid comedy and tragedy, turns his back on his disappointment

and his parental home. The style is easy, apparently practiced, and the story does not lack for abundant incident, in which the relations of the races have full expression.

✱

Mirabeau and the French Revolution. By Charles F. Warwick. Philadelphia: J. B. Lippincott Co. \$2.50.

No busy merchant or lawyer untrained in mathematics and astronomy would have the temerity to while away odd moments writing a treatise on the planetary system, but there are many of them unversed in the methods of historical research and exposition who have no hesitancy in publishing volumes on difficult historical themes. The French Revolution, so full of dramatic scenes and forceful characters, seems particularly alluring to these amateur excursionists into the realm of history. Undeterred by the fate of many experimenters in literary exercises, Mr. Warwick has laid before a public, growing more exacting and discriminating every day, a book on *Mirabeau and the French Revolution*, which has neither scholarship nor style to commend it. The author's representation of the revolution as the uprising of the most down-trodden and burdened people on the globe is wholly out of accord with the established facts as to the conditions in France when compared with those in other European countries. Indeed, many scholars hazard the conjecture that the revolution happened because the French were better off and more enlightened than the neighboring peoples. The Tennis Court Oath, the fall of the Bastille and the famous fourth of August call forth the expected quantity of rhetorical effusion. For Mr. Warwick, the scholars who have laboriously worked up the economic and civil aspects of the revolution have all labored in vain. In the midst of the tangle of quotations from Mirabeau, contemporaries and modern authors the reader will not secure a very clear impression of Mr. Warwick's hero, save that "the world to-day recognizes his greatness and time will only add to its bulk and stature." The style of the book is melodramatic and the illustrations are so impossible that the temperate reviewer is at a loss for proper descriptive phraseology.

A History of Diplomacy in the International Development of Europe. Volume I. By David Jayne Hill. New York: Longmans, Green & Co.

This is the first volume of a series on the History of European Diplomacy—a subject on which there exists no adequate treatise in any language, altho there are many valuable monographs on special periods. The work before us brings the subject down to the fourteenth century and is to be followed by volumes on the diplomacy of the age of absolutism, the revolutionary era, the constitutional movements and commercial imperialism. So far as the first installment of the work is concerned, the title is entirely misleading, for it is not a history of diplomacy, nor of diplomatic usages, nor of international relations, nor of the distinct beginning of any of these things. Contrary to the expectation raised in the preface, it does not deal specially with the "origin of those elements which together constitute the present public law and international usages of Europe." It is in reality a description of the organization of Europe under the Roman Empire and a story of the dissolution of that empire, the formation of barbarian kingdoms, the conflict of empire and papacy and the foundation of national systems. It is true that the history of diplomacy must be studied in connection with the rise of European States, but Mr. Hill's work is too nearly like a political history of Western Europe from the fall of the Roman Empire to warrant the title which it bears. The student has a right to expect certain things of a history of diplomacy, but he will search in vain in this volume for satisfactory information on important topics like the relations of Rome with other nations, agreements and negotiations among nascent European States, the organization and conduct of the diplomatic business of the medieval church, the early usages of embassies and the beginnings of "foreign offices." Even the most pertinent chapter on the development of Italian diplomacy is disappointing on account of the mass of detail relating to local politics. What Mr. Hill has written is accurate and readable enough for the most part, but it will not compare with the books by Bryce and Fisher, to say nothing of the erudite

works of French and German scholars. If the succeeding volumes are no more related to the general title which they bear it would be well to change it to "A Political History of Europe."

Personal and Ideal Elements in Education. By Henry Churchill King. New York: The Macmillan Company. \$1.50.

The President of Oberlin College speaks of matters pertaining to education with the voice of authority backed by experience. His plea for less of the mechanical and more of the personal in education is worth the attention of teachers and of all interested in the methods which are at this moment forming the future citizen.

"We are in danger of forgetting that in education, in ethics, in religion, and in all true living, the most important facts are persons."

The liberality that cares for nothing is not breadth. Simplicity does not lie in a less complex environment, but in a spirit of discrimination, which unhesitatingly subordinates the inferior good to the higher and nobler ideal of conduct. "The simplicity of high ideals, consistently and resolutely pursued, is possible to any college, in the midst of the most varied interests," asserts Dr. King, and presumably he would say the same of the individual life. One of the best chapters is the one entitled "A Rational Fight for Character," in which the advice is practical, sensible, wholesome, yet the banner of the ideal never dips to the dust of the highway.

Dreams of Life—Miscellaneous Poems. By Timothy Thomas Fortune. 12mo, pp. 192. New York: Fortune & Peterson.

Many who have known of T. Thomas Fortune as editor of *The New York Age* and an active political leader among the colored people would not suspect the dash of sentiment that has expressed itself in this selection from his poems. Mr. Fortune is a native of Florida and his verses celebrate the beauty and the history of that oldest of our Atlantic colonies. There is in it not a bit of the indignation at racial injustice which he puts into his prose, and the reader would not suspect from his poems any more than from his portrait that in his native State he would be a proscribed man. Several

of the poems are quite long stories of love triumphant or defeated by circumstances. One is a thoughtfully conceived elegy on his brother's death. With some infelicities in the earlier poems, the usual construction of the verse is creditable for one whose main strength goes into other channels, and the spirit and tone are excellent. We give one verse:

"From hill to hill let Freedom ring!
Let tyrants bend the knee!
Why should the people have a king,
When every man a king should be?"

The Ethics of Imperialism. An Enquiry Whether Christian Ethics and Imperialism Are Antagonistic. By Albert R. Carman. Boston: Herbert B. Turner & Co. \$1.00.

This is a defense of imperialism by the very radical method of discrediting altruism entirely as an ethical ideal and extolling egoism, personal and national, as the best of all possible principles. This, of course, leads to extreme libertarian views of social policy. The ground has been so often fought over before that the author has not been able to help us in what is, after all, the main problem, how we can become more altruistic without sacrificing that minimum of egoism necessary to insure our own personal and national existence?

Essays in Puritanism. By Andrew Macphail. Boston: Houghton, Mifflin & Co. \$1.50.

"The five essays which are contained in this book were first read before a company of artists who had the traditional antipathy of their class toward the spirit of Puritanism," says the author in his introductory Note, whether to explain or excuse the rather smart and cocky tone with which he deals with the more rigid representatives of the movement, such as Jonathan Edwards. The religious spirit is evidently sealed to the writer; he ought never to undertake it. But with Margaret Fuller the airs of quizzical superiority which he feels obliged to adopt, apparently in deference to his audience, is not so much amiss; while with Walt Whitman he and his are in much better sympathy, and John Winthrop and John Wesley have been able to recommend themselves even to such exclusive company, presumably by virtue of their more or less practical activity.

Literary Notes.

LOVERS of Mark Twain will find in "Editorial Wild Oats," a well illustrated reprint of his stories of journalism. (Harper's, \$1.00.)

....A series of papers on the familiar subject "Do Wars Pay?" is presented by H. E. Warner, a man who went thru the mill in the Civil War. ("Ethics of Force," Ginn & Co.)

....The University Press of Cambridge (Macmillan, agent), publishes the Greek text of "Paul's Epistles to the Thessalonians," with copious notes and comments by G. G. Findlay, D.D. The Greek text of "The Gospel of Mark," intended for rapid reading in colleges, with notes and vocabulary by Prof. William Prentiss Drew, appears from the press of Benj. H. Sanborn & Co., of Boston.

....Etymologists will find a treat in the new edition of Trench's "English, Past and Present," edited with emendations by A. Smith Palmer. (E. P. Dutton & Co., 75 cents.)

....A good book to have in the house is "Helps and Hints in Nursing," by Dr. J. Quentin Griffith, published by The John C. Winston Co., of Philadelphia. (Price, \$1.50.)

...."The Divine Comedy of Dante," intended for those who have never read the poem, but would like to know something about it, contains four lectures by Walter L. Sheldon. (S. Burns Weston, Philadelphia, 50 cents.)

....Those interested in Manzoni's "I Promesi Sposi" will find an interesting discussion of the novel by Giovanni Sforza, published by Ulrico Hoepli, of Milan. ("Brani Inediti." Price, \$1.60.)

....The Laird & Lee Co., of Chicago, publish a set of five graded Webster's dictionaries. This set received the gold medal at the St. Louis Exposition, and they have been adopted in many of our public schools. The grades are the Elementary School Edition (30 cents), Intermediate School (42 cents), Student's Common School (75 cents), High School and Collegiate (\$1.50), and Library (\$2.50.) All are neatly printed, and convenient in size and form.

....Signor Alfredo Boccelli, a member of the Italian Chamber of Deputies, and a contributor to THE INDEPENDENT, has published a volume of his short stories under the title of the principal one "Dall' Alba al Tramonto" (Libreria Editrice Nazionale, Milan. 60 cents), and informs us that he will soon publish a novel, "La Meta."

....In the diary of Samuel Pepys we have something like those glass anatomical models which enable us to study the structure of a man thru and thru. It is the most self-revealing of autobiographies, probably because it was written in cipher and not for publication.

Macmillans have compressed the eight volumes into one, the "Globe Edition," selling for \$1.75, using the Braybrooke text, which excises the most gossipy of live gossip.

....Mr. Edward S. Wilson, for five years Marshal of Porto Rico, has given us some much needed information in his book on the "Political Development of Porto Rico" (published by F. J. Heer, Columbus, Ohio. \$1.00.) He describes the conflict of parties before and since annexation, and explains the desires of the natives for a greater share in the Government, which he favors granting, both for our benefit and theirs.

...."The Americans," Professor Münsterberg's analysis of our national characteristics, which was reviewed by Prof. James Bryce in our last issue, is published in the United States by McClure, Phillips & Co., New York, at \$2.50.

Pebbles

CANDIDATE—I want to kiss the baby.
Miss Antique—Er—I'm the youngest of the family.—*New York Sun.*

....Willie to the circus went,
He thought it was immense;
His little heart went pitter-pat,
For the excitement was in tents.
—*Harvard Lampoon.*

....An architect remarked to a lady that he had been to see the great nave in the new church. The lady replied, "Don't mention names; I know the man to whom you refer!"
—*Sacred Heart Review.*

...."Do you still take a cold bath in the morning?"
"Not much, I don't. There's been something the matter with our water pipes for two weeks, ha, ha, ha!"—*Cleveland Plain Dealer.*

NONCHALANCE.

....If you wake up to find that your house
is on fire,
And in oceans of smoke you are drowned,
Pause gayly and light your cigar in the
flames,
Ere you leap fifteen flights to the ground.
—*Princeton Tiger.*

....News comes from Southern Kansas that a boy climbed a cornstalk to see how the sky and clouds looked and that now the stalk is growing faster than the boy can climb down. The boy is clear out of sight. Three men have taken the contract for cutting down the stalk with axes to save the boy a horrible death by starving, but the stalk grows so rapidly that they can't hit twice in the same place. The boy is living on green corn alone and has already thrown down over four bushels of cobs. Even if the corn holds out there is still danger that the boy will reach a height where he will be frozen to death. There is some talk of attempting his rescue with a balloon.—*Topeka Capital.*

Editorials

The Anglo-Japanese Pact

THE treaty between Great Britain and Japan is published, and it means, on the face of it, just this: That Britain will protect Japan's rights in Korea, and that Japan will defend Britain's rights in India. But it means more: That Great Britain and Japan will, between them, protect Asia.

Japan fears that Russia, gathering her strength, and with Vladivostok just over the Korean border, smarting under her humiliation, with a tremendous army easily maintained at Harbin, and double-tracking the Siberian Railroad, will crowd eastward and southward until she can recover by arms what she has lost in war. This attempt the present agreement will frustrate. Japan will have a free hand to "control" Korea and develop her continental empire in the peninsula, from which so much of her earliest culture came, and she must be protected from any Russian advance.

Equally Russia is the Asiatic power which Great Britain has ever feared. Driven back from the farther East, Russia will certainly try to extend her borders elsewhere. It may be in the Balkan region, or it may be in Turkish Armenia, or it may be in Mongolia, or in Afghanistan or Persia. A direct Russian attack on British India is not to be soon expected, to be sure, for Afghanistan and Beluchistan are buffer states; but Russia has evidently been trying to secure control and entrance by way of railroads into Persia and Afghanistan. She borrowed money at three per cent. of France and loaned it to Persia at five per cent. for the various extravagances of the Shah of Persia, who has just been visiting St. Petersburg. When Russia shall begin to push downward thru Persia for a seaport about Mohammera, will Great Britain think her Indian Empire threatened? or when Russia begins to press Northern Afghanistan, and threatens Herat, will General Kitchener think it time to call on Japan for aid?

Probably not in India itself. It is only as a last resort that England would think it needful to call for Japan's help there; she can alone attend to any

trouble on her frontier. She can raise any number of soldiers in India, good fighting men. But it may be noticed that just now India is not in the pleasantest mood. Lord Curzon has not had the love of the people; and the division of Bengal has angered the population so that the weapon of the boycott has been summoned against British goods. In a war with Russia Japan's aid would be given elsewhere.

But the purpose of this pact is not to provide for war, but by the display of united action to prevent war, and to keep possible enemies at bay. And here we must consider carefully the language of the treaty as it concerns India. It pledges Japan to aid Great Britain, not definitely when invasion of India is threatened, but when its neighborhood is threatened. The language is very indefinite, evidently purposely so. It speaks of "the region of India," and "the proximity of the frontier." Now what does that mean? Is Afghanistan the "region of India"? Is Persia in "proximity" to "the frontier"? It may very well be so; but if that is the case let us see how large is the task which the two powers have assumed. They really agree to defend all Japan, Korea, China, India, Burmah, Afghanistan, Persia, Beluchistan and Tibet, and we may include Siam and Arabia, against foreign aggression; for all these countries are involved directly or indirectly in the terms of the treaty. It means, then, that Great Britain and Japan will do for Asia what the United States offers to do for the American continent. This is a dual Monroe Doctrine for Asia.

Further, it shuts out wars of aggression, just as we shut out wars of aggression from our hemisphere. Consider what an engine this is for peace. It does not settle questions of dispute that might lead to war, as does The Hague, but it absolutely, and with sufficient power to back it, forbids war. Russia, Germany, France, are all warned off. If they grumble the pact says, in the words of John Milton to Salmasius, "*Si non lubeat rumpatur.*" "If they don't like it they can lump it!" And Russia and Germany do not like it. Russia sees her chance

to revenge her defeats a few years later fade away; and Germany fears for her hold on Shantung. The treaty is a magnificent stroke of diplomacy, excellent for Japan, admirable for Great Britain, and good for the peace of the world. Japan, disappointed over her failure to get all she would out of the war, smarting because she was beaten in diplomacy by the wily Witte, may recover her cheerfulness and take pride again in her statecraft as well as in her arms.

Now, why will not Germany, France and Great Britain unite to do the same service for Europe, and thus insure the permanent peace of the world?

The Quest of Diogenes

THE spiral way of human progress has led mankind to a breezier level than that at which the peoples of antiquity lived and toiled and thought, but it has brought us round to the same side of the range that they occupied. Their problems are again the real problems. The medieval life, through which the race made its way between the downfall of classical antiquity and the modern age, was on another slope, under different conditions, and it was different in itself. Our questions are no longer those of secular versus ecclesiastical power. They are questions of oligarchy versus democracy; of the rich versus the poor, of the citizen versus the grafter. And, that no feature of the repetition be lacking, our problems have suddenly resolved themselves into the fundamental quest of that ancient civilization. We have picked up the lantern of Diogenes, and are searching the town for a man. We are running with Jeremiah thru the streets and broad places, if we "can find a man, if there be any that doeth justly, that seeketh the truth."

There have been other times when the public has been profoundly shocked by revelations of the untrustworthiness of men of high repute, to whom great private and public responsibilities were committed. There was great humiliation and distress of mind when the scandals connected with the building of the Union Pacific Railroad impeached the good name of men prominent in the Na-

tional Congress. The Star Route frauds dragged more than one high name down to ruin and disgrace. The great bank malfeasances at Fall River, at Philadelphia, and elsewhere, and such failures as that of Grant & Ward, shook the confidence of thousands of plain folk in the integrity of men supposed to be above suspicion, and left everybody asking, Whom, then, can we trust? But all of these instances were trifling in comparison with the rottenness that has been brought to light in the past two or three years. Making every allowance for prejudice and exaggeration, the facts that have been made public in the writings of Miss Tarbell, of Mr. Lawson, and of Lincoln Steffens are shown by recent disclosures to be but the fringe of the terrible truth that even yet is probably not more than half known.

What is to happen now that the facts are known? Shall we reform, or shall we merely try to be more clever? Shall we square our conduct with our professions, or shall we study how to perfect the masks that we wear? Shall we be more open, or more secret? Shall we become more honest, or more skilful players of the double *rôle* of Jekyll and Hyde?

It all depends, most of our readers will perhaps be inclined to say, upon the degree of honesty actually surviving at the present moment in the population. If as a matter of fact nearly everybody is far gone in dishonesty, and is neither sorry nor ashamed, there is no help for us. We must go on from bad to worse, until our entire social system collapses. But if, on the contrary, there are more honest men and women than dishonest ones, we shall be able to bring wrong-doers to account, and to re-establish both the standards and the every-day practice of upright and open dealing.

All this is true as far as it goes, but it is not, we think, the whole truth. Besides a saving force of actual honesty in the population, two other virtues are needed to save the situation. Besides honesty we must have courage and openness of dealing, that is to say, publicity.

Dishonesty cannot exist without concealment. Secret transactions are its opportunity. In politics, in business, in all the varied acts that make up personal

conduct, perfect openness means perfect integrity, everywhere and always. Secrecy is the prime condition to the growth of disingenuousness, and disingenuousness is the parent of dishonesty.

And what, then, is the parent of secrecy? Why does any people take to the ways of concealment rather than to openness? The answer may be humiliating, but it is unmistakable. The parent of secrecy is timidity. People hide and lie when they are afraid that what they do will be condemned by their friends and the public, and are not brave enough to take their stand for what they propose to do, and to fight it out. It is not a pleasant confession to make, but we fear it must be made, that Americans of the present generation are not in a high degree intellectually and morally courageous. Our European critics have been saying this of us for many years, and we have resented their criticism. It is time to ask ourselves whether they have not been more nearly right than we like to admit. We are complacent. We particularly dislike what we call "a row." We submit to imposition to a degree that awakens the Englishman's contempt. If we had among us a university professor with the intellectual gifts of a Huxley, his colleagues would try to make him feel that he was an impracticable fool if he should try to write and speak as Huxley did. Perhaps the influence of Huxley was as bad as the English bishops thought it was; that is not the point that we are now considering. Right or wrong, for good or for evil, men absolutely fearless in saying what they think, do, from time to time, appear in Great Britain, as in France and in Germany. And for some reason or other they are scarce in the United States. We cannot help thinking that in this one fact we have an indication of the fundamental cause of our present evil state. If Americans had the courage to speak their honest thoughts more fearlessly, we could count on a larger proportion of good and a smaller proportion of evil.

Asepsis and Antisepsis

ONE thing that the Japanese delegate to the Fourteenth Convention of Military Surgeons of the United States made very clear in his address was that asepsis

is ever so much better than antisepsis in preventing mortality from wounds; or, in other words, that cleanliness beforehand and care immediately after to avoid any contamination of the wounded surface is much more effective in preserving life than any amount of germicidal applications afterward. This delegate was no less a personage than Surgeon-General Suzuki, of the Japanese Navy, and he declared that much of the Japanese success in the treatment of wounds received during the various naval conflicts of the war must be ascribed to the fact that before every engagement it was absolutely ordered that each member of the crew should have a bath and put on perfectly clean undergarments. As can be well understood, in most shot wounds fragments of clothing are carried into the wound, and this insistence on clean underclothing prevented many cases of blood poisoning that would otherwise have occurred from the presence of various kinds of germs on the clothing that had collected there from the air, and from the various excretions of the individual.

The principle thus enunciated by the Surgeon-General of the Japanese Navy was declared by Medical Director Joseph Wise, of the United States Navy, to be the most valuable contribution to naval surgery that has been made in modern times. In substance, it is not new, but is at least as old as the germ theory. Its application on a large scale in war, however, has never before suggested itself until these acute Orientals realized the possibility of carrying out their principles in practice. It has been a matter for no little gaiety among the nations to hear the account of the preparations for a French duel. It is now well understood that French duellists, under the advice of the attending surgeons on these occasions, take a very thoro bath before the sanguinary event and wear scrupulously aseptic clothing during its progress. It is generally understood that the French duelling surgeons of experience are accustomed to take every precaution that the duelling swords shall be made as carefully aseptic as if they were to be used as surgical instruments. For instance, it is no longer considered the proper thing for a duel-

list to allow the point of his sword to touch the ground, nor is his second supposed to test the sharpness of the instrument by drawing his fingers along it.

Of course, this almost sacrificial set of precautions for the French duel have been laughed at as Gallic over-particularity. As a matter of fact, however, this thoro introduction of asepsis into duelling has made that venerable institution even more harmless than it ever was before. There is no doubt that many more of those wounded in sword duels in France would die as the result of blood poisoning only for the introduction of this very modern scientific *régime*. It would seem absurd on the face of it to suppose that such precautions could be adopted in a wholesale manner in time of war, yet this is just what the Japanese have accomplished, at least as regards their naval combatants. On shipboard it is not a difficult matter to insist on every combatant having a bath before the engagement is expected, and issuing to him a clean set of underclothing. It is in the very simplicity of what has been thus accomplished that the triumph of Japanese ingenuity is best exhibited.

There seems no doubt that further applications of this principle of asepsis can be made and that even whole armies may, if this unfortunate business of war is to go on, be found carrying their bathtubs to the field for the preliminary cleansing that will make wounds less fatal than before, as carefully as they now do their first aid packages and other humanitarian appliances. As it is, the cleanly habits of the Japanese soldiers seem to have been of the greatest possible help to their surgeons. During the war the Japanese lost a smaller proportion of their wounded than has ever before been known. The lesson of these facts for ordinary life is not far to seek. Cleanliness is not only a cultured pleasure, but it is a protection against many ills and a source of prophylaxis against the most serious forms of wound complications when accidents occur. Now that modern life has become so much more dangerous than it used to be, cleanliness is the cheapest possible form of accident insurance policy. It is a complete exemplification of the truth of the proverb, that an ounce of prevention is worth

a pound of cure, and that it is better to keep a wound absolutely clean than to apply any remedy, however supposedly curative, or to depend on even the most powerful chemicals to cleanse it afterwards. Antisepsis is only a makeshift after infection has taken place. Asepsis is the principle which prevents infection and is the greatest of modern life savers.

A Letter to the Churches

BISHOPS and Synods have a way of sending occasional pastoral letters to their churches. Hardly a more useful or practical letter of the sort have we seen since Paul wrote to Corinth and to Timothy than one written by President William F. Warren, of Boston University, to the Methodist Church, and printed in *Zion's Herald*. We commend it to churches of every name, and wish it might be put in leaflet form for general circulation.

It is the strangers among us, those who come to our shores a million a year, from Russia, Greece, Bulgaria, Servia, Montenegro, Syria, and the rest, Slavs and Orientals, that he particularly considers. Why should they in their loneliness be treated as strangers? Are they not Christian brethren? Look at a normal, respectable Russian Slav. He never swears. He drinks less of his *vodka* than your New England grandfathers' Puritan parson did of his rum and hard cider. He and his children have been baptized as Christians, have been instructed in the Catechism, and at confirmation have solemnly renounced the Devil and all his works. They are, according to their knowledge, conscientious Christians. Not even when bathing do they remove the silver cross on the breast. Before eating or drinking they make the sign of the cross, or when passing a church or an *ikon* of St. Paul or other sacred reminder; that is they mean to recall the five wounds of our Lord. At every Holy Communion they reverently kiss the sacred body of our Lord represented on the ivory crucifix presented to them, and, trusting in Christ, receive the bread and wine. Is not that man a Christian? Is he not to be received as such, sought out, invited

helped, treated as a brother in a strange land, gathered into the church in the most fraternal way?

But to most of our people he is an alien, a barbarian, an object of fear and suspicion. Says President Warren:

"In their narrow, native American prejudices the mass of us too much resemble the Judaizing party in the days of St. Paul. The average Methodist is willing to consider these Oriental strangers human beings, and as such in need of Christ and His salvation. But he assumes that as yet they know next to nothing of the one or the other, and that what they do know only aggravates their guilt in the sight of God. If exceptionally earnest, he says that mission halls should be erected, missionaries of the Boanerges type placed in them, and thus efforts made to deliver them from the power and service of Satan."

But this is not what they need, says President Warren. They were praying people at home. They prayed as never before when they left their native land and its oppressions to find a land of liberty and comfort here. Shall they be treated as dangerous foes, called by opprobrious nicknames, and at best treated as children of Satan, these Oriental Christians, to be herded and converted as if they were pagans; these, who have come to us from their four-square cruciform churches, with their gilded domes? Certainly they need to be received as brothers into our churches, welcomed as brothers from a far country.

But how can we reach them? To this question President Warren addresses himself. We would we could quote the whole of his answer to a young, discouraged Methodist minister, who finds his people moving away, and the locality swamped with foreigners. He tells him how to find and reach them, how to learn their Christian faith, how to sympathize with them, how to take them into easy and speedy fellowship and gather their children. But this is a matter of method and process, for which we must refer our readers to the article itself, which President Warren ought to make accessible to others besides the readers of a Boston Methodist paper.

A colossal blunder and wrong of our fathers and ourselves has been our treatment of Christians from other lands, whom our nation, more Christian than our churches, has welcomed to citizen-

ship; but whom we, individually, have treated too often with aversion and contempt, and have not sought to welcome to our churches. We have forgotten the lesson of Moses: "If a stranger sojourn with thee in your land, ye shall not do him wrong. The stranger that sojourneth with you shall be as the home-born among you, and thou shalt love him as thyself. For ye were sojourners in the land of Egypt; I am Jehovah your God." Perhaps those Jews of millenniums ago were better Christians than we have been.

The Hungarian Breach

THAT the wise and honored Emperor of Austria and King of Hungary should have so sharply broken off conferences with the majority leaders of the Hungarian Parliament is so contrary to his nature and manner that Hungarians and Austrians and other nations are surprised beyond measure. It seems ominous of a break between the two portions of the dual Empire, and even of such revolution as, by the help of Russia, failed in blood more than fifty years ago. The Hungarian leaders were hopeful of a settlement of the questions at issue, and might even have yielded the bitter question of the use of the Hungarian language in the Hungarian army. But the Emperor received them with the scantest courtesy, and seemed desirous of a rupture. He would not discuss with them, but gave them an ultimatum, with a warning and threat, and sent them to their chief enemy for further consultation or reply. When they went to Golochowski, the man who wanted Europe to form a *bund* against the United States, they demanded that a Hungarian be chosen to treat with them, and when one was appointed he delayed bringing the Emperor's word, until angry and disgusted they left Vienna for Budapest.

Hungary not only resents the Emperor's rudeness, but seems inclined to resist. It really looks like the absolute breaking of the tie, just as Sweden and Norway have separated completely.

But let us look a little beyond the present moment and consider what are

the dangers that would threaten and may well prevent such a separation. It might involve a catastrophe. The breaking up of one of the great Empires of Europe would destroy the balance of power, which has worked for peace. The danger of war between Austria and Hungary would be very great, and it is by no means clear where the victory would rest. Hungary has grown and developed more rapidly than Austria, but is not yet as strong as Austria, especially as the latter commands the army, which, however, is about equally divided between Austria and Hungary, and it is not likely that the Hungarian regiments could be led to fight against their own country. But it must be remembered that Hungary is much more split up in language and religion than is Austria. Out of its twenty million of population, a little less than half are Magyar by race, and the rest are divided between Germans, Slovaks, Rumanians, Ruthenians, Croats and Servians. How willing they would all be to unite under Magyar lead is far from clear. But it now looks as if the Hungarians, who take the intellectual and political lead, would press the country to an absolute separation.

Still the fear now is, as it was in the days of the attempted revolution under the elder Kossuth, that neighboring nations would intervene. Yet the conditions are different from what they were in 1848. Russia is in no position to enter into another war. Indeed, the break-up of the Dual Monarchy might create such an unrest in the Balkan provinces that, while some might attach themselves to Hungary, others might be drawn to Russia, which dearly wants an outlet on the Mediterranean. That would be the time for the attempt for a Balkan federation under the lead of Rumania and Bulgaria, but the forces for union with Hungary and Russia would be no less strong.

On the other side we can hardly presume that Germany would intervene to help Austria retain her union with Hungary. Indeed, Germany's interests have long been for separation, and the consequent union of German Austria with the German Empire. All have been awaiting the death of Francis Joseph,

now seventy-five years old, for the time when the jealousy between the two Austrian kingdoms would provide the opportunity for consolidating all German-speaking peoples into one greater Empire. The addition of twenty-five million people to Germany, all one in race and language, would easily make William II supreme on the continent of Europe; and the possible enlargement of Hungary by the absorption of Servia, or even possibly Bulgaria and Rumania, would not for many years counterbalance the German strength.

Would Hungary be a republic? That was the will of the people under Francis Kossuth, but the times were not then ripe. We should now expect the republic, altho at present the monarchy is little more than a mere name. While Norway is looking now for the republic in the north, it would be a notable event for the opening century if in the south of Europe, against Russia and Germany, there might be created an example of liberty and equality, in form and principle as well as in substance.

The Railway Rate Question

CONGRESS will soon be at work again, and Mr. Roosevelt will again be asking for that railway rate legislation which the House approved. In the Senate the House bill was ignored, but Mr. Elkins' committee has been making an investigation. It is quite well understood that a majority of that committee have views on this question that are not in agreement with the President's. That majority will not report a bill supporting the President's policy as to an increase of the Commission's power. But it will, we think, propose additional legislation designed to prevent discrimination. Mr. Roosevelt's supporters and those other Senators whose views are satisfactory to the railroads agree up to a certain point. Their agreement should cause the passage of a bill providing remedies for some evils. Let us see what these evils are and how they are related to the question concerning which these two groups disagree.

Both would prevent discrimination between shippers in its various forms—the secret payment of rebates, the unjust use of private car lines and of the charges ex-

acted for private car service, the disproportionate allowances for private side tracks and terminals, etc. Such discrimination has been for eighteen years forbidden by statute, but the original law and the supplementary and more specific laws more recently enacted have been violated persistently and flagrantly. A company that grants a rebate and a shipper who receives it can be punished if the facts can be obtained and laid before a court. There is law for this, altho the punishment under the statute specifically dealing with rebating is inadequate. The punishment clauses should be amended, and the statute should be enforced with vigor. It has not been so enforced.

If private car lines are permitted to exist, they should promptly be brought under the jurisdiction of the Commission. It may be that if the question should be carried to a final test in the courts, an authoritative interpretation of existing law would place them under the Commission's control. But the owners of them now deny that the Commission has power to interfere with their practices. The controversy can be most easily and quickly settled by a new statute. Possibly the companies themselves should be required to carry on the business in which the private lines are engaged. At all events, the private cars should not escape the supervision to which the business of the ordinary lines is subjected. Once clearly under the Commission's jurisdiction, private car injustice will undoubtedly be a violation of law.

All private side tracks and terminals, and the corporations owning them, should be brought under the Commission, if there be any doubt as to their status. And the granting of rebates indirectly, by means of such devices, should then be prevented. Let the laws be so amended that every form of unjust discrimination will be clearly unlawful. Mr. Elkins and Mr. Foraker and those who stand with them should at once consent to such amendments as may be needed. They themselves should propose the amendments, for they have expressed a desire to put an end to discrimination, and the railroad companies assert that they also would be glad to avoid every form of it. If the companies and the Senators in sympathy with them are sincere, they will set out at

the beginning of the session to place all rate favoritism under the ban of law which cannot be evaded.

There remains to be considered the proposition that the Commission be empowered to substitute (subject to judicial review) a reasonable rate for an open and published rate found, upon complaint, to be unreasonable. Here the two groups in the Senate do not agree. But before we consider this question, let us see what will be needed to make the amended laws against rate favoritism effective.

Much will be needed, and if the need be not satisfied the laws will be worth very little. Provision for detecting violations of them must be made. Knowledge of unlawful rebating has heretofore been obtained as a rule by chance or by accident. After a company and a shipper have made an unlawful agreement, is either one inclined to disclose the fact to an officer of the law or to a wronged competitor? Companies say that rebating has ceased. Some of them have said this in past years, and subsequent events have proved that the assertion, with respect to their own practices, was untrue.

Only by means of official inspection of the accounts and books can the laws against rebate favoritism be made effective. President Stickney, of the Chicago Great Western, testified last week before the Commission. We find in the *Chicago Tribune* this report of what he said in the court room:

"The first legislation needed is that which provides the necessary machinery for carrying out the laws we already have. It takes police to enforce a law. We need legislation that will create a police force for the enforcement of the present law.

"We want Government auditors who can go into the railroad offices and find out from the books whether they are paying rebates, whether they are discriminating. If we are going to enforce the Interstate Commerce law we must have a Government police force for the purpose."

These are the opinions of a veteran railway officer, who has been building, organizing, and managing railroads for 35 years. They are in agreement with our own, expressed in these pages nearly a year ago.

Now, Mr. Roosevelt's addresses on this subject show that in urging that the Commission be empowered to substitute

a reasonable rate for one found to be unreasonable, he has been moved, largely, if not chiefly, by a consideration of the injustice and manifold evils due to discrimination between shippers, to secret favoritism for the benefit of one at the expense of another or all others. There is law now for that, altho its scope should be extended and the penalties attached made heavier. The proposed grant of power to the Commission would relate, not to such violations of law, but to modifications of general open rates, which every shipper is required to pay, and with respect to which complaint has successfully been made that they are unreasonable, being improperly adjusted to certain commodities, or unjust to certain localities, or clearly objectionable on other grounds. The effect of this proposed legislation upon general rate-making has been misrepresented by some. So far as it is designed to give force to decisions of the Commission which are now without force and easily evaded, and to prevent years of delay in the final establishment of any one of them, it is for the public good. It should be considered apart from the question of unlawful rebates and allowances and the measures by which these can be prevented.

Homesickness

The following letters were exchanged between a Southern mother and her daughter, who had just entered a Northern college:

DEAR MOTHER.—I am awfully, awfully homesick. I could die of loneliness. I cannot eat or sleep or talk with this lump of lead for a heart. I am frantic inside these brick walls. I have prayed to be delivered from this terrible agony, but it gets worse instead of better, etc.

DEAR DAUGHTER.—If it were not for the consequent difficulty we should have in keeping you in one of those narrow-minded, highly intellectual Northern schools, I should not care if you "flunked" every examination to the end of the chapter; but please remember that it is not the custom in your family to "flunk" the ups and downs of life. I have orphaned myself of our only child not that she may learn logarithms and the New England dialect, but chiefly that she may learn to know herself in a new light, that she may practice the fine art of measuring her wit against new conditions, and that she may qualify herself with a broader sense of relationship to her other

kind; how really these Yankees are also our people and it is time more of the young among us acquired the peace and ease of kinship.

But you are homesick for the familiar, and you have added to the sentimentality of your affliction by praying—and I have no doubt that you wept while you were about it. Prayer is a good thing, a needful thing, but do not misuse God by asking for what he has already given you the sense to overcome. You might as well take peppermint for digestion as to pray about homesickness. . . . And what is the little matter of "brick walls" to a person endowed with spirit? Be sure of this, every woman at least has wings. It is their great compensation for being predestined to a life more or less confined. They find the ends of the earth in their own souls. But only one in ten thousand ever discovers this fact. Be the one in your ten thousand. Find your wings and use them. Then the walls will become simply your very convenient, domestic roosting place, etc.

Doubtless many such letters are being exchanged now, for this is the week when our young people have just poured into their college homes for the coming year. The boy is still in the glamour of high football aspirations. The young cape jessamine lady from the South has unpacked her gowns and her fellow poets. She has hung innumerable sentimental pictures upon the walls of her room and arranged her neck ribbons in the top drawer. The rose-maiden of the North has found her rain coat, golf sticks and chafing dish. Everything is propitious for another year of youth and happiness. Then suddenly the horror begins. It may be in the middle of the night, or at the first chapel exercises, even at the crowded tea-table, and it is a sensation of unutterable loneliness, a sinking, seasick feeling in the very soul of man. The light goes out of the brightest morning, there is no taste to food, no sense of *camaraderie* between the boy and the fellow who slapped him so kindly upon the back the first day and let him into the racket generally. He even hates the presumption of such unfounded fellowship. He does not care whether he gets on the Freshman team or not. He would not admit it for worlds, but what he really wants is a sight of the fire-lit living-room at home, and to hear the noise of his younger brothers quarreling over some trifle. It is a clearly defined sissy failing of his manly heart, but he can no more help it than he can the color of his eyes.

Meanwhile, the cape jessamine girl from the South is the most exquisite vis-

ion of woe to be seen anywhere as she lies upon her bangs in a pink dressing-gown, dissolved in tears. She is not weeping because she has been "conditioned" in "math" and in everything else possible. She is sick for the sight of a middle-aged mother-face, which she pictures upon the shaded veranda at home. She is remembering Tom, Dick and Harry who have loved her so faithfully all summer, and to each of whom she is more or less frivolously "engaged." And oh! if Katharine, her best girl friend, were only there, they could embrace and weep together, which would be such a comfort. Nor has the young rose maiden from the North fared much better, altho she has played golf all day, looked every one calmly in the eye without shedding a tear, and eaten three square meals. She has preserved her "self-respect" by concealing her forlornness with Spartan courage. She has written home serenely of the "fare," of the "new girls," not omitting to express some contempt for the frail, homesick ones, and given an intelligent estimate of the educational facilities of the great institution; but if there are any bald-headed stoics among the guardian angels in heaven, they know what a desert her heart is during this first week at college, away from her own particular golf-links and leaden skies.

After the age of thirty years at most we should have finished living on our own selfish account. From that period it is more decent and natural that we should be interested chiefly in bringing up the next generation and in shielding it from unnecessary unhappiness. For this reason it becomes the duty and pleasure of THE INDEPENDENT to offer from time to time some advice to the young students among its readers, beginning with the following diagnosis and prescription for nostalgia:

Three symptoms always accompany this disorder. The first is evidenced when the young stranger not only fails to grasp the situation, but permits it to overcome him. A new situation is a new world to conquer, a new lover to win, a larger ladder to climb, normally speaking; but it is a veritable death-trap to any one who crawls into it with a mouse spirit, or without his swastika charm against what is older and better estab-

lished in the order of things than he is. The second symptom comes in logical sequence. This is the loss of the sense of proportion. The panic of the young freshman's own mind casts him "out of drawing," and he loses his rational relation to things. The least important things become matters of life and death, and the essential ones sink out of sight beneath his narrow horizon. There is really nothing terrible the matter. His people at home are well, and they doubtless committed him with a fervent "Thank God!" to stronger powers that be. His own prospects are good, even if he does not sleep well, or has lost his appetite or the disposition to whistle.

And let the little bow and arrow of pink femininity arise from her grief-stricken couch and realize that while this is not a Tom, Dick and Harry situation, her teachers are not really ogres ready to devour her, but distracted men and women who can be gradually subdued by a series of creditable recitations.

And finally homesickness in any malignant, morbid form cannot exist where the sense of humor is regnant. Therefore let the patient rekindle this blessed effulgence of the mind, set himself at the end of the perspective it makes, and behold the quizzical, caricaturing beam it casts upon her tear-stained lineaments. It stretches her young gravity till it is a drollery of mourning, as out of keeping as a funeral is with summer day. If she is not an egotistical monomaniac she must laugh. Then the spell is broken and the homesickness passes like a bad dream in the dark.

Land Frauds in Oregon

One of Oregon's Senators and one of the State's two Representatives have now been found guilty of defrauding the Government of public land. The other Representative is under indictment. Senator Mitchell's profits were confined to the fees received by himself or his firm for his efforts at Washington in behalf of some of those who were trying to steal land, but Representative Williamson's plunder was the land itself, which was added to a large tract acquired some years ago and occupied by his partner in the live-stock business, Van Gessner. We regret to say that stealing public

land by subornation of perjury is not a new criminal industry. In past years great tracts have been acquired in this way. But those who so acquired them encountered the opposition of no Secretary Hitchcock in the Interior Department, or, if the Secretaries then holding office were not less faithful to their trust, their agents were less active and competent than those who have, within the last two years, procured evidence upon which more than a hundred indictments rest. Mr. Hitchcock deserves much praise for his untiring pursuit of these rascals. He has been most effectively supported by Mr. Heney, the prosecutor representing the Department of Justice. As all the prominent culprits are Republicans, the prosecutions are an interesting example of practical reform within a party.

Dr. Gladden's Resolution It is well, for the sake not only of history, but of the representatives of the two sides involved, that it should be clearly understood what was done at the meeting of the American Board at Seattle. We are therefore glad to publish Dr. Gladden's note to us as follows:

If, as you say, my resolution was voted down at Seattle, four to one, the "principles" of the prudential committee were also voted down four to one. Both statements were before the house. The motion passed was a motion to "lay the whole subject on the table." The issue was simply evaded. The board declined to reaffirm the principles of the prudential committee just as definitely as it declined to pass my resolution.

In view of the fact that the board suspended action, and they passed the whole matter up to the churches for their decision, it was safe to promise that the protestants would continue their support of the board. But if it is claimed that the resolution was voted down, and that the officers of the board have received a mandate to go on and "invite or solicit funds from persons whose gains have been made by methods morally reprehensible and socially injurious," that is a different story.

New Zealand During the last year or so there has been persistently circulated in the leading English and American conservative papers gloomy reports from New Zealand belittling the success of those radical experiments there that have made the colony for the past decade the

social laboratory of the world. As we doubted all along the truth of these reports, we are especially glad to present to our readers a few facts on the other side, taken from the official report for 1905 of the New Zealand Department of Labor, just received. In general the prosperity of the island was never so great. The internal energies have expanded, and an analysis of the imports shows a higher purchasing power on the part of the average New Zealander than ever before. The savings banks deposits have more than doubled in the last ten years, and the continually expanding returns from the railroads shows how easily the families of the colony expend their time and money. New Zealand has for a long time furnished employment for its citizens who were out of work, and it is interesting to note that the dependents of the colony in ten years have decreased from 7,802 to 3,423. Moreover, the proportions of unemployed have changed in character, for comparatively few married men now require assistance. The chief objections to New Zealand's radical laws seem to have been the fear that capital would be driven away from the island. This seems to be a groundless apprehension, however, because the number of factories has increased in ten years from 1,409 to 9,023. Moreover, as the number of laborers in these factories increased from 29,879 to 67,713 in the same period, there has been no dearth of employment for labor. Under the Arbitration Act, which has come in for so much criticism, the number of industrial unions registered during the year is 109 for the employers and 273 for the workers. Instead of being dissatisfied with the Arbitration Court, the New Zealanders are making preparations to perfect it by giving the preliminary Conciliation Courts more power. They are also taking up the problem of the increase of rents in the cities by proposing that the Government itself should assist the wage earners in obtaining land in the suburbs and making advances so that the wage earners can build their own dwellings. This scheme of getting cheap houses in the suburbs and having easy communication with industrial centers by low fares on "workmen's trains" is not only expected to be a direct

benefit to the workers, but to others, by relieving the competition for town dwellings. If, then, female suffrage, compulsory arbitration, and a modified form of the single tax, old age pensions, and all the other reforms in which New Zealand has led the world were a failure, certainly the employers would not keep building more factories, as they have done every year, nor would the condition of the working people be steadily improving and their numbers increasing.

Divorces The Seattle *Post-Intelligencer* is responsible for figures of divorces in one section of Boston, which we see quoted with due animadversion thruout the country:

"In Everett, Mass., there were 318 divorces and 296 marriages during 1903. In Chelsea the record was 507 divorces and 463 marriages. Newton saw 301 couples divorced, and 351 couples united."

These statistics are shameless forgeries. In 1903 the State of Massachusetts granted the largest number of divorces on record, namely, 1,721, or one divorce to 15.6 marriages. The statistics in Massachusetts and other States are reported by counties, not by towns. In Suffolk County, which includes mainly Boston, the total number of divorces granted was 508, or one in 14. Chelsea contains only a twentieth of the population of Suffolk County. Equally there are no statistics of divorces for Everett or Newton, and the figures given are stupidly, if not also maliciously, preposterous, and those who have circulated them should do their best to help the correction limp after the slander. The figures are bad enough without exaggeration.

Children's Courts The influence of the United States upon international diplomacy and in the development of parliamentary institutions is not more marked than its growing influence in modifying the judicial and penal institutions of the rest of the world. A fresh illustration of this was furnished at the meeting of the International Prison Congress at Budapest. The official delegate of the United States Government, the Hon. Samuel J. Barrows, had, in an elaborate report, laid be-

fore the members of the Congress some months in advance of the meeting all the information available as to the establishment and working of children's courts in the United States. The result was that the idea was received with great unanimity and even with enthusiasm by European jurists; and the Congress in its platform strongly indorsed the system and recommended its adoption in Europe. The suspension of sentence, an idea borrowed from the United States, which has been in use in France and Belgium for several years, is now seen to be imperfect without the adoption of the distinctive American feature of probation officers. The Congress showed itself more friendly than ever before to the reformatory system as developed in the United States, and recognized the need of a progressive and corrective system for young offenders. Tho it did not frame its recommendations in this respect for those above the age of legal minority, it is quite evident that this arbitrary barrier cannot permanently prevent the extension of the reformatory system to those above that age who are legitimate subjects for it. If offenders under sixteen can be saved by a corrective system, why not apply it to offenders of twenty or twenty-two, or above that age, who are offenders because, like minors, they lack the development and education which would have kept them from crime? The only natural limit to the operation of a corrective system lies not in the age but in the corrigibility of the offender. The next session of the Congress will be held in Washington in 1910, and Mr. Barrows was elected president for the next ten years. The work of the Congress is carried on thru the International Prison Commission, which is a bureau of communication between the nations.

The announcement of several months ago that John D. Rockefeller would give to the General Education Board \$10,000,000 to advance higher education in this country has been fulfilled by its payment last Monday. Assuredly it will not be given quite as unwisely as the last of the Peabody Fund was given, for a shabby normal school in the educationally best supplied city in the border South.

Insurance

The Insurance Investigation

MORE interesting developments were brought out during the progress of the insurance investigation in this city last week. George W. Perkins was particularly frank in some of his testimony concerning transactions between the New York Life Insurance Company, of which the witness is vice-president, and J. P. Morgan & Co., of which firm he is also a partner. Some of the testimony of Mr. Perkins had to do with year-end sales of securities, which somewhat resemble transactions on the part of trust companies and similar institutions that have come to be known as "Window Dressing."

It was brought out during the past week that pensions, amounting to \$25,000 a year to Mrs. Henry B. Hyde and \$18,000 annually to Mrs. James W. Alexander, were to have been paid to them on the deaths of their respective husbands. These pensions were nullified by action recently taken by the Equitable Board. Perhaps the most interesting testimony

of all, however, was that given before the Armstrong Committee by Jacob H. Schiff, head of the banking firm of Kuhn, Loeb & Co., who was a director of the Equitable Life Assurance Society, until the Frick report was rejected and repudiated last June. Among other things Mr. Schiff said:

"The system of directorship in great corporations of the City of New York is such that a director has practically no power. He is considered, in many instances, and I may say in most instances, as a negligible quantity by

the executive officers of the society. He is asked for advice when it suits the executive officers; and if, under the prevailing system, an executive officer wishes to do wrong or wishes to conceal anything from the directors, or to commit irregularities such as have been disclosed here, the director is entirely powerless; he can only act in an advisory capacity and he can only judge of such things as are submitted to him."

Mr. Schiff's testimony has large value as showing the impotence of directors under the systems that have grown up under the influence of high finance and is a strong plea against one man power.

The political contributions of the New York Life, to which reference was made in this department last week, will, according to statements emanating from President McCall, never again be repeated and the board of trustees is to be asked to pass a resolution at its next meeting forever prohibiting such political campaign contributions.

A RECENT cable to the New York *Times* sets forth that managers of English life insurance companies expect to at-

tract considerable business to their companies in consequence of the recent exposures of the alleged mismanagement of their American rivals. A large business has hitherto been done by American concerns in Great Britain. The *Times* cable states that the Equitable alone carries £5,000,000 on British lives. It is considered probable that British companies will also become more active in the scramble for business on American soil, with every prospect of securing business.

CHARLES E. HUGHES,
of Counsel in Insurance Inquiry.

Financial

Industry and Trade

ALL the trade reports show signs of continuing prosperity. In the iron industry prices have been rising in response to large demand. Railroads have placed large orders for cars and rails. The rail output is already sold for the greater part of 1906. Crops are large. Railway tonnage capacity is taxed to the limit. Traffic congestion is reported in the coal fields, at the lumber mills, and at Lake ports. The movement of wheat at primary points was larger last week than at any other time since 1899. September was a month of great activity in both production and distribution.

Information collected by the Government for August and the first eight months of the present calendar year affords some interesting and significant comparisons. For the eight months live-stock receipts at the five leading interior markets were 22,579,000 head, against 20,960,000 last year. Packing house products received at Chicago were 598,043,000 pounds, or nearly 200,000,000 more than in 1904. Receipts of wheat were largely increased at both the winter and the spring markets. Shipments from various points on the Great Lakes were 40,540,000 tons, which may be compared with 24,857,000 in the corresponding months of last year. But this increase was due in part to an earlier opening of navigation and freedom from labor controversies. Traffic on the Lake canals amounted to 26,164,000 tons; in 1904 it was only 14,843,000. Large cities report growing activity in the building industry. On the farms and at the mills there is ample evidence of abundant output and satisfactory prices; on railways and waterways distribution can scarcely keep pace with demand.

Increase of Values

THE late Walter S. Gurnee, a retired banker, who died on April 7th, 1903, left an estate which has been appraised for taxation at \$8,502,191, the valuation of his securities having been based upon their market value at the time of his

death. Since that time, however, their value has increased by about thirty-three per cent. The changes, with respect to certain stocks which he held, from the date given above to last week, are shown below:

	April, 1903	Last Week
8000 U. S. Steel pf.....	\$690,000	\$832,500
6000 North Sec.....	585,750	1,552,000
6000 U. S. Steel Com...	211,500	225,750
5000 Can. Pac.....	648,750	868,750
5000 Wab. com.....	133,750	115,000
4000 Am. Loc. pf.....	374,000	453,000
3500 Am. S. & R. pf...	329,000	424,812
3000 So. Ry. pref.....	276,000	300,000
3000 Erie 2d pf.....	156,000	221,625
2500 Mo. Pac.....	267,812	263,437
2000 Am. C. & F. pf...	180,000	199,350
1120 C., M. & St. P. pf..	205,520	212,800
1150 Stand. Oil.....	764,750	730,250
	\$4,822,832	\$6,399,275

Financial Items

IN spite of Canada's tariff discrimination of one-third in favor of British goods, her imports from Great Britain during the last fiscal year fell off by nearly \$1,500,000, and her exports to the mother country decreased by \$15,000,000. On the other hand, our exports to Canada increased by \$9,000,000, and our imports from Canada were larger by nearly \$5,000,000 than the preceding year.

....A special train on the Santa Fé road made the run from Los Angeles to Chicago, 2,244 miles, recently in four minutes less than 45 hours, or at the average rate, stops deducted, of 51.1 miles an hour.

....Dividends announced:

Atchison, Topeka & Santa Fé R'y (Registered Adj. Mort. Bonds), 4 per cent., payable November 1st.

Atchison, Topeka & Santa Fé R'y (Stamped Adj. Mortgage Bonds), 2 per cent., payable November 1st.

Minn. & St. Louis R'way (Pacific Ext.), Coupons payable October 1st.

N. Y. & N. J. Telephone Co. (quarterly), 1½ per cent., payable October 14th.

The Independent

VOL. LIX

NEW YORK, THURSDAY, OCTOBER 12, 1905

No. 2967

Survey of the World

Railway Rate Legislation

Owing partly to the publication, on the 4th, of a report that the President's railroad rate policy had been modified by concessions that would satisfy the railway interests, it was announced on the following day by Representative Townsend (one of the authors of last session's Esch-Townsend bill) that the President's views and purposes had undergone no change. He was as determined as ever, it was added, to strive earnestly for legislation in accordance with the recommendations in his messages and public addresses. On the 6th, after several conferences between Mr. Townsend and the President had taken place, the public was informed, apparently by authority, that a new bill embodying the President's views had been completed, and that its provisions were as follows:

First—That the Interstate Commerce Commission shall be given the power to decide, upon complaint, after full hearing, whether a rate is unjust or unlawful; that the Commission shall have authority to substitute a rate which shall become immediately effective and so remain unless and until reversed by the courts.

Second—The Commission shall have the authority to declare that a rate charged for shipment on private cars is unjust, or unreasonable, if it be so, and that the common carrier shall be held responsible for such charges.

Third—Giving the Interstate Commerce Commission jurisdiction over terminal railroads.

Fourth—A reassertion of the long and short haul provision of the original Interstate Commerce act.

Fifth—A provision relating to the shipment of merchandise by water and rail, so as to prevent alleged manipulation of rates made possible in such circumstances under the present law.

Sixth—Giving the Commission full authority to examine the books and records of the railroads and to prescribe the general form and manner in which such records shall be kept.

It remains to be determined whether the provision of last year's bill for the creation of an Interstate Commerce Court shall be included, but it is said that the bill will either provide for a new court or increase the number of Federal judges. Private car lines are not to be made common carriers, but the companies (common carriers) that permit them to be used on their roads are to be held responsible for them. The present power of the Commission with respect to books and records is largely increased. It is predicted that the railway interests will seek, in the Senate, a compromise permitting legislation concerning private car lines and side-tracks and terminals, making the law against rebates more severe, imposing penalties for failures to obey the Commission's denunciation of unjust rates, and making the Commission's rejection of a rate effective without delay, but withholding from the Commission the power to determine what the new and just rate shall be.—B. S. Cusey, a beef company's traffic manager, who recently pleaded guilty to a rebate indictment, testified last week in the pending case of the Commission against several Western railroads, saying that the rebates he obtained were about \$2.50 per car, and that they were paid ostensibly for delay and for damage to the goods carried.—In a public address at Portland, Ore., last week, James J. Hill asserted that the rate reductions on the Great North-

ern in twenty-five years, measured by the traffic, had amounted to \$667,000,000; that a general reduction to the same level would bankrupt two-thirds of the country's railway mileage; and that, if rates were made by the Government, the Constitution would compel the use of uniform distance tariffs, in accordance with which the rates in the far West would be more than doubled.

Philadelphia's Reform Movement

For some time the Republican "organization" of Philadelphia, of which Boss Durham is said to be still the leader, has been looking for some Republican of national reputation who would make a campaign speech in the city under its auspices. The local election takes place in November, and the City Party, composed of those who support Mayor Weaver in his fight against the ring, has nominated a ticket in opposition to the ticket of the Republicans. Something was needed by the "regulars" to offset the remark of Secretary Root about "a corrupt and criminal combination masquerading under the name of Republicans," the similar opinions expressed by Secretary Bonaparte, and President Roosevelt's commendation of Mayor Weaver's work. After the invitation had been rejected by a considerable number, Senator Foraker accepted it, giving notice that he would confine his remarks to national issues. Followers of the Mayor could not see how national issues were involved in the election of a sheriff or in a campaign dealing exclusively with local issues of the greatest importance. The Senator's acceptance was so severely criticised by the press in Philadelphia and elsewhere that on the 9th he canceled his engagement to speak, explaining in his letter that if he should make the address his action would "be interpreted as having direct reference to your local troubles and differences, with which I cannot with propriety have anything to do."—John W. Hill, the engineer formerly at the head of the filtration works and the first of the city's employees to be indicted, has been indicted again, the accusation covering 130 distinct charges, and relating to false and fraudulent estimates and records, by

which, it is alleged, the city lost \$2,120,000. The contracts involved were those of the Durham-McNichol Co.—On the 8th, the Central Labor Union, with its 124 affiliated organizations, formally indorsed the Republican ticket, thus placing organized labor in opposition to Mayor Weaver and the reform movement. It was said at the meeting that McNichol and the other contractors whom the Mayor has attacked employed union men exclusively in the filtration work, that the Republicans had given the unions an eight-hour day on all municipal work, and that Senator Penrose had supported the eight-hour bill at Washington. It was also asserted that the reformers had interrupted the work on public improvements, and that the employers prominently engaged in the reform movement were, with one exception, opposed to union labor.—The Councils, last week, passed over Mayor Weaver's veto a bill submitting to the people a proposition for a loan of \$4,000,000 for grade crossings. The Mayor's opponents have placed contracts for about \$100,000 worth of signs by which he is attacked, and have undertaken to spend \$120,000 for advertising space in the newspapers during the campaign.

Labor Questions

Two years ago the Superior Court in Chicago sentenced three members of a union of press feeders to pay fines of \$100 and be imprisoned for three months. The union itself was fined \$1,000. The offense was the violation of an injunction restraining the men from interfering with the non-union workmen of certain firms. By the Appellate Court, last week, these sentences were confirmed, and Judge Smith said in his opinion: "There is no such thing as peaceful, polite and gentlemanly picketing, any more than there can be chaste, polite and gentlemanly vulgarity or peaceful mobbing or lawful lynching."—At the recent national convention of street railway employees, \$20,000 was appropriated for the purchase of ten automobiles, to be used by the unions for passenger service during a strike. The unions already own three automobiles, which were used during the strike at Saginaw, Mich.—President John Mitchell, of the United Mine Workers, addressed 5,000 anthra-

cite miners at Elizabeth, Pa., last week. He said afterward that he saw no reason why there should be a general strike next spring, and that in the last three months more than 50,000 names had been added to the rolls of the union in Pennsylvania.—The National Cash Register Co., of Dayton, O., employing 3,000 men, which has heretofore taken union men only, now gives notice that hereafter its works will be an "open shop."

Municipal Politics in New York

Owing to the failure of the Fusion movement against Tammany, in New York City, separate nominations for the mayoralty have been made by the Republicans and the Municipal Ownership League, both of which had taken part in the Fusion conferences. The Citizens' Union, which was prominent in the Fusion negotiations, has made no nomination, but will use its influence chiefly to secure the re-election of District Attorney Jerome, who, by his own choice, has been nominated as an independent candidate by a petition bearing 4,000 signatures selected from 20,000 that were at his disposal. The League, at a mass meeting of which J. G. Phelps Stokes, the philanthropist, was chairman, nominated William R. Hearst, the well known owner of several newspapers, who was a candidate for the Democratic presidential nomination in 1904. Mr. Hearst declined, being unwilling, he said, to array the power and wealth of his personal enemies against the League and its work. Tammany, on the 5th, as had been expected, nominated Mayor George B. McClellan for re-election, and Patrick F. McGowan, hitherto unknown to the public, for President of the Board of Aldermen, the office next in succession. The convention adopted resolutions giving hearty praise to President Roosevelt for his "successful labors in the initiation, conduct, and settlement" of the recent peace negotiations. On the 6th the Republicans, without previous notice of their intention, nominated Charles E. Hughes, the examining counsel now engaged in conducting the life insurance investigation. But Mr. Hughes declined. It was imperative, he said, that he should continue to pursue the investigation, which, to inspire public confidence, must not be colored by any sugges-

tion of political motive. If he should accept, the work of the investigation would be largely discredited, its motives impugned, and its integrity assailed. Platform utterances concerning municipal ownership excite much interest this year, because the Fusion campaign was to have been inspired chiefly by this issue. The League's are, of course, of the most emphatic character. The Republicans call for free competition in the construction and equipment of future subways, the largest advantage to the people in their operation, and absolute control of them by the City Government; also for a municipal lighting plant, "for the use of the municipality and of its citizens." Tammany, asserting that municipal ownership of important public utilities has long been accepted Democratic doctrine, points to the recent purchase of one of the ferries by the city, promises that others shall be bought, refers to appropriations and preparations for municipal electric lighting, and says that a "Democratic administration may be entrusted with the continued application and ultimate triumph, upon safe lines, of the principle of municipal control of public utilities." Limited franchises only, it adds, should be granted, and these upon terms most advantageous to the public and under close supervision and regulation by the municipality.

Cuba's Political Campaign

Governor Gomez, the Liberal party's candidate for the presidency, arrived in New York from Cuba on the 2d, accompanied by Colonel Ferrara, who was recently arrested several times for making seditious speeches. In long statements given to the press, the Governor has repeated the charges against the Palma Government to which we referred last week, asserting that Liberal leaders were arrested, Liberal municipal officers removed, and both the police and Rural Guard placed under the direction of unprincipled men, in order that the Liberal vote might be suppressed. At the recent election of registration boards, he adds, the ballot boxes were stuffed by Moderates, and after the election the registration officers appointed were all Moderates, although the law provides that each local board

shall consist of two from the majority party and one from the minority. He also says that the new lists have been padded by the Moderates with fictitious names, according to the custom in Philadelphia, and that the coming election will be a farce. All these charges are denied by President Palma and Secretary Andrade. In reply to the Governor's assertion that the Government has brought the island to the brink of financial ruin, others point to the excellent condition of the Treasury, abundant exports, large crops and general prosperity. Governor Gomez says the United States ought to intervene in the interest of a fair election. His critics point out that his party has denounced the Platt Amendment, which provides for intervention in certain contingencies, and that opposition to the Amendment was the leading feature of its platform. At last reports he had not decided to lay before President Roosevelt a statement of his grievances. Some published letters from the island indicate that not all of the Moderates are models of political purity, that a political machine of considerable strength has been constructed by them since the President joined their party, and that machine influence in the interest of the Palma ticket has been successfully exerted in some places.—The text of the Anglo-Cuban treaty, now pending in the Senate, has been published. It gives Great Britain privileges equal to those of "the most favored nation," except with respect to duties on imports. The coasting trade is included. It is well known that this treaty is not acceptable to our Government.

Storm Losses in the Philippines It now appears that the damage caused by the recent typhoon was at first under-estimated because reports from many places in the archipelago were delayed. At least 200 natives and about 25 Americans lost their lives. The steamship "Canlabenia," engaged in traffic among the islands, was sunk off the coast of Ticao, and all on board perished. There were 5 American and 11 native passengers and a crew of 97. Many bodies were found on the neighboring beach. In the hemp-growing districts the

loss is believed to be not less than \$5,000,000. Warehouses were destroyed and plantations so injured that they cannot be restored to good condition in less than a year. The Government's protective work in the Luzon provinces of Cavite and Batangas, and in Samar (which largely increased the acreage under cultivation) has been undone by the storm. In Albay also, and in Sorsogon and Masbate, fields have been devastated, roads made impassable, and eighty per cent. of the dwellings, schoolhouses and warehouses destroyed. It is thought that owing to all this loss, and to the severe drought of preceding months, the Philippine Government's receipts for the year will show a decrease of forty per cent.—All tonnage and port dues at Manila, it is said, will be greatly reduced or abolished. Such concessions, it is believed, will tend to make the port a center of Oriental commerce, rivaling Hong Kong.—Miss Alice Roosevelt and the tourists accompanying her arrived at Yokohama on the 4th, and will sail for San Francisco on the 13th, after spending the intervening days in visiting points of interest in Japan.

Various Topics After some discussion as to whether control of the Panama Canal work should be transferred to the State Department, it was decided last week that control should remain with the War Department, and that Secretary Taft should have a free hand. He will go to the Isthmus early in November, to become familiar with the local conditions. John G. Sullivan, formerly division engineer on the Canadian Pacific, has been appointed Assistant Chief Engineer.—President Amador, of Panama, denies the report that union with Costa Rica is under consideration.—News was received in Washington on the 9th that the merchants of China had decided to abandon the boycott of American goods, at least for some time to come, and to await the action of Congress with respect to the exclusion law.—In the cases of the nine officers of the Retail Coal Dealers' Association of Illinois and Wisconsin, who were found guilty two years ago of conspiracy to suppress competition and raise prices, and were fined \$200 each, this

judgment has been confirmed by the Appellate Court of Illinois.—A remarkable petition was presented, last week, to Governor Lanham, of Texas. It asked that the State should permit mobs to punish negroes guilty of rape. Asserting that the tendency among negroes to commit this crime was increasing, the petitioners (led by G. W. Wright, of San Marcos) urged the Governor to accept their recommendation that in the case of a negro guilty of such an offense there should be no legal inquiry whatever, and that the State authorities should not interfere to prevent the hanging of a mob's prisoner. In reply, the Governor reminded the petitioners that he had sworn to defend and support the Constitution.

Bowen and Loomis In our last issue we called our readers' attention to the correspondence between President Roosevelt and Mr. Loomis, given out at Washington, which purported to show that the late Secretary Hay was on Mr. Loomis' side in the departmental inquiry into the Bowen-Loomis controversy. To these letters Mr. Bowen replied:

In answer to the letters that were exchanged recently by President Roosevelt and Mr. Loomis in regard to Mr. Hay and published in yesterday's papers, I have to say only this: After I had sent to Washington all of the documents which I found in the legation at Caracas relating to Mr. Loomis I received a letter from Mr. Hay stating, "I have been greatly surprised and pained in reading the documents you sent me." The following month he wrote to me a letter containing these friendly words: "I have always taken your part not only from personal liking, but from a conviction of your merits, your ability, your courage and your integrity." From a high official of the Department of State I received a letter written this last April stating, "Secretary Hay remains your stanch friend." From the same high official I have in my possession a letter dated July 8, 1905 (eighteen days after I was dismissed from the diplomatic service by President Roosevelt), stating: "I had a few words with Mr. Hay the day before he left Washington for New Hampshire, and he spoke of Mr. Bowen in the same kindly and affectionate manner he always did."

Every one who knew Mr. Hay knows that he could not possibly have been a friend to a man like Mr. Loomis, and that no power on earth could have induced him to denounce as a traitor an American official who refused to shield corruption.

In conclusion, in order to show President Roosevelt's attitude toward Mr. Loomis, I will

simply quote my last remark to him and his to me in the presence of witnesses the day he dismissed me: "Mr. President, you will remember that after I sent you all the information I had about Mr. Loomis you offered me a promotion that was intended to lead to an ambassadorship." "Well," he answered, "I would have done a great deal to hush up the scandal."

Secretary Taft commented on the above statement of Mr. Bowen as follows:

The President said he had been wholly misunderstood. Mr. Bowen said he was glad that the whole matter had come out and was generally known, and to this the President replied: "I do not agree with you, and I am very sorry that the whole matter has happened."

Two Cent Foreign Postage

The movement toward establishing a two-cent international postage rate is being strongly agitated in England. Mr. J. Henniker Heaton, M. P., who established the penny postage for Great Britain in 1899, strongly advises the reduction. He states that the world's post offices are bringing in a tremendous profit. In Great Britain \$25,000,000 and in France and Germany \$15,000,000 of excessive postal surplus is bad finance, because it taxes initial commercial operations. He thinks that in three or four years, on account of the development of correspondence under a lower rate, the different Governments would be receiving as satisfactory returns from foreign postage as now. A number of prominent men in London have enrolled themselves as members of the Universal Penny Post League, and have promised to do all in their power to further its aims. John Wanamaker, ex-Postmaster General of the United States, and Ambassador Whitelaw Reid are in favor of reduced postage. It is hoped that this agitation will finally result in the establishment of a two-cent rate at least between the United States and England. In this connection we refer our readers to an interesting discussion of the English and American postal service in another column by Mr. Porritt. Our postal service, altho in several respects it is less comprehensive and efficient than that of some European countries, is conducted at a loss to our Government, so Mr. Heaton's criticism of his own Government for using the post office as a source of revenue does not apply to ours.

International Politics

There is some question as to the time of the second meeting of The Hague Conference. From St. Petersburg it is reported that a large number of replies have been received to the Czar's invitation, all of which are favorable and contain no suggestions regarding the subjects for discussion, and that the conference will be called to meet very soon. On the other hand it is reported from London and Berlin that the acceptances of both England and Germany are conditional upon the subjects to be discussed. Germany will not want the question of disarmament raised, and Great Britain has a special interest in certain problems of neutrality, such as the coaling and repair of warships in neutral ports. Consequently, the Conference may have to be postponed until next year, until its scope is settled by preliminary negotiation. Count Witte will open The Hague Conference as the representative of the Czar. The Pope will try to secure the admission to the Conference of a representative of the Holy See thru the good offices of Germany.—The *Novoe Vremya*, of St. Petersburg, suggests that Russia, France, Germany and the United States should join with Japan and Great Britain in maintaining the *status quo* in China, and that the affairs of Central Asia should become subject to a mutual guarantee between Great Britain and Russia. It is surmised that the object of the Russian Government in thus securing a permanent settlement of Asiatic questions is to give her a free hand for nearer projects. Since the possibility of Russian aggression upon the independent State of Norway to secure an Atlantic port has been so extensively discussed, it is very timely that Count Wachtmeister, the Swedish Minister of Foreign Affairs, should call attention to the fact that Great Britain and France are bound by the treaty of 1855, at the close of the Crimean War, to furnish to the King of Norway and Sweden naval and military forces sufficient to co-operate with his own forces in resisting the encroachments of Russia. The King is prohibited by the treaty from ceding any Swedish or Norwegian territory to Russia and from granting to Russia any coast privileges.

Rioting in Moscow

Disorders originating among the university students in Moscow and promoted by the revolutionists as a demonstration of their power, reached a climax on Sunday in street riots which were suppressed by the Cossacks with great brutality. Outside agitators persisted in attending the student assemblies, notwithstanding that this was prohibited by the University Council, and finally the interference with the normal work of the students became so great that Prince Trubetzkoy, Rector of the University and one of the leaders in the Liberal party, was obliged to suspend the teaching of classes. A general strike was ordered by the revolutionists, and the printers, bakers and street car men went out. The interruption of the publication of newspapers caused many alarming rumors to be circulated; the price of bread rose rapidly, and the supply soon gave out. Students and strikers marched thru the streets bearing red flags and assembled in the squares, and, when driven out from these, in the theatres and railroad stations. A crowd collected on the Tverskoy Boulevard and was charged by cavalry and infantry, who fired three volleys directly at the people. Many were wounded and some killed, but there are no reliable reports as to the number of casualties. It is thought to be over a hundred. The Prefect of Police issued a proclamation giving the police and troops unrestricted power of arrest, and they availed themselves of the privilege to seize and beat men, women and children. A number of them were taken to the Prefect's court yard, where they were forced to run the gauntlet between two rows of fifty Cossacks, who struck at them with their knouts and the butts of their guns until they dropped fainting or dead. Two hundred of the striking bakers were arrested and beaten in the court yard.—At Tiflis, in the Caucasus, ten bombs were thrown into the barracks where the Cossacks were quartered in three different parts of the city. Twenty persons were wounded, but one Cossack and one bomb-thrower were the only persons killed.—The Government shows a disposition to make some concessions on the language question, which has been the cause of more antagonism on the part of the minor

ances than anything else. The use of Finnish and Swedish will be permitted in the higher administrative departments of Finland, where previously only Russian was allowed. The commercial schools of Warsaw, Riga and Reval are to be allowed to use Polish or German as a language of instruction in all studies except Russian grammar, history and geography.—The Municipal Council of St. Petersburg refused the proposition to give Count Witte a banquet and address of welcome on the ground that his services at Portsmouth were not deserving of honor because they “were only a redeeming sacrifice for the political mistakes in which he has acquiesced and which were responsible for the war.” The newspapers resent the action of the Czar in honoring a man for negotiating so humiliating a treaty.

The Ending of the War The signing of the Treaty of Portsmouth by the Emperors of Russia and Japan will be telegraphed to Washington and announced to our State Department at Washington by the representatives of these countries. This will be the formal ending of the war, as the exchange of the copies signed by the two emperors will be made informally. The exchange of the ratifications will probably be made at the White House in the presence of President Roosevelt by Baron Rosen, the Russian Ambassador, and Mr. Takahira, the Japanese Minister. The Privy Council of Japan held a long session at Tokyo on October 4th, under the presidency of Marquis Ito, and in the presence of the Emperor, at which the treaty of peace was discussed and approved. The official copy of the treaty reached Japan on the following day, being brought from Seattle on the steamer “Dakota” by Mr. Yamaza, Director of Political Affairs at the Foreign Office, and Mr. H. W. Denison, legal adviser of the Foreign Office. The Privy Council relieved four cities of martial law, since the riotous demonstrations against the ratification of the treaty have subsided, altho the popular resentment is by no means allayed and will be concentrated in a political attack upon the Cabinet. A grand naval demonstration of the allied pow-

ers of Japan and Great Britain is planned to take place soon after the ratification of the treaty, and Admiral Togo will make a triumphal entry into the city of Tokyo. It is also suggested that Togo may later visit England with his fleet, thus giving to both Europe and Asia visible evidence of the power of the combined navies of the two island nations of the Atlantic and the Pacific. The officers of the Russian and Japanese forces in Northern Korea have not yet been able to agree upon the terms of an armistice between the forces.

The Cost of the War The losses of the Japanese army during the war, as given in the official report, are 72,400 dead. Of these 46,180 were killed in battle, 10,970 died from wounds and 15,300 died from disease. The remarkably small proportion of deaths from disease and from wounds, notwithstanding the arduous conditions of the Manchurian campaign in all seasons, proves that in military sanitation and hospital service the Japanese have excelled all other nations. It will be noted that the total number of lives lost is very much less than the estimates made by adding up all the losses reported by the war correspondents in the various battles. According to a statement made by Count Okuma, formerly Prime Minister, and now leader of the Progressive Party, in speaking before the Associated Chambers of Commerce at Tokyo, Japan will have at the close of the war and after the withdrawal of the troops from the continent, a debt of \$1,250,000,000, on which the interest alone, roughly speaking, will be \$75,000,000 a year, or nearly twice the entire revenue of Japan ten years ago. This necessitates raising by taxation \$6 for each person in Japan every year. Before the war the taxation was only \$2 *per capita*. The *per capita* share of the national debt before the war was \$6; now it is \$25. To lift this heavy burden it is necessary, Count Okuma said, that the business men of Japan should redouble their energies in the development of public works of all kinds, and thus secure victories in peace as well as in war. For the furtherance of this policy the Chamber of Commerce recommended to the Gov-

ernment the following measures for the advancement of national trade, industry and finance: The appointment of Government commercial agents, the establishment of floating exhibitions of samples and museums in foreign ports, a customs tariff union between Korea and Japan, the opening of a universal exposition, the improvement of existing railroads and the rapid construction of new railroads, retrenchment in the expense of the administration, the establishment of a Japanese-Chinese Bank, the adoption of measures against the expansion of the currency. The Japanese section of the Manchurian railroad between Port Arthur and Kwang-Cheng-Tse will require an outlay of about \$12,500,000 to be made efficient, but is expected to become a paying property on account of the coal mines at Yen-Tai and Fu-Shun. A new loan will soon have to be placed by Japan.—The report of the Russian finances show an extraordinary expenditure of \$281,202,000 during the last six months, most of which is due to the war. A loan of \$360,000,000 for Russia is now being negotiated, about half of which will be placed in France, and the rest in Germany, Holland, England and the United States. The Russian Government is planning to develop Siberia by means of homesteads, in a somewhat similar way to that adopted in this country after the Civil War. Soldiers will have during two years a right to pre-empt farms of 133 acres and will receive a bonus of \$50.

University Theology in Germany

The advanced theological thought which prevails at many of the German universities has called forth the determined opposition of the conservatives, who are putting forth their best efforts to counteract the influence of these neological tendencies. The most notable effort in this direction is the establishment of a "Theological School" in Bielefeld, by the veteran Pastor von Bodelschwingh, the head of the dozen and more institutions of charity at Bethel, near Bielefeld. The object is to give thoroly scientific instruction in theology, but from a positive and evangelical stand-

point, and all theological students who have had their faith shaken by the advanced teachings at the universities are invited to come and learn what Biblical truth is on the basis of the Scriptures. For the present the school is in charge of two experienced teachers, Professors Jaeger and Koehler. In this connection a table giving the positive and the advanced professors in the different Protestant faculties of Germany, as published by the *Chronik der Christlicher Welt*, is of special interest. The distribution of theological faculties from this point of view is the following:

	Positive.	Advanced.
Berlin	8	10
Bonn	6	5
Breslau	7	3
Erlangen	7	0
Giessen	0	7
Göttingen	5	6
Greifswald	10	0
Halle	7	8
Heidelberg	1	8
Jena	0	7
Kiel	4	7
Königsberg	5	5
Leipzig	10	2
Marburg	2	10
Rostock	6	6
Strassburg	0	10
Tübingen	1	6

Accordingly, out of a total corps of 175 men in the Protestant faculties of Germany, 79 are considered as positive and 96 as advanced. Of course, even the former are positive in many cases only in a Pickwickian sense, as not one of these still adheres to the old doctrine of verbal inspiration.

France and Germany have come to an agreement concerning the Moroccan Conference. The agreement was signed at Paris by Premier Rouvier and Prince von Radolin, the German Ambassador to France, and the program for the conference submitted to the Sultan of Morocco. It contains specifications concerning the \$2,500,000 loan from German bankers. It is agreed to create a state bank, which will control loans and that French as well as German firms shall share in building the harbor works. The Algerian frontier question will not be discussed at the meeting. The treaty will be signed at Algeciras, probably early in November.

Starting Life on a Farm

BY JOSEPHA B. GODSON

[This story of how a young married couple without any previous experience in farming decided to desert the city and found their new home in the country, and how they got both pleasure and profit in making their living directly from the soil by their own exertions, is valuable as a personal contribution to the problem of city and country life. This picture of feminine farm life is not so dark as that of the Illinois farmer's wife, which we printed a while ago and which called forth so many letters of sympathy.—EDITOR.]

WHEN I had reached the age of twenty-two I had lived the life of hundreds of American girls with plenty of money. Not only every necessity, but every luxury and every advantage that money could procure had been given me, and my inheritance, from many generations of ancestors, had fitted me for nothing more strenuous in life than the pursuit of pleasure.

Then I fell in love with a man of similar tastes and antecedents, three years my senior, a handsome face and empty pockets, and what else I am sure I did not know or question. On attaining his majority he had come into a large fortune, and when I knew and loved him this had quite disappeared. Naturally my family did not look with favor (to put it mildly) upon such a match, and when one fine day I walked to the corner, took a cab and drove to our dear old clergyman's house, I brought as my share in a matrimonial alliance the remains of that month's allowance, the very correct calling dress in which I was clothed for trousseau, perfect health, a heart full of love for the man of my choice, and no hope of forgiveness or expectations for the future from my family. But when I saw Henry on the steps I jumped out gaily with perfect love and trust, and in absolute ignorance of the ways and means of life, and I put my hand in his, and we were married. After the ceremony we drove in the same old cab to the Arlington Hotel, and when I had wept a little against Henry's immaculate afternoon coat, we sat down to face the future.

Between us I remember we had exactly \$162 and some odd cents. This

did not augur a lengthy stay in the apartment in which we were then sitting, but we were not in the least dismayed. Henry got me some violets, and after a very happy little dinner he produced from his pocket a much folded page from *Forest, Field and Stream*, which he had brought from the club, and gravely bade me give attention to the following advertisement:

Wanted.—A practical farmer to take a well equipped farm of 60 acres in the Adirondacks. Rental of \$160.00 a year to be paid either in cash or labor. Good inducements to the right man. Address for further information, H. C. Carter, Brownsville, N. Y.

At first, I must confess, the connection between the practical farmer and ourselves did not strike me, but when once it did I was enthusiastic to a degree, and I remember saying: "Oh, Henry, dear, it's just the thing; we can labor instead of paying rent, and the Adirondacks are lovely." As soon as Henry saw I was pleased with the idea he sat down and wrote to H. C. Carter, engaging the farm immediately on said Carter's own terms, and, not to waste too long before getting to the real matter of my narrative, five days later we beheld Mr. Carter himself at the Brownsville station. We

mounted with him into a "Democrat" wagon behind a stout gray mare, and were conveyed up the mountainside three miles and a half to our future home.

The farm was a part of Mr. Carter's own estate of 500 acres, and lay along the side of the mountain—at least, the pasture and fifteen acres of bush did—and on top was quite a level part divided into five or six fields. The day was sunny and bright, tho it was the 15th of November; the pure bracing air filled me with joy and delight, and, while Mr. Carter took

Henry around the barns and outbuildings, I went into the cozy-looking little farmhouse, white, with green shutters, and, recognizing the kitchen by the large black stove, I pulled off my gloves, built a fire, and, filling the big iron kettle (weighing about one ton) at the pump, took from my handbag a little silver tea caddy, six lumps of sugar (which I had secreted during breakfast at the junction), a lemon and a box of wafers. I spread one of Henry's pocket handkerchiefs on the smallest table, and when he came in looking a bit dazed (Mr. Carter was a practical man and had been trying to discover Henry's methods of farming!) his dear face brightened up, and we sat down to our first cup of tea in our first home.

There was very little to unpack or set in order, but the picnic spirit sustained us thru that trying day. The farmhouse had three rooms downstairs and an attic above. There was a cheerful kitchen with two windows framing views like Corots. Opening from the kitchen was a room we used as dining-room and sitting-room; furniture: a table with a red cloth, a good reading lamp, two queer, comfortable rocking chairs, and a fat little black wood-stove. Besides this room was the bedroom, and outside the kitchen was a fine, big shed with shelves and tables, and below a tiny cellar, beautifully clean, cool and well ventilated, in which was a long, narrow table for milk. In the kitchen were a few primitive cooking utensils and a good stove. Outside we found the barns in fairly good condition, room for more stock than we ever owned, and a big hay barn with grain bins, etc., a chicken coop, a corn crib and ice house.

We now possessed a little over fifty dollars, and this we invested in

A cow.....	\$25.00
A heifer.....	15.00
18 hens and 2 roosters.....	5.00
Churn, milk pans, butter bowl, etc.....	5.00
	<hr/> \$50.00

Mr. Carter sent up twelve beautiful Southdown ewes, to be kept by us for a year on half profits, and a team of big gray horses and a few farming implements went with the farm. Henry was to pay the equivalent of rent by taking care of a pack of fine beagle hounds and training them—something he really knew

how to do, but this, of course, took from his time on his own farm—two hours each morning and all of every Saturday. Keeping strictly to truth, I must confess the first week was a bit trying. Without wood laid in, and as there seemed to be nothing to do with, we found ourselves obliged to run in debt at the village for some things that were barest necessities; and of course every day the most common happenings were to us startling emergencies, to be met as best we could. For instance, never shall I forget the evening the cow arrived. She had not yet given up her nightly quota of milk, and we both set forth with our new milk pail and due solemnity to see that she did her duty. She was a huge Jersey cow with an extremely belligerent eye, and after Henry had cornered her by the side of the barnyard fence, I took up a safe position on the other side, crouching down and peering thru the bars so that I might miss nothing of the situation. Oh, if I could but paint a picture of that cow's face! She felt she was being tampered with, and when Henry was not immediately successful in his efforts she turned her head around and regarded us both, more in sorrow than in anger, but with such truly bovine amazement and chagrin depicted on her countenance that this, in conjunction with Henry's attitude and expression, were more than I could bear.

My shrieks of merriment seemed to be the last straw, both to Henry and the cow, and, rising in just wrath, my better half for the first time asserted his authority and ordered me into the house. So I left him to cope with the matter in hand alone, and all I know further is that during the following year the milk pail came in full twice a day and no questions asked.

The winter routine on a farm is of course very different from the work in the spring, summer and fall. Each season brings its peculiar duties, and for the first four months of our year things went about as follows: Up at six o'clock in the morning (barely daylight), and while Henry milked and fed and watered the stock I got breakfast, so that by seven or shortly after, when he came in, we sat down to our repast. It consisted at first of toast, eggs and cocoa or milk; then, as I knew how to make things,

we had porridge, muffins or graham gems or batter cakes also. When we had finished Henry helped me wash the dishes, make the bed, sweep out the rooms, dust and set in order. Then together we went out to the barns, and I helped him put those in order, gather the eggs, feed the chickens, etc. We inspected with pride each separate animal, and early in the year adopted a motherly cat who came to reside in the hay barn. Then Henry took his axe and went out to the bush, learned how properly to fell a tree, cut it into lengths and dress it, and with his own stout arms during the year he took down, dressed and cut and split for use eight cords of good hard wood—maple, ash, hickory—and this settled our fuel bill. From eleven o'clock until one he worked with the dogs (the kennels were the other side of the bush), and at one o'clock came home to dinner. Meanwhile, I would come back to the house, and with a cook book and what little intelligence God had given me battled with the problem of how to prepare food. And I learned, too. I am prouder of it than of anything I have ever done. The fact that I by myself learned how to prepare and serve a wholesome dinner—soups, meats, vegetables, salads and sweets—I think means more to me than almost anything in my life so far. And when I made bread—not just eatable, but sweet, light and delicious—I felt like a queen who has just come into her queendom! It was not all easy, I admit; but I was determined and indefatigable, and Henry was appreciative and his digestion good.

Indeed, strange as it seems, of all the many new things I attempted during that year the cooking came the easiest and was the pleasantest to do. From the first I began to save the cream, and I was very successful with a little barrel churn, much easier and quicker, I think, than the old-fashioned style, making from five to ten pounds of butter each week, and with this and the eggs we did not use (three or four dozen each week) I paid for all our groceries and canceled the small debt we incurred in the beginning of our operations. Of course, we had in the house from the last year's crops potatoes, apples, cab-

bage, carrots and beets, and we left the same quantity from our crops when leaving.

Another source of income which I immediately started was Belgian hares. I sent away and purchased two pairs of these gentle, cleanly and prolific animals; I got books regarding their care, etc., and Henry made me a fine place to keep them in the old corn crib. There was a preserve of about 2,000 acres about our place, kept up by some men from Albany, and they paid me fifty cents apiece for every healthy little bunny, two months old, which I turned out into the woods, and during the year I cleared over fifty dollars.

During those long winter afternoons we would tramp over the place—often on snowshoes, which we both had used—mending fences, planning places for the spring crops and making all sorts of plans for getting on, and then home again in the gloaming to our simple supper and evening "chores," and then to our magazines and papers beside that funny old red table cover, with the lamp, and the fat little stove.

In January we filled our icehouse from the neighboring pond, paying a cent apiece for the cakes to the man who cut them, and Henry made fifteen dollars hauling ice for other people, and also wood to the mill, two miles up the road.

In February our heifer had a fine little calf, and when it was a few days old I took it from the mother and taught it to drink and raised it myself. It was a heifer calf and it throve wonderfully and, of course, added that much to our assets. About that time we had saved enough for another cow and when we had bought her our milk and butter supply was larger. One thing I must not forget was our purchase of a pair of white Pekin ducks. They were surely my best investment. I paid one dollar for the pair. Each day for thirty-nine days I got one egg. Every one was carefully saved and three settings were placed, two under hens and one under the old duck herself. Out of the whole number I raised twenty-four ducks, full grown, which I think was a large percentage, and I certainly deserved every one, for I watched and guarded

and tended them with greatest care, and baby ducks are very tender and very silly and I wonder I had such luck. Our chickens did well too. At the end of the season I had to sell nearly a hundred from my original twenty.

The first of March a terrible blizzard came along. I have never seen anything so hopeless and awful. We really suffered with cold and necessary exposure. One day it took Henry and me both from dawn till darkness to get to each animal once with food and water, and the other farmers told us afterwards that ours was the only stock in the mountain that got any water that dreadful day.

March was a fierce month. We could only get to the village a couple of times and provisions ran a bit short; however, we kept well and cheerful and none of our stock was lost, tho once Henry had to dig our best cow out of a snow drift when he went to milk her in the morning, and once we had to carry all the chickens into the kitchen to thaw out. Yes, I believe we did that twice. A foolish and premature hen stole a nest and came off during the worst weather with thirteen downy chicks, and the whole family had to live three days in the wood box behind the stove. But our troubles did not begin in earnest till the baby lambs began arriving. The weather grew no milder and nearly every night the wind would rise and fresh snow fall and for a week we worked literally night and day over those precious babies. Six of the ewes had one lamb each and six had twins, which made eighteen in all, and in spite of all we could do six died.

Some of the sheep simply would not mother their offspring and the poor little things could not gain strength enough to take milk from a spoon. Each one, as soon as it was born, had to be wrapped in a warm piece of sacking and brought into the kitchen and dried at the fire and wrapped up again and returned to its mother and she induced to mother it. For three nights we did not both sleep at once, but went back and forth at short intervals to and from the sheep corral, carrying the little ones in and out and taking warm bran mashes to the ewes. Never shall I forget plunging thru those dreadful drifts, the lantern's little gleam scarcely making an impression on

the darkness of the night and the walls of driving snow, my arms full of warm sacking or burdened with a baby lamb, for whose life I trembled.

Well, twelve came thru strong and flourishing and of these six were ours and also half of the wool from the flock which was sheared later, in the summer.

A bit of great good fortune came to Henry in the early spring. He took a perfectly beautiful stallion, which made him a fine saddle horse and was allowed half of all he made for his keep. This was not really very lucrative, but Henry had such pleasure and comfort from using him and took second prize with him at the horse show in the fall.

The most altogether trying thing we tackled was a small pink Berkshire pig. The farmers all told us that pigs were the source of most of their incomes, so we thought we would modestly begin with one, and in fear and trembling we drove to a neighbor's and brought back little "Squeally." We wished him to be a clean, nice pig, and we really gave him every opportunity, but well—he evidently had no pride or self-respect and after caring for him for two months we felt we had very little of either left ourselves, and we were glad to sell him for five dollars. We had paid two dollars for him, but I think we felt that three dollars' profit poorly paid us for the care piggy had received.

Along in April the snow melted and in May the spring work opened with a rush. Did ever any two mortals work as hard as we did? Our day was seventeen hours long—from four a. m. till nine p. m. We planted five acres in oats, sowing red top clover with them; we put in two barrels of seed potatoes, which did finely and we planted half an acre as a vegetable garden, containing some of almost every vegetable, but mostly winter vegetables—carrots, turnips, cabbage, onions, squash, etc. Then besides our sweet corn patch, we planted another of field corn for the chickens and about two acres in fodder corn for the cattle. There was a large apple orchard with fine clover hay growing and all the rest of the farm, except the fifteen acres of bush, was in timothy hay. I put in every seed in that vegetable garden myself and weeded and tended it myself

all summer, except for a little assistance given gratis by a neighbor in transplanting and setting out some young plants. Henry plowed it first and got it ready. Oh, how I labored over that patch of earth! I fancy I crawled fifty miles on my hands and knees, but it was a great success in spite of a very dry season and a disastrous hail-storm. As our beets and peas, also lettuce and radishes, were unusually early we sold them at a good price in the village and to the summer people who came out to their cottages near by us. Our potatoes also brought a good price and we had a huge crop. When our sheep were sheared we drove the wool into the city ourselves and sold it, thus saving freight and middle man's profit; and our apples did splendidly, so that we not only replaced the amount of things we found on the farm, but sold a great deal besides.

I wish I could go more into details of this most interesting year of my life, but I fear my paper is far too long now, but it is a true tale in every particular and certainly shows how two young people, absolutely ignorant of farming and even of the sterner realities of life under any conditions, but with health, determination and average common sense, took a farm and farmed it, without hired man

or hired maid; performed all the multitudinous duties; bore all the responsibilities; met each emergency as it arose, and with only fifty dollars to start with, made our living for a year—and a good living too—more than held our own in the farming community where we were located and at the end of that time had nearly four times what we started with. (If we could have waited until spring and sold out then our profits would have been greater.)

Financially the year was a complete success, and when I think of the qualities of mind and soul and body developed in that year, the self-reliance it taught to two hitherto helpless creatures, and what it meant morally to us to have accomplished what we set out to do; when I think of all this I can not be grateful enough for having had the chance to learn to be that thing of all others I admire and wish to be—a capable woman and not a lily of the field in this day and generation; and I also had a chance to find out in that first year of married life, that I had chosen a man to whose brave heart and strong arms I could safely trust my future, even if the occasion should arise to do something more strenuous than mix a cocktail or lead a cotillon.

FORT ROBINSON, NEBRASKA.

No Desert

BY BISHOP H. W. WARREN

HERE a daisy and there a rose—

Forces unseen evolve to the seen,
With sweet fragrance and color enough
For a thousand bright blooms between.

Here a swallow and there a lark—

Life and joy and rapt ecstasy keen,
With glad song and wild swiftness enough
For a thousand such lives between.

Here a planet and there a star—

Cosmic forces and dazzling white sheen,
With divine vital vigor enough
For a thousand rich realms between.

The Advance of the Trolley

BY ALEXANDER HUME FORD

DURING the continuance of the Louisiana Purchase Exposition, very cheap trolley excursion tickets were sold everywhere in Ohio, good over connecting steam and electric railways to St. Louis. Since last summer, however, a practically all-trolley route has been completed from Western

that is being rapidly closed, and tomorrow may see promised plans carried to completion that will connect by continuous trolley Portland on the Atlantic with Portland on the Pacific.

In the New England and Middle States, railway legislatures have, in every possible way, hampered the exten-

New York and Pennsylvania to the Mississippi and beyond, while the ever-advancing network of interurban electric railways is rapidly stretching westward toward the land of Lewis and Clark. In fact, today a continuous trolley trip from Maine to Missouri is practical, but for a gap in Central New York

sion of the interurban trolley, but in the Central West, where the dead level prairies lend themselves to cheap trolley construction, the farmers have demanded legislation more than favorable to the electric railway, with the result that there are more miles of interurban trolley in the single State of Ohio than in all

Sleeping Car Showing Berth.

gether, combined to fight their common enemy, the steam railway, issued interchangeable mileage books and perfected an organization that meets somewhere in the Middle West once a month to discuss plans for putting on extra interstate trolley flyers, and in every way perfecting the electric railway service radiating

from the city of Cleveland.

The trolley in Ohio having successfully passed through the successive stages of development encountered in the early career of our railways, now seeks to rival the steam roads in every respect. Not content with having captured the short-haul business, the shrewd capitalists behind this new octopus are reaching out for nothing less than complete conquest. The local interurban trolley car is being relegated to the background as a less lucrative source of revenue than the lately introduced electric flyer, that, fitted up with all the luxury of a modern Pullman car, skims over the rails without stop, save at the larger cities; and even this new mode of electric travel is in the infancy of its development, altho today thru runs of three and four hundred miles are made both in Ohio and Indiana.

The pioneer long distance trolley express—between Cleveland and Toledo—has been compelled to run two cars instead of one on each of its three daily trips, and soon the number of runs will be doubled. Already the run has been extended to Detroit, and soon thru cars will be put in commission between Cleveland and Bay City, Mich.,

a distance of three hundred miles. A ride on one of these trolley trains is an experience not to be soon forgotten. All that is necessary to insure comfort is to 'phone to the office of the company that you wish a seat reserved, and then board a trolley car in any part of Cleveland, demand your transfer slip for the

Interior of a Trolley Line Pullman Coach.

thru Detroit express, and the trip is begun. Transferred from the rocking, springing, light trolley car used in city traffic to the sixty foot, fifty ton Pullman of the interurban electric railway, the change is striking in the extreme. The car that is to be your home for the balance of the day is in every respect superior to the ordinary parlor car of the up-to-date steam railway. Leather lounge arm chairs and commodious sofas line the plate glass walls of the smoking compartment, and in the spacious parlor compartment cushioned wicker arm chairs are at the disposal of all. There is no

crowding, for no more tickets are sold than the number of seats. Once the trunks of the passengers are stowed away in the baggage compartment, the signal is given and the cars glide over the tracks toward the West. Despite the fact that the start thru city streets is comparatively slow, within two hours the trolley express stops at Norwalk, sixty miles distant, passengers bound for Sandusky are transferred to local cars, and a caterer boards the express with tempting hot lunches for those who wish to eat. Another two hours' run over steel rails as heavy as those used on the steam road,

Lounging Room, Interior of a Passenger Coach.

and the express slows down as it passes thru the streets of Toledo. From ample arm-chairs, thru the wide plate glass windows (for each of these express trains is an observation car) it is possible with careless comfort to watch city and coun-

in exhilaration a ride on the cowcatcher of a thru express locomotive, with none of its attendant discomforts and uncomfortable thrills.

The fastest interurban trolley service in the world, for a long distance run, is that

Freight Train.

try glide by, for the heavy cars glide, rather than run, over the rails, and the two hour trip from Toledo to Detroit affords an exquisite change of scenery, while the runs, in two and a half hours, from Detroit to Bay City, on Lake Huron, or westward to Kalamazoo and Lake Michigan, are journeys that should by all means be made by trolley in preference to steam rail travel. The average speed of the trolley express at the Michigan end of the run is perhaps twenty-eight miles an hour, not too fast for the traveler to enjoy the delights afforded by the ever-changing scenery through which he is carried free from noise or smoke. By all means, if you can, take one long distance journey by trolley express; it is a fascinating mode of travel, approaching

between Lima and Dayton, O.; for eighty miles the trolley express keeps pace with the locomotive on the competing parallel steam road, and arrives at its destination on time just twice as often as does the locomotive. As it costs less to operate an express than a local trolley car, and the receipts are usually much higher, excess fare is seldom charged on the electric railways, and where there is active competition with the steam railway the trolley express has placed thru tickets on sale at less than half a cent a mile; thruout the Middle West a cent and a half by trolley as against three cents per mile by steam road is the usual rate. Yet the trolley of today is often superior in every way to the steam road. The Interstate Limited trolley service between Day-

ton, O. and Indianapolis, Ind., for instance, provides superior accommodations to those offered by the competing steam railway, and charges a much lower rate of fare, which also includes transfers on local trolley cars to any part of either terminal city, and makes about as good time between terminals. The cars of this service are each fitted with buffet and kitchen, meals are served *à la carte*, and every luxury of the Pullman service is provided. These express buffet cars are capable of maintaining a continuous speed of sixty-five miles an hour, and when this direct service is extended to Cleveland, as it will be in the near future, thru sleepers are to be added to the equipment. The mere fact that twenty-eight miles an hour is the present average speed of the interurban trolley alone

way of the electric than the steam railway, yet the bulk of the passenger traffic is by way of the trolley. The men behind the Ohio trolleys show a disposition to lay heavier rails and double track their properties, so that heavier and faster cars may be run at a higher rate of fare to the traveling public. Almost every interurban line of trolley in the Middle West is now reaching out for thru connections and interchangeable traffic. The sleeping cars that now go thru by trolley from Indianapolis, Ind., to Lima, O., a distance of 190 miles, will soon be running regularly from points in Illinois to Cleveland and Detroit, and as either distance may be easily covered in a night at the average speed maintained by the trolley express, it is more than likely that the electric railway will begin to draw to it-

Standard Express Car, Interurban Railway Company.

keeps it from at once advancing its passenger rates to a par with its steam rivals.

The trolley sleeper has in reality made its appearance. On the Columbus to Zanesville electric railway, where these cars were first introduced, the rate of fare between the two terminals is greater by

self considerable passenger traffic over distances up to three and four hundred miles. The electric railway sleeper has the advantage, on properly ballasted roadways, of gliding along more smoothly than does its rival of the steam road, while the absence of noise and smoke in

itself attracts the nervous or weary traveler. To be able to retire in your berth at bedtime aboard a trolley car at Indianapolis and alight immediately after breakfast at Cleveland or even Detroit, is a possibility of today not dreamed of at the beginning of our still very new century.

Nor is it only in the night runs that the trolley is now competing with the steam railways for long distance traffic. From Akron, O., to Kalamazoo, Mich., it is 365 miles by trolley, yet through the possibility of frequent connections the traveling man can cover the distance by elec-

the long distance passenger traffic that the triumphant trolley hopes to snatch from the steam railways.

Finding that the short freight haul was its least lucrative business, many of the railways in the Middle West gracefully yielded this traffic to the competing trolley lines. The farmer who previously drove his milk and produce to some distant railway station now reins up his horses anywhere along the line of trolley, careless as to whether or not he reaches his destination at any given hour, for soon enough he knows a car must

Blizzard, January, 1905, Des Moines, Iowa.

tric railway more quickly than by steam, and at a cost of \$5.45 for the entire trip by trolley as against \$8.07 behind the locomotive. From Indianapolis, Ind., to Zanesville, O., it is just 250 miles, yet an hour's time may be saved by taking the trolley in preference to the steam car. Instances innumerable may be mentioned where better time may be made by electricity over steam between points within the area of country bounded by Champaign, Ill., Cincinnati, O., Bay City, Mich., and Pittsburg, Pa. Nor is it only

come bowling down the streaks of rust, and then all that Mr. Farmer has to do is to wave his hand, pull out one thru ticket for each ten-gallon can of milk or sack of produce he wishes to ship as "passengers" to town, and tell the conductor where to put them off. It is needless to say that with such a system in operation it was useless for the railways to hope to compete for small freight within thirty miles of a large town served by a competing trolley line. Latterly the trolley has gone into the mail and ex-

press business also, and here again the revenue of the railway is made to suffer. With the laying of heavier rails and double tracking its lines, the electric railway now anticipates a further capture of the more lucrative long haulage of every kind of freight, but against this the steam railways will fight as for their very existence and right to continue in business.

The interurban trolley can live and thrive with only its passenger service as a source of revenue, while to many steam railroads the passenger service is a source of actual loss. For a sum that it will cost a steam road to run a train every hour the electric line can send out a car every four minutes; moreover, the trolley line has its terminals wherever a passenger wishes to alight. A suburban trolley line that has never paid a dividend may be turned into a paying property by the mere construction of an amusement resort at its farther terminal. Every house that is built beyond the city along its line is worth \$30 annually to the electric railway company in added fares. Holiday excursions may be organized at practically no expense, and in a hundred ways the trolley company may build up a suburban clientèle that a steam railway could not possibly handle, or even create. Thanks to Western initiative and aggressive perseverance the electric railway is rapidly spreading over the continent as the most convenient form of locomotion yet devised for the use of men.

The Eastern States, however, have not been entirely remiss in their efforts to extend the domain of the interurban trolley. The world's first electric railway was opened for traffic between Baltimore and Hampden just twenty years ago. The steam railways even then realized that the trolley would in time prove a most powerful rival in the thickly populated parts of the East, and from that day to this they have tried in New England and the Middle States to influence every form of legislation that might tend to hamper the construction of connecting electric interurban railways, and where legislation could not be sufficiently influenced, they have bought up rights of way to block the further progress of proposed electric trunk lines. The railways

have even found it necessary in New England to purchase entire competing trolley routes, so that the electric lines from city to city between New York and Boston have been rendered of little service as a thru line because of the arrangement of its schedule to take twenty-one hours to cover the trip of 250 miles. All this is to be changed, however. Already the night boat to Fall River, Providence and Hartford quotes thru rates by trolley to Boston, and a Boston street car company has absorbed a network of interurban trolley lines extending from Providence, R. I., to Nashua, Vt., while the direct New York to Boston electric railway has actually broken ground. Thru express trolley cars, however, are as yet unheard of between New York and Boston, and this run, that would be made in eight hours in any Middle Western State, is entirely neglected in populous New England. Influenced legislatures in some New England States forbid the trolley to carry freight and express, limit its speed across country, and in every way hamper its progress. Yet, notwithstanding every drawback, there is a constantly growing class of trolley tourists in the East who spend their holidays speeding about New England in the open cars of the electric interurban railways. In New York State the outlook is more hopeful, for the subversion of Niagara is creating a revolution in electric railway methods. Long dormant projects are suddenly being pushed to completion; a trolley line is now being stretched rapidly across the State, a trans-New York railway will adopt the overhead wire, another will use the third rail, while the New York Central is experimenting with the most powerful electric locomotives ever constructed; these have proved themselves capable of hauling heavier loads at a greater speed than can their steam rivals; and the power of Niagara will be drawn upon for all these projects, besides rescuing the trolley in the Eastern States from the slough of despond into which all interurban electric railways in that section have been sinking for years past.

New York and Philadelphia are already connected by trolley, and thru cars run at frequent intervals. Here again, however, the spirit of the West is conspicuous by its absence; thru express cars

that should easily make the eighty-odd miles in three hours consume thrice that time. However, with the completion of the tunnels under the Hudson and beneath the Delaware, we are promised thru trolley cars from any part of Manhattan to Broad street, Philadelphia, in little more time than it now takes the steam locomotive to cover the same distance. The present thru trolley rate of \$1.30 will be lowered to \$1 each way, and a car will leave either terminus every five minutes. Philadelphia and Washington will soon be connected by trolley, and Pittsburg is also sending an electric road toward the National Capital.

In time the real "electric flyer" will have its day, at present it is the purely practical and useful that interests the American investors who have spent four billion dollars in the construction of electrical railways, as against twelve billions it has cost to build and equip our steam railways. So far no wonderful spurts of speed have been made with the trolley car in America, but in Germany it has been demonstrated by actual Government tests that with heavy cars and per-

fect roadbed a speed of 125 miles an hour may be maintained with perfect safety, while eighty miles an hour is the speed limit set for safe traveling over ordinary tracks where the trolley car of lighter structure is used. It is in the far West that our first records of great speed on electric railways may be made. California has the most perfectly equipped trolley systems in the world; power to operate these is drawn from mountain torrents hundreds of miles distant, and in Oregon, where power is also supplied gratis by nature, wonderful developments are taking place; there the trolley, charging equal freight rates with the steam railway, still secures ninety per cent. of the total business competed for. From the Puget Sound district and across the Cascades and Rockies the melting snows will send electric flyers eastward to meet those operated by the limitless power of Niagara harnessed. The first trans-continental trolley is well in sight, and it is safe to predict that before it is completed the speed records for long distance traveling will be held by the electric railway.

NEW YORK CITY.

Typical Grade Crossing on an Interurban Railroad.

The President and the Post Office

BY EDWARD PORRITT

[Mr. Porritt is the American correspondent of several English papers and the author of several books on English politics. Our readers will especially remember his last article in THE INDEPENDENT on the influence of college graduates on Hartford's political life.—EDITOR.]

"I am far from thinking very highly of our rank as a nation of administrators; but perhaps if we would be judged by the Post Office, we might claim the very first place in this respect."—Morley's "Life of Gladstone" Vol. II, p. 18.

GLADSTONE had adequate ground for the claim which he thus made nearly forty years ago. Had he reasserted the claim of 1866 in the closing year of his life he would have had an even better basis for it; for the great statesman who early in his career manifested his pride in the British Post Office, lived long enough to see the initiation of the many postal reforms—the extension and cheapening of the services—which were inaugurated as one of the Victoria Jubilee memorials of 1897.

Were President Roosevelt asked by what standard the Government at Washington should be judged the Post Office would be the last standard that he would suggest. He might suggest the Navy or even the Army, but never the Post Office; for whether the Post Office is judged by its mail service in the cities, or by what it is doing for the rural population, it is beyond dispute that it falls far below the level of the British Post Office. It is so much inferior that no American can make the comparison between the two countries without a feeling of regret at the obvious inefficiency which characterizes most departments of the United States Postal Service.

In making a comparison between the British Post Office and the Post Office Department at Washington, I am not going to lay any stress on the parcels post, the savings bank, or the telegraph department at St. Martin's-le-Grand. I am a strong advocate of a parcels post; of Government ownership and operation of the telegraph lines; and also of Government savings banks. But in this appeal to President Roosevelt to signalize what he has assured us is to be his last term of office by some marked and general improvement of the Post Office services, I desire to show that even as re-

gards the work which the Post Office now undertakes, it gives us an infinitely poorer service than that which St. Martin's-le-Grand gives to England, Scotland and Ireland.

In making this comparison I will take the American city with which I am best acquainted, and compare its postal services and facilities with those of a town of much smaller size in England. Hartford is the American city I know best, for it is there I make my home. As an English contrast I will take Warrington, where my boyhood was spent, and to which I go first when work or pleasure takes me back to England.

Hartford has a population of ninety thousand. From a commercial and industrial point of view it is one of the important New England cities. From a social and residential point of view, as a place where it is a joy to live, it has no equal in this country or in any other country that I know. Warrington is a town of sixty-five thousand inhabitants. It has none of the natural beauty of Hartford, few of its educational advantages, but commercially and industrially it compares well with Hartford. Were Hartford in England it would rank as a much more important place than Warrington, by reason of its insurance and banking business; from the fact that it is a political capital, and also because it is the seat of half a dozen centers of learning, and is at the same time a residential city, of much the same character as Cheltenham or Bournemouth.

This last characteristic of Hartford—its vogue as a home city for people whose business interests do not tie them to any one place, and for people who are not in business—is important as regards postal services; especially as regards mail facilities for the residential as distinct from the business sections of the city. It is a characteristic which would not go unheeded at St. Martin's-le-Grand, where the characteristics of each town are care-

fully taken into account in organizing the local post office services.

As I have shown, Hartford is a larger and much more important place than Warrington. Yet what are the actual conditions when the postal facilities in the two places are contrasted? I will deal first with the delivery of letters. Here, in Hartford, we have only three deliveries a day—at nine, at half-past eleven, and at half-past four in the afternoon. In Warrington there are six deliveries, not counting the two deliveries of the parcels post. The first is at seven o'clock in the morning, and the sixth at half-past eight in the evening.

Next, as regards collections. In the residential districts of Hartford there are four—at eight, eleven, four, and at ten o'clock in the evening. In the corresponding regions of Warrington there are collections every two hours; and every one who uses the Post Office can know to a certainty the exact minute at which his letters will be cleared. In Hartford I never know whether the mail boxes have or have not been cleared at the time indicated. This I do know, that often I have posted a letter for the ten o'clock collection in the expectation that it would go by a steamer sailing from New York the next day, and have afterwards been informed that it arrived by a steamer of a later date. Sometimes I have seen the letter carrier making his clearance earlier than the time indicated on the box; and at other times I have seen him clearing twenty minutes or half an hour later than the time stated.

In England there is no uncertainty about the collection of letters. All over England, in the smallest rural hamlet as well as in the cities, the letter boxes have tablets which indicate the time at which the next clearance will be made. After a clearance the carrier changes the tablet, and thus indicates that the box has been cleared.

The street letter boxes in England are very different from the miserable contraptions of cheap tinware such as are much in use here. English people are accustomed to letter boxes which have a look of solidity and permanence; and they insist on a generous mouth. They would not tolerate the trap-like arrangement into which our letters must be coaxed, and

which will not accommodate a package or letter out of the ordinary size. Four ounces are carried for two cents in England.

This has been the letter rate since the Jubilee of 1897; and the modern E. R. boxes are built on lines in keeping with this generous letter rate.

In another important particular St. Martin's-le-Grand differs for the better from the Post Office Department at Washington. If it undertakes a service it performs it. No one can claim that the United States Post Office discharges every service which it undertakes, and for which it draws its pay beforehand. I have experience of its bad faith every week. Books are frequently forwarded to me both from this country and from England. The postage on each is invariably fully prepaid; but when the books reach Hartford I receive a notice that there is a package for me at the Post Office too large for the carrier to deliver, and I have either to go or to send for the book.

I am told that this rule is not peculiar to Hartford; and it has been suggested to me that it was made in the interests of the express companies. I no more believe this than I should believe a statement that there is treason in Congress, or in the Army and Navy. There is no doubt, however, that this attitude of the Post Office Department is utterly disloyal to the governmental service which it exists to maintain and develop. The probability is, however, that it has not appeared to the Department in this light; or it may be that the full and splendid meaning of the word "loyalty," when applied to service and work, is not adequately understood in the Post Office at Washington.

Finally, in this comparison of the English and American Post Offices, come the sub-stations. Just how matters are in regard to them in other cities I do not exactly know. Here in Hartford there are sub-stations where the service is good. There are others where the post office business is subordinated to the drug store business; and at these sub-stations one is made to feel that he is in contact with a United States official who gets but little pay for his service, and who gives to a patron who happens in for a cigar or a soda water precedence over the man who

had imagined that he was at a United States post office. Even at the drug stores where the sub-postmasters endeavor to live up to their contract and are loyal to the post office business, the postal facilities are often aggravatingly deficient. If stamps for foreign postage or international postal cards are asked for, the likelihood is that the supply is exhausted; and nobody in authority seems to care whether the service at the drug store sub-stations is efficient or otherwise.

I can imagine a reader of *THE INDEPENDENT* asking why the British Post Office is so much superior to that of the United States. To answer this question I must again parallel Hartford and Warrington. I do not know who is postmaster today at Warrington; but I do know that he is a civil servant who has spent the whole of his working life in the Post Office. The probability is that he began as a counter clerk, a sorter, a telegraphist or a letter carrier, and that, having earned promotion, he was installed as postmaster in some little town with eight or ten thousand inhabitants. Five or six years of good and efficient service—proved capability and loyalty to his duties there—saw him moved on to a larger town, to a place of fifteen or twenty-five thousand inhabitants. His next step was to a town of forty thousand, and thence he came to Warrington. With such a career behind him, and his working life not more than half way thru, he knows that if he continues his good record at Warrington he may expect in three or four years to be moved to Preston or to Bradford; and once in the Preston or Bradford grade anything is open to him—Leeds, Birmingham, or even Manchester or Liverpool.*

* Mr. W. Bennett, postmaster, Runcorn, has been advanced to the position of postmaster, at Goole. Mr. Bennett has been at Runcorn almost exactly four years, and succeeded the late Mr. W. K. Orrell. He came to Runcorn from Warrington, where, starting from the foot of the ladder, he had attained the position of assistant superintendent. While he has been in Runcorn, Mr. Bennett has considerably improved the postal service. He has arranged on the same train service earlier deliveries all round, and he has extended the time of posting in the evening from nine to a quarter past nine.—*Warrington Guardian*, April 1st, 1905.

Mr. W. J. Moseley, the chief clerk at the Rotherham Post Office, has been appointed Postmaster of Tamworth.—*Yorkshire Post* (Leeds), April 6th, 1905.

The postmastership of Blackburn, vacant through the resignation of Mr. J. Jones, now postmaster at Bangor, has been accepted by Mr. G. Harris, postal superintendent of Manchester. The salary is £470 a year.

If I inquired more closely I should find that the Warrington postmaster had gone into Post Office work with the intention that it should be his career—that he should serve the King in the Post Office as other men serve him in the Army or the Navy or the Foreign Office, until the time when he would retire on his pension—a pension determined by the salary he was receiving at the time of his retirement. The colleagues of the postmaster, I should also find, were in the service for life, and I should learn that many of the younger men were looking forward to postmaster-ships, and did not contemplate spending their working life in one post office.

Examining the post office I should find that internally and externally it was in the best physical condition—scrupulously clean, well painted, and without a suspicion of tobacco smoke. The plant would be as up to date as that of the Steel Trust mills at Pittsburg, and the equipment scattered over town would be all in equally good condition, and adequate in every particular for the work in the year 1905 that was expected of it. There would be outward evidences, too, that the staff was numerically strong enough for the work expected of it, and that there were extra men who could be summoned when there were heavy calls on the service.

How do these Warrington conditions compare with Hartford? Here, again, I do not personally know the postmaster. I only know that he is a lawyer and has been a judge. Furthermore, I am told that he is a Republican, and that this is his principal recommendation for the office. In an English town one might spend one's whole life without knowing the politics of the postmaster. He can vote at elections, but he is never seen at political meetings; never serves on a po-

Mr. Michael Stafford, first class superintendent in the surveyor's department, Liverpool, has been appointed postmaster of Wigan in succession to Mr. Sparkman, who has received an appointment in the South of England.—*Manchester Guardian*, May 17th, 1905.

Mr. W. Bostock, postmaster at Stoke-on-Trent, has been appointed to a similar position at York at a salary of £600 per annum. Mr. Bostock went to Stoke three years ago from Coventry.—*Manchester Guardian*, June 5th, 1905.

The position of postmaster at Halifax, recently rendered vacant by the retirement of Mr. J. W. P. Gregson, has been filled by the appointment of Mr. J. W. Tuckett, at present postmaster of Burnley.—*Yorkshire Post*, August 14th, 1905.

The Postmaster General has appointed Mr. A. E. Adeney, chief superintendent in the London postal service, to be an assistant controller, in succession to Mr. T. Briggs, promoted to the position of vice controller in the London postal service.—*Manchester Guardian*, August 21st, 1905.

litical committee; never attends a ward caucus, and seldom or never enters a political club; and whether he is a Liberal or a Conservative is utterly immaterial to the constituency he serves, and counts for nothing in his promotion.

I am told that the postmaster in Hartford was put into office in middle life without any previous training or experience in post office business; that he dropped out for four years during Cleveland's second administration; and that when the Republicans returned to power at Washington in 1897, he was once more installed in office (simply because he is a Republican, and was considered to have a claim on some Federal appointment), and that he then displaced a Democrat who, by general agreement, was the best postmaster Hartford has had since it became a city of its present importance.

All this seems incomprehensible to one like me, who in earlier life was much in contact with the English Civil Service, especially with the Post Office. But what impresses me as still more remarkable has yet to be related. The postmaster in Hartford is also president of the gas company! In England I should as soon expect to hear that the postmaster was a bishop, or a Member of Parliament, or commander of a war cruiser as that he was president of a gas company, or, in fact, engaged in any other line of business than the Post Office.

Such a combination of offices in England is not permitted, for obvious reasons. It is regarded as against public policy that a postmaster should engage in any business, because his official position might be used to give him undue advantages over his competitors, and might bring him and the Post Office into nasty complications. It is also expected that a man who enters the Post Office service intends to make it his career. He is paid on this basis; the security of tenure and the pension system rest on this idea of exclusive service; and, moreover, the Post Office insists on having all the working time of its employes.

It came as a shock to me when I was told that the Hartford Post Office also ran the local gas company. It had never occurred to me that there could be any connection between the Post Office and the gas company. In England one is

the function of the Central Government, and the other of the municipality; and both are better done than in this country, if Hartford may be taken as typical of American cities.

President Roosevelt will not be disposed to question Gladstone's contention that the civilization of a nation—its governmental civilization—can be tested by its Post Office. It affords a daily test which the people can apply, and which the visitor from abroad can most easily make. No American, however, would like the mail service to be taken as the standard of American civilization. Under present conditions it would not be a fair test, for the post office is twenty years behind American civilization, as exemplified in the schools and educational institutions, the libraries, the transport system and all the great industries. In these America leads the world as obviously as she lags behind in the Post Office.

The hampering conditions at Washington which confront the President come to mind whenever reform and extension of the Post Office services are suggested. Still I am convinced that if President Roosevelt determined that his last term should be memorable for an uplift in the Post Office he could accomplish it; for a reform within the lines I have indicated—a reform aiming only at good and efficient fulfilment of the work the post office now professes to undertake—could antagonize no great vested interest—not even the express or the telegraph companies.

To set up in every American city a post office such as I have described in England; to cut the Post Office completely out of local politics and to promote postmasters according to merit from small cities to larger ones—might antagonize the local politicians and disgruntle Senators at Washington, who dispense post office patronage. But whose good opinion is permanently worth most to the President—that of the politicians, or that of the country at large, which the Post Office is intended to serve? One point is certain: Things cannot go on everlastingly as they are, and President Roosevelt might as well have the credit—the historic credit—of bringing up the Post Office service generally to the level of American civilization.

The Grouse of the Desert

BY DWIGHT W. HUNTINGTON

AUTHOR OF "OUR FEATHERED GAME," ETC. ILLUSTRATIONS BY THE AUTHOR.

A VAST area in the Western part of the United States was indicated on the maps of our earlier geographies with small dots across which were printed the words "the American desert." Similar dots appeared on the map of Africa to indicate the great Sahara and the youthful mind was led to believe that the two deserts were alike—vast sandy wastes, which were evidenced by the dots. The American desert was not well defined. The dots were distributed liberally over the region east of the Rocky Mountains and included the great plains which are covered with the wild shrub, the artemisia, familiarly known as sage-brush. The plains, which are overgrown with the wild sage, extend from Western Kansas, Nebraska and the Dakotas to the Rocky Mountains. In some of the valleys of the mountains the sage grows abundantly and the area of the shrub extends to the eastern portions of the Pacific States, and south into Arizona and New Mexico. The distribution of the "sage cock" or "sage hen," the grouse of the desert, is identical with the distribution of the sage. This grouse feeds largely upon the leaves of the sage, which seems necessary for its existence.

"Cock of the Plains" is the name given to this bird by the explorers Lewis and Clark, who discovered it. It is the largest grouse in America and is second in size only to the great capercailzie of Europe. It measures from two to three feet and weighs from two to three times as much as the pinnated grouse or common prairie hen. It is a very handsome bird, protectively marked with gray, white and black, and on the shoulder there is a peculiar tuft of white feathers, which seems to have been caused by the wearing off of the outer feathers by the sage-brush which allows the white feathers underneath to show. This at least was the explanation given by the taxidermist in North Dakota who mounted a fine cock for the writer. The general appearance of the bird is gray and it harmonizes well with the alkaline soil and the gray-green bushes, and is easily lost to the eye when it decides to vanish in the sage. A large black patch underneath is a distinguishing mark of the bird. The sage grouse, like the other grouse and all other game birds protectively marked, relies for its safety upon concealment rather than flight, and is, therefore, a better game bird than the bright plumaged pheasants, which rely

largely upon their remarkably active legs, and are, on this account, most exasperating to well-trained setters and pointers. The gray appearance of the bird suggested the nickname "the sage hen," given to the dust-covered woman in Mr. Janvier's recent story before she had descended from the stage upon her arrival at a frontier town. "And the name stuck," very properly, since the woman, like the grouse, no doubt, "harmonized" with the dusty sage.

The word desert is forbidding. It suggests the hardship and danger incident to vast hot, sandy plains, devoid of vegetation and water. The plains where the sage grouse lives are vast in extent, but they are elevated and are often swept by cool breezes from the mountains, which are always in sight in some direction, excepting from their extreme eastern limits. The wide, undulating, unfenced fields are covered with the gray-green shrubs which cast their purple shadows on the white alkaline soil. The sage plains are really very beautiful. Far away on the horizon, a mere line of blue, or high and near at hand, according to the place where the camp is placed, are the ever-present mountains, with snow flashing on their crests in midsummer. In many places the so-called bad lands, with outlying detached buttes of fantastic form, add to the beauty of the scene. The buttes of the Green River region, Wyoming, and those of the upper Missouri in Montana would well repay a visit without the game. Many domes, spires and pinnacles surmount these strange hills. Rock layers project like cornices, and the layers of conglomerate, eroded out, resemble at a little distance the carvings of ancient temples. One outlying butte in the Green River region is called Church Butte, from its resemblance to an old cathedral. While shooting sage grouse near this butte we observed that the ground was strewn with moss agates, and, dismounting, soon made a large collection of these flints, one of which had been fashioned by an Indian for his arrow-point, and had no doubt winged its way toward an antelope, or, possibly, a human enemy.

The camp of the sage grouse hunter is usually pitched beside a stream which issues from the mountains, and which fur-

nishes the brook trout for breakfast. The writer has tried many such camps near the main range and at the base of the outlying groups of mountains, the Big Horns, the Uintas, the Rosebud, the Wasatch, the Wolf Mountains and others, and can recommend them all. The method of pursuit is attractive. It is a merry canter from the camp to the plains and until a flock of grouse is seen upon the ground, or more often in the air, as they go whirring away from the horse's feet. From a running horse the writer once brought down a flying cock and established a reputation with the guides as a marksman with the "scatter-gun." The usual way, however, is to draw rein when the game is found, and either to shoot from the saddle or dismount and walk up to the birds. The grouse lie well to the dogs, and dogs are sometimes taken out from the army garrisons, but we often found the birds sufficiently abundant to make good bags without the aid of dogs. The horses of the Western plains all stand firing and remain where they are left, without hitching, when the reins are tossed over their heads. Some horses will follow the shooter about like a retrieving dog. I used such an animal one season in Wyoming, and became very much attached to him. We were shooting without dogs, and the horse often indicated the presence of the game by his nervous action before we could see the birds on the ground or before they took wing. I often made ready at the suggestion of the horse, and took the shot from the saddle as the birds arose. Upon one occasion the horse raised his head just as the gun was discharged and several pellets of shot passed through his ears. From that time on his nervousness increased and he was even more serviceable as a pointer, but not nearly so "steady to wing."

When the birds are quite tame they are sometimes seen running ahead of the horse, but when they have been much shot at and are wild they exhibit a remarkable ability to hide in the brush.

The flight of the sage cock is strong and well sustained. He can easily fly a mile or more, alternately whirring and sailing on extended wings like the other grouse. His "whirr" upon arising from the ground is something wonderful. Any

one who has flushed the ruffed grouse (miscalled "partridge" in New England and "pheasant" in the West and South) can form an idea of the noise made by the sage cock when told that the bird is three times as big as the grouse of the woods and that the noise is proportionate.

The sage grouse never fly to the trees or seek the cover of the woods. The shooting, like that of "chicken shooting" on the prairie, is done in the open. The marks are large, the misses few, and a bag of these great fowls soon becomes a burden, especially if a few "jack" hares

grouse. This is always true of young sage grouse when they are feeding on grasshoppers. As they grow older and partake more freely of the sage, there is a slight flavor of the shrub which is by no means objectionable. Old birds, late in the year, when feeding entirely on the sage, taste more strongly of it, just as the "partridge" tastes of resinous buds when he feeds upon them late in the season. Early in the autumn the sage grouse "pack" or gather into large flocks like the prairie grouse. They are then more often seen on the ground and are much

The Haunt of the Sage Cock.

are added to it. A very few birds will supply an ordinary camp. It was the writer's good fortune upon several of his Western trips to have the escort of troops; the camps were large. An orderly or two carried the game, and the killing of many birds was justifiable, since the soldiers accepted them as an agreeable change from trout, the venison of elk and the black-tailed deer and the ever-present bacon.

I had been prepared to dislike the sage cock by the ornithologists who are arrayed against it, all saying that it tastes too strongly of the sage to be palatable. I was agreeably surprised, therefore, to find the flesh of the birds sweet, tender and as delicious as that of the other

wilder. The whole "pack" usually arises when far out of gun range with a roar of wings suggesting a tempest, and the birds at this season fly great distances before alighting. We were lost one evening in Montana (my companion being a soldier who was detailed to accompany me afield), when shortly after sundown we rode into one of the great packs of grouse which were sleeping on the ground. Every bush within a hundred yards or more seemed to send forth its bird with a deafening roar of wings. The noise in the stillness of evening seemed louder than usual, and was most alarming for an instant in the half light until I learned what it was. My escort was not nearly so valiant or so brave after dark as he was

when we went forth in the morning and he told me of his valiant deeds. He had just been expressing his fears for our safety, admitting that he did not know where we were, and the outburst of the birds proved so terrifying that he suddenly forgot he had a gun. Three black-tailed deer which met us face to face a little later gave us another start, but I managed to fire a broadside at them as they disappeared. It was midnight before we found our camp. The pursuit of the sage cock is no longer attended with any danger. The habitat of the bird is, as I have observed, strangely beautiful and picturesque. I commend this sport to the sportsmen who travel West to California.

It will well repay any one to stop over a few days to visit the sage plains and shoot the sage cock. As to the place? The country known as the Green River country in Wyoming is as picturesque and interesting as any on the Union Pacific route. In the Yellowstone and upper Missouri country the sage grouse were abundant a few years ago near the stations on the Northern Pacific Railway. I learn, with regret, that the birds are being exterminated in many places, just as the other game has been exterminated throughout America. A great mistake is made, since the birds of the desert are worth more than the land.

CENTER MORICHES, Long Island.

England Since the Making of Peace

BY JUSTIN McCARTHY

I DO not think I can better begin this article than by telling my American readers something about the cordial feeling of admiration which prevailed all over this country for the successful efforts of President Roosevelt to restore the peace of the world. I called attention in a former article to the emphasis which King Edward had given in his speech at the close of the Parliamentary session to his commendation of the President's conduct, and to the fact that the King had assigned to the President the full and exclusive merit of the initiative efforts to restore peace between Russia and Japan. At that time the project was still only a project, but now that a full success has made it an accomplished triumph it is most gratifying to find that nobody anywhere seems disposed to set up a rival claimant for the honor of having originated the movement. One might have expected to hear that this or that continental sovereign, this or that European statesman, had suggested the peace conference at an earlier moment than that chosen by President Roosevelt, but I am glad to say that, so far as I know, no such claim has been made. All thru these islands the general conviction is that to the initiative of President Roosevelt the

peace conference is wholly due. The general conviction, too, seems to be that the success of that effort must make the way more easy for peace-seeking diplomatic intervention in future wars.

There is not by any means the same general concurrence of opinion in England with regard to the alliance between the British Government and the Government of Japan. The news was suddenly sprung upon us that the treaty of alliance with Japan had just been extended to something much beyond its original limits. At first the treaty merely provided that if any other state besides Russia should make war against Japan, England would be pledged to come to Japan's rescue by force of arms. Now, however, it is made known that a new treaty of alliance has been entered into between England and Japan, and that the agreement it contains engages that England shall come to the rescue of Japan in the same decided and vigorous manner if even any one power should hereafter make war upon the Japanese. The British public, the British constituencies, and the Imperial Parliament have had no more to do with the making of this treaty than have the American readers of THE INDEPENDENT, and we may safely anticipate that at

the earliest moment during the next Parliamentary session the Conservative Government will be called upon to propound their justification for their sudden and unauthenticated entrance into such an agreement. I have heard many Englishmen declare that under all these conditions the only statesman who comes out of the whole peace arrangements with entire credit and honor to himself and his country is President Roosevelt. I know that many public organizations in the British Islands have already forwarded addresses of congratulation to the President on his noble work. I have good reason also to know that many Englishmen who never ventured in their lives before to address a private letter to an American President have sent across the Atlantic their personal messages of congratulation and thanks to Theodore Roosevelt. Apart from all other considerations, there is much to rejoice at in the fact that such demonstrations as these must effectively tend to strengthen the growing feeling of friendship and brotherhood between the British people and the people of the United States. President Roosevelt's initiative has shown us at all events how sincere and disinterested peacemakers, who have no concern themselves in a war, can become the instruments of restoring peace to the world. The present is therefore an epoch of the highest importance in the world's history.

But in the meantime what is to come of the existing Conservative Government here? That is the question which we are asking ourselves every day. All the recent bye-elections have told more and more heavily against the Conservatives, and the latest of all, that of the Elgin Burghs, in Scotland, has nearly doubled the number of votes by which the Liberals have for a long time back held the representation of the constituency. A general election would most certainly now or at any time near to the present return the Liberals to power by a large majority. But then the return of the Liberals to power might not under present conditions prove by any means as welcome to all genuine Liberals as it must be under ordinary conditions. The Liberals are still greatly divided among themselves, and it is not certain, or even so far as one can judge

probable, that the Irish National Party would be able to give the next Liberal Government a cordial support. The present leader of the Liberal Party, Sir Henry Campbell-Bannerman, is unquestionably a sincere Home Ruler, but many of his colleagues are not disposed to take a firm stand on that battle-ground, while some of them are positively unwilling to lend any help to the Irish National cause. The moment a Liberal Government comes into power the question of Home Rule will be pressed forward by the Irish National Party in the House of Commons, and it is not probable that any Liberal administration will be sent into office with so strong a majority as to make it able to get on without the support of the Irish National members. If the leading men of the Liberal Party could all regard the whole question with the statesmanlike judgment and resolve shown by such of them as Campbell-Bannerman, John Morley, James Bryce, and some others; could see that Home Rule for Ireland is one of the future's absolute certainties and would act accordingly, we should then undoubtedly have after the next general election a Liberal Party which could carry all before it in the House of Commons. Such a Government would at once introduce a Home Rule measure on the principles of that last brought in by Gladstone, and would be sure to carry the measure thru the representative chamber by an overwhelming majority. Then it would pass to the House of Lords and the House of Lords would reject it promptly. But then we know what would inevitably come to pass if the Liberal Government were to persevere with their work. We know what has come to pass at every crisis when the House of Lords found itself in continuing opposition to the House of Commons and the majority of the constituencies. The House of Lords has always given way and the measure of reform has been carried. So it will be with the Home Rule measure. The coming Liberal administration will only have to persevere for a session or two and the triumph will be accomplished.

A great movement, certain before long to take organized form, is much talked of in England for a complete change in our

railway system. By this I do not mean a change in the construction of our railway lines or in the fitting up of our railway carriages, in the rate of speed or the number of stations, but in the ownership of the whole railway property. The idea is that the State in some form or other should become the owner of all the railways in these islands, and that the railways should be worked for the benefit of the public and not for the benefit of railway directors and shareholders. We have seen rapid and immense changes made in this direction of late years in the conditions of public companies. The municipal institutions of these countries have been growing more and more into ruling power for the control and direction of what must be regarded as strictly public interest. The local communities, in fact, have obtained legal power to manage their own public affairs themselves and for the direct benefit of the public. There are Councils which own and manage the lines of river steamers starting from and returning to the port which belongs to the jurisdiction of the elected councillors. There are Councils which have started short lines of local railways. These changes are the result of the recent alterations in our laws which tend everywhere to confide the management of local affairs entirely to the hands of the local representative bodies. These local representative bodies are the creation of laws passed by the supreme ruling body—that is to say, the Sovereign and the Parliament—and therefore it is contended that it would be only one step forward in the same direction if the supreme ruling power were to buy up all the existing railway companies and to give the future management of our whole railway system into the hands of the State itself, working for the general benefit of the community. The result sought for by this change would be that the railway system should for the future be worked in the interests of the public altogether, and no longer in the interest of the railway companies and their directors and shareholders. The whole project is sure to engage before long a large and widespread public support, and may well be regarded as likely to come to success, and thus to open an entirely new era in the history of our railway system.

Literature has been showing much activity this autumn. It would seem as if the lull which has taken place in political affairs caused by the cessation of the war and by the absence of parliamentary excitement has given a new opportunity and a new stimulus to the production of books. We have lately had some remarkable novels by well known writers. One of these I have already mentioned, "The Maid of the River," by Mrs. Campbell Praed. I mentioned the publication of this book in my last INDEPENDENT article, but it had only then just come out, and I had not had time to give it anything much beyond a mere announcement. It well deserves, however, a more thoro examination. The book is published by John Long, of London, and it is described on its title page as "An Australian Girl's Love Story." Mrs. Campbell Praed is always most happy in her Australian stories, and this latest seems to me the most successful and the most artistic of any she has yet given to the world. Its scenes are laid in Queensland, the province where Mrs. Campbell Praed was born and brought up, and it seems from its first chapters and all thruout to bring the reader into the very atmosphere of Australasia. There is something almost marvelous in the artistic skill which enables her without any long and elaborate descriptions to make us feel that we are looking upon the very scenes and the very people thus brought to our notice. I shall not attempt to tell the story, preferring much to leave the readers to follow it for themselves, and shall only say that it is a love story which, despite of many difficulties and crosses, ends happily for the lovers. In many of Mrs. Campbell Praed's Australian novels we are shown principally the Australia of what may be called society, the Australia of city life and of organized and flourishing communities; but in this latest novel we have the Australia of the bush and the plain and the struggling existence of those who have to make their living in the mining regions and on the plains and the rivers. The young heroine, Nunaina, or "Nuni," as she is familiarly called by her friends, seems to me quite a fresh creation even in Australian romance, and the reader soon begins to regard her as

a living creature moving in his very presence. Mrs. Campbell Praed has been a great traveler in her time. She has lived for the longer part of her life in London, but she has seen all the foreign countries which English women usually visit and she has seen many countries with which English women are not usually acquainted. She has visited India and China; has made two visits to Japan; has twice made the circuit of the whole globe. She is, therefore, all the better qualified to bring out into clear relief those peculiarities of Australasian scenery and life which distinguish the Australian regions from other lands and other atmospheres. She is a most active literary worker, and I see that Messrs. Chatto & Windus already announce the publication of a new novel by her which is to appear soon and is to be called "The Lost Earl of Ellan," another story of the Australian bush life and of the northern coast of Queensland. I have not yet seen the book, but shall probably have something more to say of it in my next article.

Miss Helen Mathers, the well-known authoress of "Comin' Thru the Rye" and many other novels, has chosen a most interesting subject for her new story, "The Ferryman," published by Messrs. Methuen & Co. The question raised in this novel is whether it is morally justifiable to release sufferers from painful and incurable maladies at their own wish and thus relieve them at once from suffering and from life. The hero of the story, who tells the tale himself, has

been compelled to give up a promising career in the army because of growing deafness. He meets in a voyage to New York a millionaire, who after the sad death of his wife becomes convinced that hopeless sufferers should be released from life at their own deliberate choice. Captain Ravenal is at first unwilling to help toward such an end. Ravenal meets on the same voyage a beautiful and most fascinating American girl, with whom he straightway falls in love. This Huldah Rimmon is one of a wonderfully clever family living in Brooklyn, and is herself a marvellous portrait painter. She paints Captain Ravenal's portrait and they meet often, but she does not let him see that she loves him, and he leaves her for the time. There is a picturesque description early in the story of the view from Brooklyn Bridge at night, and it is on Brooklyn Bridge that the hero and heroine meet in the last chapter of the story. Meanwhile Captain Ravenal, believing that Huldah will never return his love, devotes himself to the millionaire's scheme—but we must not tell any more of the story—of how "The Ferryman" ceases to believe in the moral right of the millionaire's scheme, and how he meets Huldah again on Brooklyn Bridge. The novel is interesting from first to last, and the love story is most charming.

Messrs. Methuen have also published a new novel by Mr. Percy White, of whose story, "The System," I wrote not long ago. His new book is called "The Patient Man," and I hope to write about it in my next article.

LONDON, ENGLAND.

The Impressions of an Aeronaut

BY WILFRID DE FONVIELLE

[The author of the following article is a well-known French popularizer of science, who has devoted his attention especially to meteorology and ballooning. Some of his ascensions were remarkable. In March, 1858, he was two whole days in the air, remaining all the time above the environs of Paris. In February, 1869, he went 54 miles in 35 minutes. During the siege of Paris, he was very active in military ballooning and did the young republican government great service by his wide knowledge of aerial navigation. He is the author of many volumes and a contributor to the *Paris Temps* on all questions of science. The characteristic portrait of him given below is from the painting by Miss Anna E. Klumpke, the American artist, exhibited in this year's Paris Salon.—EDITOR.]

SENECA, in his "De Natura Rerum," well describes the impressions which the balloonist feels as he goes "wandering among the stars, while he sees passing beneath him the palaces of kings and the cabins of the peasant." In the presence of the majesty of nature as seen in the clouds, it is impossible for the virtuous mind not to look with contempt on the vanity of the distinctions of which common mortals are so fond, and not to be cured of the sin of pride, which is the capital failing of the learned. However admirable may be the discoveries made, especially in recent times, in the fields of physics, chemistry and astronomy, they sink into insignificance when we think of what remains to be known. And a sail thru the heavens is a grand revelation of our ignorance! The great Arago has well said:

"The cyclopedia of knowledge is immense. It would fill many volumes. But that of ignorance would be still greater. The shelves of no library would be ample enough to give it hospitality."

I say it advisedly, without fear that my enthusiasm will be charged with exaggeration—aerostatics possesses the magic power that superstition attributed to the fairies of the Middle Ages. It broadens all the problems that it touches. Surely no astronomer can carry in his pocket a telescope which will permit Professor Pickering to discover daily the new satellites of Jupiter. But a balloon will carry in its basket an aeronaut who, when he gets in the absolutely pure sky, can feast his eyes on stars that never reach, or reach but dimly, the best observatories on the earth. Bolides, the aurora borealis, twilight effects, can there be studied under ideal conditions.

The dangers of ballooning—they are

not so great as the general public imagines. When for the first time an intelligent man puts his foot into the basket of a balloon, he knows, or should know, that he does not run any very great risk if he has a good aeronaut in command. Count Henry de la Vaulx, who visited America during the St. Louis Exhibition last year, has made over a hundred ascensions, most of them very long, and he holds the record for distance and the time spent in the air. A voyage without a hitch from Paris to Moscow, at a speed double that of an express, may be considered no ordinary performance. And this is what Count de la Vaulx has done. Nor has he ever had an accident, not even a scratch. I might cite many similar examples to show that ballooning is not a dangerous sport. For instance, M. Emile Carton, whose has made ascensions in America; the director of the Vienna Aero Club, and his son Hermann, the author of an excellent book entitled "Four Thousand Leagues in the Air"—they and many others have safely "sailed thru the air" and are none the worse for the adventure.

Now let us glance for a moment at some of the positive pleasures of ballooning. He who enters a car for the first time is especially attracted by the appearance of the clouds. He immediately turns away his attention from the earth. His eye is charmed by the richness of the forms and colors which he sees about him and which vary with automobile rapidity. I have never known "a passenger of the skies," who was not carried away by the wonderful brightness about him. And yet, the deserted earth has also its charms. You are interested in studying the different forms of the surface in different spots, and the physiognomy of the various regions fixes itself

in the memory in most wonderful fashion. Practiced aeronauts get so that they can recognize districts over which they have once passed. This faculty explains the instinct of the carrier-pigeons.

Getting started is often beset with as many dangers as landing under difficulties, when, for instance, the wind is strong and the balloon big. Even the best aeronauts will do foolish things at

Wilfrid de Fonvielle.

this moment. Their mind is often concerned with the length of the coming voyage, or the rapidity in which they hope to make it, rather than with the more prosaic matter of getting well off on their way. I remember when, in 1875, Duruof and I went up at Rouen, we wanted to make a remarkable ascension and not come down till Russia was reached. So we had filled our basket with ballast, which was disastrous, for it so weighed us down that we caught in the branches of the neighboring trees when we tried to rise, the silken envelope was torn, and we were thrown into the Seine. Fortunately a rowboat was at hand, and we were saved from a dangerous ducking. But today, thanks to the sheds built for the steering-balloons, an ascension can be made in safety, even in the midst of a storm. It would be a great thing for the progress of ballooning in America if you were to build sheds of this kind in the parks of some of your great cities.

When the start is accomplished smoothly, you observe a most singular phenomenon. You seem to be standing still yourself, while the earth recedes from you. The diminution of objects on the surface of the earth, which is at first very rapid, is the only thing that shows you that you are leaving *terra firma*, and soon you go floating through space without feeling the least movement or motion. The physiological explanation of this phenomenon is simple. It is of the same nature as that produced when one travels by rail and one sees the objects on the surface of the ground moving in the opposite direction from that of the train.

But it is not so easy to explain another and more material phenomenon—the absolute absence of vertigo when one looks down on the earth from the basket of a balloon. Persons who cannot look down from the top of a monument, a bridge or a house, can gaze down from a balloon car without the least feeling of dizziness of any kind. How is this effect to be explained? I tried to answer this question in my “Manual of Aërial Navigation,” published some fifteen years ago. But I will not now weary my readers by going into the subject here, and only remark that the two facts just stated—the lack of all disagreeable motion and the absence of vertigo—doubt-

less explain why ballooning is growing so popular with the fair sex.

Even during the early days of aerostatics, when the practice was considered exceedingly dangerous, women did not hesitate to make ascensions, and some even won distinction in the profession, such as Madame Blanchard, Blanche Garneron, Madame Pouteror, Sophie Godard and Madame Duruof. More than one fine lady has taken part in balloon contests and several female aeronauts have made remarkable ascensions. To the Duchess of Uzès belongs much of the honor of having got her sex interested in ballooning, a kind of sport which is especially feminine, the nearest approach to the flight of the bird. Among the passengers taken by the “Lebaudy” on its different trips were many ladies, who did not hesitate to run the much more serious risks attending a voyage in a balloon propelled by an aeriën motor. Nor are American women behind their European sisters in this particular. The first astronomer who has left the earth to study the stars in a balloon was a woman, and an American one to boot. I refer to Mrs. Dorothea Klumpke-Roberts, of San Francisco, Doctor of Mathematics of the University of Paris and long connected with the Paris Observatory. In 1898 she went up in a balloon to observe the falling stars, and later made two other ascensions for the same purpose, accompanied by her sister, the artist, painter of the portrait published with this article.

That the popularity of ballooning is increasing there can be no doubt. I do not think I exaggerate the facts when I estimate that 700 or 800 voyages are now made annually. The members of the Paris Aëro Club alone made more than 200 last year. Their grounds at St. Cloud, near Paris, are provided with a shed, such as is suggested above, so that a balloon can be inflated, no matter what the weather may be, and a start made under the best conditions.

But let me go more into particulars as regards the pleasures of ballooning. I wish especially to say a word about the charm of night ascensions when there is no moon and when the ascension is made in thickly populated regions, like the environs of Paris. Then the celestial

constellations are not alone worthy of attention; the lights on the earth rival them in brightness. You then are struck as never before by the power of the electric light, which is visible at an immense distance. M. Camille Flammarion, who had the happy inspiration to make his wedding journey in a balloon, says he can never forget how he was dazzled by these two sorts of light.

A moonlight night has beauties of its own. Its brightness is reflected on the surface of the clouds, which are sometimes like great mountains, whose profiles stand out clear-cut in a most wonderful way, while the balloon goes winding along in these misty valleys. Then getting out into the pure air, you see the constellations blaze forth with an intensity that is almost overpowering. The number of the stars is unbelievable. The volume of those we know has increased to such a degree that the dog-star becomes as bright as Venus when she is seen from the earth. Some of the nebulae are so clear that they look like distant gas-jets. The bolides are really terrifying. You seem to hear them explode, and it is not perfectly sure that you do not, for the balloon, with its sails spread, fills the office of a big ear trumpet floating in air. It catches as well the noises from the earth, the last of which, as heard by the aeronaut, being the whistling of the locomotives and the barking of dogs.

I once left Paris in a balloon with Duruof, going in a southeast direction. We were well above the clouds and were sailing quietly over the plains surrounding Orleans, when we heard the rumble of an express train, the sound much resembling breakers on the sea shore. Under ordinary circumstances it is easy to distinguish the two sounds. But this time the distant roar continued so long—did not cease in fact—that I began to get nervous. "It may be," I finally remarked to Duruof, "that the wind has changed and we are going toward the ocean. Wouldn't we do well to go down a bit and see where we are?" He listened a few moments, and then said: "Perhaps you are right," and he seized the cord of the valve, which quickly brought us below the clouds, so that we could make out just where we were. It happened that we were follow-

ing the line of the Paris-Lyons Railway, accompanied by an express which was going in the same direction that we were and at about the same speed.

Another sound that reaches you in the sky is the striking of the church clocks when you are passing over them. This used to convey very useful information to the aeronaut sailing on his "trackless course." When local time prevailed the church chimes would give me the longitude of my balloon, for my watch was running on Paris time. But the introduction of standard time has changed all this, unfortunately for the balloonist. I once had in mind the idea of preparing an atlas in which I intended marking all the church steeples in systematic order. With this document in my basket, I would always know in which direction I was moving when ballooning in France.

A balloon trip is often a fine lesson in physical geography. In November, 1870, I went from Paris to Louvain in a balloon, and for the first time fully appreciated the fund of information one can collect concerning the general character of the region over which one is passing. It was not necessary to look on the map to see when we were entering Belgium. The villages were nearer together, the roads more numerous, the trees more robust and the fields greener. I have had similar experiences in my various ascensions in the Alps, in Italy, England and in different parts of my own country. One's geographical education can never be perfect without a wide ballooning experience.

There is also a hygienic side to aeronautics. If I were rich enough, I would never let three months pass by without going up in a balloon, if for no other reason than to drive from my lungs the bad air which had accumulated there. The complete renewal of the air in the cells produces an exquisite sensation. Respiration is accelerated, and consequently the mind becomes more active, your thoughts are richer and healthier. You do not get to heaven, which recedes as you mount; but you certainly get nearer to God. More than once, as I have floated along in the mysterious night, lighted by the stars, I have seemed to hear the celestial music of which Kepler speaks.

Literature

Roman Society*

AN extremely interesting period in Roman history is treated by Professor Dill in this volume. Previously the author had described the conditions of Roman society in the succeeding century, but here we have the conflict of good and evil, of philosophy and sensuality, of religion and superstition, not yet worked out to its fatal end in the overthrow of the Western Empire, to be succeeded by a new Christian Empire of the East.

The period from Nero to Marcus Aurelius opens with the tyranny of one of the worst men who ever occupied a throne, and ends with the mild rule of a Stoic saint. But there was probably no great change in the character of the mass of the people. The terrible vice had been chiefly in the class attached to the Imperial court. They gathered enormous wealth by oppression, and were the victims of the Emperor's greed. The women of the court rivaled the men in debauchery. Extravagance reached the highest mark known to human history. But yet it was a period of fair government in the country districts of Italy and in the provinces. It was the period of the building of great cities and splendid temples and theaters. The horrible excesses of the period of the Terror seemed, with the accession of Vespasian, to have sobered the public mind, and Stoic philosophy, with its doctrine of the brotherhood and equality of man, was helped by the new Platonism and the renovated paganism which attempted a little later to make their last stand against the conquering Church in the reigns of Julian and Theodosius.

Nowhere else can so full and true an account be found of the condition of Roman society at this time as in this admirable book. Its merit consists in the fact that it gathers the scattered material, accessible only to the technical classical scholar, not found in Greek or Latin lit-

erature, but recorded in the inscriptions on tombstones and other monuments. The mass of this material is enormous, and this it is which has so helped Professor Ramsay to reconstruct the history of Asia Minor. This same service Professor Dill does for social conditions in Italy itself. But it must be added that he has pieced together with infinite skill the suggestions and allusions of the classical writers, and has made a special study of the Roman Satirists, especially of Apuleius. He has thus been able to do with that lubricious writer very much what John Milton says of Chrysostom, whose diligent reading could cleanse the scurrilities of Aristophanes into the style of a rousing sermon.

The successive chapters of this work show us what was the world of the Satirists, what that of the freedmen, what was the pure circle of the Younger Pliny, how Seneca was the philosophic director of eager youth, how Apollonius of Tyana, Plutarch and Maximus of Tyre were philosophic missionaries who could claim sudden and permanent conversions. What was their New Theology then, what were the new superstitions, or the new religions, that attempted to find faith and life in the East when the Roman paganism had lost its right to credence, and some support was needed for belief in immortality, and Christianity was yet held to be a religion only fit for Jews and slaves who worshiped an ass on a cross. Of much value are those chapters where all are interesting, which describe the prevalence of the religion of Isis, that of the Magna Mater of Pessinus, and that of Mithra. Of these our ordinary histories and text-books tell us little, but they had a much greater influence on Christianity than had the worship of Zeus and Athene and were much more feared. These were great, mysterious deities from Egypt and the East. They attracted those who wanted a sort of monotheism, and who regarded the god worshiped as only the simulacrum of the divine Power which he figured. Isis, the mother with the child Horus, seemed to

* ROMAN SOCIETY, from Nero to Marcus Aurelius. By Samuel Dill, M.A., LL.D., Professor of Greek in Queen's College, Belfast. 8vo, pp. xxii, 639. New York: Macmillan & Co. \$4.00.

touch the tenderer instincts, and had much the same honor which is now paid to the Holy Virgin. It was an age when womanhood began to claim its equal respect; and so the other cult of the Magna Mater, also a mother with a child, but yet a magnificent turret-crowned goddess, riding in her chariot drawn by lions, found devout worshippers and colleges of strange eunuch-priests, and strange initiations and mysteries, and blood-sacrifices, wherein the votaries—and an emperor among them—were “regenerated” by baptism in the blood of a bull, the famous *taurobolia*. And seven initiations did the worship of Mithra require, the purest of all the forms of pagan worship that antedated Christianity. Its vogue spread from Persia to Britain, and a multitude of beautiful bas-reliefs have been found which adorned his shrines, and which show us the young, glorious sun-god Mithra slaying the bull, who represents, in a way Ahriman, while with the tauroctonus are the Persian symbols, the lion, the dog, the snake and the scorpion. The Christian Fathers thought Mithra-worship a special invention of the devil, because it so resembled in its features the Christian worship. Our selection of the 25th of December as the birthday of our Lord was taken from the date when, after the winter solstice Mithra begins a new course of triumph in the heavens, the great festival of his sacred year. In the sacraments of Mithra, Tertullian perceived a diabolic parody of the usages of the Church. The neophytes pledged their faith, they were baptized with holy water, and to the higher grades of initiation were given sacraments of bread and mingled water and wine, which last was the original draft of the Haoma, and had no real relation to Jewish or Christian baptisms. It was against Mithra that the Christian Emperors made their fiercest assaults.

• To this fascinating book, of unusual interest and value, we are glad to direct the intelligent reader. We observe that W. H. Mallock has already hastened to make it his argument and text for a discourse on natural religion; and to many readers its most striking feature is its contribution to the study of the effort of

the philosophic mind to seek a purer faith apart from Christianity.

The Committee of Fifty on the Liquor Problem

The Committee of Fifty is no more true to its name than the Holy Roman Empire, for it is not a committee and has not fifty members. Nevertheless, if the people of the United States had been able collectively to select a committee for the responsible task of collecting the facts about the liquor problem it is not probable that they would have been able to choose a more competent and impartial body of scientists, educators, ecclesiastics, economists and men of affairs than that which twelve years ago voluntarily assumed this work for society. That they have been able to collect such a large amount of information at an expense of \$21,500 is a fact worthy of attention by our legislative commissions. The complete results of the investigation have been published in four volumes¹, which must be studied by all who wish to understand the factors of the liquor problem as it actually exists in the United States. These volumes we have discussed as they appeared, but it will be convenient to extract a few of their conclusions from the volume² just published, which contains a popular summary of the whole investigation. It is unfortunate that this final volume does not make any reference to the experience of the last five years, nor to the sharp criticism made upon the work of the committee.

The report of the physiological sub-committee contains the most original matter, for its work was not confined to observation and the collection of data, but included experimental work such as that of Professor Atwater's with the life calorimeter, which has recently in-

creased the extent and exactness of our knowledge of the action of alcohol on the human system. Alcohol taken in moderate quantities is oxidized and yields energy like such foods as sugar, starch and fats, which it can in part replace. Since it contains no nitrogen it cannot be used for muscle building, like the proteids. A small amount of alcoholic beverages stimulates digestion; a large amount retards. The fruit flavors and other ingredients in alcoholic liquors are important factors in their action, but cheap and adulterated liquors are not more harmful than the pure and expensive. Even the moderate use of alcoholic drinks just before or during physical or mental work usually diminishes the total amount of work done.

Under the sub-committee on legislative aspects, eight different kinds of liquor legislation was studied in as many different States. Their main conclusions are as follows: Prohibition legislation has abolished the manufacture, and in districts where public sentiment sustained it has made it hard to obtain intoxicants, thus removing temptation from the young. The attempt to enforce it continuously where there was strong opposition have been failures, and have often resulted in demoralizing evasions and in dangerous centralization of power in State authorities. Local option obviates some of these difficulties. The license system restricts and controls to some extent, but it is not certain that less liquor is sold.

"It cannot be positively affirmed that any one kind of liquor legislation has been more successful than another in promoting real temperance." "In the present state of legislation, different laws must be judged by their practical effect, and not by the ethical theory on which they rest."

The sub-committee on the economic aspects of the liquor problem found that 33 per cent. of the paupers in almshouses were brought to their condition by the personal use of liquor and 10 per cent. from the intemperate habits of others. Intemperance figures as one of the causes of crime in 50 per cent. of the 13,400 convicts in prisons and penitentiaries examined, and as a first cause in 31 per cent. In economic forces, such as the increasing tendency of employers and

of labor unions to require sobriety on the part of employees and members they find the most effective allies to the moral agencies attacking the evils of the liquor traffic.

The Ethical Sub-Committee base their hope of permanent improvement in the existing conditions entirely upon the redemption of human nature by the regeneration of the individual. All remedial legislation and other advocated reforms are merely palliative, and their effect is so dependent upon the varying industrial, racial, economic and social conditions as to make the problem a local one. The most efficient temperance reformer is a patient opportunist. Apart from the appetite for alcohol, the saloon as a social center is the most important factor in the liquor problem. No substitute for it, such as clubs, gymnasiums, game rooms, restaurants, temperance bars, libraries, etc., have yet been found which are capable of competing with the saloon on its own ground, but these are useful, especially if at the same time the saloon is deprived of its attractive features by legislation.

Hart's American Nation.

THE development of the colonies in the eighteenth century is one of the most unworked fields of American history. For the earlier period we have the full and critical works of Doyle and Osgood, but the evolution of British mercantile policy and the growth of Colonial commercial and industrial interests during the seventy-five years preceding the Revolution have not yet received adequate treatment along modern lines. There are valid reasons for this. Vast collections of manuscript and printed materials in England and America must be examined, many detailed monographs must be written, and new habits of historical thinking will have to be acquired before the inner history of that eventful epoch can be written.

This does not imply any derogatory criticism of the second group of five volumes on American History in Professor Hart's series.* They mark a distinct improvement over older works in the emphasis which they place on important topics like British commercial and ad-

ministrative policy and Colonial trade and industry, although they do not present much that is new or illuminating in the way of conclusions. Professor Greene writes the history of the fifty years from 1690 to 1740 under the title of *Provincial America*. He has sought to grasp the larger and more permanent nation-making forces of his period. He considers local affairs only in so far as they constituted a part of the larger tendencies which were making for the Revolution. His chapters on immigration, the extension of settlements, and the growth of industry are all too short, but they form an admirable introduction to the conflict with France. Dr. Thwaites takes up the story at 1740. His central interest is in the struggle between England and France for the North and the Great West and, as a setting for the contest, he writes a concise account of the French explorations and settlements in North America prior to the opening of the war. Dr. Thwaites will help to dispel the too common illusion that all American history before the Revolution was made on the seaboard. The two volumes on the Revolution by Professors Howard and Van Tyne are thoroly scholarly, but open to criticism in regard to the distribution of emphasis. Not one hundred pages in all are devoted to the causes of the crisis; there is no detailed and searching study of Colonial, commercial and industrial interests, or of the leading personalities of the Revolution in their relation to those interests. The two volumes are practically given over to a narration of the political and military events.

The diplomacy of the peace negotiations at the close of the war, the experiment under the Articles of Confederation, and the establishment of the Constitution form the theme of Professor McLaughlin's volume. He does not accept the traditional view that the Union was in grave danger of dissolution during the period of confederation, but holds that the Constitution was the logical and inev-

itable outcome of well ascertained social and political conditions. The question of State sovereignty under the Constitution is dismissed as a topic for political metaphysicians, but it is not admitted that the people had a legal right to leave the Union when they saw fit.

The five volumes possess many valuable characteristics in common. They are well documented and are judicial in tone; there is a proper recognition of the importance of the West during the early period; the cause of the Loyalists during the Revolution is more fairly presented than it usually is; with some exceptions there is no undue glorification of Americanism; and the maps and bibliographical apparatus are of great value. As a whole, the volumes constitute a valuable contribution to the literature on American history available to the public.

However, from the standpoint of critical scholarship, the authors leave American history very much as they found it. The co-operative plan has precluded a consistent and systematic treatment of the development of British Colonial policy and American commercial interests, and the economic analysis is not keen or original. Mercantilism is still represented as the outcome of mediæval ignorance, "wrong in principle and degrading in motive"—a view contrary to the conclusions of the economists who have most thoroly studied that politico-economic system. Moreover, it is somewhat striking that the "robust and liberty loving people" who revolted against this "false" system were quick to adopt its principles when they threw off British dominion.

Northern Trails. By William J. Long.
Boston: Ginn & Co. \$1.50.

Mr. Long takes the reader with him, in this latest book, to the barren shores of Labrador and Newfoundland. Wolves, we meet, that guide lost children home, and then disappear into the wilderness; a wild goose, that caresses his mate goodbye at the approach of the hunter, before going out to fight for his home and young; and Pequam, of the weasel family, that tempts an Indian to abandon his trail, by killing a deer and leaving it across the track. These animals, and many more—whales, polar

bears and salmon—are all introduced to us in the midst of their wild, unfrequented haunts. All are endowed with almost human intelligence and reason, after the manner of interpreting their actions which Mr. Long has made so

ing to let the disputed question of instinct or intelligence go, however, and on the strength of the splendid descriptions of nature and the always evident love of the wild, accord this volume a high place among “books of the trail.” It is a de-

“When he winds down the invisible staircase of the winds.”

From William J. Long's New Book “Northern Trails.” Boston: Ginn & Co.

popular. In his preface he discusses the vexed questions of animal psychology, and defends his method of studying animal life against the sharp criticism it has received. He finds “at the end of every trail a real animal” and studies him as an individual, not as a species. We are will-

sirable contribution to the literature of nature study. The illustrations are exceptionally good, and the marginal sketches clever. One of the best of these stories “Matwock of the Icebergs,” appeared in THE INDEPENDENT for June 1 1905.

Christus Liberator. An Outline Study of Africa. By Ellen C. Parsons. Introduction by Sir Harry H. Johnston, K. C. B. New York: The Macmillan Co. Paper, 30 cents. Cloth, 50 cents.

It is five years since the plan for United Study of Missions was adopted by the Women's Boards of the United States and Canada. Forty-four boards have taken up the work. A central committee planned the course of study, and is publishing the text books which are used by all these boards. In this course an Introduction to the Study of Missions and Outline Studies of India, China and Japan have already been issued and studied. Few people realize how widely interest in this course of study is spreading thru mission clubs, classes, and missionary societies. More than two hundred thousand copies of these books have been sold, and it is safe to say that from fifty to a hundred thousand copies of Miss Parsons's new book on Africa will be studied during the coming year. Sir Harry Johnston's Introduction is scholarly and scientific. While treating of the geography, races and history of the country, he states unhesitatingly his conviction that the missions which have preached Christianity in Africa since 1840 "constitute the one feature of the white man's invasion of the continent which History will rank as unquestionably good." Miss Ellen C. Parsons is an authority on the subject of foreign missions. No grains of salt need be added to her statements. Having been herself a missionary in Turkey, she understands in what ways Mohammedanism complicates the missionary problem in Africa. As editor of *Woman's Work*, one of the ablest of the woman's missionary journals of America, she has long been in touch with mission work abroad; and her interest in Africa was deepened thru writing, a few years since, the biography of Dr. A. C. Good, of West Africa. In this outline study of Africa her work has been done with skill and judgment. Enough detail is given to hold the reader's attention, but her wisdom appears in what she omits no less than what she includes in the writing. To tell the story of a dark, enslaved continent and of the introduction of light and liberty thru the Gospel of Christ is no easy task, but to tell it in a large way, so as to arouse en-

thusiasm over the chivalry of missions, and at the same time to point out the problems that Christian missions must solve as they enlarge their work among the native races, was far more difficult. But it has been done. A short African Bibliography, covering seven pages, a table of more than eighty societies maintaining missions in Africa, another table of important events bearing upon the history of Africa, and one of important dates in African discovery, add to the usefulness of this concise, well written and readable book.

Byron's Complete Poetical Works. [Cambridge Edition.] Edited, with an introduction by Paul Elmer More. New York: Houghton, Mifflin & Co. \$3.00.

The need of a single-volume Byron, unexpurgated and containing the recently resurrected poems, is amply filled by this latest edition. The print is clear and large and the paper of a lightness which permits 1,055 pages to be compressed into the dimensions of a moderate-sized book. Mr. More chooses the text of 1832-33 in preference to that of 1831, on account of its more satisfactory use of capitals, italics and punctuation marks; but he has not hesitated to make numerous alterations. He has, furthermore, compared the text word by word with that of the recent seven-volume Murray edition, and has included all of the poems brought to light by Mr. Coleridge and others. Readers will find no difficulty in agreeing with Mr. More that these additions might well have remained in oblivion; they are mostly without merit, and are interesting only by reason of their being Byron's. A rearrangement of the poems is made, and chronological sequence has been compromised by an effort at logical grouping. Within the groups, however, the poems are arranged sequentially. The notes are largely those of the earlier editions, except that the longer excursions have been excised, and an occasional explanation is given. Some curious duplications have been made. The poem, "The Girl of Cadiz," which originally stood in the place of the one entitled "To Inez," in the first canto of "Childe Harold," appears both in the text (pp. 159-160) and in the notes (p. 1,003). The derivation of "caloyer" is given on page 1,005 and

again on page 1,024, while the allusions in the bit of doggerel, "I read the Christabel," are explained not only on page 230, but (in part) on page 1,013. A thoughtful and scholarly estimate of Byron's genius and character introduces the volume.

The Gambler. By Katherine Cecil Thurston. New York: Harper & Bros. \$1.50.

If the reader can get used to such a name as "Clodagh" for the heroine, he will become interested in the career of *The Gambler*, who is an Irish beauty with the faults and fascinations of her race. The book is not quite thoughtful enough to be a serious study of the heredity of the gambling instinct, but it is an interesting story, and, since gambling is rapidly becoming the greatest of modern vices, such a striking object lesson as this on its sinister fascination and disastrous results is much needed. The defects of Mrs. Thurston's literary style and the crudity of her methods are more obvious here than in *The Masqueraders*, where the perplexities of a novel and somewhat embarrassing situation held more closely the reader's attention. The illustrations are below even the low level of the average pictures in novels.

The Religion of Israel: A Historical Sketch. By R. L. Ottley. New York: The Macmillan Co. \$1.00.

Canon Ottley published an excellent "Short History of the Hebrews" in 1901, in which he dwelt upon the outward fortunes of the Hebrew people, their political and social institutions. The present volume is intended to supplement the other by tracing the growth of Israel's religious ideas and usages. The author recognizes that Hebrew faith began in very rude and primitive rites and concepts, and only gradually and painfully rose to the ethical fervor of the prophets and the spiritual purity of the Psalmists. His aim is to trace this process and describe it concisely and clearly. He has succeeded well, and there is no work in English which tells in such brief compass the story of Israel's faith from Moses to the Pharisees with such painstaking loyalty to establish fact. Canon Ottley does not suggest new the-

ories and does not present new solutions of the difficult problems, but he sets forth what has been pretty conclusively determined, with a learning to conservative positions, and passes lightly over controverted points. Kautsch, Schultz and Smend are the authorities preferred, rather than Winckler and Cheyne, and the criticism followed is of the moderate and cautious school. Israel's religion is the revelation of God within the nation itself, communicated through prophets, to which Babylonian culture contributed little. The majority of critics would attribute less to Moses and Samuel than does Canon Ottley, and more to Amos. The antagonism of the prophets to ritual and sacrifice is softened more than the invectives of Isaiah and Micah justify, and Ezekiel is accorded larger place in the building of Israel's faith than most students impute to him. Yet, taken as a whole, Canon Ottley's brief treatise is a safe guide to what is known concerning the slow and wonderful development of Hebrew religion.

The Saint Lawrence. Its Basin and Borderlands. By Samuel Edward Dawson, Litt. D., F. R. S. C. New York: Frederick A. Stokes Co. \$1.75.

This is an excellent compendium of the history of the discovery and exploration of the basin of the Saint Lawrence River, and of the watershed which divides it from the Mississippi. The subject has been dealt with by various writers with a varying amount of detail, but here we have a convenient summary with sufficient breadth of view and detail at the same time to satisfy the general reader; and looked at in this light the book has considerable value. The chapters on the Cabots, the Corte-Reals, the Basque voyages, those of Verrazano and Stephen Gomez, form a very lucid survey of the documents involved in the early history of the discovery of North America. Those on Cartier's voyages and Champlain's expeditions are full of detail and carefully weighed conclusions. Nearly two-thirds of the book are taken up with the history to this point, so that there is but a small portion left for the work of the Jesuits, Radisson and Chouart, Joliet, Marquette, La Salle, Hennepin and Dulhut, but Dr. Dawson has carefully selected those portions of their

work which bear upon the Saint Lawrence and has constructed a clear and connected narrative. The illustrations and reproductions of ancient charts and maps are good. There is a good modern map, as well as a fairly full bibliography, indicating the books consulted and referred to; and the index is a sufficient one.

Literary Notes.

"IN and Around Venice," by Horatio F. Brown, is a new book on an old subject. It is but sparsely illustrated. (Scribner's. \$1.50.)

...."An Angler's Hours," by H. T. Sheringham, recounts the experiences of an enthusiastic veteran. The book will be found interesting to followers of that sport. (Macmillan. \$1.50.)

...."Catch Words of Cheer," collected by Sara A. Hubbard, contains quotations from well known authors for every day in the year. "Go on, make errors, fail and get up again. Only go on!" is a type. (McClurg. 75 cents.)

....John Kendrick Bangs has amusingly parodied "Raffles," by recounting the adventures of his widow, an amateur crackswoman. The illustrations, by Albert Levering, contribute much to the volume. (Harper's. \$1.25.)

....Hamilton Wright Mabie has collected about ninety of the old ballads in a volume entitled "Old English Love Songs." Many of the old favorites are to be found there, attractively illustrated by George Wharton Edwards. (Macmillan. \$1.25.)

....The Forest and Stream Publishing Company have collected some articles by the late Rowland E. Robinson, under the title of "Hunting Without a Gun." The volume contains some stories and sketches in addition to the tales of hunting. (Price \$2.00.)

....A booklet of 160 pages, by Arthur Lloyd, gives a brief and very readable life of Admiral Togo. Great difficulty was experienced in collecting incidents of the Admiral's life on account of his excessive modesty. The book is issued by the Kinkodo Publishing Company, Tokyo.

....An illustrated edition of Kenyon Cox's "Old Masters and New," the first edition of which was reviewed in THE INDEPENDENT for

September 21, has been issued by Fox, Duffield & Co. The illustrations are reproductions of paintings by the masters under discussion, and add greatly to the interest of the book. (Price \$2.50.)

...."What Shall a Young Girl Read?" by Margaret E. Sangster, recommends a list of some ninety books, from "Beauty Through Hygiene" to "Pilgrim's Progress." Many powerful books are omitted, and some weak ones included, but such a list may be of use for suggesting good titles. (Sunday School Times. 50 cents.)

....Mr. Oliver Huckel has prepared an English version of Wagner's "Lohengrin," similar in form to his translation of "Parsifal." He discards the dramatic form and does not attempt to reproduce the meter and style of the libretto, but puts it into narrative blank verse, certainly a more agreeable form for reading. It is attractively printed by T. Y. Crowell, New York. (75 cents.)

....Among the more important of the articles in the annual report of the Smithsonian Institution for 1904 are those on "Old Age," by Elie Metchnikoff, of the Pasteur Institute; "The Multiple Origin of Horses and Ponies," by Dr. Ewart; "Present Problems of Inorganic Chemistry," by Sir William Ramsey; "The Evidence of Evolution," by Hugo De Vries, and "The Evolution of the Scientific Investigator."

Pebbles

....Nothing succeeds like excess.—*Life*.

....*City Editor*: "I notice that in this account of yesterday's wedding you refer to the 'happy couple.'" *Reporter*: "Isn't that all right?" *City Editor*: "How many times have I told you that you were to give facts and not guess at things?"—*Town Topics*.

....Willie had a savings bank;
'Twas made of painted tin.
He passed it 'round among the boys,
Who put their pennies in.

Then Willie wrecked that bank and bought
Sweetmeats and chewing gum.
And to the other envious lads
He never offered some.

"What will we do?" his mother said:
"It is a sad mischance."
His father said: "We'll cultivate
His gift for high finance."

—*Washington Star*.

Editorials

The Insurance Investigation

At last week's sessions of the Armstrong Insurance Committee there was brought to light by the shameless admissions of responsible officers the depressing record of much evil conduct and of a continuous breach of trust. It should be borne in mind that the Mutual and New York companies profess to be companies conducted on the mutual plan, and that their funds are, or should be, held in trust for the benefit of widows and orphans. Their officers have desired to be regarded as faithful trustees. It is admitted that the books of one of them have been tampered with or falsified repeatedly to conceal the expenditure of large sums for improper purposes. It is also admitted that several hundred thousand dollars have been paid by the same company within the last five years to an agent employed to control legislation, and that he has not accounted, or been required to account, for the use of this money. The president of the other company, his son, and his son-in-law have drawn in a few years from its widows' and orphans' fund, in salaries and commissions, the sum of \$4,643,926.

It was to conceal the payment of nearly \$150,000 to the Republican party's fund (in three successive campaigns) that the books of the New York Life were so manipulated that no record of these expenditures exists. Have other payments for improper purposes been concealed in the same way? Is there not warrant for a suspicion that the books have been falsified to cover up other payments that could not bear the light? Policy holders can no longer trust the officers whose unfitness has thus been proved by their own admissions.

The most disheartening and shocking of all the disclosures, however, are those concerning the huge payments to legislative agents. To one Andrew Hamilton (now in Europe), who, in behalf of the same company, had "absolute and entire control of legislation in the United States and Canada," but especially at Albany, there was paid in the last five

years \$476,927, for which he was not required to give any account, beyond his receipt for the same. This does not include \$235,000, as to which no adequate explanation has been made, or another mysterious fund of \$75,000, or about \$165,000, which he is to have for the work of the present year. The total is nearly \$1,000,000. President McCall was examined concerning these expenditures. He said:

"At the beginning of every year it is the feeling of every executive officer that we shall be badgered and harassed to death in every State by the introduction of bad bills of every kind. Sometimes men of honor will feel they have a right to amend a law, and their motives are all right; but mainly the general insurance legislation of this country, if you will follow it, emanates from people who are desirous of striking at insurance companies. I may even say that I believe that three-fourths of the insurance bills introduced in the United States are blackmailing bills."

"Was Mr. Hamilton expected," asked the examining counsel, "to deal with the man who could produce results?" "I think he was," replied President McCall, with a little laugh. "Whether he was an attorney or whether he was any other man?" continued the questioner. "The best fellow he could find," was Mr. McCall's response. But he insisted that bribery was never discussed by Mr. Hamilton and himself, or in his hearing, and that he had no information as to an improper use of the money.

Officers of the other two companies have not yet been questioned fully as to their expenditures for controlling legislation. But this man Hamilton was also employed by them, and there is testimony that there was among the companies an allotment of the States in which such work was to be done, altho New York was left open for the efforts of all. It is quite probable that the sum received by Hamilton from the New York Life, and for which he rendered no account, was not more than one-third of the entire sum so expended by the three great companies.

If it be true that the enactment of bills aimed at the companies by blackmailers was thus prevented, it is also true that in

some way much legislation desired by the companies has been effectively promoted. The record at Albany shows very few bills that could fairly be regarded as hostile to the interests of policy holders. On the other hand, during many years past there has been a gradual relaxation of the statutory restrictions to which New York companies were originally subjected, and the laws have been changed to satisfy the desires of the companies' officers. Not all of these changes have been for the good of policy holders. An example may be seen in the statute which forbids the bringing of suits against the companies on a certain class of their contracts, except by the permission of the Attorney-General.

Of course, no part whatever of a life insurance company's funds ought to be used in buying off blackmailers or in purchasing legislation. Testimony given by the New York Life's officers warrants the inference that this company's money, or the money of its policy holders, has been so used. There is no reasonable excuse for it. The practice is not only immoral, wicked, and demoralizing, but also entirely unnecessary for the defence of any company honestly managed. Bills introduced by blackmailers, if such there be, should be opposed openly and boldly by the guardians of the interests that are menaced, who should publicly denounce them and their authors, relying for success upon such denunciation, upon exposure in the press, and upon appeals to policy holders for help. When an honest and innocent man is blackmailed, he defies the blackmailer, exposes him, and strives to bring him to justice. He is not "harassed to death" by the scoundrel's threats. He does not pay an agent—an Andrew Hamilton—\$150,000 or \$200,000 a year, to be spent at State capitals with no accounting.

A life insurance company whose responsible officers have taken to themselves enormous salaries and summoned all their relatives to share in the feast, whose books conceal the existence of improper expenditures, whose directors are engaged in profitable syndicate operations with the company's funds—in short, whose internal condition is such as has been disclosed by the investigation of companies in New York since President

Alexander attempted to oust Vice-President Hyde—such a company cannot afford to fight blackmailing legislators in the open. It prefers to negotiate with them. And after it has begun to pay, it must keep on paying. It virtually invites blackmail, and thus the premiums paid in for the protection of widows and orphans become a source of legislative corruption.

The leading officers of one company have been displaced. Those of the other two must follow them before public confidence in these fiduciary institutions can be restored.

The Greater Wrong

IT has now been conclusively shown by the life insurance investigation that policy holders have been wronged by the wasteful and dishonest management of the companies. The money taken by lobbyists, received by syndicate-makers, and paid out in great salaries came from thousands of families, most of them in very moderate circumstances, whose savings and self-denials to meet insurance premiums have brought them in the aggregate some millions of dollars less provision for old age than they ought to enjoy.

Great as is this wrong, however, there has been revealed in all this miserable business a wrong that is yet greater. It is a wrong for which all of us are responsible because all of us have permitted it. It is a wrong that threatens our whole social fabric, and which, if persisted in, will utterly pervert the American experiment in human freedom. That wrong is the handing over of opportunities created by nature or by society, or necessary to the well-being of society, to a small minority of the whole population, to exploit under legal privileges created by the State, instead of holding them subject to the immediate control of the State to be developed for the good of the whole community. This, we say, is a greater wrong than any other, because it is one that lies at the foundation of social morality.

Why does society create and exercise the powers of government at all? If we believe that Divine Providence has ordered that some men shall exist and slave, shall endure privation and misery that other men may enjoy themselves in riotous living, we then must, if we are logi-

cal, acquiesce in the exploitations of the masses by monarchs and other privileged persons. If we do not believe such things we must say that the social order, including government, exists for the express purpose of creating and maintaining certain kinds of equality; of preventing the strong and the clever from taking every sort of advantage of the weak. It exists to forbid the ruthless and fearless highwayman to knock down and strip the defenseless traveler; to forbid the house-breaker to carry off the family jewels and silverware; to forbid the expert copyist to draw money from the bank on another man's name.

So much all men admit. But it has taken a good many generations to bring a large number of men to the point of seeing that, if we are justified in interfering with the brute struggle for existence by curbing the strong man at all, we ought to ask ourselves whether there are any limits, and if so what limits, to such rightful interference. This question has at last been raised, and it is being asked by thoughtful men with a sincerity and urgency of desire to know the ultimate truth, which are the best promise of betterment that we can anywhere find in the existing moral situation. Here and there are men who have seen to the end of this question, and have found the answer to it, and they fearlessly challenge any social philosopher to show that the answer is other than this, namely: the true function of the social order, including human government, *is to create equality of external conditions to the greatest extent possible.*

Subjective, or personal, equality does not exist. It is impossible. One man is taller than another, heavier than another, stronger than another, healthier than another, braver than another, wiser than another, saner than another, and there is no possible way of making them equal in these respects. But we can say that while these inequalities will necessarily allow some men to breathe more air than others, to digest more food than others, to enjoy more and to live longer than others, they need not be made an excuse for taking from the others the air, the food, the enjoyment, the life, which those others have some capacity for. That means (when we sweep away all sophistries and quib-

bles) that external conditions—in the aggregate making up the natural and social environment—must be equalized, so that all men, however unequal in themselves, shall have as nearly as possible an equal chance. If, for example, we lived in a world where there was an abundance but not an unlimited amount of atmospheric air, the rule of fair play would be that the men and women of limited lung capacity should be allowed to breathe all they could, and that those of unlimited lung capacity—if such could be imagined—should be permitted to take each as much as their smaller fellows plus whatever surplus remained after the weaker had taken their fill. Under such a rule there would be a chance for all, and yet without putting an end to race improvement, that is to say, to evolutionary progress.

The business of the State is to realize such an ideal *as far as it can* by creating as much external equality as at a given time is practicable. The attempt to divide up the activities of mankind into kinds or classes, and to say that these are properly the functions of the individual, while those are the functions of government, is nonsense. It stands in the way of the true economic and moral progress of the race. The business of government is to work out, in politics, in law, in economics, in every other sphere of life, as much equality as it can. Details are purely matters of expediency, not of principle. Already we have political equality, equal suffrage. Social evolution has made other kinds of equality possible. We could have equal ownership in the means of transportation and of communication. We could have equality of opportunity to provide against illness and old age through State insurance. We could have these things, and we ought to have them.

Behring's Cure for Tuberculosis

THE most important news item that has come to us from the Congress of Tuberculosis, which has been holding its session in Paris during last week is the announcement that Professor Behring is confident that he has discovered a cure for tuberculosis. Behring is the investigator to whom we owe the antitoxin for the treatment of diphtheria, which has proved so successful.

He is, therefore, an authority of the first order. As yet he makes only a preliminary announcement, for with true scientific caution he wishes to have his own results tested by distinguished colleagues before he publishes it to the world. He is especially anxious that Professors Roux and Metschnikoff, of the Pasteur Institute in Paris, shall make a series of control observation. The very fact that he desires to submit his conclusions to these men, who are themselves of equal distinction with himself, Roux having shared with him the honor of the discovery of the diphtheria serum, and Metschnikoff being considered one of the best authorities in bacteriological research, is of itself a sure sign that it is not notoriety that Behring seeks, but real progress in medicine.

Of course there is besides this the additional consideration in this case, that he already possesses a world-wide reputation, and that he is not a man who at any time during a long and successful career in bacteriology has ever attempted to make personal benefit accrue from his work, rather than the welfare of humanity. It has been known for some time that he was working very successfully on the therapeutic problems of tuberculosis. He announced some three years ago that he had succeeded in perfecting a method by which animals at least could be made immune to tuberculosis. He has had ample opportunity for testing his method in the neighborhood of Marburg, where his laboratory is situated, for the country is largely devoted to the raising of cattle and the marketing of dairy products. Success has crowned his efforts in this matter, and as a consequence every one is ready to concede that he is probably the greatest living authority on tuberculosis, and some further announcement has been expected from him for some time.

This anticipated announcement came at the recent Congress and was made on the last day. Its text is practically as follows:

"In the course of the last two years I have recognized the existence of a curative principle for tuberculosis completely different from antitoxin. This new curative principle plays an essential role in the development of the immunity which is derived from my bovo-vac-

cine. This bovo-vaccine has proved thoroly effective against animal tuberculosis during the last four years. The new therapeutic principle which I have found rests upon the impregnation of the living cells of an animal with a substance originating from tuberculosis virus."

This does not seem much, yet coming from a man of Behring's reputation and well known modesty there is little doubt that it means the near perfection of a remedy that will enable patients successfully to resist the ravages of the dread tuberculosis. It might have been expected that Behring after his work on diphtheria serum would most probably find as the result of his investigation some antitoxic therapeutic principle for tuberculosis. The very fact that it is not an antitoxin would seem to confirm the idea that the presentation of a real cure is at hand.

Meantime, however, we shall have to wait in patience, for no one knows better than Behring himself the harm that haste may do in this matter, and no one appreciates better than he the stigma that stained German medicine as the result of Professor Koch's premature announcements. It used to be said that when a new therapeutic advance was accepted on both sides of the Rhine then it was sure to be valuable. This was because of the well known rivalry between the scientists of the two nations. Behring and Roux, far from being rivals, tho their life work has been cast in the same departments of bacteriology and therapeutics, are excellent friends. This will not make Professor Roux any the less exact in his examination of the new therapeutic principle. He is sure to be what Behring asks, a loyal and capable critic.

The next meeting of the Tuberculosis Congress is to be held in Washington in 1908. Professor Behring announces that surely for that meeting he will be ready to present the remedy in its completed form.

The same news item that brings us the announcement of Behring's discovery also tells of how much has been accomplished for the cure of tuberculosis in incipient cases by means of the outdoor treatment. The only fault at the present time is the fact that tuberculosis is usually neglected so long that its successful treatment becomes impossible. If patients only present them-

selves early enough in the case, not when they are coughing up large amount of material, but when they are troubled only with the tired feeling, the rapid pulse and the slight persistent cough of early stages, then there would be little need for a specific remedy. Nature's ordinary provisions would be quite ample. But there will always continue to be patients who, because of neglect of their health, slip into conditions almost unconsciously in which the only thing that can save life is a biological product directly opposed to the virus and bacillus at work in their tissues.

Are Kings Out of Fashion?

It is the twentieth century, and yet we see an independent people, free to choose between a republic and a monarchy, actually hesitating in their choice, and likely to decide in favor of the latter. We thought we had demonstrated the futility and absurdity of kings a hundred years ago, but evidently the world still regards it as a debatable question. There is nothing more discouraging to man or nation than to be conscious of setting a good example and to realize that it is not being followed. It is liable to lead to a lack of self-confidence, a very demoralizing result, personally or nationally.

Have we already lost confidence in republicanism? Where are those mass meetings, overflowing with oratory, cheers and subscriptions, which used to be held in every city when there was the faintest hope of a new republic in Europe? Why are our newspapers dumb on the subject of Norwegian republicanism when they are fluent with their advice to all nations on their internal affairs? Has our President followed the traditions of his office in proffering the hand of fellowship to any possible republic? We know how much he can do in international affairs, unofficially of course, but he evidently does not consider that the American people have sufficient interest in a nation so closely united by ties of blood as the Norwegian, that he should manifest the slightest interest in its political fate. Have the thousands of Norwegian immigrants who are now living in this republic and who have returned to their native land exerted any

influence in favor of a republican form of government there?

In the middle of the last century a wave of republicanism swept over Europe that threatened to carry away every monarch. Now it has completely subsided. Kings are again popular. They neither tremble nor doubt themselves. It is the republicans of Europe who doubt. They still bear the name and have not formally disowned their ideal, but they certainly have lost hope, and apparently lost faith in it. The stalwart patriots of Spain and Italy who once almost succeeded in establishing republics now profess themselves quite content to live under a monarch. Mr. H. G. Wells laments that English radicals have ceased to dream of a republic. Mr. Andrew Carnegie, in the days when he was chanting the praises of "Triumphant Democracy," intimated that while the English were not willing to depose Queen Victoria on account of her age, sex and respectability, they would not be willing to kiss the hand of a successor who had none of these qualities in his favor. What thinks the Laird of Skibo now? The hereditary aristocracy of Great Britain finds able defenders, such as Mr. W. E. H. Lecky in his "Democracy and Liberty" and Mr. W. H. Mallock in his "Aristocracy and Evolution." That veteran Norwegian author, Bjørnsterne Bjørnson, has always been an enthusiastic republican, so long as a republic was unattainable, but now, when it is possible, he throws the weight of his influence on the side of a monarchy, saying that the Norwegians are so thoroly democratic that it does not make any difference whether they have a king or not.

Paradoxical as this argument seems, it undoubtedly expresses the very general feeling in constitutional monarchies that kings have ceased to be impediments to the advance of democracy; that the people having obtained self-governments under the forms of monarchy, it is not worth while to struggle for the abolition of a convenient legal fiction. King Oscar makes no more fuss about his deposition than a prime minister who has been put out of office by an adverse vote on the budget. Undoubtedly many persons nowadays would agree with Dr. Johnson, who said that he would not give half a guinea

to live under one form of government rather than another. Certainly the fact that they become subjects of Edward VII does not appreciably deter the rapid emigration from these States into the Canadian Northwest. Kings as superfluities are harder to get rid of than kings as tyrants. If a man's coat is too tight he has the buttons changed, but the useless buttons on the back he leaves undisturbed.

But the swing of the pendulum of popular opinion has gone beyond the neutral point of regarding kings as harmless national decorations. They are now held to be useful, if not essential. Englishmen of almost all parties take pride in asserting that their king exerts an important personal influence on the policy of the country. The activity of Emperor William is not generally thought pernicious. He is probably as popular as any president would be notwithstanding his constant preaching of the divine right of the House of Hohenzollern, and his confident assertion that his will is the supreme law. Even our American delegates to the Interparliamentary Congress were captivated by him because "he shakes hands like a politician." The monarchical idea cannot be said to be sinking into innocuous desuetude, when the greatest war of history is fought and won under the banner of a deified sovereign to whose personal virtues Togo and Oyama ascribe their victories.

On the whole we must conclude that he who wrote, "God said, 'I am tired of kings. They shall trouble my people no more,'" made a premature and unauthorized announcement of the feeling of the Deity, or that the old saying, "*Vox populi, vox Dei*," is no longer valid. Preachers, whether in republics and kingdoms, have ceased to call the attentions of their congregations to that vigorous, and as we believe still pertinent, argument against the monarchical idea which is to be found in I Samuel 8, 10-18. A leading German Socialist not long ago maintained that the government of his own country was superior to that of the French Republic, and a leading French Socialist recently professed himself equally willing to live in any country in Europe, except Tur-

key. Mr. Kipling, indeed, called upon us to "Suffer not the old kings," but he was alluding to the president of the republic which he was inciting his own king to crush.

We once thought that in establishing a republic in America we had set an example that all nations, as they were able, would follow. It is somewhat humiliating, therefore, to find that the United States is quoted, not as an example but as a warning, that we are subpoenaed as witnesses for the defendant in the great case of *The People versus The Privileged Classes*. The beacon light, which was intended as a guide to the only safe political haven, has come to be regarded as a warning signal against breakers.

Play in Education

THE INDEPENDENT has for years persistently advocated the doctrine of play as an educative force. We agree with Dr. Hutchinson that play is a provision of nature, intended to bring out not only physical but moral and intellectual strength. He insists that exercise is literally "the mother of the brain." Every play, that is worth the name, "develops not merely strength, endurance and sweetness, but also alertness, quickness of response, coolness, balance, wariness, and judgment that is both sure and swift." Nothing is more important about a home than provision for sports and games; and this surely is equally important where children are grouped together in schools. The ingenuity of children will go a long ways to provide for their instincts, but those in authority have an obligation that cannot be avoided. We imagine that athletic games have been a natural upgrowth of the educative demands of the children. Most of these games train the hands and the eye as well as directly the brain. Some children get play by working in garden plots, and others can find nothing more attractive than the use of tools. Again, other children are naturally marine biologists, preferring the frog pond to an athletic field. While these are paddling in the water others are quite as devoted to trapezes and jumping bars. Dr. Hutchinson assures us that children who are allowed to play until seven or eight

years of age, or even ten, and then enter school, overtake those who enter two or three years earlier. "Give a child normal surroundings," says another writer, "and he is pretty sure to learn to use his brain wisely—very much as he learns to use his legs and arms wisely."

It is with intense satisfaction that THE INDEPENDENT notes the progress made during the last two or three years in all our larger cities along this line, of more playgrounds, and the adoption of play into the curriculum. Two years ago Professor Zueblin published a list of twenty-six hundred parks in American cities—a list that has now probably gone quite beyond the three thousand mark. The death rate decreases in proportion to the number of these breathing spaces and playgrounds. Boston has a park system clear round the city, while New York has multiplied small grounds in congested districts. Chicago has forty thousand acres in an outside system, and has rivaled New York in small reserves, scattered about the heart of the city. In many of these grounds meals are served, at about cost price, while tennis and ball games are enjoyed at the cost of a nominal sum. McKinley Park has an open air swimming pool, nearly an acre in extent. This is surrounded with beautiful shrubbery, coming close down the water, and a fine beach for the bathers. Two thousand five hundred persons often use this pool in a single day. Every one of these bathers passes through a corridor of shower baths, all of which, to the number of thirty or forty, play on him, making it a certainty that, however grimy he may be, he will get a thorough cleansing. All is free—a gift to cleanliness and health. For small children there is a shallow pool, of about one acre, where they may paddle about and enjoy themselves, while at the same time being cleansed. Fourteen more parks in the same city are to be furnished, before long, with all the advantages of the McKinley Park, besides gymnasiums and other methods of play and exercise.

A feature of all these parks, in Boston, in Chicago, and in New York, as also in Philadelphia, Cleveland and elsewhere, is that they become social centers. There is nothing that brings the people together so cordially as a means of common enjoyment. It is desirable to foster this result

and control it. Chicago projects, as central features of each park, a gymnasium for men, a gymnasium for women, plunging pools and swimming pools. Then there will be a restaurant and public library. Associated with these will be club rooms and social halls. It is not yet certain that these will include lectures, music, art exhibitions, and much more that is centering at public schools. But clearly any one may observe that, as the schools are working outward, to include more games and more of the social forces, so the park system is reaching schoolward, and becoming a part of the public educational scheme. Play and study or body and mind development are correlated.

Naturally we turn to the resolutions recently passed by the New York Board of Education. These express, in our judgment, an instinctive appreciation of the drift of events, and the needs not only of our schools but of the people in general—more play and more rest. One of these resolutions insists that the play space in connection with public schools is insufficient, and requests the city authorities, when establishing playgrounds, to make them contiguous, so far as possible, to the school buildings. The struggle to reduce the hours of study has been settled by retaining five hours, but extending recreation periods to cover one and one-half hours. This is to reduce the hours of book study to three and a half, while it does not yield to the clamor which would turn children loose after these three and a half hours have been used up. It adopts play into the curriculum; gives to it about one-third of the day's exercises, while placing this training of the body and mind together, under the supervision of teachers. Taken into connection with manual training, which is rapidly becoming an accepted part of American school life, we are reaching the Greek idea that education consists in a full development of the whole child. It is in reality only carrying Froebism to its broadest generalization. The whole of ideal school life is after all only a kindergarten, expanded, and flexible to the needs of older children.

The effect on after life can hardly be measured, when every American man and woman shall find the body and the mind

educated to a correlated work. It has been well said that "he who helps a boy to become a strong man and a good man, at the same time makes a contribution of the finest class to the welfare of the community and the nation." There is unquestionably less hoodlumism, vandalism and rowdyism where children have learned, on playgrounds, to observe the strict rules of games, and to recognize an opponent's rights. It must not be overlooked for a moment that we are not discussing undirected or misdirected play, liable to run into quarrelling and a gaming habit, but regulated play, under the observation of qualified directors.

American Scholarship

At the annual meeting of a class of medical specialists in this city the other day, Dr. C. L. A. Reed, of Cincinnati, said:

"In one large feature Europe is still, Waldeyer declares, ahead of America, and that is in the making of great scientific discoveries and the formation of those theories which have opened up wholly new domains of knowledge. To Europe, he says, belongs the credit of a surprisingly large number of new chemical elements, spectral analysis and, with it, astrophysics, the great discoveries in the chemistry of dyes and sugars, the physical chemistry of solutions, the liquefaction and condensation of gases, especially liquid air, the Röntgen and Becquerel rays, radium and its rays, color-photography, the dynamo machine, electric light, indeed, most, he asserts, of the investigations and applications of electricity as a source of power, the electric furnace and its fruitful application; in the field of biology almost the whole doctrines of the protozoa and bacteria with their explanations of epidemics, the toxins and anti-toxins, the working out of the doctrine of immunity, the discovery of the finer processes of fertilization and of karyokinesis, the doctrine of descent and Darwinism, and above all, crowning all, the conception and foundation of the great idea of the conservation of energy."

He goes on to say that it is those who got their training thirty years ago who have shown the greater energy and initiative. That is a drive at the kindergarten style of teaching, carried into the higher grades. The attempt to make study a play, to make all learning an agreeable process to the untrained mind, may give some miscellaneous information, but it supplies very little training or mental discipline. Discipline and power come by forcing the body or the mind to do

sturdily what is essentially difficult and even painful, until the pain is conquered and the hard becomes easy and even inspiring.

Awaiting the Bishop's Decision

We understand well enough the relation of the Methodist theological seminaries to the Methodist Church. We are quite aware that in the case of the Boston School of Theology the General Conference requires the Board of Bishops as a whole, and not one or two possibly "loose" or "easy" bishops, to confirm the reappointment of professors after a term of years. Now these restrictions we do not object to, as they belong to the system. We have never criticised the system, as our able Methodist contemporary of this city suggests, nor its application to the case of Professor Mitchell, of the Boston School of Theology, charged before the Bishops with heresy, for we wait patiently for the verdict of the Bishops. What we have remarked is that meanwhile there seems to be a very prudent conspiracy of silence in the Methodist press on the question involved. It is a very important question of both freedom and theology; but no one seems to care to enlighten the Bishops and the public. Whether women should be admitted to the General Conference, or whether the term of the itinerancy should be lengthened, received long and abundant discussion in the press before they were settled by the Conference. It would seem as if Bishops were not thought to need instruction. We are glad to see the assurance of our contemporary that the Bishops "will decide wisely, and the Church will acquiesce"; it "will accept the result." We agree, if the editor has information which convinces him that they "will decide wisely"; for if they do not, the Church has no business to "acquiesce"; it should reverse the decision. We too look for the best. We observe that men go, that obstructions are removed, and that progress and liberty do not fail to gain. But let it not be imagined that we make the least objection to the Methodist system, whatever may be its temporary infelicities. We recall that even God's system of governing the world, the best tho it may be,

involves things even worse than the possible removal of a competent professor from his chair.

Personal Politics in Georgia

Still proceeds the most lively personal political contest before the people, that of the rival claims of Hoke Smith and Clark Howell to be Governor of Georgia. Against Mr. Howell there is one damaging charge, that his brother is counsel for the Southern Railway. Possibly in his favor is the fact that he is editor of *The Constitution*, perhaps the leading paper in the South. Against Hoke Smith the charges are more serious. He has himself been counsel for railway "monopolies." He is said to have borrowed \$50,000 from J. Pierpont Morgan and paid for it by "legal services." Further, he owns shares in a hotel in Atlanta which has a bar and sells alcoholic liquors to its guests. And worst of all, and the chief offense charged by *The Constitution*, when Secretary of the Interior under President Cleveland, he gave positions as clerks to several negroes, especially to members of the family of the African Methodist Episcopal Bishop Turner. He tries to creep out of the damaging charge, but he seems convicted by the evidence, and both Herod and Pilate are agreed that no negro should have any office that a white man could be found to take.

Praise to an Enemy

It really almost looked like the good feeling of the Monroe days when at the Tammany convention last week to nominate New York City officers the Committee on Resolutions presented the following:

Resolved, That the successful labors of President Roosevelt in the initiation, conduct and settlement of the peace negotiations between the Governments of Russia and Japan present such a pre-eminently patriotic and humane service as to merit grateful recognition from every element of our citizenship, and we, who have been and are now his determined political opponents, unhesitatingly accord to him our hearty praise for the surprising courage, remarkable tact distinguished ability and commanding influence displayed by him as the central figure in the greatest peace triumph of the age.

It was shrewd politics to praise a political enemy, so as to anticipate the Republi-

cans. But yet it is a good sign, and the renomination of Mr. McClellan, who has made the best Mayor Tammany ever elected, makes one almost ready to hope that the conversion of Tammany to civic honesty, or at least decency, is not impossible.

Tammany on Trial

The attempts to unite the anti-Tammany forces for good government in this city have met with an unfortunate collapse. The elements were too incongruous. There were the Republicans, with a strong machine, who were ready to join if they could keep Jerome off the ticket. They did not know but he might do something. Then there were the Hearst men, who were strong in their municipal ownership platform, but who were burdened by the name of their leader. Then there were the citizens led by Mr. Cutting, who were demoralized when their candidate, Mr. Jerome, was turned down by the Republicans. They could not walk together because they were not agreed. And then it was to their disadvantage that Tammany has been on its good behavior, and Mr. McClellan has made us as good a mayor as was consistent with loyalty to Tammany. So the anti-Tammany factions must go it alone, and Tammany must be allowed to try whether it is capable of a prolonged period of sobriety between its deliriums.

Religion of Japanese

We find in a French journal an attempt to designate the religions professed by leading Japanese. Admiral Togo is said to be a fervent Shintoist, profoundly religious, and his official reports always begin, "By the favor of Heaven." Marshal Oyama is a devoted Protestant. General Kuroki has a simple religious faith, and every morning "turns towards the East and conscientiously adores the sun." General Kodama is a Shintoist, less mystical than Togo and less religious than Kuroki. Marquis Ito holds to the ancestral Shinto faith. The celebrated Count Itayaki, the old leader of the Liberals, is a fervent Protestant, as also is Count Okuma, the distinguished head of the Progressive party; and also Ozaki Yukio, Mayor of Tokyo, and leader of

the Constitutional party; and Shimadu Soburo, deputy from Yokohama, and editor of the *Mainichi Shimbun*. Vice-Admiral Ito is a Catholic and his wife is French. Professor Nagai, of the Imperial University, is also a Catholic. The Vicomte Aoki married a German Catholic, and follows her religion. Professor Inouye, perhaps the most distinguished teacher in the university, professes extreme Pantheism. M. Yanagazawa, head of the Bureau of Education, believes that Buddhism will overcome Christianity. Kato Hiroyuki, former Rector of the University, does not see that religion or sect has anything to do with reform. The religion of the no less distinguished Professor Tomizu may be called Russophobia, while that of Hiranuma Senzo, the richest merchant of Yokohama, and Senator, is said to be that of the Golden Calf.

Russia and Constantinople

Certain journals in England have more influence than any one in the United States. *The Times* and *The Spectator* are supposed to direct, as well as indicate, the popular mind. But it is hard to believe that the British people will readily accept the advice of *The Spectator* that Russia be allowed to take possession of Constantinople. No longer, says *The Spectator*, should the European Powers protect Turkey; they should allow it to be torn in pieces by the birds of prey. Because Russia is driven off from the Pacific Ocean, and not allowed to have an ice-free port there, the argument is that she must be allowed to take one either on the Persian Gulf or on the Mediterranean; and as an outlet on the Persian Gulf would threaten the British possessions in India, therefore she should have Constantinople and Salonika. But why should she have an outlet to the sea? She has all the Black Sea, and her merchant fleet have free access to the world's waters the year around, and most of the year equally from the Baltic. And why cannot a nation be prosperous that has no seaport at all? What country is more happy and prosperous than Switzerland? And does the fact that a country wants a piece of land or water give it the right to

take it from another country? We hear much of the "legitimate aspirations" of Russia for "an outlet to the sea," but we recognize nothing legitimate in the aspiration to seize the territory of another nation against its people's will. Nor have we any assurance that the rule of Russia would be a bit better than that of Turkey.

Native Menace in South Africa

The European nations divided up Africa between them with no more regard to the rights of the natives than if they had been so many black ants. Then, having annexed them, land and men, they began to impose a hut-tax on the men, or, in the Kongo State, to require of them a tax of rubber. We have the natural result in the terrible atrocities which the Belgian Government has inflicted on the natives on the Kongo, and the similar cruelties, proved against them, by the Germans in West Africa, and the fresh charges made by Count de Brazza in the French Kongo. The natural result is rebellion and war, such as the Germans have been engaged in for two years. And now there is serious danger in British South Africa, owing to interference with the self-government of the Basutos, and we hear that a British force has been sent to the Basuto border. The British have been desperately afraid that there would be an Ethiopian uprising against their rule. To prevent this, instead of giving equal liberty and privileges, so as to remove the cause of offense, they have been drawing closer the lines of repression. Hence, the forbidding the African churches to be self-governing, calling it "Ethiopianism," and even in Natal the churches under the care of the American Board's missionaries have been forbidden to meet without a white person present. In Capetown and other cities a black man is not allowed use the sidewalk, but must walk with the horses in the street. The liberty of holding land is restricted, and in the Transvaal the white people expect more drastic legislation, to the effect that no native or colored person should hold land in his own name. The sole difficulty is that

which meets English and Americans in India, China, the Philippines and in Porto Rico, the arrogance of Caucasians towards people who are said to be of an inferior race. They resent it, and rightfully.

Secretary Taft returns to Washington and reports conditions better than could have been expected in the Philippines—government good, business excellent, people contented. But we presume he tells something more to the President, and we hope he will succeed in persuading Congress to make important changes in the tariff. Perhaps, also, he may have been able to correct some evils. For example: When at the dinner given to Secretary Taft at Manila by Señor Herrera, Alcalde of the city and president of the Federal party, Señor Herrera in an address to Mr. Taft complained of the abuse of the constabulary, and of the conduct of American officials, and asked that a better class of Americans be sent to rule. A report says that Governor George Curry, of Samar, was so angry that he leaped to his feet and threw a glass of champagne, glass and all, in Señor Herrera's face; but the incident was kept out of the local press and foreign despatches. We do not know the further facts, but if the story is true Governor Curry ought to have been summarily removed.

It is a new thing for the President of the United States to summon the directors of college football to the White House to confer as to what can be done to civilize the game; but it is to his credit that he does it. The season is just begun, and one young man has been killed, and in a principal game one young man who had made a wonderful run with the ball was downed and nearly killed. We do not send boys to college to cultivate brutality. We do not object to rough play, but it must be play, not intentional violence.

Of course, the President ought not to be expected to pay the expenses of his trips when he travels officially to visit

various parts of the country; and, equally, the railroads ought not to be expected, much less required, to provide a Presidential train free, altho this has often been done by them. It has been suggested that Congress provide such a Presidential train; but this seems almost absurd. The simple way is for Congress to allow the President and his necessary attendants on such visits their traveling expenses, just as any business or benevolent organization does, and let them be audited and then paid from the national treasury. That is honest and decent.

There is a Civil Service Retirement Association in Washington, whose object is to have a retirement fund established by the stated contributions each month by members of the active civil service. That is not the way we pension retired officers of the Army and Navy. The National Treasury pays their pensions, and there is the same reason why civil servants, after thirty or forty years of service, should be provided for in their old age.

President Hadley says that hereafter Yale rowdies will be turned over to the courts to be treated like other toughs. It is time this were done. College rowdism has been condoned as "fun" and "pranks" quite too long. We are glad to see that other universities, as far off as California, are threatening the same course. We wait to see the threats carried out, and one or two college toughs set to breaking stone in striped suits.

Does the public know that the mysterious Baron Kaneko, who represented the Mikado in the interviews with President Roosevelt during these last few weeks, was educated in this country and joined a Christian Church? Dr. George F. Pentecost published years ago an article in THE INDEPENDENT telling the story of his conversion.

Insurance

The Insurance Investigation

THE developments in the insurance investigation now being conducted by the Armstrong Committee showed no abatement in interest last week. John A. McCall, of the New York Life, was again on the stand and testified that something like three-fourths of the legislative bills introduced are in the nature of "strikes." Large payments to Andrew Hamilton, of New York and Albany, for "legal expenses" on account of the New York Life were admitted and became part of the record. Turning from the affairs of the New York Life, the Mutual Life Insurance Co. came in for its share of attention at the hands of Charles E. Hughes, who is conducting the examination for the Armstrong Committee. The insistence of Mr. Hughes in probing the Mutual's affairs developed the fact that President McCurdy's own salary is \$150,000 per annum, or three times that of the President of these United States. A large number of Mr. McCurdy's relatives appear upon the pay-rolls of the Mutual, revealing a hitherto unsuspected amount of nepotism. In point, of fact, the total amount received by various members of the McCurdy family from the Mutual Life in salaries and commissions since 1885, when R. A. McCurdy became president, is nearly \$5,000,000. Drastic action regarding the New York Life has been taken in certain Western States, notably in Nevada and in Missouri, where the revocation of the company's license to do business has been threatened. Chairman Armstrong issued the following statement in this connection, which is in part as follows:

"I regret very much to see other States apply drastic remedies in advance of action in this State. Our committee was appointed to investigate conditions in the insurance business and propose remedial legislation. I sincerely hope other States will wait until we have had an opportunity to complete our work.

"These insurance companies are perfectly solvent and are able to carry out every contract they have made or may make. There is no reason for refusing to permit them to continue to do business. If Nevada proposes to do one thing, Missouri another thing, and some other State still another thing, there will be a chaotic condition of affairs. I believe there is due at least the courtesy to New York State

to wait until the investigation is completed and our remedial legislation is applied.

"Our committee will make the most thorough investigation possible, and when we are thru we shall make it our business to adopt such legislation as will safeguard the policy holders and make the insurance business safer and sounder and more attractive than it has ever been before. If other States jump in before we can complete our work or can adopt any legislation everything will be confusion in the insurance business of the country.

"Another point: When a number of Western insurance commissioners were in New York recently, we had a conference with them, and we promised to submit to them for their suggestions what remedial legislation it was proposed to adopt. In this way we hope to secure uniform action in all the States. It is not right for other States to take action after our committee has been at work only four weeks, and long before we have reached the end of our investigation. Any action they might take at this time would be premature.

"Our committee was not appointed to tear down the insurance business of the country, but to build it up. We are simply tearing down some of the rotten timbers to get the right foundation on which to build. We are trying to do this work man-fashion, thoroly, and conscientiously. It is not a pleasant task at best, but we are not dodging and shall not dodge any responsibility. The insurance body is sound, but it is afflicted with some ulcers. We are performing a surgical operation for the removal of these ulcers from the body, not trying to kill the insurance body. Because we have discovered some rottenness, it is not right for outside States to cripple the insurance business and handicap our efforts."

Madame Calvé, the famous singer, has caused her managers a great deal of trouble and loss on account of what seems to them wilful sickness. To guard against future losses they have insured her for \$42,000 at Lloyds against failure to appear because of illness. A clause in the contract provides that in case of illness, her own physician, an outsider and the manager's will decide on her ability to sing. If they decide she can and she still refuses, she will have to pay the manager a fine of \$10,000.

No insurance is carried on the priceless art treasures in the Metropolitan Museum of Art in Central Park. The Museum building having been pronounced fire-proof it is considered unnecessary to carry insurance on any of its contents.

Financial

Another Railway Trust Suit

By order of the President, Attorney-General Moody has begun proceedings under the Sherman Anti-Trust law against the combination that controls transportation by bridge or ferry across the Mississippi at St. Louis, together with all the railway terminal facilities in that city.

This suit resembles the memorable attack upon the Northern Securities combination. The defendant is the Terminal Railroad Association, of which the following fourteen railroad companies are members: Pennsylvania, Rock Island, Burlington, Missouri Pacific, Baltimore and Ohio, Alton, Illinois Central, Wabash, Southern, Louisville and Nashville, Iron Mountain, St. Louis and San Francisco, M., K. and T., and the Cleveland, Cincinnati, Chicago and St. Louis. Owing to the complaints of merchants as to the exactions of the Eads Bridge, a second bridge, the Merchants', was built, under a Federal charter providing that the property should be forfeited to the United States if the bridge should enter into a combination with the first one or be controlled by it. Some years ago, however, the Terminal Association, which owned the first bridge, obtained a majority of the stock of the second, with possession of the Wiggins Ferry Co. It is alleged that the resulting monopoly of transportation has been harmful to the interests of St. Louis. Every railway passenger is taxed 25 cents for crossing the river, and the transit charge for freight is from \$5 to \$8 per car. Complaint was made at Washington two years ago by the Attorney-General of Missouri, and it was urged that the forfeiture clause in the Merchants' Bridge charter should be enforced. After some deliberation it was decided that proceedings under the Sherman act would be more effective. It may be recalled that, three years ago, in connection with the attempt of the combination to obtain control of the Wiggins Ferry Co., the Rock Island road, which had been excluded, gained admission to the Terminal Association. The Rock Island had taken the

precaution to acquire a large block of the Wiggins stock. In the contest for control at that time, the price of this stock rose to \$1,000 a share, and a majority of the shares were finally sold to the combination at \$500.

It is pointed out that persons controlling the railway companies affected by this suit have quite actively opposed the President's railway rate policy. But the legal proceedings have not been suggested by this opposition, for the complaint was formally and officially made two years ago, and the case has been under consideration since that time.

THE new stock transfer tax in New York yielded \$1,226,000 in the months of July and August.

....A bulletin of the Census Bureau shows that the cotton crop of 1904 was 13,597,782 bales, of which sixty-one per cent. was exported.

....There has been a steady advance in the price of crude and refined petroleum since September 11th, the price of Pennsylvania crude having risen from \$1.27 to \$1.56.

....The improvements to be made by the New York, New Haven and Hartford Railroad Company in widening the cut or open subway through New Haven will cost \$5,000,000.

....This year's price of California raisins, as recently fixed by the association or combination of growers in that State, is higher in price than in any previous year, except 1903.

....A trade agreement between the sulphur producers of Sicily and the owners of the recently developed sulphur mines in Louisiana has been made, whereby the American producers are to limit their output to a quantity sufficient for the American market and certain portions of the foreign market.

....Dividends announced:

U. S. Rubber Co. (1st Preferred), quarterly, 2 per cent., payable October 31st.

U. S. Rubber Co. (2d Preferred), quarterly, 1½ per cent., payable October 31st.

Rock Island Co., quarterly, \$1.00 per share, payable November 1st.

The Independent

VOL. LIX

NEW YORK, THURSDAY, OCTOBER 19, 1905

No. 2968

Survey of the World

National Topics

In the plan of the local committee at Jacksonville, Fla., for receiving and entertaining the President, no provision was made for an address to the colored residents. They asked that the President should be requested to speak to them at the Florida Baptist Academy, but were told that no change in the program could be made. They then sent their request to Washington, and the President insisted upon stopping at the Academy and addressing them there. It was expected at the beginning of the week that the President would start for the South on the 18th and that Mrs. Roosevelt would accompany him as far as Roswell, Ga., the old home of his mother. It is understood that he will pay all the expenses of transportation. After his visit to New Orleans he will return on the cruiser "West Virginia."—Upon what appears to be good authority it is asserted that the President will make no attempt to obtain any tariff legislation at the coming session, believing that his influence ought to be exerted mainly in support of his railway rate policy.—At their recent convention, the Republicans of Massachusetts adopted a platform saying that while no tariff changes tending to depress any industry or to reduce wages should be made, there should be alterations whenever these were demanded by the public interest. The time for making them should be determined "by the representatives of the party from all parts of the country," but the platform approved the position of the State's Senators and Representatives at the last session of Congress in favor of present action. Recent addresses indicate that Lieutenant-Governor Guild, the candidate for Governor, and Mr. E. S. Draper, candidate for Lieutenant-Governor, are not in complete agreement on this question,

the former saying that the choice lies between immediate revision by Republicans and reckless smashing of the tariff by Democrats, while the latter opposes any change whatever at the present time. On the Democratic side, the campaign is enlivened by Mr. George Fred Williams's bitter attacks upon Mr. Henry M. Whitney, the Democratic candidate for Lieutenant-Governor, whom Mr. Williams calls "the leading representative of a vicious system of lobbying legislation."—The Rhode Island Democrats have again nominated Dr. Garvin for Governor.—At the President's cordial invitation, Mayor Rhett and ex-Mayor Smythe, of Charleston, S. C., lunched with him at the White House last week, having come to Washington to inquire concerning the presentation of a silver service to the cruiser "Charleston." These gentlemen attacked the President sharply in published letters, some time ago, for his appointment of Dr. Crum, a negro, to be Collector of their port.—The Civil Service Commission publishes evidence showing that Judge Francis E. Baker, of the United States Circuit Court, violated the civil service law in 1902 by soliciting campaign contributions from clerks in the post office at Goshen, Ind., or by urging these clerks to pay 5 per cent. of their salaries. The contributions were made. It is recommended that the postmaster at Goshen, C. D. Sherwin, be removed. The case of Judge Baker has been referred to the Department of Justice. According to the Commission, the truth of the charges was admitted by him, and there can be no defense except the statute of limitations.—Before leaving Colon for New York, on the 11th, the Isthmian Canal Commission annulled the contract recently awarded to J. E. Markel, for feeding and lodging the employees. This was

done by mutual consent, because the Chief Engineer is doing the work successfully thru the agency of his Department of Supplies.—Panama declines to discuss the question whether she shall assume a part of Colombia's foreign debt, insisting that Colombia must first recognize her Independence.—To assist the Dominican Government in preventing revolutions, the President has issued a proclamation forbidding the exportation to Santo Domingo of arms or ammunition from any port of the United States or Porto Rico.

Oregon's Land Thieves John N. Williamson, member of Congress from the Second District of Oregon, who was recently convicted of subornation of perjury in connection with land frauds, has been sentenced to be imprisoned in jail for ten months and to pay a fine of \$500. He was also reprimanded by the court for his failure to set a good example in high public office. The same penalty was imposed in the case of Marion R. Biggs, formerly United States Commissioner; but the jail term for Dr. Van Gessner (Williamson's partner) was reduced to five months, owing to his age and feeble condition. On the following day, also at Portland, Willard N. Jones, formerly a State Representative, and Thaddeus Porter, an attorney, were found guilty of conspiracy to defraud the Government of land. Ira Wade, a timber locator, on trial with them, was acquitted. The trial of Congressman Binger Hermann, formerly Land Commissioner at Washington, will soon take place.

The Attack Upon Philadelphia's Ring Mayor Weaver is still pursuing the ring in the courts. Upon warrants sworn out by ex-Judge Gordon, his counsel, five arrests were made last week. The men taken into custody are Abraham L. English, who was Director of Public Safety under Mayor Ashbridge; Philip H. Johnson (brother-in-law of Boss Durham), a young architect, to whom Ashbridge turned over all the city's new buildings; James D. Finley (Durham's cousin), building inspector; and John W. Hen-

derson and Henry E. Baton, of the firm of Henderson & Co., contractors. They are accused of defrauding the city in connection with the construction of the new smallpox hospital. Much evidence was submitted at the preliminary hearing, at the end of which all were held for trial. District Attorney Bell, who has been acting as counsel for McNichol and for the Durham-McNichol firm of contractors, and has in other ways been associated with those whom the Mayor is attacking, declined to initiate proceedings against these defendants, and his two young assistants (acting in his place) have given notice that the Mayor's counsel will not be permitted to examine and cross-examine witnesses at the trials. The Republican "organization" (still controlled by Durham and his associates) attacks the Mayor in an advertisement covering a page in the newspapers, asserting that he has checked the progress of public improvements, thrown thousands of men out of work, assessed city employees for a campaign fund, and employed a Democrat (ex-Judge James Gay Gordon) as counsel. It seeks support for its ticket by appealing to partisan feeling on national issues, while the ring's foes (the City Party) stand upon local municipal issues alone, and point to the support given to their movement by President Roosevelt, Secretary Root, Secretary Bonaparte and other Republicans. Among those who were asked by Senator Penrose's committee to contribute to the "organization's" campaign fund is Theodore Justice, wool merchant, widely known as a Republican and a protectionist. Characterizing the request as "an impertinence," he went on to free his mind as follows:

"As a life-long Republican, I am willing to spend money to defeat the thieving gang that at present controls the Republican 'organization' in Philadelphia; and the State 'organization' has shown itself to be very little, if any, better in its action on the ripper bill, which is only one of hundreds of acts of maladministration countenanced by it. The honest people of Philadelphia are now arrayed against graft. In my opinion any Republican who will support the ticket today degrades himself to the level of the gang. This is a movement of the people against thieves. The crimes of Boss Tweed and his gang of plunderers pale into insignificance in comparison with the audacious plundering of the gang which now controls the Republican 'organization' in Philadelphia,

and to some extent the Republican 'organization' of the State."

It appears that the labor unions came to the support of the "organization's" ticket after Senator Penrose had procured the appointment of one of their leaders to be a factory inspector.

Chicago's Railway Problem

Mayor Dunne sent to the Chicago Council last week a message urging that consideration of the street railway companies' offer be discontinued and that his plan for dealing with the railway problem be reported favorably. Whereupon the Aldermen rejected his plan by a vote of 45 to 18, altho thirty-four of them had been elected with him on a platform calling for immediate municipal ownership. The rejected plan provided that a franchise be granted for twenty years, in streets where the old franchises have expired, to a company composed of advocates of municipal ownership, who should pay to the city all net earnings in excess of five per cent. and sell out to the city at the end of the term. Aldermen who had been counted on his side said that this plan had not been considered or broached in the campaign, but that the plan then supported had been one requiring the city to buy the roads or to acquire them by condemnation proceedings. The Mayor therefore decided to lay such a plan before the Council. It is said that the Council is inclined to regard with favor the companies' offer, which we described two weeks ago, and to which has now been added a provision for a referendum in April next. This addition is said to have been suggested by J. Pierpont Morgan, who is regarded as the representative of the interests now controlling both corporations. On the other hand, it is asserted that the companies' offer will surely be rejected.

Labor Controversies

Five weeks ago the International Typographical Union began to insist that employers in the book and job printing business should sign agreements for an eight-hour day, the reduction of the number of hours to take place on January 1st. Many strikes followed, owing to the re-

sistance of the United Typothetæ, an association of employers. The contest has been a peaceful and quiet one. At present the progress made by the union appears to promise a victory for the workmen. A large majority of the employers not connected with the association have signed, but their agreements are conditioned upon the general success of the movement. At the end of last week it was announced that agreements had been obtained by 240 local unions, and that men were on strike in fifty-three cities. In Chicago the prominent employers are still making determined resistance, and are teaching young women (heretofore employed as typewriters) to operate the type-setting machines. Their purpose, they say, is to have an "open shop" hereafter. In that city an injunction has been granted.—At the recent convention of the Massachusetts Federation of Labor, a long resolution denouncing socialism and the socialist propaganda within the Federation was adopted. The principles of socialism, the resolution said, were "intellectually unsound, impractical from an economic standpoint, and demoralizing to the general well-being of society." An attitude of sympathy toward the socialist propaganda in the Federation would be, it was asserted, "detrimental to our progress, destructive of our good fame, and disruptive of those personal and civic virtues which it is our duty to cultivate." It is said that on account of the adoption of the resolution several unions will withdraw from the Federation.

Cuba's Treaty With England

It is understood that the Anglo-Cuban treaty, which has been before the Senate at Havana for several months, is opposed by our Government because the ratification of it would interfere with a treaty which the Administration desires and intends to negotiate with Cuba. Reports from Washington say that this proposed treaty would provide for a reduction of tariff duties on goods carried in American or Cuban ships, and would also involve mutual concessions with respect to port charges and shipping privileges. The pending Anglo-Cuban treaty includes an agreement that, "in all matters relating to commerce, naviga-

tion, and industry," duties on imports excepted "each and every privilege, concession, and immunity already conceded, or which in the future may be conceded" by either Power to the citizens or subjects of any other Power shall be granted immediately and unconditionally to those of the other contracting Power, Great Britain or Cuba, as the case may be; also that all this shall apply to any British Colony, if notice to that effect be given by Great Britain within the first year of the treaty's life. The latter clause, it is said, would be useful in building up trade between Cuba and Canada. Havana's Chamber of Commerce opposed the treaty, alleging that substantially all the advantages are on the side of Great Britain, that such an agreement would tend to prevent any development of the island's coast shipping, and that it would stand in the way of such a navigation treaty with the United States as we have already mentioned.—At a meeting of Liberal leaders, on the 15th, it was decided that their party should withdraw entirely from the campaign and take no part in the presidential election. It was alleged that the Government, by fraud and intimidation, had made it useless for them to remain in the field. The resignation of the office of Governor of Santa Clara province by José Miguel Gomez, recently the Liberal candidate for the Presidency, has been accepted. The City Council of Santa Clara, heretofore faithful to Gomez, has gone over to President Palma's party.

The Philippine Islands

It was made known in Washington on Sunday last that since August 23d there had been 713 cases of Asiatic cholera in Manila and the neighboring provinces of Luzon, with 553 deaths; but Governor Wright's dispatches said that the epidemic was practically at an end. The disease appears to have been of a very virulent type, for 187 of the 214 cases in Manila were fatal.—Associated Press dispatches from Washington on the 12th said that Governor Wright would resign about December 1st, owing to dissatisfaction with the situation in the islands, and would resume the practice of law at Memphis. On the following day

Secretary Taft emphatically asserted that, to his knowledge, the Governor had not resigned. Nor, in the Secretary's opinion, did he intend to resign, altho he was about to return to the States for a six months' vacation. At the White House there was given out an authoritative denial of any knowledge that the Governor had decided to retire. The origin of the report was not disclosed, but it is said that the story was given to the press by the President's Secretary, Mr. Loeb. Press correspondents who are usually well informed say that the retirement of the Governor would not be opposed by the Administration, because he is not well adapted to the needs of the office and has not accepted the Filipinos as the social equals of the whites, altho treating them with formal courtesy. Some support is given to this explanation by stories told in the letters of press correspondents who accompanied the Taft party to the islands. It is asserted that upon his arrival the Secretary found it necessary to improvise entertainments in which the leaders of Filipino society could meet the tourists in a social way, because no provision for such meetings had been made, and that on one occasion he deemed it expedient to pay special attention to the white American wife of a Filipino student who had recently returned from the States, because she had been ostracised by the white official society of the city.—A final settlement of the negotiations concerning the friars' lands has been reached by a compromise as to the price of the Dominicans' property. They are to receive \$3,521,000 on the 20th inst.—In defence of the constabulary forces, as to whose efficiency there is conflicting testimony, it is shown that they have killed 2,504 ladrones and captured 9,155 (with 4,285 rifles), and in doing this work have lost 22 officers and 295 privates.—In Mindanao, Datto Ali is again on the warpath and has been killing Moros who uphold American rule.

The Scandinavian Divorce

Both the Norwegian Storting and the Swedish Riksdag have accepted the agreement reached by the representatives of the two nations at the Karlstad Conference, and only the formal

passing of the acts dissolving the union is needed to complete the dissolution of the union, which has lasted since 1814. In the Storthing the only opposition to the ratification of the agreement was by the Republicans, who hoped to get the question submitted to the people in order to defeat the plans of Premier Michelsen for the re-establishment of the monarchy. The Premier said that the request to King Oscar, that he permit a prince of the House of Bernadotte to take the Norwegian throne, was intended as an expression of good will, but since it had been otherwise interpreted in Sweden, the question now appeared to be outside practical politics. This statement is considered as equivalent to a withdrawal of the offer of the throne to Prince Charles, second son of the Crown Prince of Sweden, and probably Prince Charles, second son of the Crown Prince of Denmark, will be elected. The Karlstad agreement was ratified by a vote of a 101 to 16. The Socialists and Radicals will make an effort to have the question of the form of government of Norway submitted to a referendum vote, but there is not much hope in any case that a republic will be chosen.—In the Swedish Riksdag both houses ratified the Karlstad agreement on October 13th, after a long debate, in which the concessions made by Sweden and the arbitration clause referring all points in dispute to the Hague Court were sharply criticised.

The War Over According to Article 14 of the Portsmouth Treaty, that treaty was to be considered ratified when the Emperors of Russia and Japan had signed their respective copies, without waiting for the actual exchange of the documents, which will take place at Washington. At three o'clock on the afternoon of October 15th Mr. Spencer Eddy, the American Chargé d'Affaires at St. Petersburg, officially informed the Foreign Office that the Emperor of Japan had signed the treaty, and at the same hour the French Minister at Tokyo notified the Japanese Government that Emperor Nicholas had ratified the treaty, and the war was formally at an end. The news of the signing of the treaty by the Czar was first telegraphed to President

Roosevelt as a mark of appreciation of his efforts toward peace. Steps will be taken immediately to bring home the interned Russian ships. The Russian prisoners, numbering some 80,000, will be brought to Vladivostok. The Japanese troops are already being withdrawn from Manchuria. Part of the troops may be quartered in Korea to prevent any uprising of the Koreans against Japanese rule. The Korean foreign ministers are likely to be withdrawn and Japanese rule made practically complete. Both the Russian and Japanese troops, except the railroad guards, are likely to evacuate Manchuria long before the limit of eighteen months fixed by the Portsmouth treaty.

England, France and Germany The importance of the modern newspaper as a factor in international politics is illustrated by the furor created by an article published in the *Paris Matin*, October 7th, purporting to give the secret history of the crisis last June when a rupture seemed to be impending between Germany and France over the Moroccan question. The *Matin* alleged that in that emergency Great Britain not only promised to aid France in case she was attacked by Germany, but that the campaign was planned in detail; the English fleet was to seize the Kiel Canal at once and land 100,000 men in Schleswig-Holstein, to co-operate with an equal number of French troops. The importance attributed to the article was because it was supposed to have been inspired by M. Delcassé, the French Foreign Minister, who was dismissed by Premier Rouvier in order to conciliate Germany. Both M. Delcassé and the author of the article, M. Lauzanne, denied this, but M. Delcassé refused to deny the truth of the statements contained. The British Government is believed to have informally assured Germany that there was no such definite agreement between the two countries, altho it is not to be denied that France was supported by Great Britain in her attitude on the Moroccan question to a certain extent. The French Government has issued the ambiguous statement that "the published reports regarding the Cabinet meeting

preceding M. Delcassé's retirement are inexact." M. Alexandre Ular has added fuel to the flames by an article in the *Paris Figaro* purporting to give further details of the affair to the effect that Great Britain not only offered her armed support against Germany, but expressed a willingness to conclude a treaty of defensive alliance with France, and that the German Government learning of this sent a warning thru Italy that any such treaty would be regarded by Germany as a *casus belli*. In consequence of this Premier Rouvier dismissed M. Delcassé from the Foreign Office and, taking charge of the negotiations in person, consented to the International Conference on Morocco, which is soon to meet. The affair caused an unusually virulent outbreak of Anglophobia in the German papers, and is being made the most of as an argument for the increase of the navy. General von Liebert, formerly Governor-General of German East Africa, in an address before the Colonial Congress at Berlin, urged the necessity of a navy strong enough to make Great Britain hesitate to attack Germany. Colonies are essential, he said, to our commercial interests. A weak navy is an extravagance, but a powerful navy is a pledge of peace. When on the sea, as now on the land, Germany had become a Power which could command respect, then their watchword would be realized—"The twentieth century belongs to the Germans." The new navy bill will call for a number of larger battleships of over 16,000 tons.

The Treaty of Portsmouth The full text of the treaty closing the Russo-Japanese war has been made public. Most of its provisions have been anticipated in a general way by the newspapers, but the wording of some of the important articles is of interest. The Korean question, the direct cause of the war, is settled in the following words, which certainly leave Japan a free hand in Korea so far as Russia is concerned:

"ARTICLE II.—The Imperial Russian Government, acknowledging that Japan possesses in Korea paramount political, military and economical interests, engage neither to obstruct nor interfere with measures for the guidance, protection, and control which the Imperial

Government of Japan may find necessary to take in Korea.

"It is understood that Russian subjects in Korea shall be treated in exactly the same manner as the subjects and citizens of other foreign powers; that is to say, they shall be placed on the same footing as the subjects and citizens of the most favored nation.

"It is also agreed that in order to avoid causes for misunderstanding that the two high contracting parties will abstain on the Russian-Korean frontier from taking any military measures which may menace the security of Russian or Korean territory."

Russia renounces all special privileges in Manchuria, and "the open door" in that province, which the late Secretary Hay worked so hard to secure, is provided for in Articles III and IV as follows:

"The Imperial Government of Russia declare that they have not in Manchuria any territorial advantages or preferential or exclusive concessions in the impairment of Chinese sovereignty or inconsistent with the principle of equal opportunity.

"Japan and Russia reciprocally engage not to obstruct any general measures common to all countries which China may take for the development of the commerce or industry of Manchuria."

It should be noticed, however, that the clauses are purely negative so far as Russia and Japan are concerned, and are entirely dependent for their value on the uncertain action of China. In regard to the cession of the railroad and of the lease of Port Arthur and other property on the Liao-Tung Peninsula, however, it is positively stipulated "that the two high contracting parties mutually engage to obtain the consent of the Government of China." Japan and Russia agree that their respective railroads in Manchuria shall be exploited exclusively for commercial and industrial purposes and in nowise for strategic purposes. But this restriction does not apply to the Japanese railroad in the Liao-Tung Peninsula. The especial cause of the riots in Tokyo was the report that Japan had relinquished the right to erect any fortifications on the northern end of Yezo bearing on La Perouse Strait, which separates that island from Sakhalin. As will be seen from the following quotation from Article IX, the rumor exaggerated the extent of Japan's concession on this point:

"Japan and Russia mutually agree not to construct in their respective possessions on the Island of Sakhalin or the adjacent islands any fortifications or other similar military works. They also respectively engage not to take any

military measures which may impede the free navigation of the Strait of La Perouse and the Strait of Tartary."

Both Powers are to give an account of the money actually expended by them in the care and maintenance of prisoners, and Russia engages to pay the balance in favor of Japan. The treaty is dated for Japan on the fifth day of the ninth month of the thirty-eighth year of Meiji, and for Russia August 23d, 1905, which correspond to September 5th, 1905, in our calendar. The war began February 8th, 1904.

Peace in Japan

The riotous demonstrations of dissatisfaction with the terms of peace on the part of the Japanese people have been superseded by popular rejoicings at the naval visit of Japan's ally. In Hibiya Park, so recently filled with an infuriated mob denouncing the Government and Marquis Ito in particular, the Mayor of Tokyo gave a garden party, where Marquis Ito and the Cabinet Ministers received Vice-Admiral Sir Gerard Henry Noel, commanding the British squadron of twelve vessels, now in Yokohama harbor. Both at Tokyo and Yokohama the officers and men of the fleet were enthusiastically greeted by the people, and entertained by exhibitions of fencing, jiu-jitsu, juggling and fireworks. The officers of the American battleship "Wisconsin" and the cruiser "Cincinnati," now at Yokohama, were invited to participate in the festivities, and Mayor Ichihara, in toasting the British Navy, referred to the presence of the American vessels, and expressed the belief that the United States, as the friend of both Powers, heartily endorsed the Anglo-Japanese alliance. Mr. William J. Bryan, now in Japan, is receiving a warm welcome, and has been asked to give a public address.—Admiral Togo, upon landing in Ise Bay from his flagship, proceeded directly to the great Ise temple to worship. This act, together with the references to ancestor worship in the Imperial rescript, will encourage the revival of Shintoism as the national and patriotic religion.—The Japanese Minister of War, Mr. Teraoutchi, has ordered all officers and soldiers in the field to abstain from criticis-

ing the terms of peace, since this is a matter for which the Emperor alone is responsible. The Imperial rescript, announcing the signing of the treaty and making known its provisions, commends the army and navy and the civil officials and the people for having all done their duty and contributed to the glorious success of the war. In regard to the conclusion of the war, the Emperor uses the following language:

"The result is due in a large measure to the benign spirits of our ancestors, as well as to devotion to duty of our civil and military officials and the self-denying patriotism of all our people.

"After twenty months of war, the position of the Empire has been strengthened and the interests of the country advanced, and inasmuch as we have never wavered in our desire for the maintenance of peace, it is contrary to our will that hostilities should be protracted and that our people should unnecessarily be subjected to the horrors of war.

"When the President of the United States, in the interests of peace and humanity, suggested that the Governments of Japan and Russia should arrange terms of peace, fully appreciating his kindness and good will, we accepted the suggestion and at the proper moment appointed plenipotentiaries to confer with those of Russia.

"We have examined the terms agreed upon by the plenipotentiaries, and, having found them in entire conformity with our will, we have accepted and ratified them.

"Peace and glory having thus been secured, we are happy to invoke the blessing of the benign spirits of our ancestors and to be able to bequeath the fruits of these great deeds to our posterity. It is our earnest desire to share the glory with our people and long enjoy the blessings of peace with all nations.

"We strongly admonish our subjects against manifestations of vain-glorious pride, and command them to attend to lawful avocations and to do all that lies in their power to strengthen the Empire."

The death of Prince Sergius Trubetskoy, the great Liberal leader, on October 12th, is a severe loss to the party of moderate reform, because in the present crisis, attending upon the convocation of the Duma, or national assembly, such men are very much needed in Russia. Prince Trubetskoy was in a position of peculiar usefulness, since by his rank he had direct access to the Czar, and he was spokesman of the delegation that presented to him the petition of the Zemstvos for a representative government.

By his office of Marshal of the Nobility of Moscow he was the head of the Zemstvo of that province, and at his residence the conferences of the delegates of the Zemstvos were held, when they were forbidden the right of public meeting. As rector of the University of Moscow he was able to secure a considerable degree of freedom of instruction, and at the same time to check the riotous tendencies of the students. He was an idealist in philosophy, original in thought, altho strongly influenced by Soloviev. He edited a journal of philosophy and psychology published at Moscow. His body was conveyed to the station in St. Petersburg by a large crowd of students and people. Among the wreaths upon his coffin was one from Emperor Nicholas.—The strikes in Moscow and St. Petersburg still continue, and there are many minor disturbances and rumors of a general labor uprising.—Assistant Chief of Police Osaovsky, who was largely responsible for the Jewish massacres of 1903, was assassinated at Kishenev October 13th. The Finnish student Hohenthal, who last February assassinated Procurator Soininen on account of his Russian proclivities, escaped from his prison in Helsingfors by the use of a file and a rope ladder, in the night following the confirmation of his sentence of life imprisonment by the Supreme Court.—The Czar has given a blow to the machinations of the enemies of Count Witte by publishing the following rescript, upon signing the Portsmouth Treaty:

"Count Sergei Julevich:

"In my unceasing zeal for the welfare of Russia I accepted the friendly offer of the President of the United States for a meeting of Russo-Japanese plenipotentiaries in order to put an end to all the sorrows and terrible consequences of the long-continued war, entailing so many sacrifices on both sides. My choice fell on you to go to the United States as my plenipotentiary, and in case the Japanese proposals were acceptable, to enter into *pourparlers* to terminate the war on the conditions indicated by me.

"During the negotiations for the final arrangement of peace you have most brilliantly and successfully performed your task, acting firmly as a worthy representative of Russia. Insisting on the impossibility of accepting conditions wounding the patriotism or conscience of the Russian people and impairing the interests of your country, you have obtained right-

ful concessions, rejecting, tho with all due acknowledgment of the successes of the enemy, the payment in any form whatever of the expenses of the war not commenced by Russia and only consenting to return to Japan the southern part of the island belonging to her up to 1875. Thus an all-advantageous peace was obtained.

"Highly appreciating the ability and statesmanlike experience you have shown, and as a grateful recognition of your great and highly important services to the Fatherland, I grant you the rank of Count of the Russian Empire.

"I remain ever your well-disposed and highly grateful
NICHOLAS."

Hero Fund Medals Ten awards were made on Monday last by the Commissioners of the Carnegie Hero Fund. Silver medals were given to four persons and bronze medals to six. The list is as follows:

Miss Maude Titus, sixteen years old, a high school girl, of Newark, N. J., for risking her life to save Miss Laura V. Reifsnnyder, of East Orange, N. J., who had fallen into the water from a yacht, in Casco Bay, Me., on July 30th, 1904; silver medal.

Mrs. Daniel Davis, of Cleveland, O., whose husband lost his life while trying to save a miner in a shaft at Sherodville, O., on July 11th, 1904; silver medal and \$1,000 for the education of her children.

Wade H. Plummer, fifteen years old, of Lamar, S. C., who saved the lives of two companions who had been thrown into the water with him, in Lynch's River, on May 7th, 1904; silver medal and \$600.

Michael A. Doyle, of Quebec, for saving the life of Miss Charlotte L. Decastner, who had fallen into the St. Lawrence River; silver medal.

Charles Crabbe, of Coppers Landing, Va., whose wife lost her life on February 11th, 1905, while trying to save a colored boy from drowning; bronze medal and \$1,000 for the education of her children.

Miss Anna M. Cunningham, twenty years old, a nurse in the hospital at Savannah, Ga., for saving Edwin W. Cubbage, Jr., from drowning, on May 26th, 1905; bronze medal.

William C. Brune, seventeen years old, of Sandusky, O., who saved a boy from drowning, on July 8th, 1904, diving three times for him; bronze medal.

Arthur J. Gottschalk, twenty-four years old, of Lancaster, N. Y., for saving the life of Mrs. Joseph Webster, in the water near Buffalo, on July 6th, 1904; bronze medal.

George F. Russell, twenty-four years, of Groton, Conn., for rescuing Paul F. Winslow and Frank G. Baer from drowning in Long Island Sound, on July 29th, 1904; bronze medal.

Arthur A. Ross, twenty-three years old, of Foxborough, Mass., for saving the lives of Nellie and Mary Welsh, who had fallen into a river, on April 19th, 1905; bronze medal.

The Red Days

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OLD FARM DAYS," ETC.

SUMACH and Virginia creeper are first to close the yellow days, and flame the stumps and rail fences and the bare knolls with crimson and scarlet. I like these two plants because they do their glorious best without making any fuss about it. The creeper only asks for some charred tree or a pile of stones to glorify, and the sumach prefers a barren slope where there is little else except stunted apple bushes and wild blackberries. Half a mile away you see a great crimson patch of sumach, and warm your soul by it. The transformation is very curious, for those very spots which in summer were most dull and barren are now most beautiful—old pastures and brooksides. In Summer the yellow ray is the strength of the sunbeam, regulating and stimulating growth. But in Autumn, when growth begins to be checked, the red or ripening ray takes hold of the seed pod and the leaf, to bring the year's work to a happy end. It is a parallel with human life in growth.

I like old folks, real old folks; sunny, warm, red-hearted; old folks who do not lose their laugh and their eye twinkle. Perhaps it is because my memory calls up so easily a father who not only absorbed a lot of sunbeams during the summer of his life, but who reflected them upon his boys during his autumn; and a little mother who churned sunshine into proverbial wisdom and family life, until at ninety even the red ray faded. Anyhow, old age is simply ripeness—like a Spitzenburg apple—red, juicy, palatable. Why any one dreads old age I cannot see. Boyhood is also beautiful because of its redness; a fine lifefulness that should never be wasted, but preserved carefully through a hundred years. Some day the life ideals will get into the vision range of the people, in place of the waste ideals. I do not see why our old age and the old age of the trees are greatly unlike.

At any rate there is something about this fine finishing up of a decent job that ought to command respect and admiration. The most joyous sight that I can

remember is our old orchard of Spitzenburgs. Row after row, grafted high—in the old fashioned way—to the reddest of all apples. A school boy, I used to come home late in the afternoon of October, by way of the orchard, climb thirty feet up into the thickest of the apples, seat myself in some convenient crotch, an acre of redness just under my eyes, and the broad valley spreading on beyond. Tree after tree to the right of me, and to left, and down the slope—red, red, red. There is no apple now to compare with this old favorite, unless it be the McIntosh. In my dreams I still climb those trees, to look at those apples. What a fine thing is the power to dream. It opens old chests, minding nothing about locks, or about time, and shows us old years just as bright as ever. Is any good thing ever really lost? Somebody's brain will keep the red-letter days and the red-letter events forever.

Did you ever see a long row of mountain ash trees in October bending down with scarlet fruit, when the robins were on their passage Southward every night, and dropping down in the morning to breakfast? It is easily within range of any country home builder to have such a wind break and bird orchard. It sends off our feathered friends happy and fat for a flight to the Gulf States. Then, again, no one should have a country home without a few water maples.

These trees vary so much in Autumn shading that it will be well to go to some swamp and select half a dozen specially notable for rich coloring. The small trees that you can transplant will be beautiful while small, but will grow more beautiful as they grow larger. It will pay you, for other reasons also, to visit a swamp at this season of the year, and note how Nature revels in color.

I have a personal liking for the butternut, but the tree despises red. To my taste the nut surpasses all others that grow; besides, I never went Brazil nutting, or Pecan nutting, and how, then, should those nuts appeal greatly to my

sensibilities? But I have picked up many a bagful of the blessed butternuts, sitting down occasionally by a pile of stones to crack a few—and my fingers also. Those were days! But they were yellow days! The butternut scorns old age, and before the red days come, tumbles its nuts and its leaves, all together, on the ground—russety and brown—and goes to sleep for half the year. Ash trees compromise on a rich brown-purple for a few days only. The persimmon is defiant. Not a touch of red will it tolerate; but stopping work, it throws down its leaves, while its limbs are festooned with golden fruit.

The sugar maple is loved, I think, as much for its color as for its sugar. The variation of shades is something wonderful. I find those that grow in New England are much brighter but not richer than those of Indiana and the Midwest. This matter of color should be taken into consideration in planting our home shrubberies and groves. What is there about a patch of red in the landscape that so pleases us? Yet we long for the bright red days; and people's faces never look so contentedly happy as when they can drive about under the crimson and scarlet leaves. The red ray is the slowest vibration of any ray in the sunbeam. It is exciting to the nerves and quickening to the pulse. Blue is blue; it makes us blue. Red wakes us up and sets our minds into activity. Father Secchi was, I think, the first to suggest the use of red rooms for the despondent and hypochondriacal. I myself like a red room. It comes close to me and warms me; red walls, soft red furniture, modest red rugs, and cherry red tables. These things bear a close relation to us. Color makes us bright or blue; heals our mental wounds and quickens our physical flow of life. This should be considered very seriously when we are about to create a country home. Some trees are full of sweetness, humanliness, love; others are cold and distant. Get all the red you can to alleviate the cold of winter. The little Japanese maples have done a lot of good and are real comforters; but I think our pleasantest shrubs are those natives which we can easily gather from our forest edges and swamps. The red barked dogwood

is one of the best of these—turning every twig brilliant crimson as the leaves fall off in Autumn. This color is retained all winter. Yellow bushes, like Rudbeckia, should never stand close by the house or near the street, but be seen at a distance and with a dark background. Nature takes the same care in distributing her golden rod.

The red days are never finer than just at their close, when the euonymus opens its seed pods and shows its crimson berries. I wonder more people do not plant this charming bush—the Thanksgiving shrub, I have called it. It is in its glory just about Thanksgiving Day. Then, near the house, should be some large plants of the best sorts of barberries; and scattered about, a plenty of high-bush cranberries (*viburnum opulus*). These last bear fruit wonderfully like the real cranberry for sauce and for pies; but it is for the elegant bunches of scarlet berries that hang out over the snow that I would grow them. They bend down gracefully from their stems, twelve feet high, or if you please to trim them so, they will cover low bushes. The snow will cover the earth, but the red days will remain about the gardens and lawns that are shrewdly planted.

The other day I shook out of an old Walker's Dictionary some pressed poppy leaves, red as ever; and a few maple leaves—placed there by my mother over half a century ago—all the material there is left of that garden of grass pinks and cinnamon roses and lilacs that went so into my character, before the big, wide world got a hold of me. I knew then only the stars above and the flowers below, and the gentle hands of home guidance. It is from this standpoint I like to consider garden making and country home building. Will your lawns and house make fine character? What have you taken into consideration in making your estimate? Have you planted pride and display; or is it sweetness, sincerity and love? As a rule, I think there is too much art about the new country home making. It is not a growth, but a manufacture. It is kept up by hired bodies, who have it really for the most part to themselves. I asked a garden owner the name of a flower. He shouted: "Sandy! come here, and tell this gentleman the

name of this flower"—explaining to me that he had not much knowledge of the whole place, except the bills he had to pay for running it. My poppy leaves do not need to be carefully preserved any longer, for they are not all of that dear old garden, so full of sweetness and color. I have some of it between the leaves of my soul.

The only sorry thing about these crimson days is that they are growing shorter. It is curious how the loss of a single minute on each day soon narrows off the hours. The sun does not rise until after six o'clock, but it is redder when it does rise. If we could only have more morning in Autumn it would be finer than Summer. Say what you will about the charm of an evening around the fireplace, even electric glow is a poor substitute for sunlight. Give me the morning always, when the whole body and soul is refreshed by sleep, in preference to any other part of the day. Have you watched the October sun rise? Never in a hurry, but with a good deal of deliberation; and generally its rays come thru air that is dense enough to soften them into red. Such sunshine has a mild tint of crimson.

It is curious how many people can see the processes of the year, open as they are to examination, and yet see them wrongly. Most people tell me that the frost turns things red, and that it ripens the nuts. It does nothing of the sort. It colors things brown or black, and sharply puts an end to the crimson and the scarlet. This turning red is a life process. It involves a chemical change, that is also physiological; and those rays are absorbed which have been most abundant, leaving only the red to be refracted. A severe freeze will loosen the leaves from the trees and distribute them over the grass. It is the advance courier of winter, which is the negation of all color.

In my Florida home I noted little that was red except the cardinal bird. Yellow dominated, for it is eternal Summer—there is no Autumn there. Orange is the Florida color. Night and day are

bathed in yellow. Such moonlights in February under the pines! Such walls made of yellow jessamine climbing over the magnolias and olives! And the roses were golden balls! But the cardinal bird, with a song that began with daylight and lasted all day long, flitted everywhere; a red ray weaving thru the yellow vegetation. She built her nest at my door; watched her eggs in an orange bush, and fed her young in the loquat and peach trees. Even in the perennial tropics Nature indulges her liking for red; only it is transferred from vegetable life to animal. It is the birds and the butterflies and the beetles that she paints. But in these Northern homes of ours we have an Autumn—a glorious red season, from which almost all other colors are banished. The distribution of red is sometimes to the stem, sometimes to the bark, and again it is found in the sap; only somewhere red is always in evidence. A curious instance is in the bloodroot, with its pure white flowers and its deep red blood. But as this plant blossoms in the spring the red is retained in the juice.

It is a chilly day. The birds call out from the orchard to those in the street and the lawn trees to be preparing for their journey Southward. There is a deal of talking of a peremptory sort—bustling, sharp, hurrying notes. I wish I could understand all the languages that are talked in my trees; I should use them to more advantage than Greek. A white mist this morning rolled out of the west, and settled down in the valley. Over the top of it the tallest trees stand out, with their highest limbs. It is a curious sight, as I look down from my hill home, to see the green islands in the white sea; but still more curious is it to see the scarlet maples as if afloat in the waters. But there are more trees that stand with bare spars, anchored for winter. The red days are going; the white days are coming. I will follow the birds to sunny Florida.

CLINTON, N. Y.

The Greatest Problem of Great Cities

BY JULIUS WILCOX

[In a recent article in *THE INDEPENDENT* Mr. Owen Kildare said: "I have not yet heard even the most radical express the opinion that honest, pure and wholesome lives can be lived without the foundation of a home. And homes down our way are still things of horror." The greatest problem connected with great cities is certainly the housing one, and this Mr. Wilcox discusses in the following article.—EDITOR.]

A LARGE city is essentially and necessarily rectangular. There are exceptions, as in old Boston, radial and zig-zag; or in portions of Brooklyn, whose Fulton street is said to have begun as a cow-path; or in portions of New York that were once villages; but modern growth takes the form so characteristic of Philadelphia.

The secret of the city is that men get together not to make a city, as an end, but to make material progress. A city is a congeries of building, and the larger the whole the more the compactness, broadly speaking, for if a city had to grow solely by accretions on the edges, it would cease growing—the increasing distances would defeat the object. Taking New York as the final example, twenty blocks, across their narrower dimension, represent a mile of length, by the uptown rule, and the lot 25x100 may be taken as unit. In practice, this lot has from a fourth to a third at the rear uncovered, this open space abutting against a like portion of opposite lot and thus in effect doubling each. The finished block is built upon around its four sides, and incloses a central space of aggregated backyards.

A house nearly three times as deep as it is wide and open only at front and rear is necessarily somewhat restricted in light and air, yet so long as the occupants are few their freedom of movement saves them from suffering. The evils begin when compacting begins, yet it is a mistake to lay the evils of the tenement upon the division of the ground into deep and narrow lots. That is a matter of geometry, and rectangular plotting is the only way to bring the maximum surface into service. Had the original lots been much wider, they must in time have been subdivided; had they been much deeper, new streets must

in time have cut through (perhaps very narrow ones) or else the lots must have been dotted with rear houses.

The natural steps in the crowding process make one floor, instead of one house, the family unit; narrow the houses, putting three on two lots; carry them higher; make rooms more in number and less in size, and put low houses into the old yards—all in the endeavor to get more use out of the surface. These steps are distinctly traceable in some sections of New York. For example, the original low dwelling on Cherry Hill (once aristocratic) was first carried higher; low houses were built in the once ample gardens, the paths which had led to the gardens being converted into alleys of access; these inner houses then went higher and higher, until there—as elsewhere by the same process—the rear tenement, the worst abomination of all, was evolved.

Space does not allow enlarging upon the gravity of the subject; moreover, the object is rather to point out what has been and can be done in practical solution of the tenement problem. Suffice it that the tenement as developed in New York is evil only and cannot be too darkly painted. To say that its conditions make for unrighteousness is almost a feeble statement; a more adequate one is to say that they barely allow anything else. Seaside homes of refuge for successive groups of sick babies; floating hospitals maintained for the same purpose by the St. John's Guild; college settlements, and all the varied means of charitable service, useful and admirable tho they are, unitedly do no more than alleviate a little. They lighten the effects, but do not reach the causes, which are more deeply and potentially rooted in the tenement than in all else combined. Vicious conditions are inherent in it, and they grow out of the makeshift attempt—which never looked

beyond the landlord's profit—to crowd a large number of persons into the narrow type of dwelling that served very well before the crowding began.

At its best, this narrow building assumes the "dumb-bell" form; an internal shaft, equivalent to a large chimney, occupies the center, and thru this and the

THE UNDER-WORLD OF THE TENEMENTS.

Three cellar views on the East Side. The pig lived in a cellar on Mott street in indescribable filth. His underground sty opened directly into a bakery. The goats inhabited a cellar on First avenue. They were part of a macaroni establishment. On clear days the macaroni was dried outside on racks above a yard filled with rubbish. On rainy days it was dried in the room with the goats.

The central picture shows some "open" plumbing in East Twenty-eighth street. Vandals had stolen the lead connections, leaving the tub and basin to discharge on the ground and the gases to rise through the house from the sewer. The house was occupied.

The picture at the bottom shows the cellar of an occupied house. The water supply pipe leaked continuously and kept the cellar floor flooded.

windows at front and rear is the sole inlet for light and air. The fault is not in the original use of the unit lot, but in its later misuse. This is easily put to test. Take the 25x100 lot and suppose its frontage gradually reduced and its depth similarly increased; when it has become one foot wide and 124 feet deep (or long) the superficial area has shrunk from 2,500 to 124 square feet, while the linear measurement remains as at first. But, instead of doing as before, take from the depth and add to the width until the square form is reached, and the 250 linear feet which inclosed 2,500 square feet now incloses 3,906. This shows that the square is the most economical form; it reduces the cost of walls, and saves the ground which they waste. By following the square form and covering a large number of lots with one combination structure which in its outline as a whole resembles a properly-built block, a central space is obtained that serves as an enormously developed light-shaft and air-duct for the whole structure in common; this much having been assured, such betterments as sinks, water-closets, hot water and baths, etc., become entirely practicable.

This is not theory; by combination and the planning which that allows it has been reduced to practice. The most important, because the largest and the most favored, work of this kind is that of the specially organized City and Suburban Homes Company, which has a block on the West Side that is now seven years old and one on the East Side which is of nearly the same age; a third, as yet on a much smaller scale, named the Tuskegee, is exclusively for colored people, who pay an average higher rental in New York than whites of like status and get less in return; a fourth structure, occupying a block on Avenue A and containing 184 apartments, has now been in service about a year and a half. Four new buildings, to comprise 192 apartments, were commenced in November last, adjacent to the one on the East Side; and when the remaining forty-two and one-half lots, which have been recently purchased, are built over, the block will be complete and will be the only large one of its character in the country, if not in the world.

The West Side structure is a group of

nine, consisting of an office and four stores and 373 apartments; two of these have five rooms, 61 have four rooms, 236 have three rooms, and 74 have two rooms. The block on the East Side contains 338, of two to four rooms. Each house of the group has a large vestibule with double plate glass doors, marble walls, handsome letter boxes, and commodious halls. Each set of rooms is steam-heated and has its private hall and toilet; each kitchen has a gas range, porcelain tubs, sink and closets; the basement has free hot drying rooms, free tub and shower baths, storerooms, and children's playrooms. The company even maintains a kindergarten and some modest schools. The differences between such a place and the old tenement almost outreach description.

The average rental in this group is \$1.70 to \$3.65 per week, about 98 cents per room. In 1904, the loss from vacancies was 1.15 per cent. of the total possible rental, while the irrecoverable arrears were 0.24 per cent. of that total; in the three previous years, the vacancy losses was 3.77, 3.33 and 3.38 per cent. respectively, while the loss ratios of the irrecoverable arrears were 0.47, 0.44 and 0.33. Thus there has been a steady decline in the ratio of these unfavorable facts. In this group of buildings 64 per cent. of the tenants have now remained one year or more; 99, from one to two years; 42, from three to four; and 35 over seven years. The other buildings show the same decline in the amount and ratio of loss by arrears and vacancies and increase in persistence on part of tenants. If a year seems to any reader a very brief stay, the wandering character of the tenement class, natural to their conditions and confirmed by habit through generations, should be understood; for an example, a local party leader who once started to distribute 1,000 circulars in a tenement section, among persons whose names had been taken from the official enrollment lists made only three months before, reported that over 31 per cent. had already gone.

The "suburban" side of the company's operations consists thus far in establishing a colony in Brooklyn, a little way from the boulevard and cycle path to the sea, the tract comprising 530 city lots.

On these a hundred "half-timbered" houses have been built, of which about three-fourths have been sold, at an average price of about \$3,100. The plan is that of monthly instalments, which average a little over \$25 and are arranged to cover a term of 20 years, the payments also carrying a life insurance policy, as has already been more particularly explained. [THE INDEPENDENT for July 25, 1901, page 1763]. Later figures are not reported, but a census of this settlement, several years ago, showed a population of 282, of whom 124 were children.

In all, about 6,000 persons are already housed by this company. The crucial question is naturally the financial one. In London the Industrial Dwellings Company had built, up to 1876, 2,723 individual tenements on what is known as the Waterlow plan, at a cost of \$1,920,000, which were earning 6 per cent., net. Here, Mr. Alfred T. White was the pioneer (altho one or two unsuccessful attempts on a small scale had been previously made) with his Home and Tower buildings in Brooklyn, erected in 1878 and designed chiefly for longshoremen. These paid 7 to 7½ per cent., and led to the construction of his Riverside buildings, which are of a better grade; these were planned to yield 5 per cent., net, and have done so. Their success led to the erection of a few other similar structures in the city of Brooklyn and lastly to the formation of the City and Suburban Company. The prime object of that company is home-

making, not profit-getting. Were it exclusively charitable in the sense of giving outright, it would be neither distinctive nor helpful; it is a scheme of assisting philanthropy for which there is no adequate single term. The financial aim and limit is five per cent. The stock is in \$10 shares, and is now \$4,000,000, having been doubled in 1904. It is quite widely distributed. Dividends have been in successive years 2, 3, 3½, and since 1899 4 per cent.

The Top of an Air Shaft.

Managing tenement property owned by others is a part of the plan. One large piece, which, when taken over, was earning little more than the interest on the mortgage, was made to pay during the first year of its handling by the company about three and one-half per cent. on the equity, and in 1904 nearly six per cent. The company has found this business so satisfactory to all parties that it gives notice of its desire to do more of it. Referring to the admirable scheme of Mr. Henry Phipps in recently giving a million for building model tenements,

the express condition of which is that they shall net four per cent. and that the income from the fund shall be used in extension of the work, the company offers to accept any sum from \$100 up, upon the general condition that principal and interest shall be used for the purposes which the company is now carrying out, the precise manner depending upon the size of the donation. A special account of each fund, large or small, will be kept on the books, and a large building or a

group of them will be named for the donor who will provide for the construction.

The improved narrow building may be assumed to contain 23 individual tenements, and the large combination ones to contain about 20, per city lot occupied; the old dumb-bell class contained 25 to 30. A computation on the basis of rooms is about the same, but is inconclusive, for "room" is an indefinite term. A computation on the basis of persons is more un-

the behavior of the tenement population toward the problem. The packing process has gone to such a marvelous extent—especially on the East Side and in the Hebrew quarter, where the unparalleled density of 300,000 to the square mile has been reached—that its causes present a special social problem. They are in part ignorance of any alternative; in part the disposition of the immigrant to squat where he lands and to move up against his own kind where he finds them; in

LACK OF LIGHT AND AIR.

Three views showing the lighting and ventilation of certain old-style tenements.

In the center is a reproduction of a bedroom. It is pitch dark and unventilated. A third of a million of such rooms have been found in Greater New York by investigators of the Department. Under the new law the requirement is that a sash window of at least fifteen square feet must be opened to the adjoining room. In new tenements every room must have a window on a street, yard, or court.

The picture on the left is a window too narrow to furnish either light or air under the most favorable circumstances, much less from the closed court on which it opens.

On the right is a picture of the airshaft to a tenement in Hicks street, Brooklyn. It is six feet long and twelve inches wide. The top story receives some benefit from it, but the others none. It is too small to clean out, and has become a catcall for every sort and condition of rubbish. Tenants have been known to batten windows opening on such airshafts because of the odors.

favorable to the large block structure, because that enforces a limit on crowding, whereas the old class cared for nothing but rent-money; estimating 100 to 150 persons as contained under one roof by the latter, the reform plan fails on the single test of numbers. But this is only to say that it expressly aims to somewhat unpack New York.

There is admittedly another factor:

part the necessity of being near the work and the apparent lack of any work elsewhere; in part a gregariousness which seems conquerable with great difficulty. Yet the centrifugal force has its limit, and expansion, in its time, is as natural a process in city growth as concentration is. This process is already working in New York, and is producing vast redistributions. One evidence of this is the

large relative growth of the boroughs of Queens and the Bronx, and also in Brooklyn, where the filling-up of what

—and now an entire block facing that site has become a small park, supplied with “scups” and other simple

for factory sites by their comparatively low values, and so have disappeared. The new bridge has cleared a line of them along Delancey street, and many unwilling tenants have gone. Fire has removed one of the worst and most picturesque rookeries on Hester street—incidentally taking a few lives by way of emphasis

used to be remote districts is swiftly moving on.

Part of the power of such a movement for better housing is that it is not only productive of good at so many points in life and character, but that it is itself cumulative. It proves that things can really be done, arouses among the classes approached that wholesome discontent which is the soil of all progress, and sets an object lesson—thus it is leaven in the sodden lump. A recent personal inspection shows gratifying changes since the writer last went thru the under-world regions with a camera, some twelve years ago. Some old buildings were marked

appliances, and doing duty at present as a summer playground. Besides razing Mulberry Bend, the law has emptied and destroyed a number of the worst build-

The tenants in the upper floor of an old Third street house woke up one morning recently to find men at work putting up a big advertising sign which faced upon the elevated tracks. Before the job was done the dormer windows, from which they received their only light and air, were battened tight. Each room was occupied, and all were pitch black. They were paying six dollars a month rent apiece, but were unable to get any redress from the landlord. The house was ordered vacated and the sign has been removed.

ings, so that gaps are found where were plague-spots on Hester, Roosevelt, Cherry and other streets, or different structures have come in to change their aspect. These spots have been nests of ignorance, of disease, of socialism and anarchy; they have been hopelessly impenetrable by democracy. Nothing could be done for them but to break them up. Moving is not really so impossible as it seems, even when it is to a suburb, for the shop can move, too. And as population moves outward it sets up for itself new public buildings, new local journals and new interests; thus it takes the city with it, and gradually acquires content, not having to "go away so far." Hardly

another city in the world, and certainly none in America, has been so apparently doomed by Nature to indefinite packing, but that very pressure has produced a reaction and has compelled finding a way out which the development of electric power has made possible. The streets were never so crowded as now, within the recollection of men who have been familiar with them for nearly a half century, and the tides of population have never been so full and so sweeping. Yet the pressure is forcing its own solution; that solution shows its means more clearly, and leaves less reason for pessimism respecting its future than ever before.

NEW YORK CITY.

Being a Mormon

BY A MORMON

[The following article controverts a good many popular ideas, but we believe the author is sincere in his statements.—EDITOR.]

BEING a Mormon is hardly so serious, so monstrous and mysterious a thing as the press and public at present seem to think. The writer was born and bred a Mormon in the far western Mormon land; and tho possibly fallen from grace, no longer a resident of the West or in any way actively interested in Mormonism, he has been thru most of the "degrees" and held most of the offices of the Church Community, and knows all that there is to know about being a Mormon; which is so little, a mole-hill compared with the mountain which has been manufactured at the instigation of recent incidents, that the reality seems simple and tame in the extreme. However, without prejudice or an ax to grind, this is the truth, the whole truth, and nothing but the truth:

After a Mormon baby is eight days old he can be "blessed." It is the first Church Ceremony, and is sometimes performed at home, but usually at the church during public worship. The bishop and two or three elders come forward, and calling the child by the name the parents have chosen, pray that it may be blessed and guided in virtue and truth. The cere-

mony is so beautiful that I have seen many mothers, not Mormon, bring their little ones to receive the benediction. It is in no way obligatory, but there are few Mormons who would miss it.

The next ceremony takes place when the child is eight years old. It is also optional, but with the child instead of the parent. Mormons are strong believers in free agency, and therefore this ceremony of baptism—by immersion—is delayed till the child can exert a certain amount of personal free will. The succeeding Sunday the child receives the "Laying on of hands for the gift of the Holy Spirit."

There is no further religious ceremony till the boy is fourteen, when, if he wishes it and is of good character, he is made a deacon, with the same laying on of hands and a prayer for blessing in the office. The deacons usually attend to seating the congregations. Then, as he grows to manhood, he may receive the office of teacher, or priest, if he chooses and if his life is satisfactory; an imperative requirement with each step.

In the Mormon Church all of the lesser offices, including priests, are classed in the Aaronic Priesthood. All

above these are in the Melchizedek Priesthood. From the Lower Priesthood, if he desires, he can next become an elder, and, if he wishes to travel as a missionary, at his own expense, he is given the office of a Seventy; always by the same ceremony of laying on of hands. There is no obligation connected with any office beside the open agreement to live an exemplary life and faithfully fulfill the duties.

Aged men are usually ordained high priests; so are those who hold presiding positions in the various departments of the Church. But for ordination as an Apostle, as there are only twelve in the Apostles' Quorum, there must be an appointment.

The First Presidency, the Presiding Quorum of the Church, is composed of three high priests. The President must always come from the Quorum of Apostles, but the two Counselors are often from outside. The acceptance of any of the positions is voluntary. The one invariable requirement is "a godly walk and conversation."

The "Temple Endowment Ceremony" is an unvarying temple ritual, and the Mormons have had temples from the very beginning in Kirkland, O. A man who does not hold an office as high as elder is not allowed to receive the ceremony, but, on the other hand, he can be an elder or hold any other office without it. There is nothing compulsory about any ceremony. As a matter of practice most young men and women at marriage desire to receive the Endowment Ceremony, as in it they are married for this life and the life to come. Mormons believe in the eternity of the marriage contract when it is entered into in the temple service. The man or woman wishing to receive the ceremony makes application to the Church authority. It is held as very sacred, consisting of religious teaching and blessing for the future, occupying about three hours. It is all taken directly from the Bible. In order to impress its solemnity and sacredness it is by rule held as too holy for common conversation, and is therefore kept as a sacred secret with each applicant. The idea of incurring penalties by exposing anything is purely emblematic, indicative that he would consider himself

unworthy of Church fellowship who would voluntarily reveal the sacred ritual; absolutely nothing more.

Connected with the Endowment instructions there is an exhortation to pray the Lord to avenge the blood of the righteous that has been shed. It is taken direct from the Book of Revelation, 6:9, 10. With no other foundation than this is built the claim, which many outside believe, that an oath is taken in the Endowment Ceremony to avenge the blood of the Mormon prophets on this nation. The Endowment Ceremony was in action and the oath administered before the assassination of Hyrum and Joseph Smith, and obviously it could not have been an obligation to avenge blood that was not then shed. In fact, the oath does not exist, and the explanation here given is the sum and substance of the Endowment Ceremony.

Marriage is nowhere considered more sacred than among the Mormons. There are three conditions. Mormons who do not take the endowments go to some bishop or elder and are married for "time." Those who go to the temple are married for time and eternity. And the marriage of the dead, which is commonly called "Sealing." This is uniting a deceased husband and wife for eternity at the request of relatives—usually their children. Such a thing as transferring a wife from one husband to another in these sealing marriages is unheard of, except in newspaper stories. It would not be tolerated.

Previous to the legal restrictions the Mormon practice was in accordance with the belief that, where all parties agreed, a plurality of wives was permissible, but it was never obligatory. Now that the law forbids it, it is not held to be permissible. Only a small number of the Church members ever avail themselves of it. Today the Church does not allow it, but where plural wives were taken prior to the law, the Church does not advocate severing the relations. There are not one-eighth of the polygamous families today that there were fifteen years ago. The rising generation of Mormons is opposed to it. Polygamy as an issue has been dead for ten years, and no reputable person, Mormon or Gentile, would have it otherwise. But

some of the best people among the Mormons in the past entered into the relation. They did it with firm religious conviction and authority, and it was not human to demand of them that they separate. Their marital relations could not be dissolved except by death. The fact was recognized. Some who flaunted polygamous relations were punished, but those who observed due proprieties were left undisturbed and unnoticed until the recent agitation. Possibly polygamy is the instigation of selfishness in men—it is older than the patriarchs of the Bible—but it is incomprehensible how thinking, loving, honest men and women of the world today can demand, as they do, that these women who have grown old in polygamous families, mothers with their children, shall be abandoned and deserted by the men whom they trusted. It is not selfishness, at any rate, on the part of the men today who refuse to desert their families; and instead of considering them criminals one would think them more worthy of praise. The law has given them the opportunity of a free divorce, in a land where last year sixty thousand court divorces were granted, as honorable desertions; but they have refused to avail themselves. Without being one of them, I confess that I was inclined to honor those men who faced the Senate Investigating Committee and declared that, law or no law, they would not abandon their wives and children; but it was neither honoring nor defending polygamy.

The compact official organization of the Church covers practically its entire membership. The term lay-members refers almost entirely to children. The governing power of the Church is: First—the entire membership assembled in general conference; second—the official membership, commonly called the Priesthood, in the General Assembly of Quorums; and, third—the First Presidency, composed of three High Priests.

The term Priesthood applies oftener to the divine authority than to the official, causing confusion in the minds of those not familiar with Mormon doctrine. The Priesthood, applied to divine authority, is of God and must be infallible. When it is applied to the officers it is quite fallible, for they are men, To

disobey the first is to disobey God. To ignore the second is of very common occurrence, for every Mormon reserves to himself the right to determine whether or not the officer of his Church is speaking by divine authority.

Prominent Mormons have joined both political parties. Some have attracted followers, possibly thru their positions and popularity in the Church, and some have lost followers from the same cause. No people on earth are quicker to resent ecclesiastical interference in political matters. As nearly all of the adult members of the Mormon Church are officials, of course Mormon officials are in political positions; but they are there as citizens, and their influence is as individuals. This is evident in the very apparent difference in official grades held in politics and in the Church; while as a fact the Gentiles hold more offices in Utah today than the Mormons, according to the population. Bitter opponents of the Church are holding office largely thru Mormon votes.

Mormon Church officials engaged with important responsibilities ought, naturally, obtain permission before they leave those posts for the demands of politics; but even this is not obligatory, as it certainly would be in business.

The public school system of Utah is one of the best in the United States. The Board of Education is both Mormon and Gentile. The teachers in Salt Lake City are 80 per cent. Gentiles, tho a large majority of the children are of Mormon parentage. In some parts of the State—as in other States—the school buildings are used for political meetings, for religious exercises and other gatherings. Often the Mormon church buildings, called “ward-houses,” have been donated for public school use, in a kind of partnership; but the recent charge that religious teaching is any part of public school exercises is utterly and preposterously false. Mormon religious instruction is *never* imparted while places are occupied as public schools. The Mormons are as zealous as any people in America to keep the schools absolutely free from all sectarian influence.

As a Church the Mormon organization controls no financial affairs but its own, in spite of all that has been said to the

contrary; and as it is largely in debt at the present time, it has monetary troubles enough to meet without going outside. But the Mormons are an industrious and commercial people, and Mormon leaders have large interests all over the world, as well as their Gentile brethren—often in partnership with them.

In the Mormon Church there are Bishop's Courts and other tribunals to deal with Church matters, and at times they are invoked in the arbitration of secular affairs. Some of these instances, too, have been distorted in Eastern print and report, causing injurious misconceptions. One was recently referred to in the Senate Investigation, and just enough of fact was brought out to produce a very false impression. As it was a case with which I chance to be perfectly familiar, I am tempted to report the actual facts, as an example. A Gentile and a Mormon settled jointly on a section of public land. The Mormon entered it at the land office, agreeing to give the Gentile a deed of the part he occupied. He failed to do so, and Mr. Leavitt, the Gentile appealed to the Mormon Bishop for adjudication—a form of practical arbitration. The Bishop's Court rendered a decision against the Mormon, on the ground that while it was not a criminal act, according to law, it came under the scriptural inhibition: "Thou shalt not steal." The Mormon then appealed to his higher Church Court, which upheld the opinion of the Bishop's Court against him; but the Mormon refused to submit. Thereon

the Bishop said, in effect: "Legally you have the power to retain the property and we have no right to interfere. But morally, to retain it is theft. As an individual you are committing a dishonest act, and for it you are barred from the Church communion."

It is not often that the Church Courts will undertake to deal with such questions at all, as there is much difficulty and no power or compensation. But undistorted, this instance illustrates perfectly the endeavor and the extent of such arbitrations.

The theory and practice of the Mormons is to lightheartedness and industry. Abstinence from strong drinks is a cardinal principle with them. Family relations are very strict, and no young men on earth are better taught to hold pre-eminent their own virtue and the honor of women. The silly construction of antagonism with the United States is astounding in its prevalence in the East. It is a religious belief of the Mormons that the Constitution of the United States is on the same plane of revelation and inspiration as all which they most revere. If the devout attention given to revelations is to be made so much of in baneful criticism, it should at least be understood, and when it is understood it will be found to apply equally to the Constitution of the United States, with which nothing in Mormon ethics could possibly conflict. It will also be found that there are no more loyal, devoted and patriotic people than the Mormon citizens.

"As the Loving Are."

R. L. S.

BY ALDIA DUNBAR.

WHAT time I plan to give all care the slip
One little book I carry in my scrip
To cheer my soul along the common way—
Staunch friend of mine, or skies be gold or
gray.

It's light-heart humor warms the chilly air,
And makes a feast of plain and scanty fare.
I read a verse when paths grow rough to
climb,
Then trudge on gayly to the lilting rime.

ERIE, PA.

Yet must I pause to greet my brother man,
To aid him with his burden when I can;
Else would those well-worn leaves look scorn
at me,
As traitor to our pact of sympathy.

Would I not lose great joy of pilgrimage,
Without the gentle soul on each blithe
page?
It is the sum of rare good fellowship,
One little book I carry in my scrip!

Unpublished Letters of Horace Greeley

BY FREDERICK E. SNOW

HORACE GREELEY was so unique a personality that anything from his pen is invested with the deepest interest. Early in life he formed a friendship for a fellow journeyman printer, with whom he kept up a frequent correspondence until the latter's death. Greeley's friend was of frail health and the tender solicitude displayed in his letters, and the efforts to shield his friend from some of the rough experiences which he himself encountered, open up to us a new and delightful side of Greeley's character. It has been permitted the writer to read this correspondence and a few of Greeley's letters are now published for the first time. The playful tone of some passages, especially in the lapses from grammar and spelling, is a noticeable feature.

In the first letter "Gris." was Dr. Rufus W. Griswold, editor of certain publications, and compiler of a volume of poems. The "Yorker" was Mr. Greeley's paper *The New Yorker*, which he published from March 22, 1834, to September 20, 1841. He also edited at different times smaller sheets, which ran thru a political campaign. Of these *The Jeffersonian* and *The Log Cabin* are mentioned in the letters. The General Winchester of whom he speaks was Jonas Winchester, with whom he formed a partnership for the publication of *The New Yorker*.

"NEW YORK, Tuesday, Dec. 22, 1840.

"OLD SOUL:—Why are you so spachless? I haven't heard a peep from you since before the demolition of Toryism! Hope that hasn't struck you dumb with extonishment! I saw your large goose a-flopping his wings in the Her. Jour. in honor of the solemn occasion, & I thought I might hear a word straight from you, but it hasn't come. Meantime I've been

off to Hampshire a visiting, & crowing over the Tory on-fortnights, (who snarled very bad back again, but didn't venture to bite,) & tried to get to Varmount, but my rope wasn't long enough. I just begun to penetrate the bowels of New Hampshire, when I found I must hasten back again to save my distance; left my good woman in Boston, & paddled home, found Gris. had run off to Philadelphia, leaving a new goat in his place, who had nearly spoiled the *Yorker* outside already. I have since got things in shape, & picked a few subscribers for the *Log Cabin* (about 2,000)—not half so many as I ought to have got by this time; & rather hope the *Log* will pay, though it is doing very little now. But the poor old *Yorker*—I am rather afraid the hand of death is upon it, though I am doing everything I can to keep the breath in its body; & I do think some two or three of the last numbers have been a match for the abominable Worlds & Jonathans; but what's the use so long as that enormous ass, the public, won't think any such thing? What I shall do I'm blest if I know—only one thing is certain; I ain't agoing to hang myself so long as the Tories are kept out of power. I s'pose I might have got some wretched claw at "the Spoils" by hard elbowing; but I want nothing of the sort; & have told all the magnates that I won't have the smell of anything. So that folly is out of the question, thank Fortune, & I am at liberty to get my Graham bread in the good old way. I reckon I shall come by it somehow.

"How do you do yourself? Hope you expand & blossom like the green bay horse celebrated in Skripter. I think you ought to have—. There I writ just so far as this dash on Tuesday, when it came into my head—I know not whether right or wrong—that I had already written you since my return from the East! So I kicked the sheet aside, & went about other business. But now (Christmas Day) I am writing a heap of letters, & I have turned up this sheet. I think I shall solve the doubt by finishing out the sheet and despatching it; & if I have written you once, why then you deserve to pay double postage for not answering me—& shall.

"I have got in some money for advance subscriptions to the *Log*, & am expecting more, & I think I'll do somehow.

"I should like to hear that you & your girl are flourishing, & that the *Journal* is going ahead. But I hardly expect the latter. If all my old subscribers in your county would take hold and pay in advance they would lift you out of the mud. But they will neither help you nor me, I reckon. Good riddance to them! I guess I have about 20 in your county for the new *Log*—possibly 50.

"The big papers are the chaps. Gen. W[ebb] printed 20,000 copies of his double *World* on Wednesday, &c. He began to sell them on Thursday morning & by night he hadn't 1,500! He stopped the sale (to boys) on 2,000, wanting so many for office sale and exchanges, (*World* subscribers couldn't come it!). He took in a *peck of silver* in twelve hours, besides a shovel-full of Bank notes. I think he has made at least \$200 clear profit by the Behemoth, though the cost was enormous. The General lost about \$6,000 by — last year; he has half made it up this year, & will clear it out if fortune favors him as it has done. He is just about as clever a fellow as ever.

"Do you see how I am getting up in the world lately? Two or three papers have named me for *Postmaster General*, & several goats have started me for *P. M. of this city*! In course, I am at liberty to look down with contempt on all smaller places; which I do devoutly. I want none of their dirty Spoils—so Old Tip won't have the satisfaction of rooking me among his army of disappointed patriots. Truly, their name is legion.

"Did you get the 'Rose of Sharon' I sent you? I think you told me you did.

"Well, here's health and prosperity to you, and a letter to me. Cram it full, & let it be encyclopedic. I won't double up on you soon again.

HORACE GREELEY."

In these letters "The Rose of Sharon" is probably the name of one of those collections of prose and poetry, so popular for gift books fifty or sixty years ago.

"NEW YORK, Jan. 4. 1841.

"Yours of the 27th ult. reached me pretty soon after mine reached you (probably;) though I thought I had written you once before since 'Lecture. I s'pose now I hadn't. Although my last anticipated some of your queries, I must write another to square the matter all up. Let me take up your points as you lay them down.

"1. Don't say a word about us Whigs of the city. We had 1,617 majority agin us in the Spring (more the fall before,) and at least 2,000 naturalized between the Spring and Fall elections, of whom five-sixths went wrong. The actual dead weight we had to encounter was over 2,600, and we brought it down below 1,000. What can Herkimer say to that?

"2. 'The Rose of Sharon' I bought for you and carried myself to a tavern in Cortlandt St. where a Mr. J. Phillips of your county was boarding. (I thought he was of your town, but that does not appear certain.) I did not doubt that he carried it to you. I have just visited the tavern again, and the bar-keeper says he *knows* it was taken away,

either by Mr. Phillips, or another Herkimerian who was boarding there at the time. If you find Mr. P. he can certainly tell you who *did* take it if he did not. Ask him what Herkimer shoat was boarding where he did in Cortlandt St. the last of December.

"3. I shall be in Albany probably until the river opens.

"4. I can do without the funds until you can spare them (that is, I think I can) if any time this side of May. If I get in a snarl, I will sing out, and you must come to the rescue. My receipts on the *Log* are abominably small; but I have paid most of my debts with them, and now my lookout is to pay the subscribers their papers.

"5. Your friend Rufus has gone to Philadelphia to live where he edits the *Daily Standard* and gets \$25 a week—a tall price, but he has to work night and day for it. Well, he is worth it if he won't attempt to originalize; for he is the most expert and judicious thief that ever handled scissors. I wish him all sorts of good luck. He was gone when I came back from the East, and I have two goats in his place—green, but will improve; and I mean to do something next year if I keep on. I give them both no more than I gave him. The *Mirror* I s'pose you can't get; for Gris. tried his best. The truth is *Morris don't own it*, nor anything else. I reckon he's as poor as Job's turkey or the Printer of the *Yorker* if his debts were in the process of payment—paid they couldn't well be without more funds.

"There, stranger you are getting too much for eighteen paltry coppers, so I'll bolt.

"Yours somewhat, H. GREELEY."

The next letter gives evidence that party feeling ran as high in the election of 1844 as in more recent years. Loco-Foco was a name given the Equal Rights Democrats of that time.

"NEW YORK, July 2d, 1845.

"I 'ah de 'oner of receiving yours this morning. Thank you. You will see that I last night anticipated its principal message in rendering another installment of justice to Jim Birney, to which I have today added another, as you will see by tomorrow's *Tribune*, probably before this reaches you. If you do not see—if you even *pretend* not to see—that the villain lied and cheated last Fall, and thereby put Polk and Texas on the country, I don't want your good opinion. If you don't *know*, & have not the honesty to *own*, that he meant to lie, cheat & steal, when he said in my paper, as he said every where, that Clay was equally for Annexation with Polk, and a *good deal* more likely to effect it, then you are welcome to go ahead and deprive the Blacks of our State of any Political Rights at all; just as you last Fall put in Texas. I *know* that the Loco-Focos here intend to deprive the African Race of any Suffrage at all in our State at the ensuing Convention; while the Whigs—not universally but generally—are determined to abolish all distinctions founded in color. The men most thoroughly abused by your banditti are doing all and risking all to

compass this result. Your black-hearted junta will probably defeat us, & Birney will probably travel through the State exhorting all friends of Equal Rights to vote the Third Party ticket, under the assurance that he has but 'little' fear that the Blacks will suffer if the Loco-Focos carry the Convention, but a 'good deal' if the Whigs carry it! And when he has thus cut off all hopes of abolishing the 'White' restriction by electing a Loco-Foco Convention, he will charge the result to the Whigs. It is not now six weeks since he made a speech in Ohio, setting forth that the *Annexation of Texas was a Whig measure, commenced, prosecuted and consummated by Whigs!* He is just the boy for such villainy.

. . . I don't mean to mention him again in a year unless I am compelled to—and I hardly think you will provoke me to speak of him. If he had half as much conscience as Judas he would go & hang himself.

"I am sorry but not surprised that you have done so poorly the past year. It is nonsense to think of printing an Abolition paper in Herkimer. You ought to consolidate your paper with one at Utica or Albany and remove thither. Even Cherry Valley would be a better location. You can't live at the Falls and it is only slow poison to try it further.

"We have done very well the past year in our business; but I have lost it all and more too endorsing for Winchester and others. My loss by Winchester is over \$5,800, of which I have already paid, somehow, \$4,500, & must soon pay the rest, though where the money is to come from doth not yet appear. Law sued on one note of his today. P. has walked into my affections over \$500 (endorsed to get him out of jail because his wife was sick & suffering here, while he was jugged at Rochester.) Now, I believe, he has just got into the State Prison for two years. I suppose neither he nor Winchester will ever pay me the first red cent. Such is the fun of living in cities, having friends & knowing how to write your name. I go agin writing.

"I mean to go West if I can (via Wheeling, Cincinnati, St. Louis, Galena & Chicago) but pecuniary troubles will probably stop me. Next year is convention, when I certainly can't go.

"Mrs. G. is in fair health for her. We live 3½ miles up town (East River) where I am now writing. My little Arthur ('Little Pickie' in the Vulgate!) is a lively, saucy fellow, 15 months old. His hair is as red as a rooster's comb.

"Winchester failed for over \$40,000 & pays literally nothing. My \$5,800 was all lent money and endorsements, which are a gone case.
Yours, HORACE GREELEY."

The following letter marks the beginning of the end of the correspondence. The disease of the heart from which Mr. Greeley's friend died in 1861 had fastened itself upon him. Thereafter the letters take on an added tone of affection, and there are persistent attempts to induce his friend to accept pecuniary aid,

attempts which appear to have been quite unsuccessful.

The son alluded to in this letter was Raphael Uhland Greeley, "Pickie" having died in 1849, to his father's intense grief. Raphael also died in 1857.

"NEW YORK, Aug. 25, 1851.

"Yours received. I give you up with a heavy heart, and have today authorized the employment of another proof-reader. To the state of health you describe, I see you could not do the work we need. But should you hereafter improve, I guess we could find something for you to do.

"As to the letters I wrote from Europe, I was hurried too much to write well. Ride—See—Write—such was my daily round. I did about five weeks good solid work in the Crystal Palace, & had but thirteen weeks in Europe all told—how could I describe everything? Besides, cities are but repetitions of a brick—they look much alike. Rome is in some respects an exception—Genoa & Venice (especially the latter) have aspects of their own—but London, Paris, Brussels, Dublin, Liverpool, etc., are mainly repetitions of the everlasting brick. It would take weeks of study of each to justify one in attempting to daguerreotype them. I only wrote as I felt, and preferred to sketch the country rather than the cities. I have shown you just how the country looked (to me) through all Western Europe. Remember that the traveler sees cities with two high brick walls on either side of him, the very sign-boards for the most part unintelligible to him. What, then, can he say?

"Of course you know better than to believe that story of *The Tribune* making \$80,000 in one year. But don't trouble yourself to contradict it—we don't. I believe it actually *did* make \$27,500 last year—I forget whether it was that or \$25,000. At all events it was enough; and a quarter of it came to me. Then what business have I to be eternally in debt and harassed for money, I should like to know.

"If you should ever want any funds send to me. I can raise some a'most always.

"Capt. Winchester is at 36 Ann St.—the same old sixpence. The General is in California, utterly broken, & I have had to pay \$2,600 hard cash for him this year, in addition to \$6,000 I lost by him when he broke before. I have a chance to get back the last, but the rest is clear gone. . . .

"My boy (six mos. old) grows like a weed, & is very good-natured. I was up in the woods to see him yesterday.

"Yours, HORACE GREELEY."

"NEW YORK, Nov. 29, 1851.

"Do I owe you a letter? Though you are sick, I have not heard from you in three weeks, and it must be that I haven't answered your last. If so, let me make haste to pay the debt.

"I have been a week away at Washington since I heard from you, & a week away at the East, talking mainly, & so have hardly heard or seen as much as I ought of things

going on around us, & especially in the rural districts. But I think I should have heard if you were much worse, and so I trust you are not. But if you are well enough to take a situation, write me so, & let me try to find you one. Our proof-reading is filled now, & is too hard for your present health anyhow, but I think that I could find something that you could make a living by if I had a chance to try. Let me know what I shall attempt.

"Won't you have some money? I earn a good deal, & two-thirds of it goes every way to all manner of loafers—why not to you? I would rather send you \$50 than not if you will let me—say so, & I will do it. I long ago quit wanting to be rich—I never did want to live extravagantly. I own a house; some mining stocks which mean to be good some time; and a quarter of *The Tribune* which pays, not

to speak of any quantity of I. O. Us. that *don't* pay and won't—they'd see me in heaven first. Let me send you \$50, to be paid when perfectly convenient.

"What have you seen or heard about 'Spirit Rappings?' Now don't stiffen your (unshort) ears, for *there's something in 'em!* What it is, I am not yet sure; but it isn't knee-joints nor toe-snaps—notwithstanding the wise pill-peddlers of Buffalo. See Mrs. Sarah H. Whitman's letter to me, if I ever publish it.

"Luck to you, old fellow! Are you ever coming to Albany? I'll meet you there almost any day that you will agree to.

"Yours, HORACE GREELEY."

"P. S.—We have a new boy—but the loss of the last still weighs. Our other child is unwell.

GUILFORD, CONN.

Count Tolstoy the Prophet

BY W. T. STEAD

EDITOR OF THE REVIEW OF REVIEWS.

A PROPHET. Yea, I say unto you, and more than a Prophet. "Count Tolstoy," said Flaubert, "unites the genius of Shakespeare with the moral fervor of a Hebrew seer."

"Among the great writers of fiction," said Mr. Bryce, in attempting to select the greatest books of the nineteenth century, "the first place probably belongs either to Victor Hugo or to Count Tolstoy."

Victor Hugo has passed hence. Count Tolstoy is still with us, the greatest survivor of the nineteenth century—the one living man of letters whose reputation is so world-wide that it is no exaggeration to apply to him the Psalmist's description of the stars of heaven: "There is no speech nor language where their voice is not heard. Their line is gone out thru all the earth, and their words to the end of the world."

To the human race Count Tolstoy is the one articulate Russian of the hundred and twenty-odd million human beings who speak the Russian language. He is a prophet not without honor, save in his own country. There he is excommunicated by the Church, contemptuously ignored by the State, and regarded with impatience by the Liberals.

Seen from abroad, he appears to tower aloft above the wilderness of pigmies, the supreme incarnation of the genius of Russia. What are all the Grand Dukes who have revelled in splendid luxury for a century compared to the recluse of Yasnaya Polyana? Byron's lines, contrasting the fate and the fame of Tasso and Alfonso, the Duke of Este, who cast the author of "Jerusalem Delivered" into a prison, recur instinctively to the mind:

"Thou form'd to eat and be despised and die
Even as the beasts that perish, save that thou
Hadst a more splendid trough and wider sty.
He with a glory 'round his furrowed brow
Much emanated then and dazzles now."

And of Tolstoy, as of Tasso, it may be said:

"Each year brings forth its millions, but how long
The tide of generations shall roll on,
And not the whole combined and countless throng
Compose a mind like thine?"

Carlyle once remarked that the day would come when Napoleon would only be remembered because he was the contemporary of Goethe. We have not had to wait for posterity to recognize that all the notable generals, statesmen and diplomatists which Russia produced in the

COUNT LEO TOLSTOY.

Taken in February, 1905.

last half of the nineteenth century are chiefly memorable because they were contemporaries of Count Tolstoy.

If I were asked to sum up in a sentence the Message of this Prophet, I should not vary a syllable from the message that was given to me in Holloway Gaol twenty-one years ago: "Be a Christ!"

"That is the truth," said Count Tolstoy. "We must all do the same. We must descend to the level of the men we wish to help, and become one of themselves—not as angels from above, but as brothers helping them side by side—that is our duty." And the distinctive note of his teaching is summed up in the following sentence:

"How can you and I sleep on mattresses and feather beds, when hard-working men have not even straw? If you were Christians you could not. What right have you to too much when your brother has not even enough?"

From some of Count Tolstoy's other teachings, such as his advocacy of ab-

solute non-resistance, his ridicule of all constitutional methods of promoting the welfare of mankind, his extraordinary confounding of romantic love with the mere passion of the full-sexed animal, I profoundly dissent. But we do not the less recognize Count Tolstoy as a prophet because in some things he seems to us to have been carried by his prophetic fervor beyond all bounds. In these things we have a right to appeal from Count Tolstoy to One who is greater than he.

When all deductions are made and all limitations and exaggerations admitted, Count Tolstoy stands forth before the men of his generation as a prophet and a teacher sent from God, recalling this materialized self-seeking generation to the Eternal Truth. The fact that such a sublime moral teacher, such a passionate exponent of the doctrine, Seek ye first the Kingdom of God and His Righteousness, should have arisen in Russia, and should be essentially in his very heart and soul a Russian of the Russians,

is calculated to rebuke those Pharisees of our time who, like those of old, are apt at asking: "Can any good thing come out of Nazareth?" To which the answer is now as in old time: "Yea, verily, for the Lord our God can raise up teachers like unto Himself from Nazareth as easily as in the Temple of Jerusalem." Which, being interpreted, means that a despised Russian may be a truer prophet of the Highest than the Briton who is even considered worthy to be the ally of Japan. For Count Tolstoy is Russian to the core. He is cosmopolitan in theory, but in temperament he is Russian, and a Russian peasant, at that.

Take him all in all, there is no living teacher like this man, so intensely human in his qualities and in the defects of his qualities. He is so strangely composite of pride and humility, a compound of extremes, "a practical mystic," a novelist and a philosopher, a nobleman and a Nazarene, an artist who blasphemes the greatest artist, a Christian who de-

nies the Resurrection, the father of thirteen children and the author of the "Kreutzer Sonata," the passionate impecacher of the autocracy, but the not less merciless satirist of the aspirations of the Liberals. Resist not him that is evil is his standing watchword, but he spends his whole life in offering evil the most uncompromising resistance he can devise, so long as he does not resist him that is evil by physical force. But what matters all the apparent inconsistencies of this incarnate paradox? For man is an embodied paradox, and Tolstoy is like unto them. No defect or shortcoming on his part can prevent us from often hearing in his resonant voice the echo of the Oracles of God:

"Slowly the Bible of the race is writ,
And not on paper leaves, nor leaves of stone.
Each age, each kindred, adds a verse to it,
Texts of despair or hope, of joy or moan;
While swings the sea, while mists and mountains shroud,
While thunders burst in cliffs of cloud,
Still at the prophet's feet the nations sit."

LONDON, ENGLAND.

Brown Earth

BY GEORGE HERBERT CLARKE

Brown fellow, rusty fellow, better cease your wooing;

All Summer long your loves have laughed at your appealing glances.
Too whist you are, unkissed you are—yours is no way of doing;

For bright Lord Sun each leaf that blows bedimpls her and dances;
But you've no share, mute surly Earth,
In this green and golden mirth.

Give o'er, give o'er,
Leaf-loves desire no more!

Brown fellow, rusty fellow, wise you are and patient;

Madcap Summer's day is done, and friendly Autumn careth;
They stoop to you, they droop to you—what tho you're dark and ancient—

The little leaves they lowly turn, each to your bosom fareth,
And as it falls the tender hush
Of love and longing's in its blush.

Amen to ye,
Your brides they all shall be!

MACON, GA.

From Leo XIII. to Pius X.

BY SALVATORE CORTESI

[Mr. Cortesi, who has been our Italian correspondent for several years, has just made a visit to this country, where as one of the representatives of the Associated Press at the Peace Conference he won a distinguished place among all the special correspondents for the ability he showed in getting difficult news.—EDITOR.]

“THERE is nothing we respect and venerate so much as the holy memory of our illustrious predecessor,” is the short answer given by Pius X whenever any one attempts to represent him as in opposition to Leo XIII in either ecclesiastical or political affairs. Notwithstanding this, the difference between the two Popes is already very marked. Take, for instance, the composition of the Sacred College. Leo XIII was the first Pontiff who conceived the idea of numerically balancing, as much as compatible with the many exigencies of the Church, the Italian and foreign Cardinals. In so doing he intended to belie the accusation that the Papacy is an institution of narrow character, monopolized by a single nationality, and to show that it is truly universal, not only in name but also in the constitution of that supreme body which represents the Senate of the Church. He thought it of chief importance to secure a certain balance between the Italian and foreign element in the Sacred College, especially as in all the other directing branches of the Church their disproportion is great. Indeed, the foreign clergy have very little influence in the business dealt with in the Eternal City. To begin with, the Cardinals of Curia, viz., those who, owing to their residence in Rome, can exercise more direct weight, are almost half of the Sacred College, but of these now only three are foreigners, one German, one French and one Spanish. The German only is at the head of an office, Cardinal Steinhuber, who is Prefect of the

Congregation of the Index. All the other important appointments, the Prefectures of the important Congregations, which deal with the governing of the Church, and which correspond to so many great departments in secular governments, are in the hands of Italians, including the Congregation of Propaganda Fide, from which depends about three-fourths of the whole Catholic world, with some of the most progressive countries, such as the United States and the British Empire.

It must, however, be allowed that, on account of Rome being the seat of Catholicism, and the employment of Italian clergy and secretaries in the Congregations, it would be less convenient to have foreign Cardinals at their head; but this is a further reason why the foreign element should be better represented in the Sacred College. Leo XIII went so far as to have in certain years of his Pontificate very nearly half Italian and half foreign Cardinals, which had never happened since the fourteenth century, when the Papal Court was at Avignon. The importance of this composition of the Sacred College will appear if we compare it with the past. At the end of the Pontificate of Gregory XVI, out of 59 Cardinals only 7 were foreigners, and they received the honor only because it was already the established custom that the heads of certain foreign Bishoprics should receive the red hat. These were the Archbishops of Arras, Rouen, Lyons, Salzburg, Malines, Seville and Milan (the last then under Austria, and so having an Austrian Archbishop). Eighty

years later there was an amelioration, but not of much importance; as in 1854, when Pius IX returned from Gæta, where he had retired on the proclamation in Rome of the Republic of Mazzini and Garibaldi, the Sacred College numbered 67 Cardinals, 15 of whom were foreigners.

Taking all this into consideration it is easy to understand with what anxiety the ecclesiastical world in Italy and abroad is waiting for the Consistory in which Pius X will create what will really be the first Cardinals of his Pontificate, as the two appointed immediately after his election were not the result of a special direction in his policy, and therefore gave no indication with regard to his future plans. As it will be remembered they were, Monsignor Merry del Val, who was raised to the purple, being definitely made Secretary of State, as the Pope did not wish that any of the Cardinals who had elected him should impose upon him a given policy, and Monsignor Callegari, Bishop of Padua, the bosom friend of the new Pontiff.

The year after his election Leo XIII held a Consistory on May 12, 1879, in which he created ten Cardinals, seven of whom were foreigners; and four months after in another Consistory he nominated four more. Pius X has already sat in the Chair of St. Peter for over two years and he has not yet created any from whom can be drawn conclusions of what his intentions are with regard to the composition, working and influence of the Sacred College. It must, however, be said that Leo XIII was induced to appoint new Princes of the Church so soon because of the numerous vacancies caused by death among them. Only a few months after he was Pope his chief rival in the Conclave died, whose followers had been induced to abandon him by the assurance that Pecci was old and weak and therefore would not live long, and that after his death their candidate would be chosen unanimously. While in the first years of Leo's Pontificate, ten Cardinals died, under Pius X they seem to be all destined to enjoy marvelous longevity, as in over two years only five have gone to their rest. Herrero y Espinosa, who was taken ill

during the Conclave, Celesia, Mocenni, Langenieux and Ajuti, the four first having been over 80 years old.

Still the Cardinals being now 60, there are ten red hat vacancies, and even if Pius X did not wish to reach the *plenum* of the Sacred College, which has never been done since 1753, he should soon create at least seven or eight new Cardinals.

The delay is supposed to come from his desire of dropping certain privileges always respected by his predecessor, according to which various high positions entitled their occupants to have the red hat conferred upon them, so much so that these posts were called *posti cardinalizi*. Among these posts were the four Nunciatures of Paris, Vienna, Madrid and Lisbon; but Monsignor Lorenzelli, ex-Nuncio to France, instead of entering the Sacred College is now Archbishop of Lucca, which is not even one of these dioceses whose heads are supposed by tradition to be Cardinals. In acting thus, Pius X is also credited with the intention of diminishing the number of Cardinals of Curia, who, being supported by the Vatican, involve a heavy burden at a time when the financial condition of the Papacy is far from satisfactory. The Pope himself has been heard to state that for four months each year he is at the mercy of the faithful, as the ordinary yearly income of the Vatican is barely sufficient to provide for the needs of the other eight months.

Partly because of this, partly on account of the good relations now existing between Church and State—contrary to the situation at the time of Leo XIII—the question has been raised by certain clerical writers as to the advisability on the part of the Pontiff of accepting the yearly allowance of \$645,000 allowed to him by the Italian Government, which was never touched by Pius IX and Leo XIII. They claim, indeed, the payment of this sum with the interest accruing from the first year it was fixed by the Law of Guarantees in 1871, thus making a total of about \$25,000,000. On the other hand, anti-clerical writers urge that the allowance to the Pope, like all similar grants of the State, if not claimed, lapses after five years, through the Stat-

ute of Limitations, so that whenever the Pontiff should choose to claim it he would not be entitled to more than the accumulation of the last five years, that is to say, \$3,225,000. To this the Clericals rejoin that that allowance cannot be considered as an ordinary debt, as it is not subject to the common laws, it being a solemn pledge taken by the Italian King and Parliament towards the Pontiff whom they themselves officially acknowledged as a Sovereign, promising to maintain the independence of the Papacy, recognizing the right of the Pope to have Ambassadors accredited to his Court, declaring his diplomatic agents sacred and inviolable, and ensuring to his residence the complete privilege of extra-territoriality as if it were a foreign State. They even add that in reality the Law of Guarantees did not provide the Pope with a new allowance, but maintained that which he enjoyed in accordance with the Article 49 of the Constitution given by Pius IX to the Pontifical States, on March 1st, 1848, so that the allowance also is part of the rights of Sovereignty, legally recognized by Italy to the Pontiff, and cannot therefore fall under any proscription in no matter what period of time, it being from its nature perpetual and inalienable. The Law of Guarantees indeed established that the allowance should be paid also if the Holy See were vacant for some time, and that it should be exempt from taxation, and could in no way and for no reason be diminished even if in future the Italian Government should take it upon itself to sustain the expenses of the Vatican Museums and library, the maintenance and custody of which are included in the allowance. Altogether there seem to be sufficient indications that the Church is inclined to accept the income granted by Italy, especially if the arrears are also included, as it would solve forever the difficult financial problem of the Vatican.

It is perhaps not generally known how limited the resources of the Holy See

are, compared to the heavy expenses of the working of the vast complicated machinery represented by the headquarters of Catholicism in Rome. Dying, Pius IX left a capital of \$6,000,000, one-third of which was lost in some risky financial speculations in which Leo XIII was induced to participate in 1892, with the hope of augmenting the income of the Church. Through his savings, and through generous contributions received especially at the time of his different Jubilees, the late Pontiff succeeded in leaving to his successor a capital of \$8,000,000, which brings in at the utmost \$520,000 a year, while the Vatican needs at least \$1,200,000 additional, yearly. To the \$520,000 income may be added the Peter's Pence, which approximately represents \$500,000, annually, and some other moneys, chiefly fees paid into the different Congregations, making altogether about \$800,000 a year. The \$400,000 lacking must come from private sources, chiefly offerings from religious Orders, from Catholic rulers, such as the Emperor of Austria, who gives \$16,000 every twelve months to the Pope; from Bishops, like Cardinal Vatzary, Primate of Hungary, who sends \$200,000. Therefore the hesitation of the Vatican over the acceptance of the allowance from the Italian Government is quite explicable, a sudden decrease in these different offerings being feared, especially at a moment in which, owing to the separation of Church and State in France, the Peter's Pence from that country will greatly decrease. Just in view of this, efforts are being made to have the Peter's Pence reassume the important proportions it had in the past, by a larger contribution from those countries where Catholics, being more prosperous, should contribute in a larger degree to the support of their own Church. Among these countries is the United States, which offers as Peter's Pence an average of \$100,000, yearly, that is to say less than one cent for each Catholic.

ROME, ITALY.

THE cynical Englishman's sentiment that life would be tolerable if there were no amusements is evidently not very highly appreciated in this community, which spends about a million dollars a year on grand opera alone. The subscription list at the Metropolitan for the present season is larger than ever, and Mr. Conried offers a tempting *ménù* to his patrons. Of song birds of the fair sex he will have, besides such local favorites as Eames, Nordica and Sembrich, Fremstad, Homer and Walker, the eminent dramatic soprano Bertha Morena, who is a great favorite at Munich, where she has sung for the last few years as the successor of Ternina, whom she is said to surpass in everything but action. The list of tenors is a marvel. Mr. Conried has Burgstaller, Caruso, Dippel, Reiss and Knote, any one of whom would furnish forth a foreign opera house, but American audiences are fastidious; paying high prices, they want only the best, and plenty of it. Besides the artists named, we are to hear also the no less excellent Scotti, Van Rooy, Goritz and Plançon.

The operatic repertory is not such a matter of indifference as many suppose it to be. Caruso, to be sure, can fill the house, no matter what he appears in; yet everybody is glad that, besides the usual Italian works, to which revivals of "La Sonnambula" and "Favorita" are to be added, he is also to be heard in two French operas—"Carmen" and "Faust." Mr. Conried has not yet been able to persuade him to assume the *rôle* of Manrico in Verdi's "Il Trovatore"; but that work, which at one time was the most popular opera on the stage, will nevertheless be revived, and, with Nordica and Knote in the cast, it will doubtless make a sensation. Goldmark's "Queen of

Sheba," which had no fewer than fourteen performances here in the year of its first production, is to be revived with unprecedented scenic splendor. The too much neglected "Flying Dutchman" is to be added to the Wagner list, while seats for the opera "Parsifal" will no longer command double the usual operatic prices. The great success of Strauss's comic opera "The Bat" has induced the manager to prepare another popular work by the Waltz King, "The Gypsy Baron." The most interesting of all the revivals, however, will be that of "Hänsel and Gretel," by Humperdinck, who is to come over from Germany to conduct the first performance. Puccini also has been invited to conduct his "Manon Lescaut"; but it is not certain he will come.

After the New York season the Metropolitan Company will make its usual tour, East and West; but Boston is apparently to be disciplined by being shunned. Since the Bostonians—so utterly unlike the New Yorkers—appear to care very little for grand opera (except when presented by Mr. Savage in English at popular prices), they will doubtless console themselves with the reflection that they will hear their own splendid Symphony Orchestra four times as often as New Yorkers will hear it, and that there is to be, besides Gericke, an interesting "guest" conductor—Vincent d'Indy, one of the leaders of the modern French school. The Bostonians are also looking forward to a visit from the greatest of Russia's conductors, Safonoff, who was the lion of the last orchestral season in New York, which then had a monopoly of him by contract. This year he will again be one of the conductors imported by the Philharmonic Society (which, it is safe to predict, will arrange an extra concert or two for him)

OTIE CHEW.

but he has also been secured for a concert tour of the Russian Symphony Society, which has now become an institution in the metropolis, and which gives more novelties than all our other associations put together. Besides Safonoff, the Philharmonic Orchestra has engaged Victor Herbert, and several eminent German conductors not yet heard here: Fritz Steinbach, Max Fiedler, William Mengelberg, Ernst Kunwald. Weingartner also returns, but he will conduct Walter Damrosch's Symphony Orchestra this time in Sunday and weekday concerts. Frank Damrosch has chosen for the four concerts of the Oratorio Society Beethoven's Mass in D, Handel's "Messiah" and "Judas Maccabæus," and Saint-Saëns's "Samson and Delilah."

Within the last few years the newspapers of Germany have reported a strikingly increased interest in chamber music (string quartets, trios, etc.). It cannot

be said that New York presents a similar phenomenon, yet what with the quartets presided over by Kneisel, Willy Hess, Dannreuther, Kaltenborn, Leo Schulz, and Olive Mead, the Margulies Trio, etc., we have an abundance of such pabulum. Most of these organizations travel throughout the country, and the same is true of the violinists, pianists and concert singers who, as usual, are invading the dollarland in great numbers. No less than eight eminent grand-opera singers—Eames, Calvé, Schumann-Heink, Fritz Scheff, Lillian Blauvelt, Homer, Campanari, Bispham—will appear on the road in the opera houses and concert halls with companies of their own. Of the newcomers, it is confidently expected that a sensation will be made by two young violinists of the fair sex, Otie Chew (who makes her début with the Philharmonic) and Marie Hall. Among the other violinists to be heard are Kubelik, Marteau and Maud

Powell—a goodly list, surely. The list of pianists is headed by Pugno, Harold Bauer, Alfred Reisenauer, and every one will be delighted to hear that the “hermit of Tarrytown,” Joseffy, also has been persuaded to promise a few appearances.

The Savage English Grand Opera Company opened the season in Brooklyn last week. Their repertory consists of all the great operas, and in the cast are most of last year’s favorites, as well as some remarkably good new ones. Everybody should plan to hear Mr. Savage’s company as it tours thruout the country. They sing and act remarkably well, and deserve every bit of the popular success they have received.

The foregoing list is by no means exhaustive; but enough has been said to prove that the present season promises variety of pleasures sufficient to gratify even the most jaded.

ART

The Massacred Angels

A newspaper discussion in the science of angelology has been started by the refusal of the building committee of the new Episcopal Cathedral of St. John the Divine, on Morningside Heights, New York, to accept the two large statues of the Angel of the Annunciation and the Angel of the Resurrection, carved by Mr. Gutzon Mothe-Borglum to adorn the entrance to the new Belmont Chapel. The clerical critics objected to them on the ground that they were too feminine in appearance to represent angels, and especially such well known archangels as Gabriel and Michael. Other angels by the same sculptor in less conspicuous parts of the building, equally feminine, will be permitted to remain, tho no scriptural authority has been adduced for admitting that females may be even minor angels. But some concession, doubtless, has to be made to the spirit of the age, which permits the entrance of women into spheres from which they were formerly excluded. The idea that women may be angels but not archangels seems to be based upon the assumption common in all denominations that Heaven is founded on a constitution similar to the Church. Females may be members of

the celestial choir, but may not aspire to office in the hierarchy.

Undoubtedly the churchmen are right in holding that angels in the Bible, which in a matter of faith like this is our sole and infallible authority, are invariably spoken of as male, but nowadays, when angel’s visits are few and far between, it is natural that we get our ideas of angels from those who of all earthly beings seem most adapted to a heavenly environment. It must be admitted that Mr. Borglum has made a mistake theologically, but it is a mistake any gentleman might make. Mr. Borglum’s defense is also greatly to his credit. He is reported as saying, in regard to the Angel of the Annunciation, that “It seems to me that it is repugnant to every gentlemanly sense to conceive of a man performing that *rôle*.” This novel suggestion places Mr. Borglum among the highest of the higher critics. Who can say that there has been no advance in morality in two thousand years when men now criticise the conduct of angels?

The rejected angels now lie in fragments on the floor of the chapel, for the indignant sculptor visited his workshop by night and destroyed them with mallet and chisel, feeling, as he says, like a murderer while doing it. From the accompanying photograph, taken just before their destruction, our readers can judge of the justice of the criticism to which they have been subjected, and, whatever conclusion they may reach, will regret this slaughter of the innocents.

THE DRAMA

Now that indiscriminate and intolerant disapproval of the drama is dying out, the need for impartial dramatic criticism becomes more apparent. The fewer people there are who think all plays are bad, the more people there are who want to know what plays are good. Formerly the line could be pretty sharply drawn between playgoers and non-playgoers, those who saw almost everything of any interest, and those who never entered a theater. Neither class needed dramatic criticism. Now, however, a very large and increasing proportion of the population go to see a few plays a year and want to see the best. They do not want

to waste their time, to waste their money, nor to waste their minds and emotions on trash. They want the same preliminary assistance in selection as is given by a reliable review of books; not a censor to restrict their choice, nor a dictator to decide what between good and bad, but a friend who will give suggestions as to the merits of plays of all kinds, so

that each person can pick out those he would like to see when he has the opportunity. Since we do not carry any theatrical advertising we are not under any obligations to notice all plays produced, and shall confine our attention to those which have some special interest.

Most of the important new plays are produced first in New York City, and af-

terward taken thru the country. Many of our readers will have this season their first opportunity of seeing the plays we

strikingly illustrated by the fate of George Ade. "The County Chairman" and "The College Widow" were immedi-

The Surrender. The Last Scene in "Man and Superman," by Bernard Shaw.

reviewed last year, and for the benefit of those who have been so careless as to destroy their back numbers of the magazine, we repeat the list of what were in our judgment the best plays, tho not always the most successful from a commercial standpoint.

Classical: The Marlowe-Sothorn Shakespearean plays. Mansfield in his repertory. Forbes Robertson in "Hamlet." "She Stoops to Conquer."

The Literary Drama: Ibsen's "When We Dead Awake," and "Hedda Gabler." Miss Wycherly in Yeats's Irish plays. Miss O'Neil in Aldrich's "Judith of Bethulia," and Sudermann's "Fires of St. John."

Modern Comedy: Warfield in "The Music Master," Crane in "Business is Business," Pinero's "Letty."

Farcical: Shaw's "You Never Can Tell," Ade's "The College Widow," "Mrs. Temple's Telegram."

The uncertainty of dramatic work is

ate and permanent successes, and it was thought that the genuine American drama, so long announced and unaccountably delayed, had at last arrived. The plays were concerned with American life, treated in the American spirit; they were witty, realistic and clean. But Mr. Ade has failed to satisfy the confident, tho doubtless exaggerated, expectations of the public in his two new plays. It is rather difficult to see why they are not so successful as his former plays, for they are equally American, very similar in theme, well staged and acted, and not lacking in humor. The most definite criticism to be made is that both plays are deficient in coherence and logical arrangement. Any one act by itself would be equally interesting. "The Bad Samaritan" is a twentieth century Lear, who unexpectedly regains his property, and tries to benefit all the people of the village in which his retirement was spent, but he finds that the way of the

benefactor is hard. The poor inventor, the incipient Melba, the aspiring student, all turn against him when they are transported to the city and to "Nirvana-by-the-Sea." "Just Out of College" is a successor to "The College Widow," and deals with the graduate in the business world.

Margaret Anglin is an actress who in recent years has rapidly grown in dramatic power and facility. No woman on the American stage today excels her in natural pathos. The play of "Zira," in which she is now acting, is one in which the plot is ingenious, but the different acts are quite unequal. The last act particularly is commonplace and feeble, but the scene at the end of the third act, in which Miss Anglin defies her enemy, and then confesses to her fraud, is quite the most powerful and brilliant piece of acting to be seen among this season's new plays in New York.

The comedy, "Mary and John," or as it was subsequently called, "Mary Versus John," by Edith Ellis Baker, at the Manhattan Theater by the Fiske Company, was delightfully acted. Miss Annie Yeamans, as the cook, is particularly triumphant along lines in which she has previously been very successful. John Mason, John Emerson, Sadie Martinot and Ida A. Thomas were all good in their respective rôles. Not much can be said in favor of the text of the play.

The new play of Clyde Fitch this year, "Her Great Match," is the story of how an American girl abroad captured the heart and hand of H. R. H. the Crown Prince of Eastphalia. Maxine Elliott, who takes the part of Jo the American girl is, as usual, very charming and effective, though perhaps the most striking acting is done by Mr. Cherry as the Crown Prince, and Mathilde Cottrelly as his aunt. Their delightful broken German is inimitable. The play is in no sense great, but it is pretty, amusing and well worth seeing.

No new play produced in New York so far this season comes to our shores with quite the reputation of "The Walls of Jericho," whose success during the past year in London has been the talk of theatrical circles. The play is of the "problem" variety and deals with the highest of English high life. If on that account

it is unlikely to create the furor in the United States that it has in England, it is, nevertheless, a play of considerable tho uneven merit. The first and fourth acts are mediocre, but the third really reaches a splendid climax in the scene between the sensible young millionaire husband and his aristocratically warped wife, and Mr. Hackett and Miss Mannerling were never seen to such advantage in any other rôles they have essayed. Virtue is invariably triumphant and the villain foiled in the Bowery melodrama, but in more aristocratic theaters "mere morality" is considered too commonplace and old-fashioned to be put in a play. But Mr. Alfred Sutro in "The Walls of Jericho" has produced something of a novelty in producing a drama that is as moral as a melodrama in its ending, and as piquant as Pinero in its depiction of social evils.

No one can say that the literary drama is neglected in America now that Mr. George Bernard Shaw holds the center of the stage. For many years his plays, "pleasant and unpleasant," have been better known to readers than to play-goers, for in the judgment of the managers they were impossible in the theater; a judgment in which Mr. Shaw gleefully concurred, and volunteered as the reason for it that they were too unconventional and too full of ideas to suit actors or audiences as they are.

But thru the efforts of Mr. Arnold Daly, "Candida," a matrimonial paradox, got a hearing in New York two years ago and found an unexpected welcome. It was followed last year by "You Never Can Tell," a clever farce on the old-fashioned new woman, and this year by Shaw's more serious plays, of which "Man and Superman" and "John Bull's Other Island" have just been produced for the first time in this country.

For one gifted with a good visual imagination, reading "Man and Superman" is almost as good as seeing it, especially since three of the brightest parts of the book have had to be cut out from the play—that is, the preface, the "Revolutionist's Handbook" and the third act containing the characteristic tetralog, in which the comparative advantages of heaven, earth and hell as places of residence are discussed. As we have recent-

A Proposal Five Minutes After Meeting Under the Influence of Irish Moonshine. From Bernard Shaw's Latest Play, "John Bull's Other Island," at the Garrick Theater.

ly published (July 6) a study of Shaw's philosophy, we need not here explain in detail his point of view.

The situation in "Man and Superman" is not unique, but was presented in a stronger play three hundred years ago, by a gentleman whom it is Mr. Shaw's pet affectation to belittle—Mr. William Shakespeare.

John Tanner is a Socialist; Benedick, "a young lord of Padua," was an aristocrat to the point of his ready sword, yet, the two men are brothers. Like Bernard Shaw's hero, Benedick says of himself: "I am loved of all ladies, but, truly, I love none." Robert Loraine acts the impetuous Tanner well; from the first moment of desperate revolt against Ann's influence, we are sure he is secretly deeply in love with the woman he rails against, and that gives a touch of verisimilitude to his character that is missed in reading the play. The situation is too slight to serve as a motive for a really great drama, as the plot, if so it

can be called, hinges, simply, upon a man's reluctance to yield his liberty under the yoke of a lifelong contract, a reluctance, which is (with apologies to Mr. Shaw for a difference of opinion) even more intense a feeling on the woman's part. A fierce maidenliness often drives a woman to perverse revolt against her deepest affection. But this repulsion of violently attracted natures, tho natural and within the observation of most people, is usually, as in the case of John Tanner, overcome by love too strong to be cowardly.

Somehow, Mr. Shaw makes a tragedy out of marriage, much as does Ibsen, whenever he touches it. The audience, half hypnotized by a preternatural cleverness, and a wit which never fails or flags, almost believes in his thesis that all marriage is by "capture," only it is the man who is the unwilling victim. Robert Tanner's futile efforts at escape remind us of the struggles of a particularly large and gamesome trout, being steadily

reeled in by the hand of Fate, *née* Whitefield.

The Ann of Miss Fay Davis is so charming that we have less patience with the efforts of the hero to get away from the honey-baited hook, than if the angler were less attractive. At the end we hear John Tanner echoing "Benedick the married man!" after three centuries:

"In brief, since I do purpose to marry, I will think nothing to any purpose that the world can say against it. . . . The world must be peopled."

The "Superman"—the "Life-Force" flings the lovers into each other's arms, against the man's expressed will, but in accordance with his own deepest desires; nor shall Mr. Shaw, with all his dazzling wit blind us to the fact that his play is not the profound sociological study he would fain have us believe, but a *mélange* of Shakespeare, Schopenhauer, Nietzsche and Maeterlinck spiced with Shaw.

"John Bull's Other Island" is a discussion of the Irish question. It contains no reference to the "duel of sex," and the love making is unconventional only in its rapidity. To those who enjoy witty conversation on important subjects, well spoken by typical characters in an appropriate environment, this play will be a delight. To those who say of a play, as Demosthenes said of oratory, that it should consist of "action, action, action," it will be a bore. Revolvers are introduced in the first act, but only used as paperweights. There is an automobile accident, but it takes place, like the catastrophies in the Greek drama, off the stage. All the various views of Ireland and the Irish are in turn pointedly presented, and then immediately controverted by an opposing paradox.

Mr. Shaw's vegetarian views are expounded by an unfrocked priest of the St. Francis type, who calls himself a brother to the pig, and talks with a grasshopper, which answers him with chirpings more intelligible than some of Mr. Daly's remarks, "The English woman eats not wisely but too well. The Irish woman eats wisely but too little." The idealistic Irish movement of Mr. William Butler Yeats receives a crack from Shaw's shillalah. There is a young Irishman who talks like Yeats.

"If you live in contact with dreams, you

contract some of their charm. If you live in contact with facts you acquire some of their brutality. I long for a country where the charm is not a dream and the facts are not brutal."

But he is beaten in love and politics by an efficient Englishman, who has no intuitions, but a purpose; no tact, but plenty of determination, and who is never afraid of making a fool of himself, because he never knows it.

"York State Folks," with which the Majestic Theater opened this fall, is a characteristic type of the rural plays that retain a permanent place in the drama because the humor and pathos of the simple life make a more general appeal than more complex elements, and are especially effective with country-born city-dwellers. The peeling of an apple, the distribution of the mail in the country store, the practicing of the Glee Club, and lovers strolling home from evening meeting are capable of reviving long forgotten sentiments by recalling childhood scenes when hearts were more susceptible. The play is prettily staged and is acted with less of the farcical exaggeration of clownish country types than commonly.

Chauncey Olcott in the new romantic Irish play entitled "Edmund Burke," at the Majestic, was the same favorite that he always has been. The scenes in which he appeared were diverse, but he was as of old a champion of the wronged and a lover of the beautiful in woman. During the play Mr. Olcott sang several songs written and composed by himself.

"The Prodigal Son" was first written by Mr. Hall Caine as a play, and this purpose is quite obvious to the reader of the novel. But in dramatizing the novel some of the most effective parts, such as the midnight flight of Thora to rescue her baby and Oscar's visit to his wife's grave, have been omitted, and the characters conventionalized and falsified. The play is really an opera without music. And not altogether without music, either, for there is a great deal of the orchestral accompaniment to sentimental scenes. It is a great pity to waste good acting and magnificent staging upon what is in this form a very ordinary melodrama.

"De Lancy," the new play by Mr. Augustus Thomas, is simpler in structure and not so cluttered with unnecessary fixings and incidents as "Mrs. Lef-

finger's Boots," but without Mr. John Drew's agreeable personality and his art of saying things naturally, the play would be as commonplace as the society drama of modern New York usually is. Until some one of our playwrights is inspired to look a little deeper than the surface of men and events, the picturesque and pulsating life of this city of supreme contrasts and vitality will remain without an interpreter. Misses Margaret Dole and Doris Keane, and Mr. Nichols make the most of their respective rôles.

"The Man on the Box" is a dramatization of Harold MacGrath's novel of the same name. It is a light and amusing piece and affords a fine opportunity for the humorous display of Henry E. Dixey, who, in the guise of a groom, enters the employment of his lady love, and after many absurd situations obtains the situation of bridegroom. Mrs. Carlotta Nillson, who received so much praise in "Letty" last year, played most acceptable the rôle of the heroine.

It was an exceedingly difficult task

that Mr. Thomas Jefferson set before himself when he essayed the rôle of Rip Van Winkle, at Wallack's. Joseph Jefferson, his father, had converted the part into a classic, to which, probably, no one else will ever attain. Certainly Thomas never reached the perfection of his father. He was at times hard and metallic where his parent had been soft and musical. But he approached the character he portrayed in a kindly spirit and he reinvested it with some of its old charm and human interest. The support given the present Rip is by no means as strong as was that usually given to Joseph Jefferson.

In closing this review we must not forget to mention the Hippodrome, which is a circus, variety show, ballet, spectacle and play all in one. It gives a performance that is absolutely unrivaled in the country, and every stranger in New York to whom spectacular bigness appeals—and to whom does it not?—will feel more than repaid for "taking it in." How the variety houses can keep crowded in competition with the Hippodrome we do not know.

Interior of the Hippodrome.

Literature

The Missourian

In these days when a romance takes a new direction it is as startling as if an old comet had got a new tail. And that is what has happened in this story of Din Driscoll, *The Missourian*.^{*} He is the eternal hero of romance, leaving behind him the same iridescent trail of love and blood and glory that these man-stars have ever left in their magnificent wake; but the curious thing is that his sky line begins where it usually ends for heroes in his particular constellation. Thus, the fashion has been, when the scene of a story is laid anywhere in the sixties, to include two or three battles of the Civil War, all the well known warriors and statesmen of the times. The hero flies about among them, the greatest, bravest, and only unknown man in sight. If he survives the final battle scene with his head in the heroine's lap, he is carried thru the abominations of Reconstruction days. It is as easy to foretell his orbit as to calculate that of Saturn. We know with tedious certainty what last ditch of desperation he will be in before the close of the tenth chapter. We are as familiar with the oft-repeated emotions of the little goose-quill heroine as we are with our own grandmother's oldest cake receipt—and the father of all artistic lying knows how we have wearied of the performance.

This is why we should be grateful to Mr. Lyle for having given in this novel a new and adequate setting for the American hero of love and war.

^{*} *THE MISSOURIAN*. By Eugene P. Lyle. New York: Doubleday, Page & Co. \$1.50.

Din Driscoll belonged to Joe Shelby's famous brigade. Just before the surrender of Lee's army in Virginia, he sails for Mexico with an offer to Emperor Maximilian of what remained of the Confederate army in the West. And never since the days of Cortez has any man had such adventures in that land of jungles, vipers, women, roses and brigands. Doubtless history affords more accurate details concerning the incidents which led to the

abdication of Maximilian, but only a genius who commands the whole zodiac of colors, from the sinister, tiger-eyed gleams of light in the untamed forest to the dim chamber of a man's heart, could so interpret the life, the poetry, splendor, squalor and villainy of that "play Empire." It was the tail-end of the world's politics steeped in romance. And the author has written it all out in sentences that set the whole thing to breathing; he has colored and vitalized every flimsy intrigue until the reader becomes a part of this puny pageant, fol-

EUGENE P. LYLE, JR.,
Author of "The Missourian."
Doubleday, Page & Co.

lowing the illusions of the poet Prince thru political phases that are the most preposterous figments of a romantic brain.

So much for the general current of the story. But the character of Din Driscoll commands especial attention because it is a new triumph in the art of literary portraiture. Mr. Lyle has selected those qualities in the Southern character which render it chivalric, but not quite mediæval. Completed, it is a sort of bronze reflection of that something in the past which made war the virgin life of a man, the period when passion was cleansed by the sword, and love was the after-thought of battle. This is a fine distinction, often

hinted at vaguely, but rarely ever so logically developed in fiction. And history justifies it by the life of more than one Bayard.

But according to Mr. Lyle, this virgin man, with a sagging cartridge belt, and pistols tucked under his gaunt ribs, is the simplest, most sincere, and terrible person imaginable. He has a sense of honor which cleaved men's skulls and a sense of chastity which enabled him to show contempt for the gilded lady even when suggestion tempted him to adore.

"He was a deep-breathing, danger-nourished man of life and of things that count. And his only cynicism, and even that was unconscious, was the dry, honest sort which sheer unpolished naturalness bears to all things trivial and vain and artificial. . . . Here he was traveling near a handsome young woman who for the moment had been cut off from her precious wee sphere. And he saw her outside of it; playing coquettishly and to her own mind seriously; playing bewitchingly her shallow *role* patterned after life, yet without once realizing the counterfeit. The Western country boy, whatever his Cavalier stock, had a Puritan backbone in common with the whole American race."

A better interpretation of the best American type has not been written in any other book this year, and he stands out with startling, characteristic abruptness in that empire of ritual royalty and puny villainies. This is where the author has scored another success. In the *Battle of Antietam*, which is a favorite with our novelists, Din Driscoll could have surpassed the courage of his comrades only by a sword's length at best. There would have been nothing against which to draw the profile of his distinction, there is not sufficient contrast between Americans to produce the necessary artistic difference. But given a ragged, vagabond battle line of little brown Latin fatalists for a background, and this eternal "cavalier" with the "Puritan backbone" becomes the man-climax which the artistic sense demands. He is what everything in poetry and history have led up to, and we recognize him as the young epitome of all races in this Western world. He satisfies the mind as a being veracious, he satisfies the imagination as a being heroic, and he appeals to righteousness because his intuitions tend to sanity and morality rather than to license.

Mr. Lyle has kept off the big stage

with his story, but the skirmishing line far away toward the flank of marching events has never been better drawn. The illustrations, made by Ernest Haskell, are significant and refreshingly original.

Recent Economic Publications

THE two text books on political economy before us¹ agree in but one respect. They both regard the present industrial order, not in its historical aspect, as a product of previously existing conditions and itself subject to a continual process of organic change or evolution, but in its static aspect as a permanent and everlasting mechanism, capable at the most only of minor modifications and perturbations. In all other respects, however, they form a direct antithesis. Levasseur's *Elements* is fluent, commonplace, eclectic. It addresses itself to the common sense of the average man, to whom, indeed, most of its propositions will sound familiar enough, and who cannot but be flattered by the fact that his ordinary everyday opinions are the highest achievements of economic science. Interest, profit, and wages are explained without reference to the problem of value, which is not taken up until the subject of exchange is reached. It is then defined as a product of utility, rarity, and labor, which "comes into being at the very moment of exchange, and is the result of the conditions of each exchange."

If Levasseur sticks to the surface of things, Professor Flux reduces them to subtle abstractions, spiritualizes them, as it were, and makes them perform quite uncanny gyrations in midair. His *Economic Principles* are erected upon the so-called Austrian or marginal utility theory of value, according to which the value of a commodity is equal to the utility of the last unit of it offered for sale. Professor Flux admits that "the direct comparison of the urgency of the needs of different persons for any commodity is not feasible," but the prices they pay for equal means of satisfaction can be

¹ ELEMENTS OF POLITICAL ECONOMY. By Emile Levasseur. Translated by Theodore Marburg, M.A. New York: The Macmillan Co. \$1.75.

ECONOMIC PRINCIPLES. By A. W. Flux, M.A., Professor of Political Economy in McGill University. New York: E. P. Dutton & Co. \$2.00.

compared, and these prices are affected "not only by differences in intensity of desire for the commodity, but also by differences in the amount of other goods which they possess. . . . Expressed in terms of money, such offers are known as 'demand prices.'" How are the wages of labor, *i. e.*, the value of the laborer, determined? By the net product of the last laborer added to or subtracted from the labor gang, without adding to or subtracting from the capital employed, is Professor Flux's answer.

Professor Flux nowhere condescends to a discussion or refutation of any of the older theories. The Austrian theory is the final dispensation, and all other economic theories are mere heathen superstition unworthy of notice.

It is with a sense of relief that one turns from the arid platitudes and scholastic subtleties of latter-day economic theory to such studies of concrete economic fact, past and present, as are presented in the latest additions to the *Studies in History, Economics and Public Law*, edited by the Faculty of Political Science of Columbia University and published by the Macmillan Co.

Those who are unacquainted with the history of political economy generally believe that Malthus was the first to give an adequate treatment to the problem of population. They will give up this belief after a reading of *Pre-Malthusian Doctrines of Population*², which gives an abstract of the views held concerning population from the earliest times down to the publication of Malthus's *Essay*. We regret, however, that he did not see his way clear to a more thoro presentation of the social causes that have, at different periods and among various peoples, given rise to so great a diversity of views concerning the increase of mankind. Had he done this, he would have contributed a most important chapter to the history of civilization.

Herrenschwand (1730-1796) deserved a more careful study than is given to him in this book, for he not only held that "in any consideration of the question of population the industrial stage of the people must be given attention," as is recognized

on page 317, but also that the different classes of the same people, for example freemen and slaves, are subject to different laws of population—a theory that has received a most signal confirmation in our own country as well as in France.

*Combination in the Mining Industry*³ is a detailed study of concentration in Lake Superior iron ore production. Professor Mussey divides the history of Lake Superior iron mining into three main periods, "according to the amount of capital used in working the typical individual mine," and marked off from each other—this is a most significant circumstance—by the economic crises of 1873 and 1893. The process of concentration is a strictly impersonal, social process. "The price of ore is continually reduced by the action of forces over which the producer has no control." The producer must therefore reduce the cost by the employment of a greater capital, and tho the amount of capital necessary to work the individual mine is increased, the accumulation of capital by the individual companies rises even faster. "The logical result of this process is that when one corporation has capital enough for the economical working of the entire deposits, it will obtain sole control."

However it be with regard to industry, the law of concentration does not apply to agriculture owing to natural hindrances such as topography, climate, seasonal work, and physical contiguity, the difficulty of obtaining and keeping a large and elastic labor supply, and the love of the peasant for his patrimony which makes him undergo severe privations rather than sell his small allotment. In the *Economics of Land Tenure in Georgia*⁴ it is shown that from 1873 to 1902 there was a fifty-six per cent. increase in the number of white landowners, and a decrease of thirty-one per cent. in the average size of the proprietorships. The rate of increase in the number of landowners was greater in the period 1870-1880 than in the subsequent decade, and greater in the period 1880-1890 than in 1890-1900. The

² PRE-MALTHUSIAN DOCTRINES OF POPULATION. By Charles Emil Stangeland, Ph.D. New York: The Columbia University Press; The Macmillan Co., agents. \$2.50.

³ COMBINATION IN THE MINING INDUSTRY. By Henry Raymond Mussey, Ph.D., Assistant Professor of Economics and Industry, New York University. New York: Columbia University Press. Macmillan Co. \$1.00.

⁴ THE ECONOMICS OF LAND TENURE IN GEORGIA. By Enoch Marvin Banks, Ph.D. Ditto. \$1.00.

500 acre farm seems to be the dividing line between tendencies, for while the number of ownerships of every class under 500 acres has increased, the number of ownerships over 500 acres has diminished. As a whole, the smaller the size of the ownership, the greater has been its rate of increase. On the other hand, there has been no increase of land-ownership among the whites as compared with the increase of the white population since 1860.

The ownership of land among the negroes has increased about three and a half times since 1874. But while the average size of white holdings is about 239 acres, that of negro holdings is 64 acres, and while the negroes compose nearly one-half of the population, they possess only one twenty-fifth of the land of the State.

In these days of labor unions, capitalistic combinations, and the widespread demand for their regulation by the State or nation, the study of the industrial organizations of the Middle Ages and the attitude of Government toward them naturally assumes an added interest.

What part did the action of the English Government play in the dissolution of the gild system? English economic historians usually impute to legislation a very important, if not a decisive, part in this process. The monograph on *English Craft Gilds and the Government*⁵ is devoted to an examination of the evidence on this head, and it arrives at the conclusion that the Government, far from aiming at the disruption of the gilds, actually strove to conserve them, so much so that the mediæval restrictive regulations were not removed from the statute book until the nineteenth century, by which time not only the gild, but even the manufacturing system had passed away. The gilds had succumbed to forces chiefly of an economic order.

The monograph on the *Poor Law of Connecticut*⁶ is the most voluminous of these studies. Its interest is primarily local and professional, altho many an interesting fact in social history may incidentally be gleaned from its pages.

A History of Egypt. From the XIXth to the XXXth Dynasties. By W. M. Flinders Petrie. With numerous illustrations. Vol. 3. 12mo. pp. xx, 406. Charles Scribner's Sons. New York. \$2.25.

There has been much delay in the appearance of Vol. 3 of *Flinders Petrie's History of Egypt*, owing to the author's active work in exploration, or the necessity of co-ordinating many late discoveries. These volumes give us the best and most complete account of the records and historical monuments of the Egyptian Kings. This is not a work on manners and customs, or religion, but is purely history, very largely original and representing the author's own researches and conclusions, in which some other scholars may differ from him, for he has pronounced views. The period covered in this volume extends from the beginning of the Nineteenth Dynasty, about 1300 B. C., the most brilliant period in Egyptian history, to 342 B. C., when the last native king of the Thirtieth Dynasty lost the throne, and the rule passed over to the Persian Ochus. This period is illustrated by 161 pictures of monuments, mainly half-tones, with all the known cartouches, an advantage to collectors of scarabs with cartouches of kings. When we remember that the period treated covers the entire relation of Israel to Egypt, from Abraham to Jeremiah, the value of the volume to the Biblical student is obvious. Petrie appears to put the Exodus at 1213 B. C. in the reign of Merenptah.

Speeches and Addresses. By John Charlton. Toronto: Morang & Co.

The name of John Charlton, member of the Canadian House of Commons from 1872 to 1904, is known in this country as one of the Joint High Commission of 1898 to arrange a settlement of matters in dispute between Canada and the United States of America. In this volume he has collected some of his speeches and addresses on various subjects. Those which will be of special interest here are those on the National Transcontinental Railway; the Brown Draft Reciprocity Treaty of 1878, which failed to be ratified by the United States Senate; Self-Protection, Reciprocity and British Preference. There is also an able Parliamentary speech on "Irre-

⁵ THE ENGLISH CRAFT GILDS AND THE GOVERNMENT. By Stella Kramer, M.A. Ditto. \$1.00.

⁶ THE HISTORICAL DEVELOPMENT OF THE POOR LAW OF CONNECTICUT. By Edward Warren Capen, Ph.D. Ditto. \$3.00.

deemable Currency," and in the platform addresses there are two of interest as giving a Canadian's view of Washington and Lincoln. Mr. Charlton does not attempt to reach heights of forensic eloquence, as some speakers do, but aims rather at a calm and logical presentation of the matters which he debates. In this he is decidedly successful, and his speeches are marked with vigor and common-sense argument. One of Mr. Charlton's platform addresses is on American humor, and it is full of excellent instances which have appealed to him, and, possibly, have lightened the strain of a political life.

Art in Photography. With Selected Examples of European and American Work. Edited by Charles Holme. Special Summer Number of "The Studio." New York: John Lane Co. \$2.00 paper, \$3.00 cloth.

If there are any persons now who would challenge the correctness of such a title, a study of these examples of pictorial photography should do much toward removing their prejudice against the youngest of the arts. So far from being a mechanical process it is now so far developed that it is possible to recognize at a glance the work of any well known photographer as easily as that of a painter; the man has become master of his material. The present collection of over a hundred reproductions of recent British, American, French, German, Italian and Belgian work affords a good opportunity for the comparison of national tastes and tendencies, which are here clearly manifested. Great pains have been taken to give each picture the best expression by suitable tint and texture for paper and block. It is unfortunate that our antiquated postal laws stand in the way of the use of photographic prints for the illustration of magazines in place of half-tones and similar crude substitutes.

The Atonement and Modern Thought. By Rev. Junius B. Remensnyder, D.D., LL.D. With an introduction by Prof. Benjamin B. Warfield, D.D., LL.D. Philadelphia: Lutheran Publication Society.

The names of Dr. Remensnyder and Dr. Warfield stand for stanch and militant orthodoxy, and it is the substitutional

theory of the atonement in its baldest and most rigid form that is here presented. It is declared that the atonement offered by Christ was a genuine substitution, a veritable ransom, the actual infliction on the part of God the Father of the punishment due and necessary for the sins of man upon the innocent Christ. It is the doctrine of Anselm's *Cur Deus Homo* without modification. This doctrine is pronounced the burden of the New Testament, the heart of the Gospel, the key-stone of the Christian system. Yet Dr. Remensnyder is well aware that the great majority of Christian teachers have departed from this view, and that it is losing ground every day. Both he and Dr. Warfield are conscious that they are arguing a lost cause, and complain that they who "hold the public ear have definitely broken with the doctrine of a substitutive atonement." A generation is growing up which never heard the sacrificial explanation of the death of Christ, and many young people in the churches would be shocked by the declaration that Jesus was punished that we might escape punishment, and yet they are not found lacking in Christian faith and piety. Dr. Remensnyder writes with clearness and force, and his sincerity and earnestness of conviction entitle him to all honor; yet his endeavor to bring back the Anselmic theory of the atonement into modern thought is a useless striving. The modern man cannot retreat from his conviction, as quoted by Dr. Remensnyder from an editorial in *THE INDEPENDENT*, that "Christianity does not require us to look on the death of Christ as propitiating the Father, who needs nobody to excite or encourage His love. No expiatory sacrifice is needed, for God is abundantly able to forgive, out of His own store of love."

Floyd's Flowers; or, Duty and Beauty for Colored Children. By Prof. Silas X. Floyd. Illustrated by John Henry Adams. 12mo. pp. 326. Chicago: Hertel, Jenkins & Co. \$1.00.

This really seems something new—a book for colored children. It is a collection of excellent advice, in the way of a hundred simple stories, such instruction as would make better men and women. It is appropriately illustrated with nearly a hundred pictures by a colored artist.

Inasmuch as the author, Dr. Floyd, is himself a colored man, and one who has been a welcome contributor to *THE INDEPENDENT*, the book is entirely by and for the race. We will say that Mr. Adams has not at all exaggerated the negro features. Indeed, the most of his children are more than half Causcasian in blood. But that is well, as the bulk of the purchasers will be of that type. The book will be a real benefit to the youth who reads its interesting pages.

Literary Notes

It is announced that *Charities* of New York, and *The Commons*, of Chicago, will join forces and be published hereafter as one magazine. *Charities* has long been recognized as the ablest paper in this country in its chosen field of charity and philanthropic reform, and *The Commons* is easily the best magazine published in the interests of the settlement idea and kindred topics. *The Commons* is constructive. *Charities* is remedial. Both together should make a very important reform magazine.

....*Sunday Talks* by Barbara Yechton, is a good book to read to boys and girls on a Sunday afternoon. (Thomas Whittaker, New York, \$1.25.)

....An excellent interpretation of "The Kansas Conscience," now aroused by the acts of the Standard Oil Company in that State, is given in *The Reader* for October by William Allen White, of Emporia.

....*The Bible Beautiful* by Estelle M. Hurll, traces the art of illustrating biblical themes from the early catacombs to the splendid paintings of the Renaissance. It is attractively published and very well illustrated throughout. (L. C. Page. \$2.00.)

....Nathan Haskell Dole has compiled an anthology of Latin Poets, consisting of metrical translations by English writers. Practically the whole of Roman literature is represented, from Plautus and Terence to Juvenal and Lucan. The selections are well chosen. (Crowell. \$2.00.)

....Three lectures by Justice David J. Brewer on the subject, "The United States a Christian Nation," are published by the Winston Co., Philadelphia. Decisions of the Supreme Court are frequently cited that support Christian views and the observance of Sunday. (Price, \$1.00.)

....The latest writings of Count Leo Tolstoy on the Japanese war, and present conditions in Russia, have been translated into the French by J. W. Bienstock. There is at least one man in Russia trying to bring about reform by some other means than bombs and dynamite. (Paris: Société du Mercure de France, 70 cents.)

....A reprint of President Eliot's *The Happy Life*, is put on the market by Crowell

& Co. (75 cents), now that such "Lives" are in fashion, at least in print. The same publishers also print *The Life That Counts*, by President Cole, of Wheaton Seminary (75 cents). Both books teach us that the quiet, unselfish life is the best.

....A convenient diatessaron entitled, *His Life*, has been prepared by fifteen pastors, representing six denominations. It contains a life of Christ in a single narrative in the words of the four Gospels. It is intended for wide circulation; the price for the paper edition is 10 cents, cloth, 30 cents. (Pastor's Union, Oak Park, Illinois.)

Pebbles

....*Hicks*: "I've got to borrow \$200 somewhere."

Wicks: "Take my advice and borrow \$300 while you are about it."

"But I only need \$200."

"That doesn't make any difference. Borrow \$300 and pay back \$100 of it in two installments at intervals of a month or so. Then the man that you borrow from will think that he is going to get the rest of it."—*Somerville Journal*.

....Said a broken-down fox: "I have spent Every dollar I had," and he went

To a wealthy old skunk

For the loan of a plunk,

But the skunk wouldn't give him a scent.

—*New York Times*.

Then he went to a mink of high rank,
And he begged for the loan of a franc.

Said the mink: "Why, old fox,

Here are plenty of rocks.

Help yourself; draw 'em out of this bank."

—*Chicago Tribune*.

....A collection ought to be made of such things, and yet what excuse, what provocation is there for a passage like the following, which occurred in a novel recently offered in all gravity to a respectable New York publishing house. Near the last of four pages devoted to a catalog of the physical charms of her heroine the writer remarks: "Her rich, fruity mouth was a very organ of bewitchment. In luring tones it sang its tune of love, longing for some one to sip the kisses which played at hide and seek around the pinky corners of the plump lips."—*Ladies Home Journal*.

....To keep fish from smelling cut off their noses.

Why does a yard full of clothes remind one of a telephone? Because the line's busy.

A stroke of lightning the other day tore a boy's shoe to pieces, but did not harm the boy. He had gone in swimming and placed his shoes beneath a tree.

A notorious eavesdropper—rain.

The prettiest thing around a picture is generally the frame.

When you cancel a note you can't sell it.—*Baltimore American*.

Editorials

New York's Municipal Campaign

Although the political organizations which oppose Tammany in New York failed to unite in support of candidates, the municipal campaign is by no means to be dull and lifeless. Three tickets are in the field. Tammany has nominated Mayor McClellan for another term; the Republicans have named William M. Ivins; the Municipal Ownership League is represented by William R. Hearst. With no candidate of its own for Mayor, the Citizens' Union, foremost of all Tammany's foes in the past, now strives to re-elect District Attorney Jerome, whom all other parties and factions have rejected. Lurking behind the respectable head of Tammany's ticket are nominees for subordinate places whose character is so repulsive that the newspapers heartily supporting Mr. McClellan denounce them daily. Some of those on the list below Mr. Ivins's name are either unknown or unfit. In average excellence the Hearst ticket may fairly be rated above either of its competitors, bearing as it does the names of ex-Senator John Ford (author of the franchise tax law), J. G. Phelps Stokes, and ex-Comptroller Coler. A Mayor is to be elected for a term of four years, and county officers are also to be chosen.

Tammany in this campaign has introduced no novelties of procedure. Relying upon the popular strength of its Mayor and the division of its enemies, it has placed on the list with him the names of such men as James W. Ridgway, whose course some years ago in the office of District Attorney of Kings County (Brooklyn) should now prevent him from receiving the vote of any good man. This nomination is the fruit of the reconciliation of the Manhattan Boss, Murphy, and the Brooklyn Boss, McCarren. The Republican organization has been handicapped from the beginning of the futile Fusion conferences by the malign influence of the Republican State Boss, ex-Governor Odell. Nothing more ridiculous or contemptible has been seen in municipal politics than the frittering away of Republican opportunity under his direc-

tion. Mr. Ivins, a competent man of excellent record, goes into the fight with the millstone of Odellism hanging about his neck. District Attorney Jerome, the most worthy of all candidates now before the people of New York, asserts that Odell and Murphy (Tammany's leader) joined hands to prevent his re-election. An alliance behind the scenes for that purpose must also have had other aims, and would explain much that has taken place. History shows that agreements between Republican State Bosses and Tammany city Bosses have not been unknown in the past.

The great general issue of the campaign is honest government and good administration; with this stands the special issue of municipal ownership as suggested by the gas and electric light monopoly and the \$200,000,000 worth of subways soon to be constructed. Tammany has never presented a fairer front. There have been no great robberies; the foul scandals of the term of Croker's Van Wyck have not been repeated. The Mayor is a discreet man of liberal education and good manners. His chief errors have been the approval (fortunately ineffective) of a bill designed to mend all the weak places in the gas monopoly's armor, and the appointment of incompetent or otherwise unworthy heads of departments. Being Tammany's Mayor, these things he was obliged to do. Behind him was Murphy; behind Murphy were the forces which control the gas interests and expect to control the new subways. The present fruit of these relations between capital and politics has been great and profitable contracts, but no political leader is the contractor of record. The refinements of indirection in political graft may now be found in New York.

Fusion was designed to unite all the political bodies that could be arrayed against the traditional misgovernment of Tammany; some measure of municipal ownership, in its practical application to the subway and gas problems, was the weapon most available for use. Fusion came to nothing, for reasons which could

best be explained by Mr. Odell, and now each one of the three parties is for municipal ownership in varying degree. Tammany points to the acquisition of one ferry, promises to buy others, boasts of appropriations for an electric lighting plant to be used for street lamps, and says franchises hereafter must be limited. Not a word about gas nor any direct reference to the construction and operation of subways. The Republicans in their platform demand a municipal lighting plant for the use of citizens. Mr. Ivins goes further. He would ask for a law authorizing the city to condemn and buy all the gas plants, would have all lapsed and forfeitable franchises taken up by the city, and would have the Rapid Transit Commission empowered to contract for the construction of subways without at the same time contracting for the operation of them:

"In the matter of the municipalization of our public franchises, except on the point of the compensation payable on the reassumption of them by the public, I will listen to no adverse party in interest. The principle is no longer open to discussion."

The League demands the immediate establishment and operation by the city of a plant for the sale of gas to all citizens; the construction of subways by the city, and the operation of them by the city as soon as it shall be legally and financially able to do this; short-term leases in the immediate future, and the selection of members of the Rapid Transit Commission by the people in a democratic way. These are the policies to which the three parties are committed.

The issue is one of great importance, especially in its relation to the planned network of subways upon which \$200,000,000 is to be expended. There is nothing in the history or the present attitude of Tammany that can commend its policy or candidates to those who demand such reforms and such relief as are promised by the platforms and candidates of the two other parties. Mr. Ivins means what he says. Some years ago he was a pioneer in the promotion of political reform, and experience in office has given him a thoro knowledge of municipal affairs in New York. But a majority of his present associates declined to support District Attorney Jerome and are under the influence of Mr. Odell. We do not question

the sincerity and earnestness of any one whose name is on the League ticket. As a rule, the nominees and the members of the League are moved by devotion to a cause, their advocacy of which has not been marred by intrigue or political bargaining. We are familiar with the career of Mr. Hearst, and we understand why his nomination repels some whom the nomination of Mr. Ivins attracts. In each of these two tickets and two movements against Tammany rule and policy there is something that is distasteful to some, and a cause of distrust to others, who long to see Tammany beaten.

Mr. Jerome, who hates all bosses, and whom not one of the three organizations has nominated, ought to be elected by a great plurality. Each of the three parties should have placed his name on its ticket. The people should now show by their votes for him that a competent, faithful, honest and independent prosecutor cannot thus be compelled to retire from the public service.

The Federation of Churches and the Unitarians

EVERYBODY knows, or should know, that there is to meet in New York in November the most important and impressive religious gathering ever held in this country. Its purpose is to organize an official and permanent federation of the evangelical churches in this country, which have hitherto had a certain degree of fellowship or jealousy, but no recognized basis of union. They have been split apart and often rivals. It is expected that they will form such a confessed and visible union as shall give them combined strength and influence.

The invitations to this conference for organization were sent out by the National Federation of Churches and Christian Workers. That is a self-constituted body which has existed for several years, and which has had for its purpose the bringing together in local federation, in cities or States, of the individual churches for their common work. It has established quite a number of such local federations, which have done good service.

This National Federation, not at all official, but composed of voluntary mem-

bers of various denominations, having its headquarters in New York, with E. B. Sanford, D. D., as secretary, sent out the invitations to the national organizations of the various evangelical denominations, asking them to come together and form the official and permanent Federation of Evangelical Churches. It did not send invitations to every minutest denomination in the country, but to all the principal ones; and twenty-seven, by their national bodies, have accepted, with a membership of about 18,000,000.

It did not send an invitation to the Unitarians, who are not usually denominated evangelical. Now the Unitarians, thru their president, Samuel A. Eliot, D. D., have sent a letter asking that they be admitted, and suggesting a list of excellent men, such as Dr. Edward Everett Hale and ex-Secretary Long, by whom they would be likely to be represented; and Secretary Sanford sent a reply, as courteous as the case allowed, to the effect that the omission to invite them was intentional.

It is very pleasant to know that the Unitarians desired to be held in fellowship with the so-called evangelical denominations, which only were so designated in the letter of invitation that was sent out. But it is also perfectly clear why no invitation was sent to them.

They are not usually included under the term *evangelical*, and only to such was the invitation sent. The Catholics are beyond question a Christian body, but no invitation was sent to them. So none was sent to the Church of the Latter Day Saints or to Dr. Dowie's brotherhood, both of which claim to be Christian. It is easy to assert that they ought to have been invited, but they were not, and for very good reasons.

This Federation is an effort to bring denominations together. It is perfectly impossible to get all together. The Catholics would not come; and if the Mormon Church were asked to come in, nearly all the others would stay out. So if the Unitarians were asked to join it, past all question other greater denominations would refuse. The effort would be doomed to failure; it would breed disunion, not union. That is the practical fact, apart from its reasonableness. The Unitarians may be supposed to be as good

Christians as anybody else, and they certainly embrace not a few noble Christian men; but the more Christian they are, the more glad will they be, with much regret that they are misunderstood, to stand aside and not be a bone of contention to prevent the union of Christians that have less charity than they. Indeed, we are rather surprised that they did not see this, and that their letter should have seemed intended to throw discredit on the union to which they must have known that they could not at present be admitted.

The reason why the Unitarians were not invited, and why their admission would break up the effort for federation, is not far to seek. The fact is that *Evangelical* includes in its meaning a definite relation of discipleship to Jesus Christ as Saviour of the world. Now, the Unitarians do not profess to be included under that term. Many of their members are fairly so included, but not as Unitarians. Many hold and teach that Jesus Christ was simply an ordinary man, but an extraordinary teacher. Not a few of their preachers take precisely the position of Felix Adler, the admirable preacher of ethical culture, who does not pretend to be even a Christian, and of the Liberal Jews. These men are freely accepted in Unitarian pulpits, and may be a majority of the body. They resent the adoption of any statement by their Conference which shall be stronger than the invitation to their fellowship of those who wish in any sense to be followers of Christ.

It may be conceived that the time will come when an honest life and good character will be all that is required for fellowship in the Christian Church; when any one who admires Christ's teachings and tries to be honest and loving, whether he calls himself Christian, Jew or Buddhist, will be accepted as a Christian, and evangelical enough; but the time is not yet. In Massachusetts and Rhode Island the evangelical churches do now accept Unitarians within their local federations, but that cannot be done all over the country. The attempt to do it would break up the whole thing. Such being the case, much as we admire Dr. Eliot and the good Christian work he has done, we think that he and his associates

ought willingly and gracefully to stand aside and rejoice that the other churches can come together, and wait until time and change shall bring all of us closer together.

Walking

ENGLISH people express wonder that Americans are such poor walkers. The difficulty has been partly a matter of pride. Every Yankee owned so many acres that he must keep a horse, and this his wife and children were expected to drive. They all went to church on Sunday, and not a small amount of rank and distinction was created by the chaise and the carriage. These vehicles marked stages of a social sort higher than the ox cart, in which not a few reached the meeting house. It was always well in those early days, also, to have fleet methods of escape from possible Indian attacks. A new continent gave large farms, and the New Englander found walking about his own acres quite sufficient for exercise.

That this has brought about a constitutional tendency is not to be wondered at. The effect has been not altogether good on the American physique—especially of females. The Irish mother can walk forty miles in a day, and be at her washtub the next. The English woman makes little of a ten mile walk before breakfast. She finds that it expands her lungs and oxygenizes her blood, so that she has red cheeks and good muscle. It has other advantages, in that it enables the walker to see, not so many things, but to see a few things thoroly. As the railroad trains rush faster and faster across the continent, walking becomes more essential to an observer and a student. Travel has ceased to be for pleasure. It expresses nothing more than hurry—with possible worry. The least delay upsets our engagements, and breaks our connections. Personally conducted tours give us one day for the Yosemite, one more for the Grand Canyon, and one more for a National Park. There is little satisfaction in this sort of speed, to a well trained mind. John Muir would have known little of the glaciers if he had not gone on foot.

Tramping was not a mere abandonment of decent society; it expressed a strong protest against conventional speed. The decent tramp, and there are many of these, has a philosophy beneath his abandonment of our artificial methods of locomotion. He has taken to his legs again: one of the best gifts of Nature. He has not had altogether a bad time of it. Gypsies are notably happy and healthy. More out-of-doors is certainly desirable to give American character tenacity of will, physical endurance, and healthy conceptions of life.

Walking gives us that close intimacy with Nature that cannot be obtained in any other way. It is with the growth of scientific research that a passion is now slowly growing up for going on foot. It enables the tourist to examine and study geology, entomology, ornithology and botany. One mile gives more for the eyes and ears than a hundred that are speeded thru by rival railroad trains. We recommend this habit as a part of the new doctrine, that one should live close to Nature. If we would do this we must know the feel of Nature and the smell of Nature. He must take time to study the bees in their work, and get acquainted with the birds in their home-building, and, if he cannot see the grass grow, he can at least get deeply sympathetic with the minute processes of the field and the woods.

Walking is, however, an institution by itself; not the mere negation of locomotive forces. It glorifies the legs, as the most supple friends of the arms and brain. The human body is a splendid unit; and all its parts are adjusted nicely, each to the other. Walking does not fit, however, so well with some seasons as with others. It does not belong to the midsummer vacation. It serves better as a Spring or an Autumn pastime. In September and October you get the ideal tramp—something that glorifies that much despised word. These months take us naturally into the fields. We do not need to go far from home; we shall find enough to make us happy in any old pasture, or trailing along a common brookside.

Apart from the mere guideboard directions, the pedestrian needs no other introduction to neighboring towns. He may

scout his county until it becomes like a homestead. Everywhere he is on a tour of personal investigation. He is a genuine Columbus. All the continents are discovered; but that does not hinder the discovery of towns, of glens and waterfalls—new roads to new lands, and a thousand facts as fresh as were discovered by Hendrick Hudson when he sailed up the North River. It needs only a wallet for lunches, and a toothbrush, and a snug portmanteau for a change of shirts, collars and underclothing. Let him start out for a two or three days' tour only; then try four or five days. He will soon find out his idiosyncrasies and can humor them. A change of shoes may be demanded by a bunion, and his accumulations may require additional hampers. If he can have a good companion—just one—all right; otherwise go alone. Four or five will pull too many ways, and no one will get a chance for his whims and tastes—and, mark you, this is the chief advantage of walking. The ideal is where man and wife tramp together. They will learn something new about what being wedded is. It is dangerous to concentrate our lives too closely to one spot. We know one such couple in New York State, and one more in Florida. What one fails, by constitutional habit, to see, the other will probably have a bias specially to observe. Each one stimulates the other. Then comes comparative study. We conceive this to be a very delicate refinement of wedded existence—to become complementary parts of one life.

But we do not hesitate to recommend walking for its economy. Americans are happily getting by the false standard that estimates value by cash payments. The cost of a week's tramp will not exceed the expenses of a single day at one of our summer resort hotels. When our pleasures and recreations cost even less than home life, we shall not have to toil ten months to accumulate money enough to enjoy two, or even one. After a sturdy walk, of the sort we have been describing, deliberate, studious, we shall carry home with us a full head as well as a full heart. We venture that a right sort of tramp of two weeks will give intellectual stimulus, and subjects for study during all the rest of the year, and at

practically no expense. We have no obligation, just now, greater than to reduce the cost of our pleasures—more particularly the expense of our recuperative off-days. A vacation that takes a large part of a clerk's or apprentice's annual savings is demoralizing. The day laborer, who is always afoot, will be the better for a bit of railroad luxury, for variety; but for the majority of working people, merchants and professional men, the ordinary vacation is getting to be too expensive. The remedy is learning to walk. The schools have turned to manual culture, why not also to walking as an art? The boy loves to walk, and he does it well; why must he lose this pleasure and ability as he grows older?

Independent Scholarship in the Catholic Church

A NUMBER of Catholic scholars in Germany as well as in France have in recent months shown that their independence of thought will risk even ecclesiastical censure. One of these is Prof. Karl Kuenstle, of the University of Freiburg, in Baden, who has just published a *brochure* entitled "*Comma Johanneum*," which a prominent Protestant paper of Leipzig declares intrinsically "to be worth more than big folios of ordinary theological discussion." The pamphlet has been generally ignored by Catholic papers, but Protestants of such prominence as Professor Gregory, of Leipzig, in the *Literararisches Centralblatt* have warmly welcomed its independence and results. Gregory declares that it is a "masterly work."

The *brochure* discusses the old *crux* as to the authenticity of the famous Trinity passage, I John 5:7: "There are three that bear witness in Heaven," which only a few years ago the Roman Index Congregation declared dared not be doubted as authentic by the faithful. Kuenstle, following the canons of modern historical research, has proved that this verse is the production of the Spanish heretic Priscilian, of the fifth century, and down to the ninth century is found only in the Spanish manuscripts of the Bible. He, indeed, states that the decision of the Index Congregation only declares that this *Comma Johanneum* could be used

as proof for the doctrine of the Trinity, but had not purposed to pass on the Johannine origin of the passage. Protestant scholars, however, declared that in this matter he is mistaken. Such is the impression made by this little work in Catholic circles that Professor Koch, of the Catholic Faculty in Tübingen, states that Kuenstle's researches on this vexed problem have "practically closed the discussion."

Another evidence of such independence is the investigation of the so-called "blood miracles," as these occurred, according to the reports of the Middle Ages, in the consecrated host, and to the present day yet are claimed to occur in the so-called "blood substances" of the Saint Januarius in Naples. Catholic scholars are now explaining these pretended miracles on the basis of the current bacilli theory in modern medicine as a purely natural phenomenon. The Benedictine father, Martin Gander, has published in the great Catholic house of Benziger & Co., in Einsiedeln, a special work on bacteria, in which he discusses also the "host bacillus." It is the same that is known to the world as the *bacillus* or *micrococcus prodigiosus*, and is well known for its color producing quality, especially in the case of bread, potatoes, etc., where it causes blood red spots. This Gander declares to be the legitimate explanation of what the Middle Ages and even later times regarded as the "blood miracles" in connection with the sacred host. He quotes also from a discussion of the Jesuit Professor Resch, in "Nature and Revelation," a statement to the effect that these red pigment bacteria were undoubtedly the cause of the "bloody host," and thinks it a wise arrangement of the Church which forbids the preservation of the sacred host for too long a period, because thus it would be subjected to all the changes which affect bread when under external influences.

The German Catholic professor of theology, Dr. Sickenberger, has recently published a work entitled "Critical Considerations on the Domestic Ecclesiastical Condition," the second chapter of which is devoted to a careful discussion of the activity of the Catholic Church in these words:

"If we examine the results of our work we must see, to our great sorrow, that we have come far short of that which with all reserve one could expect of the efforts which we have put forth. Everybody who will open his eyes will see this. We have a well organized Hierarchy; the shortage of priests has almost been overcome. In Germany, in so far as it is Catholic, there are 18,000 priests at work in 30 dioceses; in Austria in 63 dioceses there are 27,000; in France in 88 dioceses, there are 55,000; in Italy in 267 dioceses, there are 63,000. We have our free church seminaries and other institutions of learning; we have a vast multitude of priests of orders and sisters by the hundred thousand, with their vast activity in school and charitable work, the Catholic associations, Catholic literature and press, and then the immense success of the Catholic parliamentary life—think of these. And what are the results? The educated classes as a rule are decidedly anti-Church; the universities and the educated world in general as also a large percentage of civil officials are frightfully anti-Catholic; in Austria, Italy, France the anti-Catholics are the leaders of the people; literature and arts are largely estranged from the Catholic religion. The great bulk of the teachers of all grades are opposed to the Church; among the military officers the spirit of the Church has largely been suppressed. And when we look at the Catholic masses? How much such vices as intemperance, unchastity, greed and the like prevail! Even in such purely Catholic districts as Bavaria, immorality, murder and the like prevail in a frightful degree. The sons of Catholic families, as soon as they have finished their college course, become gross infidels. Do I exaggerate? My readers would like to have me answer this question, but they can answer it themselves."

We can fairly balance such statements against the assertions we so often meet in Catholic papers of the loss of faith in the Protestant Churches.

Henry Irving

TWICE within the year have we been called upon to pay tribute to the passing of a great actor, Jefferson on this side of the water, and now Sir Henry Irving on the other. We have had time to realize the void created by the loss of the impersonator of "Rip Van Winkle"; we are now asked to consider what it means to the dramatic profession, when a personality such as Irving's is taken from its midst. Every great actor arrives at an

opportune moment: the history of drama shows this in every age; the time is always ripe for the true artist. In Irving the chain of related generations links the present with Macready and Helen Faucit, with Charlotte Cushman and Charles Mathews. His career of over half a century of active service on the stage is a great part of the record of the English theater for fifty years. With the death of Sir Henry Irving, we are further removed from the Victorian era; tradition has gained what we have lost, according to the Emersonian law of compensation.

Irving was a force in his profession; he leaves behind him indelible marks of a vital reformer. His art has brought pleasure, and has been a benefit. The actor must impersonate; there are many such. But Irving's genius expanded beneath a healthful stimulus of an active imagination, and he added to and enriched that which was placed before him, and so his undertaking of *rôle* meant more than the letter, perhaps a little more than the spirit. A great actor does not alone imply great acting, unless by the latter you understand intellectual and moral tastes upheld by divine fire—art, genius, spirit, what you will. Irving's work might thus be characterized—and in spite of his mannerisms he was a rare example of the true artist.

Sir Henry Irving was not as old as Jefferson, yet sixty-seven years is a ripe age, in which experience wins the reverence of a younger generation. The career of the English actor was a full one; to the very end, he sustained a repertoire that was exacting, and included some of his best parts; Shylock,

Mathias, Becket, and Sergeant Brewster. It was as Becket that he appeared on the evening of October 13th, at Bradford, England, and it was only a short while after he had uttered those words of the Cardinal: "Through night to light. Into Thy hands, O Lord; into Thy hands;" then he himself passed away. In his time he assumed *rôles* that numbered over seven hundred—a versatility extending from Richard III to Bill Sykes. What if his Romeo and Claude Melnotte lacked romantic finish, his Benedick and

Malvolio were unsurpassed. Even tho compared unfavorably with Booth as Hamlet, he did not relinquish the Dane without having added dignity and brooding pathos to the part. Then there were Dr. Primrose, Louis XI, Cardinal Wolsey, and those countless Shakespearian productions which won him fame as a manager, and the respect of the world as an actor of high and noble intent.

A career of fifty years means that Irving passed thru the Bulwer and Robertson stage of drama, and always he moved with clear idea as to the mission of the actor. He touched the

Boucicault decade, and then, as Macready before him did with Browning, so he turned to Tennyson and introduced the poet-laureate as a practical dramatist. Thru all these changes, as actor-manager for many years past, he has witnessed the fluctuating methods of the commercial side of the theatre, and he has gone thru it all, holding above everything to his purpose.

As a reformer, Irving's influence remains active for the present generation. Three notes are dominant in all he has

Sir Henry Irving as "Becket" in Tennyson's Drama of That Name. Irving's Last Appearance Was in This Rôle at Bradford, a Few Hours Before His Death on October 13th. He Will Be Buried in Westminster Abbey.

written or spoken about his profession: First, the high duty of his calling; then the refined, pure and thoughtful character of the art *per se*; and finally the imaginative value of interpretation and execution. These qualities stamped Irving and made him the great actor he was. Add to this another quality every artist should possess—a student's desire for truth—a desire which prompted Irving to demand the text of Shakespeare intact, and not that of Garrick's or Cibber's spoliation—and we begin to realize the extent of that void created by the death of Irving.

Lord Coleridge, in an address delivered at the time the actor, in 1884, was about to pay his first visit to America, said: "Acting, such as yours, ennobles and elevates the stage, and serves to restore it to its true function as a potent instrument for intellectual and moral culture." This is the high lesson of a useful life. It is more than genius, for genius does not always betoken the value of the man. Sir Henry Irving made the world look differently upon his profession, and thru the years the rôle of actor did not make him forgetful of his part as a man.

The Boycott in India

WE are having new illustrations of the tremendous political power of the boycott among people who have no other method of reaching their purpose. What it has done in Ireland we know, and at present it is being used with great effectiveness in China against American products and in India against those of Great Britain. It is not clear that in China the boycott has failed, as has been asserted. Certainly it has already done great injury to American trade. It is even more surprising that it should be employed in India, and its consequences may be more serious.

The occasion is the Governmental partition of the great province of Bengal. It is hardly beyond question that the province ought, for purposes of government, to be divided. But there is a native public sentiment against it, which was not considered, and which has expressed itself in a way to surprise the rulers who had not imagined that the people had any

special sense of pride or patriotism. But they have risen up in protest against the accomplished fact, and have agreed to boycott all British products, using those only that are of native manufacture. The very unpopular late Governor-General, who is responsible for the partition of Bengal, is in a way attacked with his own weapon, for he has been urging everywhere the creation of home industries. The boycott is spreading rapidly, and it is proposed to extend it so as to boycott all natives who in any way have anything to do with English rulers responsible for the partition. That would affect the reception of the Prince of Wales on his coming visit, especially as some of the Maharajahs have joined the popular protest.

It is likely that this protest finds in the partition of Bengal a pretext rather than a cause. With education there grows a sense of patriotic resentment that India should be governed by foreigners. England is educating India, but is not trying our way in the Philippines of teaching the people to rule themselves. We promised the Philippines self-government; Great Britain still assumes that the Empire of India cannot ever be governed by its own people. English writers laugh at our method in our colony; they are beginning to discuss the infelicities in their own.

One of the extraordinary results of this boycott is the coming together of the Hindus and the Mohammedans, forgetting their ancient feuds. Would that similar patriotism might bring together the Greeks, Armenians and Bulgarians in Turkey! There might then be hope of accomplishing some reforms in that misgoverned empire.

This boycott may run its course and fail, but it has already done much to accentuate the ill will between natives and Englishmen. On both sides very bitter language is being used. Dissatisfaction with British rule is increasing. Feelings long suppressed are finding expression. English employers are threatening to retaliate on their Bengali clerks; and on the other hand every effort is making to extend the boycott to both men and products, and it is, says *New India*, "spreading like wildfire." To our nation the lesson is, to give the people more, and

not less, part in government. You cannot always cork up a volcano. Nor can you put down a boycott. Men cannot be punished for neglecting to buy American oil in China, or Manchester goods in India. The boycott is a weapon which evades resistance, and is itself irresistible so long as the people agree to use it.

Mrs. Lowell In the death of Josephine Shaw Lowell last week the United States loses one of its noblest and greatest women. For forty years there has been nobody in New York whose charitable and social reform effort has resulted in greater and more lasting achievement than hers. Her monument is built in the Charity Organization Society, which she founded twenty-three years ago, in the Constitution and statutes of New York, in the successful fight for civil service reform, in her impress on the labor movement, on the college settlements, and in fact on every good endeavor for civic reform. Her beloved young husband, Charles Russell Lowell, was killed in the Civil War at Cedar Creek; her patriot brother, Robert Gould Shaw, perished at Fort Wagner, at the head of his negro regiment, and was buried with them. No wonder, with the example of two such sacrifices to treasure in her memory, Mrs. Lowell became what she was. Her work will remain.

Return of Governor Wright Governor Wright is coming home from the Philippines, on business of the Islands, it is said, and to remain six months. But it is also asserted, and denied, that he is not to return. We confess to a hope that he will not return. That he has been an effectual Governor we do not question, nor that he has done his best to rule well. But there are limitations involved in the feelings which a man has toward other races than his own. The Americans like him; the Filipinos do not. When Secretary Taft reached the Islands he found that the Filipino young ladies had been allowed no chance to meet Miss Roosevelt, and he had to get up a special reception, where he danced with the Filipino ladies on terms of social recognition. No man is

fit to be a Governor in the Philippines who has been brought up on the theory that other races than his own are by nature dependent and inferior. He should treat Filipinos precisely as he would treat Americans. There are too many Americans in office in the Philippines who insult the native people by their contemptuous arrogance, and they it is who make government difficult and unpopular. No man should be appointed who is not sympathetic with the people with whom he must reside. Society in Manila has ostracised a white person for marrying a Filipino. That is the expression of a vicious spirit, and a dangerous one.

Latin and Greek In these days when the schools are opening we commend to teachers the advice addressed to teachers by two of the most distinguished English writers. John Milton thus writes to his friend Hartlib, master of a school for boys:

"Tho a linguist should pride himself to have all the tongues that Babel cleft the world into, yet if he have not studied the solid things in them, as well as the words and lexicons, he were nothing so much to be esteemed a learned man, as any yeoman or tradesman competently wise in his mother dialect only.

"Hence appear the many mistakes which have made learning generally so unpleasing and unsuccessful. First, we do amiss to spend seven or eight years merely in scraping together so much miserable Latin and Greek, as might be learned otherwise easily and delightfully in one year. And that which casts our proficiency therein so much behind is . . . partly in a preposterous exaction, forcing the empty wits of children to compose themes, verses, and oratory . . . whereas, if after some preparatory grounds of speech by their certain forms got into memory, they were led to the praxis thereof in some chosen short book lessened thoroly to them, they might then forthwith proceed to learn the substance of good things, and arts in due order, which would bring the whole language quickly into their power."

Edmund Burke was of precisely the same opinion. He thus wrote to his friend, Richard Shackleton, master of the school where he had mostly been educated. A century after John Milton, he said in 1746:

"Your office of a schoolmaster throws you amongst the ancient authors, who are generally reputed the best; but as they are commonly read and taught, the only use that seems to be made of 'em, is barely to learn the lan-

guage they are written in—a very strange application of the use of that kind of learning—to read of things to understand words, instead of teaching words that we may better be enabled to profit by the excellent things which are wrapt up in them. I would therefore advise you to be less inquisitive about the grammatical parts of the authors than you have been, not only for the above-mentioned reason, but because you will find it much the easier way of attaining the language. And you will be pleased to consider after what manner we learn our mother tongue. We first by conversation (to which reading, when the language is dead, is equivalent) come to know the signification of all words, and the manner of placing 'em. Afterwards we may, if we will, know the rules and laws by which they are to be placed so and so; which will then be quite easy to us, as they are only the laws of words reduced to writing."

Another century and a half have gone by, and still we are teaching Latin in the same old way. We might add what John Locke says to the same effect in his essay on "Education," but the schools are wedded to their idols, and it will do little good.

Grant and Lincoln

A communication from Mr. William G. Johnston, of Wadertown, N. Y., questions the accuracy of Mr. I. C. Crawford's report, in our issue of September 21st, of the interview which a delegation of three Southern statesmen during the Civil War, headed by Alexander H. Stephens, had with General Grant, seeking for a basis for ending the war. The gentlemen, as reported by Mr. Stephens, whom Mr. Crawford quotes, were greatly delighted with the kindness and courtesy of General Grant. It is said that President Lincoln was ready to receive the Confederate representatives, but that Secretary Stanton overbore him, and the men returned disappointed, as was General Grant. We now give Mr. Johnston's comment and correction:

That Stephens could not have said this is easily proved by a glance at his own history, entitled "War Between the States," written seven years previously, in which he gives a detailed account of the Peace Commission going from Grant's headquarters, at City Point, to Fort Monroe, where they arrived on the night of Feb. 2, and of their conference with General Grant on the following morning, which lasted for four hours. Their want of success, therefore, was not because of Mr. Lincoln's refusal to meet them—being influenced to this course by Mr. Stanton, but because of the instructions they received from the rebel

President Davis, that rather than accept terms of peace upon the basis of a return of the States in rebellion, they would die in the last ditch. They knew, moreover, that Mr. Lincoln would listen to no talk of peace unless prior thereto the seceding States were back in the Union. And personally, two at least—Mr. Stephens and Mr. Hunter—would have gladly accepted such terms.

Further confirmation of these facts is to be found in the writings of the second member of the Peace Commission—Mr. Hunter—in his "Southern Historical Society Papers."

And still further, a full, clear, comprehensive statement in relation to all matters connected with this conference is to be found in Nicolay and Hay's "Life of Lincoln," and in perfect accord with what is herein written.

The two Senators from Idaho are at loggerheads over the forest reserves in that mountainous State. Senator Dubois says the policy of the Government in setting aside as reserves considerable areas not suitable for settlement is wise and for the interests of the people; while Senator Heyburn makes warm protests against certain of these reserves. The presumption is strong that objections are made in the interest of nominal settlers and claimants, who have no honest desire to settle on the land, but who are involved in just such land frauds as have made such a scandal as to convict a United States Senator and Representative. Indeed, investigation has shown that most of the claims examined in the forest reserves of Idaho were illegitimate. That the Government should control the mountainous sources of our rivers is beyond question. So New Hampshire ought to make a reserve of the White Mountains and control the cutting down of the forests.

Kansas wants no gowned or bewigged frippery to adonize the honorificability of her judges. Plain, honest men of the people, with sound sense and legal learning in their heads, are good enough for her. She has learned the lesson of "Sartor Resartus."

The Eastern war ended on Saturday last by exchange of notifications. The influence of the war will be felt all over the world for a hundred years.

Insurance

The Cost of Fire Insurance

THE question whether the cost of insurance is excessive under private management has been brought prominently before the public as a result of the startling revelations brought out by the Life Insurance investigation in this city. In this connection we are permitted by Mr. Edward Atkinson, of Boston, to be allowed to print his recent letter to us on the fire insurance side of the subject, which is as follows:

To the Editor of THE INDEPENDENT:

DEAR SIR: In reply to your request for some facts bearing on the theory that the State ought to undertake to give contracts of indemnity known as insurance policies against loss by fire, citing New Zealand as a place where such a system is now alleged to be in successful operation, I beg to say that economists would be wise to deal with facts before suggesting a remedy for alleged faults. Municipal and State insurance has been tested, I think many times, and has failed, notably in Switzerland, where there proved to be no ground for the alleged excess of the charges of private companies for contracts of indemnity. The theory is based on the total misapprehension of existing conditions.

For ten years the larger Stock Fire Insurance Companies of this country received in premiums on fire policies over one thousand million dollars (\$1,000,000,000). Their losses and expenses were in the aggregate eighteen million dollars (\$18,000,000) in excess of this sum. A very few had a small margin of profit. The greater number lost money on their fire insurance contracts, yet these companies prospered. Many of them made large dividends and their stock bore a high price in the market.

This loss on fire risks led them to make an earnest endeavor to establish a slight advance in rates in which they succeeded. Since then the Baltimore fire has come in and if the same companies' results were now tabulated they would doubtless show a larger loss on their fire insurance contracts.

Their losses, disregarding fractions, have been about sixty (60) cents per year on each hundred dollars of insurance carried; their expenses about forty (40) cents, and their premiums were a little under one hundred (100) cents. Under these conditions they lost money. Whence their gains? They came wholly from their functions as bankers. Their capital, their previous surplus, in many cases large, and the use of the cash premiums for one year gave them an income as bankers of about sixty million dollars (\$60,000,000) a

year. I am repeating these figures from memory and believe they are correct.

Can expenses be diminished? I once thought them excessive, but the expense account of the largest and best managed companies, worked with the utmost skill and energy, are thirty-three (33) per cent. of their premiums.

Can the losses be diminished? Not by the Insurance Companies. The owners and occupants of insured buildings are the only persons who can prevent loss by fire, and so long as architects, builders, owners and occupants alike, as a rule, neglect the simplest principles of safety in construction and occupation, the ash heap will continue to increase. There is slight improvement in normal years; I think that the destruction of property by fire bears a lessened proportion to the amount at risk. Slowly and surely improvement in protection and inspection is gaining.

It therefore follows that critics can find no true ground for alleged excess of charge by Fire Insurance Companies for granting contracts of indemnity against loss by fire. There may be many exceptions taken to details, but on what ground could State or municipal insurance be advocated when men of the highest capacity and longest experience have failed to make Fire Insurance Corporations profitable except in their function as bankers?

If any one should suggest that the writer represents a system in which the losses and expenses of fire insurance have been reduced to less than a tenth the average cost on other risks, then why not adopt similar plans under compulsion? To which the reply may be made that when owners, occupants, builders and architects are brought to the same sense of responsibility for the care and protection of their own property as that to which the members of the Factory Mutual System have been brought, barring the conflagration hazard, the losses and expenses of fire insurance may be reduced in proportionate measure. The high cost of fire insurance is wholly due to neglect of the simplest principles of prevention of loss on the part of owners and occupants of insured buildings.

Yours very truly,
EDWARD ATKINSON.

Advices from London state that during the approaching visit of the Princess of Wales in India her personal jewelry will be protected by insurance against loss by fire, theft or otherwise from the time she leaves England until she returns home. The policy is for a sum equivalent to \$250,000.

Psychology in Insurance

According to the *Coast Review* converts to the creed of the New Thought are being secured in new and unexpected fields. The present indications are that it will not alone be followed by psychists and thinkers of a dreamy mould. Its horizon boundary is rapidly expanding and will presently include the soul of the business world. The political observer has long cherished the theory that the world has no soul. There are many evidences of this, one of which lies in the hackneyed use of the phrase "soulless corporations" so frequently encountered in the public prints. But it is so easy to fall into error and to be mistaken! Business, it now appears, must have a soul because the selling of insurance is business of the common, ordinary, sordid kind, and for the instruction of the men laboring in this field there has lately been issued a book with the alluring title of "The Psychology of Soliciting."* If, therefore, business were soulless, the application of psychology to business methods and business principles would be impossible, since psychology is the Science of the Soul. It will be easily apparent even to the dullest mind what the result must be if psychology once becomes a part of an insurance solicitor's stock in trade. The average citizen, who is not immune, will, at the psychological moment, stand helpless before the psychological solicitor who has transfixed him with his working eye. Knowing the phenomena of the soul and of mind conditions, the solicitor can read the mind of the man before him as easily as the Arabian Nights' magician in possession of lamp or ring discomfited the genii whom he encountered. The possibilities of psychology and its application to business appear absolutely boundless. The solicitor who has properly mastered the manual issued for his benefit can stand and triumphantly say with the Count of Monte Cristo, "The world is mine"! After a course in psychology the condition of a man's mind will be to the close student simply a trade condition. He will be

able to perceive at once just when his "prospect" is ready to sign the contract which is the basis of his commission, and again, at the psychological moment there will be a meeting of pen and contract with a resulting signature, that must be as effective as the meeting of minds so essential and so vital in law. The prospective policy holder becomes as clay in the hands of a potter. He cannot help himself. He signs because of psychology, and under the influence of it the forces of the soul compel him to protect those dependent upon him by means of the insurance principle.

The Insurance Investigation

ADDITIONAL testimony was given by R. A. McCurdy before the Armstrong Committee last week. This was particularly notable because it elicited the expression of opinion on his part that life insurance was merely philanthropy. His words were:

"I claim that life insurance is a philanthropic enterprise, and that the estimation in which the life insurance companies have been held in late years is a wrong one entirely. The fact that they have been held to be money-making affairs for the sake of the policy-holder and the annual return to him in his dividends has obscured the whole object of a mutual life insurance company—what it is intended for, what it does."

The committee adjourned and the investigation halted on account of the death of Speaker Nixon, of the Assembly. Sessions will be resumed this week.

THE recent revelations in regard to insurance inspired more than one sermon in local churches last Sunday. The widespread indignation against the Alexanders, Hydes, Depews, McCalls, Perkinses and McCurdys and their revealed practices of diverting the funds of their respective companies from ordinary to political and other unusual channels was powerfully voiced from a number of pulpits. The insurance situation, as it is at present, calls for considerable lamentation. There appears, however, to be a tendency manifested on the part of hostile States to await the result of investigations now on foot in this State before taking further action.

Financial

Telephone Competition

FOUR independent telephone companies have recently applied for franchises in the city of New York, which is now served by one company, whose system is larger than that of any other city in the world, nearly equaling those of London and Berlin combined. These applicants offer rates, for their service, much lower than those now paid for the existing service. But the estimate of the engineer of the city's Finance Department that the price of a franchise for twenty-five years should be \$7,750,000 appears to be prohibitive, when considered in connection with the cost of rentals for use of the street conduits, which the existing company virtually controls. The situation tends to excite discussion of the advantages and disadvantages of competition in the telephone service of a great city.

We spoke some weeks ago of the admirable report of a committee of the Merchants' Association which thoroly investigated the New York company's business and induced that company to make rate reductions amounting to \$1,525,000 in annual revenue. This report, which declared that the company's service was unsurpassed elsewhere in adequacy or efficiency, contained the results of an inquiry in other places as to the desirability of competition. In the committee's opinion, competition in such service is not beneficial to the public and is not a useful means of regulating charges. The experience of certain other large cities was set forth, showing, according to the testimony taken and the facts ascertained, an increase of cost to business men, who found that they must pay for two services instead of one, and indicating that the independent service was really the more expensive of the two, because of the inferior degree of utility involved.

As in the case of other national monopolies, duplication in telephone service, wires, conduits, etc., is an economic waste. This is true with respect to the long distance lines as well as concerning those which lie wholly within the boundaries of a municipality. The ideal service is that which is furnished by one centralized system, subject to supervision

and reasonable control in the public interest. Telephone competition in a great city compels a large majority of users to pay for two services instead of one; it causes a needless duplication of lines and apparatus. If at first it compels a reduction of the original company's charges, it will probably end in consolidation, after causing much inconvenience and a waste of capital. Unification of both the local and the long-distance service, under just regulation, is to be sought for the public good. In the case of a natural monopoly, evils attending such unification can be treated more effectively in some other way than by competition. Burdensome duplication and economic waste should be avoided. Some evils may be removed by inquiry, publicity and amicable discussion. Others may require a large measure of public control. Wherever such control, if needed, is successfully resisted, a popular demand for public ownership will be stimulated, and in such ownership the people will seek a remedy for abuses which do not yield to the regulation of private ownership by public authority.

This Year's Crops

THE Government's crop report for October 1st (issued on the 10th) indicates that the harvest figures will be about as follows, in bushels, comparison being made below with the actual yields of last year:

	1905.	1904.
Corn	2,707,517,000	2,467,480,934
Wheat	683,311,000	552,399,517
Oats	938,623,000	894,595,552
Rye	30,312,000	27,234,565
Barley	132,806,000	139,748,958
Buckwheat	14,848,000	15,008,336
Flax	22,714,000	23,228,000
Potatoes	259,820,000	332,830,300

Only once, in 1901, has a larger crop of wheat been harvested. This year's yield of corn has never been equaled. The short crop of four years ago was 1,522,000,000 bushels.

....Dividends announced:

U. S. Express Co. (semi-annual) \$2.00 per share, payable Nov. 15th.

United Copper Co. (Preferred) 3 per cent., payable Nov. 15th.

VOL. LIX

NEW YORK, THURSDAY, OCTOBER 26, 1905

No. 2969

Survey of the World

The President in the South

The President started for the South on the morning of the 18th, and arrived in Richmond a little before noon, having in the course of the journey made brief addresses at Fredericksburg and Ashland. In Richmond, business was suspended and he was received with great enthusiasm. At the beginning of his long address in Capitol Square he spoke of "the priceless memories of the Civil War, the proud self-sacrifice, the resolute and daring courage, the high and steadfast devotion to the right as each man saw it, whether Northerner or Southerner." Altho great praise was due to the South, he continued, for the valor her sons had then displayed, even greater praise was due to her for what her people had accomplished in the forty years of peace that followed. For twenty years the struggle had been hard and doubtful, but afterward the splendid qualities of Southern manhood and womanhood were effective in winning prosperity. "Alike in your material and in your spiritual and intellectual development, you now stand abreast of the foremost in the world's progress." Turning to the problems of government, he expressed again his familiar views as to our duty with respect to international relations. "We are a great people and must play a great part in the world. Our mission should be one of peace, but not the peace of cravens." Our voice must be raised for righteousness first, and for peace only as the handmaiden of righteousness. We must not disregard ethical standards in international relations, and must beware of the folly "which would stop the whole work of civilization by a well meant but silly persistency in trying to apply to peoples unfitted for them those theories of gov-

ernment and of national action which are suited only for the most advanced races." In undertaking to build the Panama Canal we had "necessarily undertaken to police the seas at either end of it," and therefore we had a peculiar interest in the preservation of order in the coasts and islands of the Caribbean. He believed that by wise and generous aid we could "help even the most backward of the peoples in these coasts and islands along the path of orderly liberty, so that they could stand alone." Speaking of domestic problems, he said that it was idle to try to prevent combinations of capitalists or of wage-workers, but we should see to it that they work for the public good. Many republics had fallen because they had grown to be governments in the interest of a class. "It was ultimately as fatal to the cause of freedom whether it was the rich who oppressed the poor, or the poor who plundered the rich." Our aim should be to deal justice to rich and poor alike.—At a banquet in the Masonic Temple Governor Montague, Mayor McCarthy and Senators Daniel and Martin sat at the President's table. Responding to a toast, the President said that as an American he could claim that his hosts had no more right of kinship in Robert E. Lee and Stonewall Jackson than he himself had. He spoke of his uncle, James Dunwoody Bulloch, an admiral in the Confederate Navy, "the man who, it seemed to me, came nearest, among all the men I have ever met, to typifying that most beautiful of all characters in fiction, Thackeray's Colonel Newcome. Next only to a man's having worn the blue," he continued, "comes the fact of the man's having worn the gray, as entitling him to honor in my sight." He had put

on his staff a grand nephew of General Lee, with a grandson of General Grant and a son of Phil Sheridan. At his earnest request, Colonel Henderson, an Englishman and the author of the best biography of Stonewall Jackson, had promised to write a biography of General Lee, but he died soon after the promise was given.—At the Lee Monument the President addressed an audience of Confederate veterans, saying: "All Americans, North and South, must ever render high honor to the men of the Civil War, whether they wore the blue or whether they wore the gray, so long as they did their duty as the light was given them to see their duty, with all the strength that was in them." At the Confederate Museum he received from the ladies of the Confederate Memorial Association a bouquet of roses tied with the Confederate colors. At one point in the line of march he addressed a gathering of negroes, congratulating them upon their progress in the industrial arts and upon the good standing of their bank, which is managed exclusively by colored men. In the evening he left Richmond for Raleigh.

Railroad Rates and Forests

On the fair grounds at Raleigh the President, addressing a great audience, argued earnestly for the preservation of the forests:

"Neither State nor Nation can afford to turn these mountains over to the unrestrained greed of those who would exploit them at the expense of the future. We cannot afford to wait longer before assuming control, in the interest of the public, of these forests; for if we do wait, the vested interests of private parties in them may become so strongly entrenched that it may be a most serious as well as a most expensive task to oust them. All the higher Appalachians should be reserved, either by the States or by the Nation. I much prefer that they should be put under national control, but it is a mere truism to say that they will not be reserved either by the States or by the Nation unless you people of the South show a strong interest therein."

Such reserves would be a paying investment in many ways, providing a defense against floods and maintaining Southern water powers. He then spoke at length in support of his railway rate policy, repeating much that he had said on this subject in other public addresses:

"I do not believe in Government ownership of anything which can with propriety be left in private hands, and in particular I should most strenuously object to Government ownership of railroads. But I believe with equal firmness that it is out of the question for the Government not to exercise a supervisory and regulatory right over the railroads; for it is vital to the well being of the public that they should be managed in a spirit of fairness and justice toward all the public."

To leave them without such control would be to put a premium upon unscrupulous and ruthless cunning in railroad management, for some shippers and some managers were willing to force others into acts of injustice, under penalty of being left behind in the race for success:

"The effort to prohibit all restraint of competition, whether reasonable or unreasonable, is unwise. What we need is to have some administrative body with ample power to forbid combination that is hurtful to the public, and to prevent favoritism to one individual at the expense of another."

Rebates were "not now often given openly," but they could be given as effectively in covert form. Private cars, terminal tracks and the like must be brought under the control of the Commission, which should have power to make its findings effective promptly:

"Moreover, I hope that by law power will be conferred upon representatives of the Government capable of performing the duty of public accountants carefully to examine into the books of railroads, when so ordered by the Interstate Commerce Commission, which should itself have power to prescribe what books, and what books only, should be kept by railroads. If there is in the minds of the Commission any suspicion that a certain railroad is in any shape or way giving rebates or behaving improperly, I wish the Commission to have power as a matter of right, not as a matter of favor, to make a full and exhaustive investigation of the receipts and expenditures of the railroad, so that any violation or evasion of the law may be detected."

At Durham the President spoke to the students of Trinity College. He was accompanied by Prof. John S. Bassett, whose praise of Booker Washington had caused an unsuccessful movement for his removal from the faculty, and also by Senator Simmons, who had been prominent in that movement. Therefore the following words were heard with much interest:

"You stand for academic freedom, for the right of private judgment, for the duty, more incumbent upon the scholar than upon any other man, to tell the truth as he sees it, to claim for himself and to give to others the

largest liberty in seeking after the truth. There must be no coercion of opinion if collegiate training is to bring forth full fruit."

At the Charlotte station the President met the widow of Gen. Stonewall Jackson, the head of a committee appointed to entertain Mrs. Roosevelt. Taking her hand, he said: "What, the widow of the great Stonewall Jackson! Why, it is worth the whole trip to have a chance to shake your hand!" He had made her grandson a cadet at West Point.

Municipal Ownership in Chicago

After the rejection, two weeks ago, by the Chicago Aldermen, of Mayor Dunne's plan for solving the street railway problem in that city, he expressed a desire to submit another one. The first, rejected by a vote of eighteen to forty-five, provided that a franchise of twenty years should be granted to a company composed of advocates of municipal ownership, and that this company should operate a railway in streets not covered by existing valid franchises. The second (which he has not yet asked the Council to consider), would provide for the acquisition of the present railway system by purchase or condemnation. On the 16th, the Mayor sent to the Council a brief message, asking for the passage of an accompanying order or resolution directing the Council's Transportation Committee to "cease forthwith" negotiating with the railway companies except as to the purchase of their properties. The committee has been considering, with some indications of approval, the companies' recent offer to pay, in improvements and cash, for an extension of their franchises. This order or resolution was promptly rejected by a vote of twenty-seven to thirty-seven, but was afterwards referred to the committee. Seven Democrats voted against the Mayor. Afterward, at the same session, the Aldermen decided by a vote of fifty-one to thirteen, that any plan which they should adopt must be submitted to a popular vote, and that they would not thereafter adopt any plan disapproved by a majority at such a referendum. Apparently the Council desires to recommend acceptance of the companies' offer, with some amendments in the city's interest. The Mayor

hopes that the minority on his side and in favor of municipal ownership will be large enough to prevent such a recommendation from being made over his veto. The companies appear to expect that their proposition will be accepted.

Corporations and Great Fortunes

On his way to Atlanta the President stopped for two hours at Roswell, Ga., to visit for the first time the old homestead where his mother (Miss Martha Bulloch) had lived in her youth, and where she was married. There he was greeted by two old negro servants, one of whom had been his mother's maid. In a brief address at the town park he spoke with much feeling of the memories awakened by his visit, and of his Southern relatives, especially of the two uncles who were in the Confederate Navy. On his way to the station he stopped to enter the Presbyterian Church, where his grandfather dropped dead in 1849 while teaching a Sunday School class. Speaking to a great audience in Atlanta on the same day, he took up the subject of great corporations, which, he said, if doing an inter-State business, should be accountable to the Federal Government. But the unwisdom of attempts to prevent or limit corporate activity had been shown in the Philippines and in Porto Rico, where legislation designed to prevent the exploitation of the islands by adventurers had seriously hampered and retarded development by excluding American capital. He then spoke of the great private fortunes and of "the man of great means who achieves fortune by crooked methods."

"The conscience of our people has been deeply shocked by the revelations made of recent years as to the way in which some of the great fortunes have been obtained and used, and there is, I think, in the minds of the people at large a strong feeling that a serious effort must be made to put a stop to the cynical dishonesty and contempt for right which have thus been revealed. I believe that something, and I hope that a good deal, can be done by law to remedy the state of things complained of. But when all that can be, has thus been done, there will yet remain much which the law cannot touch, and which must be reached by the force of public opinion. There are men who do not divide actions merely into those that are honest and those that are not, but create a third sub-division—that of law honesty; of that kind of honesty which

consists in keeping clear of the penitentiary. It is hard to reach astute men of this type save by making them feel the weight of an honest public indignation. We should treat with a peculiarly contemptuous abhorrence the man who, in a spirit of sheer cynicism, debauches either our business life or our political life. Of all men in the country, the worst are the men who have achieved great wealth, or any other form of success, in any save a clean and straightforward manner."

From the cotton crop and the Chinese boycott he passed to the Chinese exclusion law, saying we had come short of our duty toward the people of China. We ought to exclude all Chinese laborers, skilled or unskilled, but should admit and treat with every courtesy all Chinese not of the laboring class. In another address, at the Piedmont Club, the President warmly praised "Uncle Remus" (Joel Chandler Harris), and warned his hearers to exercise care in charging men in public life with being corrupt. "To accuse an honest man of being a thief is to gladden the heart of every thief in the Nation. First be sure of the facts. Do not be lenient, but do be just." One of the guests shouted: "We want you for another term!" Mr. Roosevelt smiled, but emphatically shook his head.—He arrived in Jacksonville on the 21st. In his address there he said that the Panama Canal would surely be constructed, and probably at less expense than was anticipated. As for the countries south of us, we did not wish another foot of territory, but it might occasionally be necessary to interfere by exercising an international police power, if only to avoid seeing some European nation forced to exercise it. At the Baptist Academy he spoke to an audience of negroes, commenting upon the evidence of their thrift and pointing out that while they should strive to make good teachers and preachers they should remember that there was almost unlimited room for men in agriculture and the mechanical trades. After a quiet Sunday in St. Augustine, he started for Mobile, arriving there on Monday afternoon.

Politics and
Washington Topics

Secretary Taft's
speech at Akron,
O., on the 21st, was
generally regarded as a reply to the recent speech in which Senator Foraker

opposed the President's railroad rate policy; but it was something more than that. The Secretary asserted that Mr. Bryan was resuming control of the Democratic party, advocating Government ownership of railroads and a general paternalism, leaning toward Socialism, which would paralyze the industrial and social progress of the country. It was to meet such attacks upon our present economic, social and political conditions, he continued, that the President sought to remove actual evils. He replied at length to Senator Foraker's argument against the President's rate policy, and then undertook to defend Governor Herrick against the charge that he was subservient to George B. Cox, commonly known as the Republican Boss of Cincinnati. This led to a sharp attack upon Cox himself, who is said to be supporting Senator Foraker as a candidate for the Presidential nomination. The Cox machine, Secretary Taft said, placed the whole government of both county and city absolutely under Cox's control, and the government under it was constantly described as a very corrupt one. The power secured by the Boss and his assistants had "undoubtedly inured to their pecuniary benefit" and given them large fortunes. If he could be in Cincinnati, he said, on Election Day, he would vote against the Republican municipal ticket.—In Maryland, Senator Rayner, Democrat, has publicly attacked the pending disfranchising Amendment and its chief supporter, his colleague, Senator Gorman. His denunciation of the Amendment fills a page of a newspaper. "I would rather," he says, "that my name should be forever buried in oblivion than either by active participation or silent acquiescence assist in inflicting this outrage upon the people of my State."—By order of the President, an important modification of the Civil Service rules has been made, as follows:

"When the President or head of an Executive Department is satisfied that an officer or employee in the classified service is inefficient or incapable, and that the public service will be materially improved by his removal, such removal will be made without hearing, but the cause of removal shall be stated in writing and filed. When misconduct is committed, in the view and presence of the President or the head of an Executive Department, removal may be made summarily and without notice."

The President was greatly annoyed some time ago, while driving, by the exasperating conduct of a chauffeur (in the classified service) who was operating an automobile owned by the Government. This incident led to discussion in the Cabinet and to the change in the rules. Advocates of the merit system find in the change something to commend, but say that the power thus granted might easily be abused. Under the new rule the offending chauffeur's head was the first to fall.

Philadelphia's Reform Movement Two or three members of the Cabinet and several other prominent Republicans having declined to speak at any meeting of the "organization" Republicans in Philadelphia, the chief figures at the "organization's" first meeting were Governor Pennypacker and Senator Penrose. The Governor said that Mayor Weaver had taken the right course in opposing the gas lease, removing unworthy officers, and purifying the voting lists. He then turned against the Mayor and denounced him for being false to his trust in accepting the leadership of a political movement and in using his influence in support of a political cause. Senator Penrose, a constant associate of those whom the Mayor is attacking, said the Republican Party had no apology to offer to canting hypocrites, nor any explanation to political conspirators who sought the overthrow of the party because they had failed to receive its honors. He also denounced the Philadelphia newspapers.—The committee appointed by the Councils to investigate the Mayor's acts has had unwelcome testimony forced upon it by the Superintendent of the Police, who insisted upon saying that the Director of Public Safety, recently removed by the Mayor, had given him orders that repeaters at the polls were not to be molested, and had taken from the Rogues' Gallery the photographs of jail birds appointed to be members of the police force.—On the day of the "organization's" first rally, a political scandal was disclosed by the failure of the Enterprise National Bank, of Allegheny, and the suicide of its cashier,

T. Lee Clark. This was one of the banks in which large sums of the State's money were deposited and from which influential politicians were accustomed to obtain loans. The immediate cause of failure appears to have been the large loans made by Clark upon the securities of a small railroad in New Mexico, promoted by William L. Andrews, formerly of Pennsylvania and an intimate friend of the late Senator Quay, but now New Mexico's Delegate at Washington.

The Triumph of Togo

The genius of the Japanese for spectacles and public festivals was demonstrated in the triumphal entry of Admiral Togo into the capital of Japan, and the review of his victorious fleet by the Mikado in the Bay of Tokyo. It was probably not by chance that the day for this event was nearly the same as that on which England was celebrating the centenary of Nelson's victory. The British ships were conspicuous in the naval demonstration, and everything was turned to account to emphasize the alliance of the two great insular naval powers. Baron Hayashi was one of the speakers at the Nelson banquet in London, and a telegram was read there from Togo, expressing "our ever-increasing admiration for and devotion to the great Admiral." The thirteen British warships in the harbor of Tokyo were visited by the Japanese people of all classes in immense crowds, estimated to number 40,000, on the Harvest Festival. On October 22nd Admiral Togo, with a suite of twelve Vice and Rear Admirals, and accompanied by Marquis Ito as the representative of the Emperor, was brought from Yokohama to Tokyo by special train. He was received at the Shimbashi station by the Cabinet, the Elder Statesmen and officers of the municipality, and escorted by them in triumphal procession thru the streets of the capital amid the shouts of "Banzai" to the palace of the Emperor, to whom he presented his official report of the conduct of the Navy during the war. The Emperor thanked him and granted a special rescript, which was not made public as it contains naval matters of importance. On the following day, the Emperor reviewed the fleet in Tokyo

Bay; the vessels in the harbor and the hills around were thronged with people who maintained silence out of respect for the imperial presence, as the cruiser "Asama," flying the Emperor's flag, a gold chrysanthemum on a crimson ground, passed between the triple lines of warships. As the Roman generals led captives behind their chariots, so Togo's triumph was graced by many Russian warships captured after the Battle of the Sea of Japan or raised in the harbor of Port Arthur. These have dropped the names that have become familiar to us from the despatches and will hereafter be known by their Japanese names as follows: "Peresviet" ("Sagami"), "Poltava" ("Tango"), "Nikolai I" ("Iki") and "Admiral Apraxine" ("Okinoshima"). Besides these there were a large number of minor Russian ships. Altogether the fleet numbered 308 vessels, including 86 torpedo boats and destroyers, and five submarine boats. The Emperor received, while he was on board the "Asama," Admiral Noel, of the British squadron, and the captains of the American warships, the battleship "Wisconsin" and the cruiser "Cincinnati."

Another Cuban Treaty Proposed

At a convention of the seven commercial, industrial and agricultural associations of Cuba, on the 17th, a resolution was adopted by unanimous vote, saying that the greatest need of the island is a new and permanent commercial treaty with the United States. A committee was appointed to consult with President Palma concerning such a treaty. He said that he would gladly assist in promoting closer commercial relations with this country. These associations oppose the pending treaty with Great Britain, which the Palma Government negotiated and which is not acceptable to our Government at Washington. They desire a new treaty covering general commercial relations as well as tariff reciprocity, and providing for preferential treatment of exported or imported goods carried in ships of the United States or of Cuba. Their aim is to preserve the market for Cuban products in the United States, fearing that, if no new agreement be made, that market will

be injuriously affected by coming free trade with the Philippines.—The Liberals, who have withdrawn from the campaign, assert that the Moderates have fraudulently and very largely increased the number of registered voters. President Palma denies this, saying that in Manzanillo, Holguin, and other places where the Liberals really had a majority, at the recent primaries they obtained all that a majority should have. He expresses a hope that the new Congress, after April next, will have a majority to support his policy concerning various public improvements.

President Loubet Visits Spain

The latest of the official visits which form so conspicuous a feature in the foreign policy of the French Government is the journey of President Loubet to Madrid in return for the visit of King Alfonso to Paris last May. The President arrived at the station at midday, October 23rd, was received there by the King, and the two rulers were driven to the palace in a coach between lines of troops. Two massive triumphal arches, each crowned with the arms of Castile and France, spanned the route and at the Puerto del Sol thirty golden columns were erected. Every precaution was taken against a repetition of the incident which on May 31st marred the visit of King Alfonso to Paris. No kodaks could be used without a license. The French Government, ever since the attempted assassination of the King of Spain and President Loubet, by the throwing of a bomb at their carriage, has been actively engaged in the pursuit of the anarchists concerned in the plot. Indictments have been found against five of them. The supposed principal is Avino, alias Ferras, but he has not been found. Charles Malato, a well known French revolutionary writer, and an anarchist named Caussanel, are charged with complicity, and Vallino, a Spaniard, and Harvey, an Englishman, with having explosives in their possession.—King Alfonso in opening the Cortes stated that a new and powerful navy was necessary to insure respect upon the Powers, and that military instruction should be made compulsory. Whether the Government will be able to

carry out its naval plans is questionable, for Señor Echegaray, Minister of Finance, insists upon reorganizing the finances before increasing the expenditure. He wishes to make the next budget show a surplus of \$8,000,000 instead of the usual deficit. The demands upon the Government for the assistance of the famine sufferers have been very great, and thousands are still in want.

The Parting of Norway The closing of the special session of the Swedish Riksdag, called to approve of the Karlstad Agreement for the separation of the Kingdoms, was an impressive spectacle. The aged King Oscar appeared in state robes with crown and scepter, and spoke the following closing words in a voice broken with tears:

"It is at a fateful moment that I raise my voice in this hall. The union formed in 1814 between the people of the Scandinavian Peninsula, disunited for centuries before, is ruptured, and the Swedish Riksdag has, by a resolution adopted October 16, approved my proposal in regard to its dissolution. It is truly not without deep grief that I see these two closely related peoples again separated, and that the dangers which in the union of nearly a century seemed to be averted forever are again resuscitated. However, I do not give up the hope that the political union no longer exists, lasting peace between the two peoples may be maintained in the future to the safety and happiness of both nations, and I am sure that a good foundation for this is laid by the agreement with Norway which you have adopted in accordance with my wish. I cannot at this moment express without deep emotion my cordial and heartfelt thanks for all the loyal devotion the noble people of Sweden have shown to me since June 7 of the present year, thruout a time of trial that has been so painful to me. The memory of this I shall not only carry in my heart to the last hour of my life, but it is one which will constantly encourage me to employ the strength still remaining me in my old age to the best advantage for the country and people that have shown me such loyal love. I hereby declare the extraordinary session of the Riksdag closed, and I remain, my worthy sirs and men of Sweden, with all my royal grace and favor well disposed toward you."

The proclamation of King Oscar announcing the dissolution of the Union will be issued soon, and probably the Norwegian Storting will take immediate action to fill the vacant throne. There is little prospect that the question of whether the form of government shall

be republican or monarchical will be submitted to the people. The Storting is expected to take matters in its own hands and offer the throne to Prince Charles of Denmark, who, it is said, will accept it and assume the name of Haakon VII. Haakon VI was the last independent Norwegian King and died in 1380.

The Trafalgar Centenary To celebrate a victory in such a way as not to wound the feelings of the defeated nation is a difficult feat, but it is generally admitted that this was accomplished in England last week. The streets of London, which so recently resounded with greetings to the officers and men of the French fleet, were this week decorated in honor of the victory of Nelson over the allied fleets of France and Spain off Cape Trafalgar a hundred years ago. All over the empire England's great naval victory was celebrated, but naturally the chief interest centred about the Nelson column in Trafalgar Square in London, which was elaborately decorated with laurel streamers, and piled high with memorial wreaths. Prominent among them was one inscribed: "To the memory of the gallant dead of France and Spain who lost their lives in the great conflict." Immense crowds assembled in the Square to cheer the hoisting of the flag signal used by Nelson before the battle: "England expects every man to do his duty today." Patriotic services were held in St. Paul's Cathedral, where Nelson is buried, and in many other churches under the auspices of the Navy League, beginning with the singing of "God Save the King," and closing with Kipling's "Recessional." Nelson's old flagship, the "Victory," in the harbor of Portsmouth, was decorated with lines of electric lights. The French papers under the heading, "Nelson — Trafalgar — Ville-neuve" describe the celebration in the most amicable spirit.

Russian Railway Strike A railroad strike of a very serious nature has broken out in Russia. On October 21st the traffic on all the roads leaving Moscow, with the exception of the Nicholai line to St. Petersburg, was

at a standstill. Many cities were entirely cut off from outside communication. The mails were lying in the post offices, and large numbers of passengers held up en route. Even the telephone and telegraph lines were not in operation. The situation has now been made desperate by the strike last Monday on the Nicholai railroad, connecting Moscow and St. Petersburg. Dispatches from Moscow state that a continuation of the strike for a week longer would force every factory to shut down, owing to lack of coal, whether or not the factory hands took part in the strike. The same conditions of paralysis threaten all the trade and industry of Russia, unless the strike is speedily settled. The inhabitants of Moscow are already feeling the effects of the strike in the increased prices of food, and they are even confronted by famine on account of their dependence on the interior for food. The demands of the strikers, which are for universal suffrage, political freedom, amnesty, the right to organize strikes, the liberation of the arrested strikers, an eight-hour day, schools for the employees' children, and the abolition of martial law, the railroad gendarmerie, and capital punishment, are all purely political, so that it seems impossible to satisfy them by economic concessions. The situation is apparently at a deadlock, from which egress can be had only by the surrender of the strikers or, perhaps, the proclamation of martial law on the railroads. The Government is prepared to order the mobilization of the railroad battalions of the army, in order to keep communication open in case the strike continues.

Moors Capture Two British Officers

Two British marine officers, Capt. John E. Crowther and Lieut. Edward Hatton, were captured last week by the Moors near Tangier. The Englishmen were on their way from the interior to Tetuan Bay, where the British repair ship "Assistant" was stranded. The captors were Anjera tribesmen, under a brother of Valiente, the brigand chief, who was recently arrested and imprisoned at Tangier. They attacked and overpowered the escort, and carried the British officers into the interior. The British Commissioner made a

demand for the release of the Englishmen, which was met by an offer to exchange the two prisoners for the captured Valiente. When the British accepted this arrangement the Moors made additional demands, with the result that negotiations were broken off. After some delay the British finally acceded to the demands and their chief Valiente was turned over to them, with four other captive Moors. The British scout ship "Pathfinder" went to Tetuan and received Captain Crowther and Lieutenant Hatton, and brought them back to Tangier. The captives were well treated during their detention. The British Government did not take the incident very seriously; in fact it is rumored that the two officers may be punished for placing themselves in a position to be captured. —Now that France and Germany have come to an agreement in regard to what subjects may be discussed at the International Conference soon to be held, the representatives of the two nations, M. St. René Taillandier and Count Von Tattenbach-Ashold, will be withdrawn from Fez. This indicates that both parties are willing to ignore the Sultan in the future instead of competing for influence over him, and that Morocco will pass under a form of international or joint control similar to that exercised by France and England over Egypt until last year. The terms of the agreement are as follows:

"I. Police.—First, organization by international agreement of the police outside the frontier regions. Secondly, regulations for the organization of the surveillance and of the repression of the smuggling of arms. The application of these regulations in the frontier regions will remain the exclusive affair of France in Morocco.

"II. Financial Reform.—Financial assistance given to the Maghzen by the creation of a State bank with the privilege of issue, undertaking Treasury operations, and intervening for the coining of money, the profits of which will belong to the Maghzen. The State bank will undertake the improvement (*assainissement*) of the monetary situation. The credits opened for the Maghzen to be employed for the equipment and payment of the police force and for certain urgent public works, especially the improvement of ports and provision of the necessary machinery.

"III. Investigation as to a better result of taxation and the creation of new revenues.

"IV. Engagement by the Maghzen not to pledge any of the public services for the benefit of private interests. Principle of tender, without exception of nationality, for public works."

On Twelve a Week

BY ANNIE WEBSTER NOEL

IF the man is thirty and the woman twenty-eight; if the man has just finished his training for a professional career; is earning in his first year on the battle-field of New York only twelve dollars a week and they have already been engaged three years—what are they to do? Are they to wait another five years until the man is established in his practice? Eight years of living side by side, promised to each other but unmarried—is this to be the characteristic romance of the twentieth century?

We married in New York City on twelve a week. We are still happy.

"But you are not in New York still."

"Yes, we are."

"Oh, well, twenty years ago, ten years ago, you might have done it."

"We married in September, 1903."

We have received no help from outside. I have not contributed anything toward our expenses. We had nothing but the proverbial American penny to begin with. I was a teacher before we married, earning twenty dollars a week. I could teach, but I could not cook or sew. I had never made a garment or washed or ironed one. My teaching had taken up my working time for the previous eight years.

My best friend said it was impossible. I reminded her that she had done it. But not in New York, she said, and not in 1903. At last she yielded to my urgent argument that she was my best friend, and said that it might be possible if neither of us got sick and if we had no company. "You must not have company," she said.

We had no children on twelve a week, nor on fourteen a week. On twenty a week a small boy seemed to think we could support him. I often think when I look at him, so smiling and perfect, so unutterably sweet—I often think of the man who painted our flat a while ago. I asked him if he had any children. "Of course, I have," he said in irritated protest. "I've got two little beauty girls."

Then, his indignation growing, "If a man ain't got no money he can have *children*, can't he?"

I wonder if my little boy will come to me some day saying, "Mother, what did you marry on?" and I wonder if I shall say, "Dear, times were different then. It is impossible now."

Clothes are the first problem in New York. Then rent. Then food.

Of course, the bride started out with a fair supply of clothes, as any proper bride would. Even the bridegroom had some clothes.

As to the rent. We are obliged to find a home where other people living on twelve a week do. "Aye, there's the rub." We are often sorry for our friends who come to see us and make themselves uncomfortable reflecting on the neighborhood. There are twelve families in our six story tenement. I know them all. I might as well know them. The mere fact of our living with them in the same house is so staggering to our friends that my not knowing them would not help us any. And I know them so well that some of our friends catch at the straw and "make believe" that we are doing settlement work. We are not, of course. But I have found my neighbors kind. It is nice to be able to borrow a cooking pot or a teaspoonful of baking powder or an extra chair for company and find that your neighbor thinks you are doing her a favor. Especially since my baby came have they been friendly.

But we are talking about ourselves and not our neighbors. Everybody knows that they live on twelve a week. Everybody knew that we could not, for we are different.

We are fortunate in our flat. It has three rooms—parlor, bedroom and kitchen, a small hall, and a tiny bathroom. We use the parlor as a sitting-room, study, reception room and dining-room. Our breakfast we eat in the kitchen to save me work. Our parlor is a beautiful room, the only objection to it being its

dimensions—nine and a half by twelve. When we seat four people at dinner we are crowded. Still I have known people to come again, and I have had ten children in the flat insisting on playing hide and go seek and that there was “lots” of room.

We have steam heat in the parlor, a range and stationary tubs in the kitchen, gas, open plumbing. We are one flight up and pay fourteen dollars a month rent.

We see mention in certain journals of suburban homes at nine dollars a month. We have not seen the homes. I know of one home in our block at nine dollars. It has three rooms on the ground floor, two of them dark, none of them on the street, no heat, no gas, no cellar accommodation, no bath, a common toilet in a common hall so dark that you can at first see no doors. We are fortunate, indeed, in our flat. But it is no use telling our friends so. The condition of the nine-dollar flat damns ours. But the fact is we are fully as comfortable as many in a different neighborhood. My Nike, our Madonna, do not seem uncomfortable in the neighborhood. They know they are appreciated perhaps. One little girl eyed the Nike anxiously it is true, inquiring where the angel's head was and if little girls when they were angels didn't have any heads. But the milkman says it's “all right.” “I'll bet your husband gave you that before you were married,” he said appreciatively. The Mother of God is well known in some likeness in homes on twelve a week.

But our more prosperous friends are only rendered the more uncomfortable by these presences. The “Difference” looms large. They do not understand that this very difference makes it easier for us to live on twelve a week than for many of our neighbors. We are so accustomed to thinking that education merely breeds wants that we find it hard to think of it as a source of wealth.

If our friends would only be happy our great trouble would be removed. They do enjoy staying with us. It is the plunge that is hard. The fact is that our happiness without so many of the things being striven for is a slap in the face. It is not a matter of snobbery on either side.

This refers to our real friends. It remains a fact, to be dwelt upon by those who have time, that many people who would come to see you when they know you will not come to see you when they know where you live.

I have dwelt so long on this side of the matter because it presents the only practical difficulty of the situation. We know one young couple who have married in New York on much the same income and withdrawn themselves from the society of their friends. But we cannot do that. Another couple who expect to do much better than we have done. Maybe they can. We have paid fourteen dollars a month rent. If “she” does her own washing and ironing they can pay several dollars more. But washing and ironing is hard work.

Our friends who expect to do so much better—to live in a better neighborhood—do not know how much more food costs where rent costs more. The market is accommodated here to twelve dollars a week. To be sure, coal at so much a bag is ruinous, but it is hard to save enough to buy a ton and few of the houses have cellar accommodations. It is impossible to store a ton of coal in a flat already occupied by several persons. But meat is cheap. The market is full of cheap cuts and the best of meat is sold several cents cheaper than elsewhere. I have a sister-in-law in a “good” neighborhood who pays three cents more for porterhouse, five for butter, two for bacon, two for oil, two for sugar, and so on, and gets no better quality.

Food, fuel, dry groceries, can all be had in small quantities, sometimes costing the same, sometimes one-half or one-quarter of a cent more, than by the pound or dozen. If on Thursday you think a quarter of a pound of coffee would last you till pay-day you get it. If on Saturday morning you feel you must have cream for breakfast and you have only five cents, you get five cents' worth. One orange, one banana, one tomato, two ears of corn, an onion for flavoring, a penny's worth (plenty) of parsley, a penny lemon for your fish, five cents' worth of peas (plenty for two), or four cents' worth of beans (enough for two meals), can all be had at any fruit stand, and are the expected orders. At the meat-market or-

ders for five cents' worth of bacon or two chops are carefully filled. All these things (except the bacon) cost at the same rate when bought in larger quantities. Eggs cost slightly more when bought by ones or twos or threes. Still, you can get small quantities when you have only a small quantity of money, and you can close up the week, having wanted nothing, with every cent paid. I shall never forget the week-end order of a tiny boy at my grocer's—"Two loaves of bread, one white and one rye, a bottle of ketchup, a quarter pound of butter, and two cents' worth of flour."

It is an important matter on twelve a week that the husband come home to luncheon. We chose a location near the office. Sixty cents in carfare is saved in this way, and at least as much in luncheons. Those who urge suburban residence as a solution of the tenement-house problem should take this into consideration. We could not have afforded that much more. Our neighbors all live near their working-places. There is the additional inducement that the time at home is so much longer. One of our neighbors, a coachman here in the house, refused a nice home in Brooklyn, rent-free and heat-free, because, as he said, "he wanted to stay at home once in a while."

Tho we have followed the example of our neighbors in so many ways, we have not exactly copied their methods. My husband gives me half of what he earns, and we apportion expenses as nearly as possible. The good husband here simply hands his wife his envelope. She pays the rent (even our receipt is made out in my name); she buys all his clothes as well as the children's; she decides whether cash is to be paid, and the curses of the small, unpaid tradesman fall upon her; no one thinks of holding the man responsible. She gives him each morning his carfare and his lunch-money, if necessary. If he wants ten cents for tobacco or five cents for a beer he gets it of her if he can; if he can't, he goes without. It isn't a case of hen-pecking. The man thinks it is the only way to keep the home together. Woman's economic position in the slums is high.

We kept house on twelve dollars a

week for three months, on fourteen a week for six months. Then we had twenty a week. We have come to the conclusion that twenty a week is about where poverty commences. Below that contentment is found in meeting living expenses. But above that new wants begin to take shape. If one hasn't a dollar, one stays at home and is content. But who ever went out to buy something for a dollar and did not see just what she wanted for two?

We have reached the critical stage of our *ménage*. We are spending a little more here, a little more there. We are entertaining a little more. We are mixing more with people of larger means. Our acquaintance among the joyless children is spreading and we need more for them. Better clothes, new sofa-pillows, are a necessity, and we cannot get them. Thru a gradual increase in our income we have been reduced to poverty. But we have never been poor before, and we are determined not to remain so.

What is this all about? some one may ask. We have a near and dear relative who visits us sometimes, coming from a finer home. Then for a little while "the veil drops from our eyes." We see our flat as she sees it. We realize that her voice is the voice of the world telling us that we have no right to our baby in such a neighborhood; that our cheap oil cloth in the kitchen has an ugly pattern; that our flat is uncomfortably small; that our bedroom has no sunlight; that our clothes ought to be much nicer; that it is degrading to the mind, corroding to the soul to count the pennies so closely.

When she goes away we are blue for a while. We know it is all so. But she has forgotten one thing, which we soon remember. She has forgotten that we are young. She has forgotten that the question was "Shall we get married?" It is not a question of liking the neighborhood. It is a matter of living cheaply so that we can be together.

Nevertheless the neighborhood has its advantages. Its disadvantages are so patent as to need no mention. But it deserves consideration that we have here more leisure; we have more money to spend on other things besides rent; we never have stew for dinner; we never

have socks for Christmas; we have opportunities to make friends in a new world; the struggle to meet expenses is not so absorbing but that we have time to contemplate much finer things in the future.

And we are happier together than separated.

Young people who do not marry are those who prefer not to. It is not worth their while. They do not care to marry unless they can live in the neighborhood of those earning a much larger sum than they can.

Perhaps they are afraid that if they sink to the level of a poorer neighborhood they will never rise again. Maybe. But it is not necessary to sink to that level. I tried to when we first came here from a notion of "getting into touch," but my neighbors would not permit it. "You used to talk so nice when you first came

Mrs. N———," one said, reproachfully, to me, "and you use so much slang now." So we made an agreement that I should help to remind her when she swore and she should tell me when I used slang. We didn't, of course, for we are both much too polite, but my English has certainly improved.

My husband has not found that his residence interfered with his advancement. In fact his added leisure for study, a mind no longer distracted by the vexations of an engagement, a better physical condition and the comfort of a home after his day, have helped him, he thinks.

It does not seem to us that the characteristic romance of the twentieth century will be either the marriage of the middle-aged or the renunciation of love.

NEW YORK CITY.

Idolatry

BY HENRY GOODWIN SMITH

IN forest gloom, beside his altar fire,
A Savage rudely shaped his thought of God.
With jagged flint he hewed a hideous Form,
That mocked the Glory which may not be shown
In likeness of a beast or bird or man.
To this, barbarians bowed in reverence,
To this they sacrificed their enemies,
And poured the life-blood of their own first-born.
And the Father of Mercies looked down from above,
In infinite sorrow, compassion and love.

In cloister shade, with horn and sharpened quill,
The School-man wrote, defining Deity.
With dialectic art and skilled device
He wrought the mental Idol that replaced
The shattered crudity of pagan days.
And to the cunning product of his brain
The Church of Christ bowed down in reverence,
To this she sacrificed her enemies,
And cast into the flames her own first-born.
And the Saviour of All Men looked down from the throne,
And startled the raptures of Heaven with a groan.

NORTHAMPTON, MASS.

Japanese on American Farms.

By Kiyohsi K. Kawakami.

[The establishment of Japanese colonies in Texas for the purpose of developing the rice lands of the South has raised a general discussion of the question of Japanese immigration and naturalization and made it an important political issue. This discussion has, however, been too much based upon sociological generalities and personal prejudices, and very little attention has been paid to the actual conditions. It is to supply some of the data needed for the solution of the problem that we have procured this close study of the character and work of the Japanese in Texas. The writer of the article is the author of "The Political Ideas of Modern Japan" and the American representative of the Daily *Yorodzu* and the Daily *Asahi*, of Tokyo, and he has personally visited all the Japanese farm colonies mentioned in the text.—EDITOR.]

HOW can the United States improve the class of immigrants who year after year flow into her dominions from beyond the Atlantic and the Pacific Oceans? Is there any means by which to divert the overwhelming tide of immigrants from the cities to the agricultural districts? What measure should the commonwealth resort to in attempting the betterment of the material welfare of these alien people and the improvement of their moral and intellectual tones?

In connection with this problem, it is interesting to note that during the past two or three years there have appeared in the empire State of Texas several Japanese colonies whose aim is the growing of rice on lands of their own. Inasmuch as the time has been short since the Japanese rice-growers commenced to till the soil in Texas, their colonies are not yet as well established nor as characteristic of their native land as the Russian colonies on the prairies of Western Kansas; yet the handsome crops gathered last Autumn

and the waving fields of golden grain now ready for the harvesting machines furnish evidence strong enough to render the Mikado's subjects in Texas extremely sanguine of their future prospects, and to induce more settlers from Japan to pursue farming in the rice-belt of that State.

A trip to these new colonies is both interesting and instructive. As is well known, the Japanese are a rice-eating people. For countless generations they have subsisted on this staple, and naturally the art of rice culture has been developed to a degree of perfection unexcelled by any other nation. The geographical limits of the Empire and the extraordinary density of the population necessitated the division of the farm land into small tracts, resulting in the development of an intensive rather than an extensive cultivation. The Japanese are strangers to the powerful machines and heavy teams used on American farms. They rely mostly upon human force, their

A Japanese Farmer in Texas.

implements being few and simple. Yet they till the land with indefatigable toil and unswerving patience, coupled with inherent dexterity and instinctive thoroughness. As a result, their farms have literally a spick and span appearance; as scrupulously neat and clean as the people themselves, who are notorious for their orderly habits. Not an obnoxious weed is allowed to choke the young rice, nor is an implement carelessly abandoned in the field. When they pursue farming on the wide prairies of America the Japanese substitute machine farming for hand labor, tho they retain the characteristics inherent in their race, applying to the American mode of extensive cultivation their fastidious dexterity acquired from experience extending thru hundreds of years.

The writer has personally witnessed

these characteristics manifested in most of the Japanese farms on the Pacific Coast, especially in California and Washington. His recent visit to the Japanese colonies in Texas confirmed his belief that his compatriots, with but modest means, are able to successfully carry on agriculture on American farms.

The first movement to colonize the Japanese on the rice farms in Texas was made by Mr. S. Uchida, Consul-General of Japan at New York, who visited the rice belt in Texas and Louisiana early in the year 1902 with a view to investigating into conditions as they would apply to his people, some of whom had thought of entering the rice industry in that part of the country. Mr. Uchida's impression was very favorable. He was persuaded that the rice culture in that State was far more profitable than that

in his country; that the price of land was merely a pittance as compared with the rice field in Japan, while in degree of fertility Texas farms are by no means inferior to the Japanese.

Mr. Uchida was warmly received in Houston and other cities of the rice belt. By the invitation of the Rice Association of America, he addressed a meeting of that organization in Beaumont, Tex., stating that it was not the intention to encourage the immigration of cheap labor into Texas or Louisiana, but that owing to the high price of land in Japan, it would be desirable to invite independent Japanese farmers of some means to settle in the rice belt of America. This speech resulted in a resolution unanimously passed by the members of the Rice Association, inviting Japanese rice farmers to seek their new homes in the rice districts of these two Southern States. Consul-General Uchida's report on the rice industry, submitted to the Department of Agriculture and Commerce of Japan, was published in the

Official Gazette and several newspapers in Tokyo, and became a topic of comment among the enterprising rice growers in the Mikado's Empire.

The first Japanese party which, attracted by this favorable report, undertook rice culture in Texas consisted of five young men, all of whom were intelligent and well educated in their native country. Early in 1903 these young men took a farm near Port Lavaca, in Calhoun County, Tex. This enterprise was a failure, not because the land was not adapted to the industry, but because a break in the dam allowed the salt water from the gulf to overflow the rice fields, nipping the growth of the rice before the harvest season set in.

The most significant event in the record of Japanese colonization in Texas was the arrival in that State in September, 1903, of three eminent Japanese gentlemen, Messrs. S. Saibara, R. Onishi and S. Nishimura, who at once applied for naturalization papers, intending to settle permanently in that section.

A Japanese Farmer's House at Webster, Texas.

After visiting several centers of rice industry, these gentlemen procured land at Webster, in Harris County, Tex., each farm comprising 300 acres. They immediately started to fence these premises, to break the ground, and sink a well for the purpose of irrigation; and in the Autumn of the following year (1904) their fields were radiant with the golden hues of an ample crop. Meanwhile, several other parties came from Japan to seek a residence in the rice belt of Texas,

the Del Rio Colony, these plantations are all located within a short distance from Houston, with that metropolitan city of Texas as the center. The planters have imported a number of Japanese farmers, whom they prefer to American laborers, from motives of sentiment and because of their special experience and ingenuity in the culture of rice. Altho cheap colored labor is abundant in that Southern State, the Japanese show a strong abhorrence toward it, having never employ-

Transplanting the Rice in Japan.

among them Mr. J. Ohashi and Mr. J. S. Katayama, a well-known labor leader in Japan. Ohashi settled on a farm of 300 acres in Garwood, some forty miles north of Houston, while Katayama took a tract of land at Aldine, a village near the same city. Ohashi's maiden crop reaped last season was especially satisfactory, and this young man is now enlarging his plantation. Several other parties have colonized in Texas in the course of the past and the present year, and there are, at present some seven or eight parties, each working from 300 to 600 acres of rice land. With the single exception of

ed a single negro. Those who have not brought their employees from their mother land, employ white labor at wages considerably higher than are accorded to their countrymen.

Some of the Japanese hands have brought with them their wives and children, while others are yet unmarried.

The Mikado's subjects are exceedingly adaptable. None of the Japanese farmers in Texas had ever seen such heavy machines or handled such heavy teams as are used on American farms, yet these colonizers, after a brief experience of a year or two, are already thor-

oly at home with those instruments, without at the same time losing any of their characteristic individuality. Aside from their color, these Japanese immigrants closely resemble the Americans. They live in American houses, wear American clothes, read American books and newspapers, and subsist on American food, with a slight tinge of Japanese cookery. In intelligence and ingenuity they are not excelled by any ordinary American farmers. Their capital is not large, ranging from \$5,000 to \$10,000. With strict economy and vigilant frugality, however, they accomplish more than their American rivals possibly could with the same amount of money. They bought land and heavy machines and pumping engines in instalments extending over four or five years. In the first year most of the planters cultivated from one hundred to one hundred and fifty acres, enlarging it into three hundred acres in the second. In Webster, Garwood and Aldine their rice fields are irrigated with well water, artesian or pumped. One of these artesian wells cost above a thousand dollars, and yet in time of drought had to be re-enforced by a pumping engine, involving additional expenditure of some \$500.

All in all, rice culture is an expensive industry, requiring a considerable investment. This single fact should be potent enough to dissipate the false notion of many Americans that this new enterprise in Texas would tend to bring many coolies and cheap laborers from the Orient. It is worth while to dwell upon the fact that these Japanese enterprisers in Texas are not farmers themselves, having had no farming experience at home. While in their mother land they were journalists, publicists, business men, or scholars. Foremost among these enlightened farmers is Mr. S. Saibara, formerly a member of the Japanese House of Representatives, and a lawyer of high standing.

But wearied with wire-pulling, bribery, graft, and the innumerable vices inalienable from the political world, this young politician of unmistakable promise suddenly turned against a vocation which had occupied him for nearly a score of years and came to this side of the Pacific

in search of the quiet and purity of country life. Having been a devoted Christian and a warm friend of evangelical movements while at home, Saibara found a solace for his wearied soul in the Christian atmosphere of the New England States, where he had spent a year before coming to Texas. His wife and two sons are now assisting him on his farms in Texas.

Another interesting character is found in the person of Mr. Rihei Onishi, who was formerly on the editorial staff of the *Jiji-Shimpo*, a Tokyo daily, exercising great influence as the organ of the financier circles. Onishi still retains his connection with the *Jiji-Shimpo*, and represented that paper at the famous peace conference at Portsmouth. Adroit, shrewd, eminently practical, Onishi combines in his personality the two rôles of writer and business man. When asked which is his business and which his hobby, he answers, smilingly: "Neither is my hobby; I am a farmer-newspaperman."

No less interesting than these two settlers is Mr. J. S. Katayama, who bought land at Alden. An ardent advocate of Socialism, Katayama is also identified with the growth of trade-unionism in Japan. Educated in Iowa College, Grinnell, Ia., and in Yale University, he carried back with him into his native land some ten years ago certain socialistic conceptions, and immediately embarked on a vigorous propaganda, effectively wielding both voice and pen in behalf of the wage-earners. He established a fortnightly paper entitled *Rodo-Sekai*, or the *Labor World*, now published under the title of *Shakai-Shugi*, or *Socialism*. For some seven years before undertaking the rice industry in Texas, this Japanese socialist had devoted his entire energy to the propagation of socialism and to the awakening of the working class. It was in the early part of the past year that he came to this country again in search of rice lands in Texas. Having returned from Amsterdam, Holland, whither he had sailed from this country last Summer to represent his comrades in Japan at a session of the International Socialist Party, Katayama finally purchased several hundred acres of rice land at Aldine. When the writer asked him if he had given up the

labor movement in Japan, his reply was an emphatic no.

"I am worn out after an unceasing toil of seven years, and I need a good rest. Besides, what is the use of preaching socialism when the whole nation is intoxicated with the false glory of a victorious campaign? Since I left Japan the most conspicuous of my comrades have been rewarded with imprisonment for raising their voices against the war. When this mad excitement incident to the war has subsided, and when I have recovered my energy, I shall return to my country to join my comrades again under the banner of socialism."

Falling behind no person in his devotion to socialism, Mr. Katayama is ex-

tled in Garwood, is yet a boy of some twenty years of age. He came from a wealthy family in Tokyo and, in spite of his tender age, has already shown a remarkable managing ability, having successfully conducted a 300 acre farm for the past two years.

Thus it will be seen that the Japanese settlers in Texas are all very estimable gentlemen, who, had they stayed in their native land, would no doubt have attained a position of prominence and importance as publicists or financiers. No class of immigrants who

Threshing the Rice in Japan.

ceedingly law-abiding, and shrinks from radicalism of a fire-and-blood nature.

One of the Japanese trio at Webster, Mr. S. Nishimura, is a man of remarkable business ability, acting as the sole agent in Canada of the Japan Tea Association, with his headquarters in Montreal. If an experiment on the 300 acre farm he now possesses proves a success, he will invest in the rice industry the greater portion of his profit from the tea business. Mr. Hashimoto, who set-

come to settle in this country could be more desirable. As citizens of the commonwealth, they would be loyal to the principles of the democratic government. As farmers, they would constitute the most intelligent and intellectual element of rural communities. To all intents and purposes they desire to remain permanently where they have settled, applying for naturalization certificates, which would guarantee them the full rights of American citizenship. But

will the Republic allow them to pledge their allegiance to the country of their adoption? It seems absurd, indeed, to imagine a government which would bar out a class of immigrants whose quality and character demand appreciation on the part of any sensible person. Yet these respectable Japanese are denied naturalization papers, simply because they are Orientals. It was in the last April that C. V. C. VanDusen, United States Examiner, relative to naturalization, wrote to the United States District-Attorney McLemore, of the Southern District of Texas, calling attention to the fact that the certificates of declaration of intention to become American citizens given by the District Court of Harris County, to natives and subjects of Japan, were unlawfully issued. The Special Examiner demanded that such action should be taken as will prevent the future acceptance of declarations of intention from Japanese to become American citizens, and that the naturalization certificates already issued to them should be revoked. This protest naturally created alarm amongst the Jap-

anese colonists in Texas. They had been led to believe that they could become American citizens, and upon the strength of that impression they had been induced to invest money in lands they have since been cultivating. It is true that in the State of Texas aliens are allowed to own land. But would such enlightened men as Onishi or Saibara be satisfied with property rights alone, deprived of all other privileges of American citizenship? Have they come to settle in this country, turning aside from the tempting promises held out before them in their native land, for the sheer purpose of enriching themselves? Certainly not. They expect to enjoy the full rights and share the full duties of American citizenship.

No one is more anxious than the Japanese on Texas farms to have the Federal law revised so as to guarantee the Mikado's subjects the rights of naturalization. When that revision is made, they will gladly swear allegiance to the Constitution and laws of the United States, converting themselves into loyal citizens of the great Republic.

CAMBRIDGE, MASS.

Why Socialists Are Partisans

BY W. J. GHENT

AUTHOR OF "OUR BENEVOLENT FEUDALISM," "MASS AND CLASS."

MANY persons, kindly disposed toward a vague or partial Socialism, criticise the unpromising attitude of the Socialist party. They want "practical results," and they believe that these results are best obtained by a policy of fusion with elements conceived to be making for the Socialist goal. Social evolution, they say, must be gradual and uniformitarian, as they innocently imagine physical evolution to be. They appeal to history, too, to show that most reforms have come by gradual stages. The extension of manhood suffrage, the general abolishment of the property qualification for office-holding, the growth of factory legislation, the in-

crease of wages, the shortening of the work day—all are instanced by them as advances made by means of a policy directly opposed to the separatist policy of the Socialist party. Step-at-a-time is their motto, and fusion, compromise and appeals to the better nature of the opposition are their means of action.

Small Latin and less Greek, and something less than an encyclopedic holding in social science, are needed by the Socialists to question their assertions and to dispute their conclusions. Long before De Vries and Burbank came to our aid with their proof of mutations in the physical world, we knew out of history that social evolution has other movements

than those of gradual and uniformitarian stages. Violent and revolutionary changes are made. French Revolutions, English and American Civil Wars, abolitions of feudal privileges and of chattel slavery, interrupt the peaceful progress of society, just as Krakatoa and Mont Pelée accompany the age-long erosion of the Grand Cañon of the Colorado or the washing down of the detritus of the Mississippi into the Gulf of Mexico. Evolution makes use of all forms of motion. She multiplies her effects by infinitesimal gradations, but when this multiplication reaches the allotted sum she overturns, in the twinkling of an eye, states and systems, as she explodes mountains and uplifts valleys.

As social evolution is not universally gradual, neither is it homogeneous and pacific. Its main impulse has ever been a conflict of interests. Classes have opposed classes in all historic times, and the efforts of the possessing class to hold and of the non-possessing to acquire have determined, in large part, the social order. The illusion of many opportunists that the acknowledged advances toward democracy and well-being have been caused by a spread of altruistic ideas is dispelled the moment we look seriously at the prevalent economic and political conditions. Altruism is rather an effect than a cause. When England granted the reform of 1832 she did it not out of an expansion of democratic sentiment, but to avert a civil war. The rising class of manufacturers and traders pressed heavily against the ruling class of nobility and gentry for a share of political power, and would not be dissuaded until it was granted. The first factory acts were passed not because of a humanitarian interest (except on the part of a few) in the workers, but because the rapid annihilation of the peasantry jeopardized the existence of the English army, and because the nobility, jealous of the rival class of manufacturers and traders, were willing and even eager to clip its profits.

When Bismarck gave manhood suffrage to Germany it was not thru any love for his fellow men, not thru devotion to an abstract principle of democracy. He recognized the force of the particularist patriotism binding men to

their various kingdoms and principalities, and to oppose that force he sought to create a tie binding men by a dominant interest to the Empire. To this day Germany displays the anomaly of a nation electing its national representative body by manhood suffrage, but electing its various state and municipal bodies by the grossest forms of property suffrage. The winning of the suffrage in America is another case in point. Had altruism—or even common honesty—determined the matter, surely the men who wrote the democratic platitudes of the Declaration of Independence would have conceded the suffrage. But they did not; their economic interests opposed it, and it had to be wrested from them and their successors by a long series of attacks by the working class.

There is thus, as society is now constituted, an enduring conflict of interests; and it is force, actual or potential, that wins advances. But it is force directed in particular ways, according to the issue and the political and economic environment. The reforms here instanced were incidental and partial; they had to do, for the most part, only with political and administrative matters, and they did not threaten in themselves the existence of capitalism. Indeed, they may be held to have conserved, to have strengthened, capitalism; for they have furnished an outlet and a means of expression, however fruitless, for popular dissatisfaction. As they did not jeopard the system of capitalism, the question of instituting them could, and often did, divide and array against one another the various factions of the ruling class.

But in the conflict which the Socialists are waging for the overthrow of the capitalist system another situation is presented. In this conflict the Socialists need expect no aid from any capitalist group. However the so-called "middle class" may oppose the trusts and corporations, however the Bryanites may differ from the Belmontites, they are a unit on the preservation of the reigning order. They have an equal appetite for rent, interest and profits; and if the poorer oppose the richer it is only because they want a larger share of the common loot. In defense of the existing system the petty trader will shed his heart's blood,

or even his money, as freely as will Mr. Morgan or Mr. Rockefeller. He will consent, gradually, to municipal ownership, and even to national ownership, only as he becomes firmly convinced that any share in the private ownership of utilities is impossible to himself and his fellows. But all the other avenues of exacting rent, interest and profit he wants left open, that he may batten upon them at will. The "middle class" needs the backing of the working class in its revolt against monopoly and undue privilege; and it is ever ready to concede something, or the show of something, to forward this alliance. But when it has won its point it invariably dismisses its ally. The bourgeois Directory of 1797 forgot the splendid platitudes of '89, and sent the proletarian tribunes Babeuf and Darthé to the guillotine. The English "middle class" of manufacturers and traders made use of proletarian backing in its fight for the reform bill of 1832; but when the workers, in the subsequent Chartist agitation, clamored for their share in the victory, they were ruthlessly suppressed. The European revolts of 1848, and the brief installations of bourgeois governments in several nations, repeated to the workers the same lesson. Then, and not till then, did the workers learn; and since then all movements of a Socialistic character have adopted a more or less uncompromising policy of separatism.

One cannot get anywhere at all in this matter unless he comprehends, or at least becomes acquainted with, the economic interpretation of history and its corollary, the class struggle. One must be able to see and understand the determining character of the economic environment upon social institutions; must further understand the reaction of the individual's special interests and functions as an earner or receiver of wealth upon his beliefs and conduct, and must further understand that men strive in classes, whether consciously or unconsciously, for their material advantage. The mere sentiments of philanthropy or justice which individuals of the possessing classes sometimes entertain flare up in a transitory fervor, and as quickly die out, while the economic needs of the class to which such individuals belong remain

forever a guide and a determiner of their conduct. Our economic needs are the hidden springs of our beliefs and attitudes. Men may be sympathetic and helpful; they may be profuse in charity; they may entertain large ideals of human welfare; but the ideal that trenches upon one's means of wealth-getting is by ninety-nine men in one hundred dismissed like an unwelcome guest. By an inevitable law of our being we are made to sanction the means by which we live, and even when these means are socially regarded as questionable we have no trouble in convincing ourselves that the wealth which we and our fellows so gain is "honest graft," while that which those of another class, with opposing interests, glean is "crooked graft."

The source of virtually all so-called "evolutionary" measures of reform is the "middle class," or some individual or group hanging upon its flanks and accepting its ethical standards. This class is suffering a constantly narrowing scope of action and decrease of revenue. It blindly protests against the increasing dominance of the big capitalists, and it wants instituted a measure of restriction upon wealth-getting which will give the little fellows better chances to compete with the big. But so long as it can maintain itself as a gleaner of rent, interest and profits, it instinctively opposes the demands of the working class. The disemployment and poverty of the workers trouble its pious conscience but lightly, for out of disemployment and poverty come low wages, and low wages are the peculiar food and medicine of small capital." It concedes only what it must of working-class demands in order to win over temporarily from the workers a force sufficient to threaten the magnates.

When, therefore, the Socialists, who are the political representatives of the workers' interests, consent to any fusion of forces with the political representatives of the "middle class," they doom themselves to two disappointments: First, to the denial or withholding of all but a paltry few of their demands, and second, to the disintegration of their own forces, and consequently to a destruction of their power to enforce demands. Under such conditions their army melts in a moment, like Wat Tyler's, and is ren-

dered incapable of reformation. Only in proportion as they mass their strength and hold it apart are they in a position to win the respect of their opponents. As the Socialist vote increases, the air is full of talk of municipal ownership, national ownership, rate regulation and factory laws. But let this vote decline, or remain static, and the talk dies down to a whisper. It is the force definitely attained, and the threat of a further increase of force, that induces the possessing classes to promise concessions.

This lesson has been so often given thruout history that it is almost superfluous to dwell upon it here. When the militant yield to promises, and disband in the face of an enemy, or fuse themselves with a body having fundamental interests and purposes other than their own, they invariably sacrifice their chances. As it has been so in all times, so is it today. Twenty years ago, before the present Socialist party was organized, and when its predecessor, the Socialist Labor party, was but in its swaddling clothes, the labor organizations of New York City and State adopted a separatist policy. By means of it they forced from the possessing classes a measure of recognition that never before had been granted them, and they succeeded in placing upon the statute books laws of far-reaching importance. But persuaded that they could more effectively carry on their contest by fusion, they permitted themselves to be swallowed up by the capitalistic parties. By this conduct they lost much that they had gained, and they further paralyzed their power for the making of new advances. With rare and incidental exceptions, succeeding legislatures and courts have looked upon the demands of labor as measures inimical to society; and only when labor has assumed a threatening attitude have our law makers and law interpreters been able to see differently.

Still, society *does* make gains in the direction of industrial democracy, say the opportunists; there is New Zealand, and there are, in our own country, the slow growth of the referendum, the occasional passage of factory acts, and there is an occasional judge who interprets law as tho the capitalist class were not the sole arbiters of legislation. True,

and we of the Socialist party are not unmindful. Society is not static; it seeks constantly to adjust itself to new economic conditions, however it may be held down and back from the exercise of its spontaneous impulse by a powerful class owning the means of production and resolved never to let go. There are gains, it is true; but the gains must be compared with the losses. It is nothing for exultation if the referendum is granted in Podunk, while at the same time, in the metropolis of the nation, the streets and subways are given over for three generations to a group of tax-farmers. For every petty advance the opportunists can show, we Socialists can show a score of capitalist victories, farther reaching in effect and far more suggestive of the actual trend of events. A radical advance in democratic sentiment among a part of the population may coincide with extreme reaction by another part of the population. So, too, certain institutional changes of a progressive nature may coincide with the most daring and wholesale aggressions of a predatory class. At this very time, in the face of a rising wave of revolt, the capitalist class makes everywhere new seizures of power. "After us, the deluge!"—the reckoning will not come in our time, is its sole reflection, and it laughs at the puny efforts of the opportunists to limit its conquests. Only the specter of Socialism awakens it to a sense of danger.

Nor should the opportunists take more than a meager comfort from a contemplation of New Zealand. It is true that in that antipodal nation a kind of opportunism, growing out of a working-class revolt, has made great strides toward a juster organization of society. New Zealand is not by any means a Paradise; wages are low, and the problem of the unemployed is often, if not generally, as acute there as in some less progressive states. But with all shortcomings, it is the land of all lands where the interests of the downmost man are best conserved. New Zealand, however, is a new country, with undeveloped resources, large areas of unoccupied land, and capitalism is there but in its infancy. That opportunism has been able to do what it has done there is due to conditions unique in the modern world. In

the older states, where capitalism has developed to maturity—in England, France, Germany, Belgium, the United States—economic processes are regular, the alignment of classes is distinct, and the interests and purposes that array them against each other are fundamentally and lastingly antagonistic. Under such conditions opportunism loses its contest at the first effort. It has had its trial, has been weighed in the balance and found wanting.

Thus, both from theory and observation we reach that attitude which compels us to pronounce against fusion or compromise with groups or classes having economic interests opposed to our own. It is an attitude which accords with the postulates of our creed, with our interpretation and analysis of capitalist society, and it agrees no less with our knowledge of the workaday world. Our

movement is founded upon the economic interests of the working class. By a social gravitation it draws to itself individuals of other classes—teachers, writers, ministers, artists, lawyers even, and not seldom a petty trader. It takes them not as allies, but as integral factors. For they are drawn to it only as they accept the justice of the workers' demands. It is thus, from whatever field its integers come, a compact mass; it is single in purpose, militant in mood, resolute and undissuadable. It wants certain things done, and it will do them itself. It has learned Miles Standish's lesson, and will ask no middle-class John Alden to intercede for it. Separate and apart, it holds up a banner to which all lovers of justice may rally; and to those of its friends and sympathizers who yet abide in the camps of enemies and strangers it sounds its trumpet-call: "To your tents, O Israel!"

NEW YORK CITY.

The Sleeper

BY THEODORE ROBERTS

Off Vincent, eighty fathoms deep,
With roofs of coral and pale shell,
Lies Neptune's City, wherein sleep
The weary sailors; wherein dwell
The weavers of the deep-sea spell.

Fair sisters, you have lured them far.
(And at the last Death shared the prize.)
From eager wave and ruddy star
Your love has closed their valiant eyes.
Now wake them with your witcheries!

Ah! fairest, of the silver breast,
Spill your rich tresses o'er his face.
But he who sailed the East and West,
Glad and undaunted in the race,
Heeds nothing of your tender grace.

Ah! fairest, of the arms of pearl,
What trick is this the fates have played?
To bring the lover to the girl
By mile on mile, all unafraid
And venturous and undismayed,

Only to lay him, sightless, here?
Ah! fairest, can you not awake
The nerveless heart? Bend near! Bend near!
Surely this hateful sleep will break,
The shrunk eyes gladden, for your sake!

Kiss the straight lips. . . . He did not
move?
Poor human, some spell deadens him.
Perchance grim Death claimed all his love
And caught his mad heart to the dim,
Cold ways, beyond the Farthest Rim.

Ah! fairest, of the fragrant breast,
And shoulders that no pearls outgleam,
Perchance he follows some old quest
Along the turnings of his dream,
By crowded street and inland stream.

Who knows! These humans are not made
As we are. . . . In your bright hands
take
The harp of shell, and, unafraid,
Strike the loud strings until they break.
Tear his sweet dream, and he may wake.

Dounya

BY ERNEST POOLE

[Mr. Poole has just returned from Russia, where for the past summer he has been interviewing the officials, common people and revolutionists in search of information and material. His experiences as a resident in the University Settlement in this city previous to his journey to Russia were of great value to him in getting in touch with the poorer classes in Russia and their problems.—EDITOR.]

(Told by the wife of a Russian Professor.)

DOUNYA was a chubby, dirty, bewitching little peasant girl with straight yellow hair, eager China-blue eyes, wide, thick lips always smiling, head always bobbing. Her rough little voice was sweet as a child's can be. She had lived her twelve years in a dark log hut in a hamlet out on the steppes of South Russia. She had lived on hard black bread and soup out of the family bowl, on curses and beatings and filth, on ignorance, superstition and cringing deceit—on all the sordid misery of a "famine district." And while her playmates grew sallow and cross and thin, Dounya smiled from ear to ear and grew rosy.

I was a young bride. I lived in a brand-new apartment in a town and felt the world was a happy and simple place; I was sure that all its evils could be blotted out if we only knew how to start, and I felt that my husband knew how. He had brought some tremendous social ideals back from Europe; I soon felt them, too, and I longed to help raise the hundred and twenty millions of peasants out of starvation and mud. In my absurd, self-confident wisdom I thought I could do this by raising them one at a time.

So I borrowed Dounya.

What fun we had. I began showing her all kinds of things about a home; sewing and cooking, making beds, setting table, arranging the flowers—the simplest little things that she had never dreamed of. All this she seized with bashful, radiant eagerness. In a few days she got over her shyness and laughed excitedly; soon she shouted so loud that I had to scold her. Then she cried till I kissed her.

She told me all her thoughts and feel-

ings—minutely, laboriously, solemnly. It was such a new, warm, exciting world. She poured forth a million questions and heard only half the answers. She told me stories she had heard and seen out on the steppe, she gleefully recounted tales so coarse and vile that I had never dreamed such things existed. I shuddered at the thought that some day this pure little girl might be dragged back into the mud. But this fear I soon dismissed.

How anxious she was to learn, and how proud of each new achievement! What solemn exaggerations! Her one "best dress," for instance—a little gray dress we made together, with two red bows on the breast. I showed her how to brush it; she watched with serious eyes; and then in the middle of the night I heard hard breathing; I went to her tiny room and found she had waked and risen for a last careful brushing.

I used to talk to her by the hour, sewing, while she sat on a stool, now stitching furiously, now stopping to gaze up at me, or to think hard, listening, with her yellow head on one side. We had terrible struggles with reading and writing; she told me that in her village only the priest could read, and he read only prayers. We had tearful trials, scoldings and forgiveness—then trials again. Often we forgot to cook supper—or else cooked it half way and then forgot the rest.

My friends used to tease me. Conservative, rich, aristocratic, they used to laugh at my "educated servant girl." Once some of them came to tea—I don't mean your American tea; I mean the Russian night affair—a circle of faces round a big, gleaming copper samovar, with the red charcoals glowing beneath, the samovar humming low, vague songs, the people talking and laughing, dreaming or singing till long after midnight.

That night my husband was playing his 'cello. He was just in the mood. He was playing "Traumerei," and the low, rich tones, tender, serene and yearning, made us all just sit and stare at nothing; the lamplit room was a wonderful place that night. Little Dounya sat in the corner listening without a smile, her blue eyes dilated and staring. I saw the look, and I thought she had felt enough for one evening, so I called her and whispered: "It is better for you to go now and study one hour and then go to bed." She looked up with a quivering smile. "All right," she whispered, and drew a long, shaking breath, and went out.

That was about nine o'clock. At ten I went to the kitchen. She was bending over a book, and the book was telling her how all human beings ought to have the same chance to be happy. She bent close; her little bosom rose and fell slightly. I stroked her shining hair. She jumped up bewildered. Then I laughed, and asked her to bring in more cakes and tea. She only stared at me. I went back to my friends.

In a few minutes Dounya walked into the room bearing a tray. Her face was puzzled. She looked at me, confused and solemn, as though only half wakened from a dream. On the tray were some plates and—that book.

My friends were convulsed. Dounya dropped the tray with a crash and ran. An hour later I found her in her bedroom on the floor, angrily sobbing.

* * * * *

At sixteen Dounya was a laughing radiant little beauty. The young workmen in the night-school she attended used to gaze at her over their books. And she smiled delightedly.

I could see she was beginning to dream wonderful dreams of a life ahead. Often when my clumsy big-bearded husband lay weary on the deep leather lounge at night, I used to sit at the piano playing and humming a little melody without any words—half between a love song and a lullaby. It was six months before my first baby was born. In the next room Dounya, setting the table for tea, would stop and listen thru the doorway. In the soft lamp light I could just see her face—breathless, blue eyes

dreaming, rich lips half parted—too blissful to smile.

So she wondered and worked and grew.

One day she rushed sobbing into my room. I begged her to speak, I kissed her frightened face, but she only sobbed the harder. At last she rose and dragged me into the kitchen.

There sat a thin, dirty old peasant. He wore enormous high boots of yellow bark encrusted with black lumps of mud and ice. His grey beard straggled down over a foul, ragged red shirt. His hair was tumbled over his deep-set eyes. The eyes were dull, curious, embarrassed. When I came in he rose humbly to bow. Then he flushed at sight of his filthy boots, sat down quickly and began inch by inch to pull off first one and then the other. His feet were wrapped in tattered gray and blue rags. His huge yellow sheepskin coat, frozen hard, sprawled ludicrously human on the floor, slowly melting down. A brown pool of water crept over the spotless floor. I felt Dounya's hand tighten on my arm till her fingers quivered.

The old man finished and rose again.

"Good day, my lady," he said bowing. At the same time he gazed at Dounya—surprised, delighted, proud. He smiled fondly.

"Good day, my lady" repeated a hoarse voice behind me. I turned. An old woman with broad face, blunt nose and faded little eyes, stood bowing. The big red handkerchief round her head was soiled and wet; her cheeks were mottled by some disease; she looked weak and sick. She turned quickly and watched her old lord as a dog his master. Only now and then she darted proud, half timid glances at Dounya.

"We have come to get our Douni-ashka." The man's voice was harsh and loud in spite of his efforts at softness. While he talked he kept staring at the clean, fresh girl as tho he could never see enough.

"Our old cow," he said proudly, "has a calf—a good fat one! Our pig has eleven sucklings. And now listen to this—our potatoe crop is splendid! We have enough to eat now—plenty, I tell you—plenty! I feel so happy I never beat my woman any more. What's the use? The

other peasants laugh at me; but I shout back, 'Beat your own wives if you are hungry! I am well off. I eat twice every day. Meat three times a week! I will beat my old woman no more. I feel good!'

"So I treated her fine, and let her eat all she could. She ate and ate, and got sick. Soon she got very sick. I went to the sorceress, the wife of the blacksmith, and she said, 'Your woman has a big snake in her; that's why her skin is bad; that's why she aches inside. Here is some holy chalk. Rub this on her skin and pray to God.'

"Well, I rubbed and prayed and rubbed her, but it did no good." The old man had lost his embarrassment. He talked quite simply—anxiously watching the old woman. "Then I tried my old game, and beat her, not because I wanted to, but I knew she was used to it every day of her life; so I said to myself, 'Perhaps this is just what she needs.' I beat her good and hard till I got all tired out. But when I got my breath to look at her, she was even worse than ever. Then I prayed. I got down with my head on the floor of the hut and prayed all night till the light came in the window. No good."

Here the old peasant grasped me by the arm and led me into the next room. He had forgotten all his cringing. "I just want to tell you," he whispered, "that I like that old woman of mine—I like her! I feel sick when she aches inside! But I don't want her to know this; if she knows she will stop doing what I say. That's why I brought you in this room. Now, let's go back."

We went back to the kitchen. Dounya stood staring at her weak, timid old mother. The old woman was embarrassed—her dull eyes kept shifting. Dounya just stared—desperately frightened.

"Now," said the old peasant, smiling, and showing his brown, broken teeth. "Look at our Dounyashka! Look at her—how nice she is! She is the one to cure my woman and make our whole hut glad!"

He laughed with delight, and jumped up again and seized his daughter's arm. A low cry burst from her tight-set lips, but the happy old man heard nothing.

"Just think how happy she will be!" he cried. "Rich! I tell you—well off! She can never be so happy here in the town! Listen!" He counted off his riches again on his brown, earthy fingers. "The old cow—has—a fat calf! The sow has—what? Sucklings! How many? Eight or nine, like in common litters? Oh, no. Eleven! The potato crop is—splendid! And—and——" His voice grew low and solemn. "There is something finer than all this. We have found for our Dounyashka—a fine—rich—husband."

My little girl sobbed outright and clung wildly to my arm. The amazed old father scowled and seized his daughter roughly.

"Why do you bawl? Are your old parents devils? I tell you, this husband is a fine, rich old fellow! He doesn't borrow ploughs from the fist (usurer), he owns his own plough! He is thrifty! He has two horses, a cow and three pigs! And I will give you our new calf and one pig. You will never be hungry. You can eat all you want, only don't get sick. Now, quit your bawling. I have promised and you—you must fulfill the Holy Law!"

My big husband came in, and I told him everything.

"My friend," he said to the old man, "if this little girl revolts at wedding an old peasant, then it's a crime to force her!"

The old father started up furiously.

"A crime—to obey her parents? Heigh, girl! Am I your enemy, do I want to kill you, that you bawl like this?" He stared at the sobbing little girl—angry, anxious, utterly bewildered.

"I tell you, barin, I have done a fine thing. This peasant is the richest in our village; he owns his own plough and cow, he has three pigs and two good black and gray horses. I say God gave my girl to me when she was born. God meant her to marry, and He meant me to choose her man. A woman must bear children. That is the law of Holy Church. And Dounya must fulfill the law!"

My husband pushed Dounya into my room and slammed the door. Then he faced the peasant, and they talked loud and long.

At last the old man sat down and

pulled on his soaking bark boots, his dirty hands trembling violently. He rose and threw the stiff sheepskin over his shoulder.

"The parent's right—is—is—like the right of God!" His gruff voice was low and shaking. "The Holy Church will help me! You will see!" He seized the old woman by the arm and stumbled out.

Two months passed, and I had almost forgotten. My condition made me nervous, absorbed, selfish, but even I could notice now and then that Dounya's face was anxious. She started whenever the knocker pounded the door. But she said little, and was doubly tender to me when I suffered. She worked harder on her lessons. I had to forbid her sitting up so late in the kitchen. Two or three evenings she asked me to sing that little lullaby.

Then a police notice came. Dounya's passport had been stopped. The mir (village assembly) in her hamlet had refused to renew her passport. No peasant can live in town without one. She was forced to go back at once.

That was a dreadful night. We talked and cried until I grew terribly ill and fainted. When I came to and asked to see her, she was gone.

What happened later you may learn best from Stepan Vassilitch, the zemstvo statistician, for he knew Dounya at our house, and we begged him to look her up in her village.

(Told by Stepan Vassilitch.)

I sat one night in a peasant's log hut, too tired to think. All day I'd been going from hamlet to hamlet; you know what they are—lonely groups of twenty huts or so; I'd been talking, questioning, reassuring, trying to break thru the dull suspicion and stupidity, to collect statistics on which we could work in our zemstvo plans for reform. Now I was exhausted, I lay back on a bench against the wall. The ignorance, superstition and cringing fear all about me weighed me down. The people seemed hopeless as the two dumb cows that now lay in one corner of the room. For this was South Russia, the most degraded part, the home of famines, riots and floggings.

Then I heard outside, faintly in the distance, a low sad love song.

I sat up quickly, trying to remember where I had heard it last. The song had no words—only crooning. I called to the peasant woman who already lay asleep up on top of the huge brick stove.

"Who is that singing? Heigh! Wake up my good woman—please, tell me—who is singing?"

"Oh," drowsily and gruffly, "That's our Dounya, the new wife of the old widower." I heard her turn over—then more heavy breathing.

"Please! Tell me more!"

"Well. She is singing. That's all."

"But where?"

"In the graveyard back of the church. She's a queer young devil; none of us ever know what she thinks about. Even her father and mother get angry, and her old husband gets roaring mad. She goes to the graveyard whenever he beats her. What a fool thing! Don't we all get beaten; some of us every day and all of us once a week? That's bad enough—to get beaten. You want to crawl up here where it's warm, and you ache and ache and then go to sleep. But to go out in the ice in the graveyard—she's crazy. The worst of it is that this always make the old man roar. In a few minutes you will hear him rush out and drag her in over the ice by her hair—that soft town hair of hers. He'll drag her into his hut and teach her some more. He does it every night twice—before the graveyard song and after."

"Why?"

"Oh, he is right. The pope (village priest) backs him up. The Holy Church has a Law of God that every woman must try to bear children. And she—the devil—she won't fulfill the law."

I went out, slipping and stumbling over the rough ice and snow; and all around me lay the great rolling steppe; not a tree to break the vast sweep. In front was a little white church. Behind it an iron fence encircled a few score of tombstones. And on one of these stones sat a small dim figure in the darkness staring up at the stars, crooning the same song, very slowly, stopping now and then in a queer little sound of choking. The song was half between a love song and a lullaby.

When she knew who I was she burst

out sobbing and buried her face in her dress. Her hands in mine felt like ice. I led her to the hut where I was staying. There were two rooms, one in the rear for me, one in the front for the two cows and the family. I half carried her into my room and shut the door.

She could not speak, she only sank on a stool and sobbed and shuddered. By the light of the one small lamp I could see her face all striped and bleeding. Her face was thin, the skin was white, transparent.

"Come, come, be quiet," I kept saying feeling awkward as a fool. Soon the peasant housewife brought in the battered steel samovar, which glowed and hummed comfortably. The woman stared suspiciously and went out. I made Daunya drink three steaming cups,

In broken whispers she told me all he had done to her.

"But my poor little girl! Have you no Zemsky Natchalnik (Czar's representative) here?"

She gave a bitter smile.

"Oh my barin, I don't believe any one goes to him so often as I do."

"Well?"

"He always frowns at me very black. 'Girl,' he said, 'you must always do exactly what your man wants. In the Holy Church you know that every woman must exactly obey her husband.'"

"So he did nothing! And your peasant court—the peasant judges?"

"Oh yes, I was there too. But don't you know how they are? They know nothing, they can't even read. And whoever can give them most vodka—he is right."

Suddenly she jumped up. A heavy rap at the low square window, then another. A pounding and kicking at the door.

"Devil! Devil!" A hoarse chorus of women's voices.

The white, thin girl stared at the log wall shuddering, her blue eyes defiant, her face rigid, slowly licking her dry lips.

"Oh I won't wait for her!" bellowed a deep, harsh voice. "Heave!" The door behind me crashed to the floor and in tumbled a dozen men and women, breathing hard. In front stood a shaking old peasant, with yellow leering face. He gripped a heavy whip in both his knotted, hairy hands—hands quivering

with passion. His old eyes blazed at the girl. The blue veins stood out on his temples. A moment's silence. "Now," he whispered.

From the girl burst a shrill cry—sharp, wild, bestial. Then she stood motionless, her eyes sick with loathing. They closed tight.

A circle of big, coarse faces—grinning. One old woman took a step forward and spat at the girl.

"Get out, all of you!" I yelled. It was hard to think at all.

The peasants only cringed. Some took off their ragged fur caps. The old woman bowed slightly. All watched the outraged husband. His old face now was close to mine.

"There is no law," he roared, "that lets my wife in here with you!"

"Get out!" I yelled, snatching up my revolver.

They slunk out, the old man last—backwards; he paused at the open door, leering. Then he disappeared into the night.

Dounya seized the rim of my coat and shook it. "Oh, barin—good barin—kind barin!" She stopped, and stared up. My throat thickened; she must have seen how I felt, and her eyes lit up. "You can!" she whispered. "I can lie under the seat in the sleigh, like this!" She crouched under the bench. "Look—look how little and thin I am now." Her face looked out, eyes gleaming thru tumbled hair. "Can I go?" she whispered.

I turned away and walked up and down. I thought till my head got sick.

The Holy Church, the Czar's police and judges, the very peasants themselves—all gripped her like a vise. I slowly worked out plan after plan, but each could only do the girl harm. The Empire was all around to catch her and drag her back. The Church hung overhead, cursing the obstinate sinner. She could not move.

She lay asleep now on the dirt floor over in the corner—the corner farthest from the window and the gaping doorway. The room was freezing cold. I heaved the broken door up into its place. Then I sat down and kept on thinking.

Once when I looked up I saw a dull gray path of light that came thru the little square window, streamed faintly across

the room, and fell on the figure huddled in the corner. It was morning.

I had to wake her. At my touch she shrank down; the next instant she doubled into a ball, her hands locked round her knees, her head bent close to her breast.

So she wakened. I told her there was only one chance. I would write at once to the mistress in town, and she would use all her husband's influence. Something might be done—at least so I thought in my exhausted, aching mind.

The girl just looked up into my face. Her lips parted in a little smile, sneering, desperate, wild. She ran out, pushing back the broken, leaning door so hard that it fell with a bang.

I was forced to be in the next town by noon, and I hired a peasant to drive me in. On the way I tried to show him how infamous it was to force the little girl on the hideous, toothless man. The driver grinned.

"Oh, my good barin. You can tell a horse's age by his teeth, but you can't tell a man's. Often our teeth drop out before we are forty. This peasant is only fifty-seven. Suppose he is a little ugly. A fine face can't feed a girl; the old man can. He is rich, he always grabs and saves; he has now four pigs, two horses, three cows, two carts and two ploughs. He has so much saved that even when the next famine months come he will eat twice a day all the time. He is all right. But this girl is bad thru and thru." His voice rose angrily. "Eat? He gives her piles of good food and she won't eat a thing. She just sits and thinks, thinks, thinks! That damned town has put some new devil in her soul!" He lashed his horse till the low sledge bounded over the prairie.

"A new devil! Didn't she vow to be his wife in the Holy Church? And don't the Church say a wife must try to bear children? I tell you she is fighting God! She has a new devil in her soul, and the old man must just beat her till even that devil feels it 'way inside. Then quickly he will jump out."

I gave up talking. On reaching town I wrote at once to Dounya's mistress.

(Told by the Professor's Wife.)

That letter was a dreadful shock. It

came just two weeks before my child was born.

My husband promised to do everything he could. I begged him to go that same day to Dounya's village, and give her courage. He went. Dounya had disappeared. He had the country searched. All the police joined in. But no trace of her was found.

The old husband raged. The village grinned and snickered—then roared with laughing.

The priest crossed himself and prayed Heaven to forgive the poor sinner.

That great clumsy machine—the Czar's police bureau—began ponderously working on this little trouble, trying to cure it all and varnish the wound with peace and order. Stepan Vassilitch was severely reprimanded for loose behaviour. I was arrested and expelled from my position as teacher in the night school, on the charge of spreading blasphemy and rebellion among peasant girls. My baby boy was born dead.

(Told by the Professor.)

Five years later I became a judge in our town. One morning I was walking thru the big prison room crowded with tramps. The air there is always foul, so I walked quickly. Suddenly I stopped.

A fat, flabby young woman sat on the filthy floor. She was dressed in old blue rags, a dirty yellow handkerchief was bound round her head. Her hair was unkempt, her face puffed and pimpled; her eyes stared dully before her. She had been drunk the night before.

"Dounya!"

The woman only grinned up cunningly.

"Why, barin." Her voice was thick and slow and a little unsteady. "That's not my name." Her faded blue eyes kept squinting up at me uneasily in the gloom of the vaulted room. "Not—not at all—my name. Dounya—h'm—that's a—funny name—very—funny—name. Where did you know any one—named Dounya?" She waited—sitting up straight by shoving her elbows against the wall behind her. She squinted anxiously—her cloudy mind still groping:

"Dounya—h'm—some poor devil wanted, eh—wanted by the police—or by—

ha-ha—by some old man who thinks he's her husband—perhaps? . . . Why don't you talk—barin? Maybe I've heard your voice before."

She smiled up uncertainly. The smile made me sure.

"Dounya!" I whispered, stooping. "Don't you know who I——"

"Why!" She shut her eyes and fell back. Her fat face twitched fiercely, grew rigid, and a dark flush spread over. She kept silent—struggling.

At last she opened her eyes—laughing.

"All right, now. I'll talk if you want. It'll be a fine story for your lady. How she'll sob and shake—just as if she was at a theatre. 'A Lost Soul.' A *fine* story. . . .

"Oh, don't look that way! You'd like to *uplift* me again—wouldn't you? Like you an' she did before—an' then let me drop back into the mud, an' go crazy. No. I don't want any more of your new devils in my head. It's bad enough—bad enough, already!

"Well—here's the story. That morning when your friend left me I ran out behind the huts an' off across the snow. I ran and ran. Slipped, banged my head, opened the cuts in my cheeks, an' that made me think of the oak towel (lash); so I ran faster. Some time that day I got to the railroad and sold the handkerchief—the pink one your lady gave me. I gave it to the conductor for a place in the fifth-class car. In there I got dizzy an' fell asleep, an' woke up arrested. No one knew me. I was a

tramp woman. Had two weeks in some rotten jail, an' now I just keep tramping. That's all.

"Sorry there ain't more thrills in the story.

"Hold on. There *is* one more thrill. It took a year before I had sense enough to hate your lady. Before that—well—her baby died. Guess you an' she was too full of tears and thrills to notice. I was at the funeral—in a back corner of the church—crying—God! how I cried—like a fool!

"Well, I guess I've been talking ugly; haven't I? An' you're judge here, so you'll give it to me all the harder for laughing at you an' her. All right. Go ahead. It's worth it!

"You won't? How kind!

"Give me money too? How nice. An' you want to take care of me and get me work, uplift me all over again. What a dee-licious thrill that would give you an' her—just to put a nice end to the story.

"Go to hell—will you—an' her too. All I'll take from you is prison!"

I told my wife none of this till long after.

That night I talked long and hard with Dounya in prison and at last made her agree to my plan. I sent her to the estate of my friend in Southern Siberia. On the train she was in charge of a Siberian merchant. This merchant was taken ill with pleurisy on the train. Dounya robbed him and disappeared. We have never heard from her since.

CHICAGO, ILL.

As We Pass: A Fable

BY BOLTON HALL

A little cloud shone in the sky; the earth was bright, but the cloud was brighter still. "I shall see so much in the great sky," said the cloud. But a cold wind blew upon it, and it melted into rain.

"Alas!" said the cloud, "I see no result from my little life."

A little rain was blown upon the wind. "I shall find so much in the great earth," said the rain. But it fell on the warm, brown soil, which sucked it in.

Said the rain, "I see no result from my little life."

A little rivulet trickled down the hill. "I shall do so much in the great sea," said the rivulet; but the sun touched the stream and lifted it into mist.

The rivulet sighed, "I see no result from my little life." It had become a cloud again.

It is not given to the mind to see that which the spirit does.

NEW YORK CITY.

PRESIDENT JAMES.

Doctor Edmund J. James, who was called to the Presidency of the University of Illinois in the fall of 1904, and whose installation took place last week, has for years been prominent as an educator in economic, political and social sciences. A native of Illinois, he was educated at Northwestern and Harvard and later at the University of Halle, Germany. He returned to this country in 1877 after three years spent abroad, and in 1883 he was called to the University of Pennsylvania as professor of public finance and administration. Here he remained for thirteen years, where he organized a graduate school and also acted as director and organizer of the Wharton School of Finance and Economics, the first institution in this country to establish a college course in the field of commerce and industry. President James has always stood for the higher training of business men and as the leading exponent of commercial education he was sent by the American Bankers' Association in 1892 to report on the education of business men in Europe. The report which he made on this subject at once became a standard in England and the United States. In 1896 he was made Professor of Public Administration and director of the Department of University Extension at the University of Chicago, where he remained until 1902, when he was elected President of Northwestern University. President James is most esteemed by those who know him best. A dominating characteristic of his life is virility. Another quality that marks him is his painstaking accuracy. His published articles are abiding evidence of his command of data. His devotion, courage and tireless energy mean much for the future of the University of Illinois.

Art Versus the Picture

BY MARTHA S. BENSLEY

[Our readers will remember the iconoclastic article we printed a few weeks ago by Miss Bensley on "The Arts and Crafts" movement. We received a great many replies to that article which unfortunately we could not print. We shall be surprised if the following article does not raise the combative spirit in many of our readers.—EDITOR.]

SOCIETY is always revolting against something. In it there is a sort of centrifugal force which tends to make the mass fly off from the center around which it is revolving. Today this center of motion seems to be commercialism; and the opposing, centrifugal force, the cultivation of a beauty unrelated to use, which shows itself in over elaboration in dress; in useless ornamentation in architecture, and most surely and absurdly in that fragmentary survival—the picture.

Now, the picture, by our day and race, is placed in an untenable position. It is forced to assume the apex of the artistic pyramid, and to pose as the apotheosis of the graphic arts. Its production is directly the motive principle of one class in our community, and indirectly the supporting force of our numerous art schools, and of a considerable proportion of our women's clubs. The existence of a picture is no longer due to the accidental disintegration of a decoration; it is no longer known as a fragment of a larger thing, but is supposed to be a complete production in itself with a large field of influence specially assigned to it, and is become the very staple of artistic orthodoxy; the icon of the uplifted household in our civilization.

In reality the picture is the knife which cuts off the appreciation of art from the masses of our people, and makes the love of beauty seem a meretricious thing; an attribute of the cultured; a sign of artistocracy. Deified by the race whose bygone thievery brought it into existence, it has become a pernicious incubus on their shoulders, and tho incomprehensible among them, is yet held in awe from the very mystery and detachment which surround it. They think of its beauties as only to be seen after long consideration, and those who either thru perverted mentality or pretense are able to voice their comprehension, are

held in honor among us and clothed with the bright robe of artistic sanctity. But all their assumed understanding is misunderstanding because of the fundamental error which considers a picture as the whole of the thing. It is as blinding a mistake as to think one vertebra of a dinosaur the complete skeleton, and the geologist who would reconstruct a fossil saurian on this false basis would be no more in fault than the community which considers two square feet of painted canvas a complete work of art. We have not only made ourselves believe that these fragments are complete entities, but we have deluded ourselves into considering them as much a part of the furnishing of our rooms as are tables and chairs. Our fundamentally true ideals have become so warped that they are satisfied by the easel picture; an attempted decoration which can be carried about like a saucepan. And to make more evident this peripatetic characteristic, we cut it off from the wall by bands of gold, cover it with glass, and hang it from a nail by a string.

Now, the impulse which desires decoration for the dwelling is certainly a legitimate one. It goes back to the time when the only thing interposed between the animal and the outside world was his skin; when personal adornment and house decoration were one because man was his residence. Surely, now that the house has developed an independent existence, it should be decorated with as much care as when the owner had, perforce, to carry it with him. These barriers which shut the world out should be attractive to those whom they shut in.

The natural development of the early civilizations was in the right line. On their walls, as parts of them, were diversified patterns, decorative stories; pictured history worked into frieze and panel; portraits of friend and lover used as ornamentation. Art was to them, as

it should be to us, not the production of separate, unrelated objects, but the medium which materializes beauty—the beautifying of the things of use.

There is no reason to believe that there would ever have been a departure from the paths of artistic righteousness had it not been for our marauding northern ancestors. From the time when they were armed with sword and bow, till now when their weapon is the groaning purse, these people of the north have descended upon the art-producing centers of southern Europe. They have not been able to take away the homes of the raided people, but they have carried away as spoil what seemed to them the distinguishing characteristics of their buildings. Whenever a decoration has been detachable, they have torn it from the wall, surrounded it with wooden bands, and as they bore it victoriously northward this fragment has become the picture.

In early times pictures, like other trophies, were placed with the captured banners and confiscated armor in the cathedrals. To those to whom decorated walls and frescoed ceilings were undreamed of, these detached paintings seemed things of beauty. Because these people had no standard by which to measure art, the beauty of pictures was taken for granted, not appraised, and they were valued at their cost in war, labor, and gold. Beauty was to them an inherent quality in pictures, like blood and bones in a man. If the beholder did not see this theoretic beauty, the defect was in him. As long as they continued to capture rather than to create their art, paintings remained to them things which could be carried about—not parts of buildings. Naturally, too, when they first began to develop artists of their own, these copied the form of the most valued art products they knew, and produced pictures. And even when an inherent sense of fitness made these artists decorate things—reliquaries, jewels, and musical instruments—education and tradition continued them in the belief that the highest form of art was that unrelated to use, the portable picture. This was an artistically aristocratic idea on a par with that which considers the unproductive gentleman a higher type than he who feeds, clothes, and moves the world; and it was the be-

ginning of that divorce of beauty from use which has come near to killing art by making it a class possession—a luxury. This pocket-book form of marauding also demoralized the art of the raided countries, for their artists began to supply this barbaric demand for detachable decorations.

Now, as long as pictures were kept in churches, galleries and museums, places where they could be stored and looked at as curiosities, like stuffed alligators, the effect was not so detrimental; but soon each man wanted his own little trophy; wanted it where he could gloat in its possession; tied it to a string and hung it on his wall. This was an insult to the wall and a disgrace to the picture, for walls are entities in themselves and their decoration should no more take precedence of them than should the dress of a person. If walls are not beautiful in themselves, hanging pictures on them will not make them so. There may, of course, be a certain excuse for hanging things—pots, pans, clothes, tools and articles of that sort—on walls. In the unfortunate contraction of our city life, space is so valuable and the things necessary to comfort are so many that this may be condoned. But to deliberately, with malice aforethought, to buy, beg, steal or otherwise acquire, a useless object, whether square, round, oval or oblong, representing some scene, person, thing or idea, and to place the same, an extraneous object, upon another entirely unrelated object in the name of art is without excuse.

There should be a harmony between the room, its use and its decoration. One idea should pervade each wall-enclosed space. Now, each picture tells a story; not of necessity an incident, but it has something to say. Perhaps the message of the girl within the golden border is—"See how beautiful are my eyes—my hair—how sweet my smile!"; next to her the pile of fish, fresh caught, may speak either of stream and lake, or of planked shad; then there may be a message of peace and love from a Nativity, and beyond it a pair of lovers on a Venetian canal, and a soft twilight showing the beauty of combined violets and grays. These pictures

speak their messages as insistently thru the language of color and line as with audible voices, and their clamor dulls our ears to the subtler harmonies of art. This sort of artistic hash served in our homes morning, noon and night has given the whole generation such a fit of artistic indigestion that it has lost all sense of taste.

Half unconsciously as yet, the truth that the picture is not the highest form of art, is not indeed art at all, is being borne in upon us. We perceive dimly that pictures on our floors are out of place, and the sale of the dog-bedecked rug and the rose-sprinkled carpet is declining. We still enjoy the terrier and the bouquet on our walls, but we no longer feel happy in walking on them. It ought to be as repulsive to us to see an imitation African lion on our walls as to see a real one walking about our rooms. In our public buildings, where, in spite of many mistakes, the architecture is generally better than in our homes, we no longer consider the picture as necessary, or even desirable. We realize that beautiful walls would be obscured by having things hung upon them, while good construction will be enhanced by frescos and wall paintings. Fancy the Boston Public Library with a row of gold framed pictures replacing the frieze of the Prophets! Tho we see that these decorations are more beautiful than detachable pictures, it has not yet occurred to us that we can have the same sort of things in our homes.

There are several fancied arguments against the wall decoration, but they are not in favor of the picture. The most plausible of these is the financial one. It is true the initial outlay of a fresco is far greater than that of wall paper, but it is not the paper alone that we put upon our walls—it is the paper plus the picture, and this combination can and sometimes does run far beyond the wall decoration in price. But also, if a decoration will last proportionately longer than the paper it will not be more expensive. That frescos, wall paintings, and tapestries will endure for centuries, has been proved by the French and Italian wall paintings, and by those of Pompeii, which have withstood two thousand years of burial. The key to

their permanence is the proper condition of the building, and this is quite possible of attainment even in our city life. Why should the rage for cheap and nasty construction be allowed to slaughter beauty? Why should art receive its death blow in its most vital point—household decoration? Even a tenement can be so well constructed that its walls will not crack nor its plumbing leak, and a building which begins to disintegrate in a few years is its own condemnor. Our homes should be better built anyway, and if good art is impossible in them as they are now, it is but an added reason why they should be changed.

Then we must consider as an element of expense the destruction due to smoke and dirt in our cities. But why need we have smoke and dirt? The enforcement of existing laws would obviate these evils. If we had clean administrations, we should have clean cities. The community can have whatever it insists on having—smoke or no smoke, art or no art.

Another argument on the score of cost is the varied taste of tenants. Landlords say that they cannot afford expensive decorations because these must be changed every twelve months to suit the shifting population, and they count on this continual renewal of ugliness as a regular expense like insurance. But even as things are, do they consult the taste of the flat dweller? Is he not expected to live surrounded by spots, stripes, or scrolls; by green, red, blue, or a kaleidoscopic mixture of them all as suits the manager of the wall paper factory?

It may be argued that we have grown fond of our pictures, but we can grow fond of anything, and affection does not necessarily indicate beauty in the thing loved—a Kaffir woman loves her nose ring. If each room were harmoniously decorated there would be no need for pictures, and if a picture is an inartistic thing, why should we wish to carry it around in our annual migrations and disfigure a series of apartments with it?

Then there is the prevalent idea that the artist must live. But why? Is the man who produces what the community should not have an advantage to it? If so, why do we not encourage the seller

of opium? Why should a man live as a producer of easel pictures if by so doing he is destroying art? He can always find useful and harmless occupation in tilling the soil. Besides, if it were his province to decorate the wall itself instead of producing parasitic things to hang on it, he would be busier than he is now. The artist and the wall decorator should be, and in reality are, one, only the painter of pictures will not admit the fact. There is an unbroken chain from Michael Angelo decorating the Sistine Chapel to Sandy McCarthy whitewashing the kitchen. Then, too, there is the fact that at present there are few artists capable of producing good mural paintings; but the great economic law of supply and demand will get to work on this question with pleasing rapidity if it has a chance; and the ability now wasted trying to make beautiful an inartistic excrescence, when applied to a fundamentally useful and true basis will meet with appreciation from a relieved public.

One of the qualities attributed to the picture by those who are making it a deity is educational value. Our Boards of Education hang them on school-room walls as intellectual spurs; our Social Settlements distribute them among the less fortunate, as uplifting influences; our Women's Clubs purchase them both to encourage the growth of art and for their own better development. Not to love and to understand pictures is, to them, to prove oneself of the unelect. Not long ago a prominent magazine published a story which embodied the prevailing sentimental feeling regarding pictures. The motif of this tale was the regeneration of a selfish, sordid woman, thru the receiving of a copy of the Angelus. Now an incident of this sort, even if true, does not prove anything of the value of pictures as products of art. It is not an artistic result, but shows the direct effect of the story which the picture tells; its literary side, not its artistic value. There is no possible reason to be-

lieve that this morally regenerated woman would not continue to combine magenta with blue in her dress, to wear her hair in a muffin at the corner of her head, to put a Rodgers group in her window, and a crocheted mat under her parlor lamp. This picture had not necessarily added one atom to the art in her life, had not awakened her to any appreciation of color and form. As far as this so-called moral effect of a picture goes, it can be had as well from a decoration with the added virtue of harmony.

The production of pictures can only be excused on the same ground that the playing of scales on the piano is tolerated. They are the gymnasium in art—good to develop the decorative biceps. There are proper places for pictures, as there are for scales and dumbbells. The picture which tells a story should be in the natural place for stories—a book, and the portrait which must often stand for the actual presence of those we love should either be so small that it can be carried about like a jewel, or made a part of the decorations of the room.

The first requisite of beauty is harmony, and the effort of art to produce it must necessarily be based on that fact. The harmony of a room is of greater import than the beauty of any one or any ten things in it. This fundamental beauty of harmony cannot be attained by any conglomeration of unrelated objects, be they ever so lovely in themselves. By every bit of harmonious decoration which we substitute for the picture, we increase the love and appreciation of larger things, the love of greater beauty and of greater good. The removal of this destructive and disfiguring parasite will allow our walls to return to their proper prominence, will permit the development of harmonious decorations, and by clearing our vision in the matter of what is and what is not beautiful, help us to take another step toward that civilization which is simplicity.

NEW YORK CITY.

Literature

New Novels

NORMAN DUNCAN's new story, *The Mother*,¹ gives the impression that he wrote it with his light turned a trifle too high and with his keynote of pathos taken an octave above where the reader's sympathies reach comfortably. But, come to think of it, motherhood is the italics of feminine emotions, the little cradle-topped

From Duncan's, *The Mother*.

elevation in her character where the light of heaven shines most persistently. And he has taken advantage of this fact to let heaven into the attic shekinah of a vaudeville actress, where she kept her child. Her love for him was the holy effulgence that covered her pitiful, painted life, and sanctified her. It is a fine argument for the way to heaven in women, dramatically expressed and quaintly proved, even if we leave out the philosophy of the "dog-face" man, which to appreciate one must read.

We have another Sabbath-school library novel in *Duncan Polite*,² and, in accordance with a curious custom which seems to control the topography of such literature during recent years, the scene is

laid in Canada. It is a fresh, clean story, likely to interest young people in spite of the prayerful tension in the atmosphere of the tale. To this same class belongs *Mrs. Jim and Mrs. Jimmie*.³ This story sustains the same relation to love that an old-fashioned "experience meeting" sustained to religion. In it everybody talks about love, and various efforts are made to lead purblind lovers in the right flowery path of bliss and happiness. But there is something eternally foolish about lovers. If only they could be made to follow their natural marrying instinct we should have shorter novels and more brides and grooms in real life—and both are preferable to the vulgar, darning-needle way some people have of knitting out their philosophies upon this subject. It is not so very delicate to tell exactly how lovers feel even in fiction. More often than otherwise it is blasphemous.

One interesting thing about English fiction is the fact that more middle-aged women figure as heroines in it than in the fiction of any other country. In order to be the star character in one of these novels, one should be married, stupid, and disposed to be gray-headed. *Peter's Mother*⁴ is an illustration to the point. And the author has resorted to that artifice for interesting her readers so common among novelists—that of hemming first one character in the story and then another between the two horns of some dilemma in morality so that, whichever way she chooses, she will commit a sin. To make good people do wrong is becoming the finest test we have these days of dramatic talent.

Last year "A Belle of the Sixties" introduced a variety in the historical war fiction of the South with a volume made up of sprightly memories, delightful character sketches and old-fashioned portraits; and now a *A Southern Girl of '61*⁵

continues the interesting series in a graver tone of voice, with more authentic correspondence between the great Southern leaders, and more quaint pictures. These books are really worth while, if for no other purpose but to show how ridiculously fallacious are the Southern heroines made up by writers like Cyrus Townsend Brady and George Cary Eggleston. *A Daughter of the South*⁵ is the latest literary blunder committed by Mr. Eggleston. One sly trick of this writer to secure attention to his wares is to place the high-bred, modest, virtuous Southern girl in the most comprising situation possible and then tantalize the imagination by permitting nothing logical to happen. "Decent Under Difficulties" should be the title of this last story.

Professor Sanday on the Fourth Gospel*

Professor Sanday holds a very high position among English New Testament scholars. His genial kindliness and most manifest sincerity, his entire frankness and fairness, his gentleness and mildness even in controversy, together with his accurate and thorough scholarship, have secured for him a peculiarly honorable place among those who discuss questions of Biblical criticism. His name carries such weight that when it is known that he has pronounced in favor of the Johannine authorship of the Fourth Gospel, the large number whose opinions are based on authorities rather than on reasons, will conclude immediately that they may continue to use the Gospel of John as on a par with the Synoptics. When Professor Sanday, the leading New Testament scholar of the Anglican Church, unites in defending the conservative position with Dr. James Drummond, the successor of Martineau and the head of the principal Unitarian institution of Great Britain, those who do not search for themselves into such questions cannot be blamed for think-

ing that the denial of the authenticity of the Gospel of John is a vagary of German extremism. These Morse Lectures may therefore be regarded as settling the question of the authenticity of the Fourth Gospel, in popular opinion and for the time being, in favor of the Johannine authorship.

But the question is not thereby settled. The position of Dr. Sanday is, in reality, a compromise. He holds to the authorship of John the son of Zebedee, one of the twelve, but he yields the historicity of the Gospel, and its authoritativeness as a source for the life and teachings of Jesus. He admits that ideas and beliefs of a period seventy years after the death of Christ have been projected back into the story of Jesus' life, and he confesses his inability to distinguish between what Jesus said and what his apostle thought two generations later. He says, "I do not honestly believe that everything happened exactly as it is, or seems to be, reported." (p. 157) That the Fourth Gospel is a free handling of the events of Christ's life and of his teachings, with plentiful admixture of the ideas of a later age, is a fact which stands out as clearly upon the pages of Professor Sanday as in the writings of Jülicher, Wernle, and Schmiedel.

That one of the Gallileean twelve, even in the last days of a life unusually prolonged, could have taken such sovereign liberty in telling his story of the Master who had redeemed his life, is difficult of belief. Criticism can hardly rest in such a position. Defenders of the authenticity must make out a better case for the historicity and authoritativeness of the Gospel as a record of Jesus, or their case will fall to pieces of its own inherent weakness. Professor Sanday has after all saved very little. It is of no great moment what particular man wrote the Gospel; the important question is whether this writing is a fair, accurate description of Jesus of Nazareth. That question the Morse lecturer decided in the negative, and therein is the significance of his position rather than in his inconsistent pronouncement in favor of the traditional authorship.

Dr. Sanday has been unable to free himself from the feeling that the Fourth

⁵ A DAUGHTER OF THE SOUTH. By G. C. Eggleston. Boston: Lothrop Publishing Co. \$1.50.

* THE CRITICISM OF THE FOURTH GOSPEL. Eight Lectures on the Morse Foundation. Delivered in the Union Seminary, New York, in October and November, 1904. By William Sanday D.D., LL.D. New York: Charles Scribner's Sons. \$1.75 net.

Gospel is either the work of a companion of Jesus or a deliberate fraud. The first fact of his criticism is that the Gospel is put forward as the work of an eye-witness. Convinced of that, he is convinced that he must maintain the authenticity or renounce the Gospel as a Christian document. But we know far too little of the feeling toward pseudonymous writing in Christian circles at the turn of the first century to warrant such a conclusion. The instances of Deuteronomy, Daniel, Ecclesiastes and II Peter show sufficiently that in all Biblical times even the most devout persons could put forth writings in the names of others. It seems a little strange that one so open-minded as Professor Sanday should be unable to distinguish between intentional fraud and innocent pseudonymity, yet it is this inability which holds him to the traditional opinion on the question under discussion.

British Reminiscences

As is so much the fashion nowadays, Sir Archibald Geikie has gathered up under the title of *Scottish Reminiscences*¹ his sixty years' varied experience in a vein of mingled summary and anecdote. It is sometimes difficult to tell whether the letter-press was made for these amusing illustrations of Scottish life and character or *vice versa*. But at all events the volume is a remarkable repository of stories with comparatively few dull ones among them. As a specimen of its contents may be quoted the following witticism on those two general staples of humor, doctors and Scotchmen:

"A medical professor having been appointed Physician to Queen Victoria, the announcement of this honor was written up on the blackboard of his classroom just before the hour of lecture. A wag among the students, seeing this notice, wrote in large letters underneath it: 'God Save the Queen!'"

The "bygone years" of the Honorable Frederick Leveson Gower² (pronounced Looson Gohr) number eighty-six, for he was born in 1819. A younger son of one Earl Granville, brother of that Earl Granville who was so long associated with Mr. Gladstone as his Secretary for

Foreign Affairs, and brother, also, of Lady Georgiana Fullerton, a well known English novelist, his life has been one of that mixture of politics, literature, art, travel and society which is the characteristic life of the best section of the English nobility. On the plea that a weakened memory is but a poor qualification for writing political history, the author confines himself to social life, and the picture which he presents is wholly a pleasant one. When we mention that at seven years of age he met Sir Walter Scott, that he was an intimate friend of Lowell, and that he has associated with most of the English literary men of the Victorian period, the range covered by his memory and the literary interest which attaches to his recollections will be readily understood. There are very few indeed of the famous names in the literature of England about which Mr. Leveson Gower has not something to tell, and often the tales are valuable as throwing light upon character. The volume is worth the attention of those who delight in the pleasant gossip of a genial and generous-hearted man of vast experience and wide information.

The name of George Jacob Holyoake³ has been before the British public more or less since 1842, when, in the twenty-fifth year of his age, he was imprisoned for blasphemy, his conviction being the last ever made in England on that charge. He was in this country in 1879 and again in 1882, in the interests of emigration from England to Canada and the United States. His whole life may be said to have been spent in efforts to uplift the workingman—a work which claimed his deepest sympathy, for he had spent his early youth in the workshops of Birmingham. He lost all religious belief early in life, and replaced it by a sort of moral system to which he gave the name of "secularism." His main idea in social reform was co-operation as advocated by Robert Owen. In 1892 he published an autobiography under the title of "Sixty Years of an Agitator's Life," and these two volumes may be taken to be a sort of supplement to that work. The names of Gladstone, Beaconsfield, Stuart Mill, George Henry Lewes, George Eliot, Maz-

¹ SCOTTISH REMINISCENCES. By Sir Archibald Geikie. New York: The Macmillan Co. \$2.50.

² BYGONE YEARS. By Frederick Leveson Gower. New York: E. P. Dutton & Co. \$3.50.

³ BYGONES WORTH REMEMBERING. By George Jacob Holyoake. New York: E. P. Dutton & Co. \$5.00.

zini, Garibaldi, only partially suggest the wide field of his acquaintance. His work with the Rochdale pioneers of co-operation, the Chartist propaganda, the organizing of the British Legion which went to fight for Italian freedom under Garibaldi, very inadequately indicate the extent of the great movements covered by these recollections.

William Bodham Donne, born 1809, died 1882, although without claim to a prominent position in the roll of fame, was an interesting figure in the third quarter of the nineteenth century, in that for seventeen years he held the unenviable office in England of Examiner of Plays. On his fiat depended the chance of a license for any drama offered for production on the stage. His granddaughter has now published⁴ the very valuable correspondence which her genial and lovable grandfather carried on with persons whose names are as familiar and as valued on this side of the Atlantic as on their own. When one looks at the names of Donne's correspondents, the interest and value of this volume is very evident. The greater number of the earlier letters are from and to Bernard Barton, the Quaker poet, and the same proportion of the later ones is made up of the correspondence with Fanny Kemble. Interspersed are many letters which passed between Donne and Edward FitzGerald, the translator of Omar Khayyám; Archbishop Trench, John Mitcheli Kemble, the Anglo-Saxon scholar, and J. W. Blakesley, Dean of Lincoln, scholar and divine. Miss Johnson has done her part admirably in editing the letters, eliminating uninteresting and irrelevant matter, and in supplying just that amount of connecting link which turns the correspondence into one of the most interesting and delightful pictures of personality and friendly intercourse between genial spirits which has appeared for many years.

Landscape in History, and Other Essays.

By Sir Archibald Geike. New York: The Macmillan Co. \$2.75.

The most important essay in this volume is that dealing with scenery in its

geological relations and its influence on human progress. Many readers will hardly be inclined to admit that man is so exclusively the creature of his environment as the author implies. Granting that the natural conditions in which he happens to be placed are potent factors in his development, there are other factors, ethnic, moral and intellectual, to be taken into account. Altho a tribe of Algonquins might be living about the Athenian acropolis for ages, it is very doubtful if the result of their environment would be a Pericles. But these essays are very charming, written with great clearness and distinction. Those who look on geology as an unattractive science will be forced to admit that it may be rendered even fascinating in the hands of such a master of style as Sir Archibald. Sir Archibald arranges the scenery of Great Britain in three leading types: Lowlands, Uplands and Highlands, and proceeds to show that each of these three main types has had a perceptible influence on English literature. He illustrates his subject by selecting instances from the writings of those poets in whom the relation he wishes to establish appears to be most readily perceptible. By the way, he seems, when discussing the relation of the Western Highlands to certain aspects of English poetry, to regard the Ossian of Macpherson as genuine. This is rather singular, especially considering the light thrown on the subject as a result of the present Celtic revival in Scotland and Ireland.

Rose o' the River. By Kate Douglas Wiggin, Boston and New York: Houghton, Mifflin & Co. \$1.25.

A rose grew on one side of the Saco River and a "sturdy young pine" on the other. How the rose was guarded with thorns, and the pine was proud; how they loved, misunderstood, and hurt each other; how, at last, all was well, and the sweet breath of the brier-rose and the fragrance of the pine made one atmosphere of love and forgiveness in a little home by the river, is a pretty story, pleasantly told by Mrs. Wiggin in her usual limpid style. We do not remember a dearer little house in fiction than the

⁴ WILLIAM BODHAM DONNE AND HIS FRIENDS. Edited by Catherine B. Johnson. New York: E. P. Dutton & Co. \$3.00.

ROSE O' THE RIVER

one which Stephen made ready for the rose of a girl who was to bloom within its walls. He did not forget to split the kindling wood, for the first fire! A man like that was worth waiting for, and we feel comfortably sure of Rose's future happiness.

Schubert. By Edmondstoune Duncan. [The Master Musicians' Series.] London: J. M. Dent & Co.; New York: E. P. Dutton & Co. \$1.25.

There is need of a good biography of Schubert in English, but Mr. Edmondstoune Duncan is not the man to write it.

His little book is for the most part dull, flat and prosy, overloaded with trivial details, in the midst of which the real essentials are lost sight of. He has condensed from the larger, authoritative biographies and unmistakably has read a great deal about the composer, but apparently he has little first-hand knowledge of Schubert's music, especially his best and greatest works. Sir George Grove said that no memoir of Schubert can ever be satisfactory. Yet, since the publication by Messrs. Breitkopf & Haertel a few years ago of the complete works of Schubert, there is material

enough and to spare for a competent writer to give us a good book about him. Mr. Duncan's style is utterly commonplace, his comment on the compositions is scrappy, and what criticism there is is expressed in the set phrases chiefly without meaning to the general reader. One would infer that the "Erl-King" is the most important of all Schubert's works, so much space is given to it, evidently because it was published separately, while many of Schubert's more beautiful songs were issued in groups and are not individualized in the publishers' catalogs known to the author. It is a pity that Mr. Frederick J. Crowest, the editor, cannot find writers better qualified to contribute to the pretty series the Messrs. Dent dress out so attractively.

The Jewish Spectre. By George H. Warner. 12mo. pp. 377. New York: Doubleday, Page & Co. \$1.50.

To begin our notice of this book, we wish the word *specter* had not been so archaistically misspelled in title and text; as also that the current British misprinting of "someone" and "anyone" for *some one* and *any one* prevails in the book. The two accents of the two words we retain; they are not lost, as in *everything* and *anything*, which are properly printed as single words. The author of *The Jewish Spectre* does not carry a name as familiar as that of his brother, Charles Dudley Warner, but he shows his right to the literary guild. We do not fully accept the arguments by which he reaches his conclusion—which is more nearly correct—that the fearsome figure so often set up of miraculous Jewish persistence, superiority and supremacy is very much of a specter. But our author cannot deny that the race has persisted in a way that no other race is known to have persisted. Beyond all caviling, we know the Jews to have maintained an historical if not administrative entity from the time of David, more than 1000 B. C. Their entity has not been lost by laws of nationality. They have been kept apart, and with substantially pure blood, tho in a hundred lands for over two thousand years; and it has all been conserved by their religious rites. There is nothing to parallel this anywhere. Mr. Warner says the Chinese are as old or older, equally the Russians.

Of course people have lived in Russia by genealogical descent all these years, but not with any consciousness of being a continuous separate race. We agree with Mr. Warner that the Jews are not markedly superior to the people with whom they live, not greater poets, artists, statesmen or financiers, and that the danger that eight or ten millions of Jews will overrun anybody is ridiculous. Perhaps the best part of the book is to be seen in its argument that all our ethics did not come from the Jews, that Monotheism was growing out of Greek, Roman and Eastern faiths parallel with the conquest of Monotheism in Palestine. But the Monotheism of the prophets was certainly something different from the *Deus exsuperantissimus* of Egypt or Persia, or the Isis or Mithra worship which were rivals of early Christianity. The author's attempt to show by mixed marriages that the Jews are a composite race, however they may have been in the past, hardly holds at present, for we may be sure that the bulk of the children born of such marriages are lost to Judaism. And still more it is to be remembered that it is not a different sort of blood that makes Jews, but religion. Mr. Warner, who treats the biblical records with no reverence, will have it that Jesus was not a Jew, but an Ephraimite Galilean. It is clear enough that Galileans were good enough Jews to be pilgrims to the temple feasts at the time of our Lord's birth. The merit of the book is that it sincerely attempts to put into a single volume a literary view of a very difficult subject. It seeks to break down the separation so far as it rests on an unreasonable fear of the Jews as an uncanny race different from our own, and thus to supply an even and happier intellectual condition. It covers a wide scope of history, and breaks down walls of suspicion and fear.

James Watt. By Andrew Carnegie. New York: Doubleday, Page & Co. \$1.40.

Mr. Carnegie's new book, *James Watt*, is welcomed by the reviewer because the mere mention of it furnishes a text for more fruitful consideration than do so many of the volumes which come to his shelf. Biography is the richest subject-matter than can be found for books, even

that of an obscure man if it be treated as relating his actions and words to human life generally; and in this way, by the great part which Watt's influence had in the development of men's worldly affairs during the last hundred years and more, this special study would be remarkably promising. Then, Mr. Carnegie, by reason of his long experience and eminence in relation to these same affairs, would be expected to appreciate aspects of Watt's work and the character which the professional man of letters would not see. We need such books, books of criticism from such points of view, as we need those from every department of men's activity. Only by intelligent observation and report from every point of view can the public realize all the good that is to be had from any man's labors. It looks as if the men of business and of practical affairs are beginning to see this need and to develop their department of our literature. What is the result of Mr. Carnegie's study? Mainly such reflections as have just been indicated. There is little if anything new in the book regarding matters of fact, and details have been frankly neglected; but the author has recognized in some degree what his readers expected from him especially, and has devoted his pages largely to comment. He illustrates from incidents in Watt's life the traits of Scotch character, the lessons of morality, persevering energy and thoroughness, and the poetic element in the mechanical genius, and he glances at some of the tendencies of modern industrialism and politics. Yet there is a certain reserve, as if the man of business could not bring himself to speak with that frankness which the man of letters is taught to use. Some such hesitancy is to be expected perhaps, but it leaves us with many questions to ask.

Inner Jerusalem. Illustrated. A. Goodrich-Freer. New York: E. P. Dutton & Co. \$3.00.

Miss Goodrich-Freer, the author of "Inner Jerusalem," is both a capable and sprightly personality, already approved in several lines of science and of literature, and everything she writes is worth the reading. We say this in spite of the prodigious production from her pen,

which makes this altogether recent work already a penultimate, or perhaps antepenultimate performance. She solidly informs herself about her subjects by reading and by personal visitation, and then presents the theme with as much vivacity as propriety allows. She has withal a very pretty wit, racy descriptive power and a clever knack of relating her subject to its graver scientific issues, with the sure result that we are both informed and entertained. No better book of the kind can be desired for the idle or the weary hour, and even the person on information bent, may find plenty in the letter and in the spirit, and so well arranged that it is easy to obtain. She is so very vigorous herself that perhaps her jokes may ultimately appear too highly carbonated for the "gentle reader," and she rather over-persistently "rubs it in" on English institutions in the Holy Land (of which certainly she is one!); but this is just her fun and way of reform, and if any one is bent upon reform in any way, in these days, perhaps they were better not interrupted. In short, for facts, atmosphere, reflections, tonic quality, one might fare very much worse than to go to this book and identify himself with its spirit for the two or three hours requisite for its perusal. A random illustration may serve to give its measure. "Jerusalem, for all its sacredness, is not without its humors. It is topsy-turvy land. The native entering a sacred place takes off his shoes and keeps on his hat; you begin to read a book at the end; the landlord pays the taxes; your servant walks in front of you instead of behind; a man calls himself not Mac, but Abu, not 'the son of', but 'the father of'; the men wear petticoats and the women expose their legs, while they cover their faces; the theory of 'ladies first', is a novelty from Europe; they put carpets on their walls, and pictures on their ceilings; you buy milk by the weight. . . . giggling has not yet been introduced, nor public-houses; there is no smoking of pipes and no expectoration in the streets. Swearing there is, but of a different type from the universal English adjective. It takes longer, but it leaves some scope for originality; it is after the fashion of the 109th psalm, only 'more so.'" (p. 29).

Editorials

Judge Calhoun's Mission to Venezuela

OUR Department of State has seen a great light, and it has found reason enough to reverse, or at least withdraw, its hasty threat to Venezuela. The refusal of President Castro to submit to Assistant Secretary Loomis's demand for arbitration of the Bermudez Asphalt Company's case alone, excluding all other cases, was an act of courage, and is now seen to have been justified. Mr. Loomis's dispatch was rude in the extreme, threatening coercion, and was resented. Then, Mr. Loomis having resigned, and having been rebuked by Secretary Taft and the President, the field was open for new procedure, and Judge Calhoun was sent to Caracas to learn the facts, which had been considerably misrepresented by Mr. Loomis and the other representatives of the Bermudez Asphalt Company. Judge Calhoun's report has been made verbally to the President, and the result is a better understanding and a withdrawal of coercion threats.

In order to understand the case, one must know that Castro is really more a Dictator than a President. Unquestionably the courts are subservient to him. The excuse for intervention is that justice cannot be depended upon as against the orders of Castro. Doubtless there is much truth in this charge. It was as a victorious Dictator that he first came into power, and tho now called President, he rules as a Dictator.

It must be further understood what is this New York and Bermudez Asphalt Company, and what are its rights and wrongs. It is one of the subsidiary companies now under the trust called the General Asphalt Company, but formerly under the defunct National Asphalt Company. The pother is all about this company.

Under the Asphalt Trust, as the General Asphalt Company is called, for it is merely a holding company, are two principal asphalt supply companies, which provide the asphalt to the other companies that do the paving. These latter are

themselves made up of some scores of local paving companies, but of these we do not need to speak. They offer a pretense of competition, but are under the direction of the Asphalt Trust. The two supply companies are the Trinidad Asphalt Company and this Bermudez Company.

The Trust first got control of the Trinidad Company. Trinidad belongs to England, but is near Venezuela. It has an asphalt lake. The Trinidad Co. leased the lake from the English Government for a long term of years. Then it bonded its lease, and the bonds are owned in England. It must pay a large amount every year to the bondholders and on the lease. This compels it to use the Trinidad asphalt. But there are other sources of asphalt in Venezuela, especially in Bermudez, which is a State of Venezuela as large as Pennsylvania. In 1885 Venezuela granted to one H. H. Hamilton, who had married a relative of the then President of Venezuela, a concession to exploit Bermudez. He had the right to take all its natural products, its asphalt, rubber, woods, gums, medicinal and dyeing plants, etc., and was allowed to import all needed machinery and supplies free. He also had right to navigate streams and rivers by mail boats. He bound himself to pay the Government forty cents for every 999 1-3 kilos of asphalt mined for export, in lieu of all other taxes, whatever. He was also bound to canalize certain rivers for navigation purposes, with the right to collect toll on them. He was also to build certain railroads, and generally open the country for trade. This concession, which was to run for twenty-five years, he sold to the Bermudez Company, and it opened work, but was afterward acquired by the Trust.

Now the Trust did not secure the Bermudez Company for the purpose of getting asphalt, but for the purpose of suppressing it. It was for its interest to use the Trinidad asphalt and to exclude the Bermudez from competition. And yet the Bermudez asphalt is much better than the Trinidad, and will go a third farther

in paving, and will not rot so soon. So, while keeping up a pretence of mining in Bermudez, really its asphalt was shut out from competition, to the loss of the Venezuelan Government.

This did not satisfy Castro, of course, who doubtless knew how to enrich himself out of the proceeds. So Castro declared the concession forfeited for failing to mine asphalt and to make canals and railroads. Meanwhile other companies attempted to take the Bermudez asphalt, and contest was made in the courts, the decision sometimes on one side and again on the other, until at last the Supreme Court of Venezuela declared the concession forfeited, and put the Bermudez source of supply under the receivership of Mr. Carner, who had been previously director for the Bermudez Company, and who now sells it to whoever will buy. Under the concession it had been distinctly stipulated that all disputes should be settled by the courts there, and not by reference to other governments by diplomacy. Notwithstanding this the Bermudez Company applied to Washington and for a number of years have been able to control the action of our Government in its favor by means of the political influence which it held here. That this was great may be seen from the names of the men who run the company. The president of the trust is J. M. Mack, of Philadelphia; the vice president is A. D. Andrews. Others interested are Widener, Elkins, Penrose, Harrity, Tatnall, Turnbull, Krech and Ellis. But—and this is curious—the five trustees put all their power into the hands of Mr. Mack, who does everything—a very convenient way. everything—a very convenient way.

This Bermudez concession is not the only one. The French have one, which Castro has declared forfeited for similar reasons. There are others. Minister Bowen, when our representative, finding that all these were in trouble, and were appealing to their governments for protection against the Venezuelan courts, obtained permission from Secretary Hay and Mr. Roosevelt to arrange with Castro for a general arbitration of all these claims, and Castro consented. But when the protocol was sent from Washington by First Assistant

Secretary Loomis, in the absence of Mr. Hay, it covered only the Bermudez Company, and it had been drawn up in accordance with the advice of that company's counsel. The purpose was to prevent settlement by arbitration, and to compel Castro to refuse, which he did, as the terms of this protocol were impossible and insulting. What the trust wanted was delay, and that our Government should use force to compel Castro to submit. On the general arbitration, as first planned by Mr. Bowen, it was practically certain that the award would go against the Bermudez Company. It had agreed, under its concession, to submit to the courts; it had violated its engagements; it had restricted the output, and had suppressed instead of developing Venezuelan commerce. And further, it had, as General Greene and General Andrews have admitted, spent an immense amount of money, \$130,000, on one account to aid the Matos revolution against Castro, which was alone enough to forfeit the concession. The late investigation proves this beyond question, and this was by no means all compulsory. They bought a war vessel in England for Matos and purchased other military supplies in this country.

So it is clear that our Government has made a happy escape from its complications due to the misinformation it had received from those who were in the interest and pay of the Bermudez Company, which means the Asphalt Trust. If Minister Bowen's, and Secretary Hay's plan of arbitration had not been side-tracked there would have been no further difficulty. All would have been settled by impartial arbitration, but that did not please the conspirators. When general arbitration failed, thru Mr. Loomis's confining it, in insulting terms, to the Bermudez dispute, the British and Germans proceeded to arrange their difficulties with Castro by diplomacy, and they are now allied for forty-seven years; while France is now on the point of war with Venezuela, and the United States is planning to back down on Hay's firm policy. The arbitration plan, if carried out, would have settled all these questions agreeably to the interests of the United States, and would have added to our prestige as a nation, and to our in-

fluence in South America. Some agreement will have to be made with Castro. In the history of all this bad scandal we are compelled to accept the conclusion reached in the Paris *Européen*, a leading European authority on international affairs, which says:

"As to Mr. Bowen, who has been made the scapegoat of this history, he has committed the unpardonable fault of being honest, and probably the only honest man, in a very shameful and dishonorable affair . . . in which a band of conspirators with the complicity of Senators, rich capitalists and their creature in the Department of State, Secretary Loomis, engaged in a deep plot against the integrity and independence of the sister republics, Venezuela and Colombia."

Opportunism, Good and Bad

MR. GHENT'S interesting article in defense of an uncomprisingly partisan attitude now in favor among the Socialists, is a thought-compelling arraignment of opportunism in general. Like John Morley's book on "Compromise" it makes the reader ask himself whether, after all, the ways of expediency are not only tortuous, but also unprincipled, cowardly, and in the long run unpractical.

Like all strong thinking, however, Mr. Ghent's argument awakens second thoughts, as well as first impressions. We discover that there are questions about partisanship and opportunism that he has not answered. However Socialists in general feel, Mr. Ghent at least abhors "a static state." He is a highly dynamic quantity, and likes to see things move. Now, partisanship, as it has thus far been observed in human history, presents this curious paradox: it is kinetic in its external manifestations; it effects changes in the world which the party dwells in and acts upon; it transforms the party environment; but at the same time it is a deadening static influence internally. Within the party itself it suppresses spontaneity; it stamps out criticism; it puts an end to change and growth.

When the Christian Church was young its uncompromising partisanship made it a tremendous force in the pagan world. But its conquests were won at the cost of internal plasticity. The independent thinker was felt to be a source

of weakness. He was liable to make dangerous concessions to the enemy, or to divert the thoughts of the faithful from their supreme interest. Little by little the creed became fixed and the organization rigid, until further progress was at an end. That stage attained, partisanship became futile, even as a force directed upon the environment. Self-satisfaction, indulgence and corruption enervated and disintegrated the body that had been solidified by a ruthless suppression of individuality.

Political parties everywhere have repeated this fatal evolution. The Republican party in the United States has been a conspicuous, and at times a humiliating, example of the remorselessly double working of the partisan spirit. An irresistible force in its warfare against slavery and disunion, the Republican party, having quelled rebellion and entered upon a policy of reconstruction, became both arrogant and despotic. Within its own ranks it suppressed independence and criticism with an iron hand. It began to live on its record, and failed to grapple with new issues. Secure in its sense of strength, and satisfied with its principles, it became the prey of the unprincipled and the corrupt. It was finally shaken out of its indifference, and compelled to address itself to new issues, by the revolt of the independents, precisely as the church was revitalized by the revolt of its protestants.

Who then are these protestants and independents who, from time to time, rebel against the static pressure of partisanship within any given social organization? They are opportunists of a certain kind. That is to say, they are men who, denied any opportunity within the organization to express their real convictions, or to work for the ends that they feel to be supremely important, do not sit down supinely, wailing that nothing can be done, but diligently look for, find, and seize opportunities elsewhere, anywhere, and exploit them until they have created a new and vital movement.

Such opportunists are clearly beings of a different sort from those shiftily opportunists who have no principles of any sort, and who work now for this thing and now for that, without definite aim. Opportunists of this latter sort deserve

all the opprobrium that Mr. Ghent or Mr. Morley, or any one else can heap upon them.

It is only because so much of our sociological thinking is superficial and indiscriminating that it lumps non-partisans together as opportunists, and thereby compels the conscientious thinker to push his analysis to the point of distinguishing good opportunism from bad. In reality the good opportunist and the bad are diametrically opposite types of human character. The good opportunist is more radical than the partisan; the bad opportunist is less radical. The good opportunist is a man whose radicalism adheres to his principles and his aims. From these no consideration of partisan solidarity or success can separate him. Means are subordinate to purposes, in his mind, and when accredited means fail he is always ready to look into the merits of means unaccredited or discredited. The bad opportunist has no principles. It is precisely in matters of principle and purpose that he is willing to experiment.

And now we come to the deepest criticism of partisanship. By a fatalistic tendency that only the strongest spirits are able to resist, partisanship creates bad opportunists and drives forth the good ones. The spirit of partisanship is the passion for success wedded to the instinct of solidarity. It does not supremely value principles, or even ulterior ends. The immediate end, success, and the immediate condition, solidarity, bulk bigger to the partisan than all other considerations. And so we find him over and over again doing exactly what the bad opportunist does, namely, ignoring or sacrificing his principles instead of independently choosing his means.

The one formidable danger involved in the possible success of partisan Socialism lies in its partisanism. Already in its political infancy partisan Socialism is intolerant to a degree that perhaps has never been witnessed in the early career of any political party. If influences now dominant in the Socialistic movement could obtain control of the economic and political situation they would give us the most static organization that the world has ever seen. From this fate we profoundly hope that the Socialistic movement may be saved by the ir-

repressible rebellion of great numbers of vigorous opportunists of the right kind.

The President's Southern Tour

MR. ROOSEVELT has never been the President of a party, but after his tour of the South he will be more distinctly the President of the whole people than any of his predecessors in recent times. He has approached the South in the most open-hearted way, and the South has received him with a frank expression of good will and delight. Everybody has heard him say in the past that he was by descent half Southern and half Northern, but we venture to think that few persons on either side of Mason and Dixon's line have until now clearly seen this dual relationship and its meaning. No part of the record of this journey will live so long and so brightly in the memories of the American people as the story of the President's visit to the old home of his mother in the little town of Roswell, of his eager inspection of the places which her girlhood knew, of his talk to the people in their little park of what he had been told about them and of those uncles who served in the Confederate Navy—above all, of that uncle, the Admiral, who had always seemed to him to be Thackeray's Colonel Newcome in real life. As we have said, every one knows now, and the Southern people well know, how the President came to be half Southern. And they have gained their knowledge of this in such a way that it gives the man a hold upon their hearts. They are his mother's people.

His praise of the valor of Southern men in the Civil War was in harmony with this relationship. At the same time it was impulsive and unstudied, creditable alike to the broad-minded Northerner of these days and to the Chief Magistrate of a united nation. Nor was the President's commendation of the South in its successful struggle with adverse conditions either forced or undeserved. In all this we see no trace of the politician's art. No one who knows the President will accuse him of striving to please and conciliate the South by flattery. Nor would we call it an exhibition of tact. Rather was it a wholly natural expression of opinion and emotion. The effect, deeper

and more enduring than any that mere tact or careful art could produce, is of great moment from all points of view. The popularity of a deserving President is established in the only part of the country where it was not already extraordinary, and his power to serve the public interest is enlarged.

Mr. Roosevelt has taken advantage of the opportunity to set forth again his views of public policy. His original plan for the regulation of railway charges has undergone no change, except that it now would empower the Commission to fix a "maximum" rate. But there is added to it an important provision for an examination of the companies' books to ascertain whether the law has been violated by concealed favoritism. We have repeatedly said in the *INDEPENDENT* that only by the exercise of such power to inspect the accounts could the law surely be enforced, and we are glad that a legislative grant of this power is now a part of the President's plan. He emphasizes his warning against imposing limits upon corporate activity by pointing to the depressing effect of restrictive laws in the Philippines and Porto Rico. Undoubtedly, these laws, designed to protect the people from selfish adventurers who would exploit their resources, have been injurious to insular interests because they have excluded American capital, and this capital has been freely invested in certain foreign countries to the advantage of their inhabitants. Mr. Roosevelt's remarks foreshadow an attempt by the Administration to procure from Congress a relaxation of the severity of the statutes relating to the holdings of individuals and corporate bodies. We hope the attempt will be successful.

It is true that we shall find it necessary to police the seas and coasts in the neighborhood of the Isthmian Canal's terminals, but there is no prospect that the task will be a hard one. It is also true that at some time we may be required to exercise the police power by an unselfish interference with the affairs of some country in that part of the world, but the recent admissions of the chief officers of the Asphalt Trust as to their contributions for the support of a revolution in Venezuela teach the wis-

dom of being sure of the facts before taking action in behalf of complaining claimants. Of course the Panama Canal will be completed. All intelligent and unbiased Americans are confident that the work will be done. We made a poor beginning, but better methods have now been adopted. The President's policy as to Chinese immigration will not satisfy those who would let in all who desire to come, but it is a decided improvement upon recent practice under existing laws and it calls for laws less severe. His appeal for Appalachian forest reserves will, we hope, excite friendly and effective interest in the South, where the need of forest preservation must soon be felt.

There has been nothing more wholesome and refreshing in his addresses than his scathing denunciation of those who achieve great wealth "by crooked methods," whose honesty "consists in keeping clear of the penitentiary." Every one knows what those "revelations of recent years" are of which he speaks. Doubtless, some restraint can be imposed by new laws, but for some of this dishonesty there is a remedy in the enforcement of laws now existing. The scourge of public opinion is always made more effective by the sharp public utterances of a man like Mr. Roosevelt. He couples the business scoundrel with the scoundrel in "practical" and corrupt politics. What he says on these topics is quoted in Philadelphia for the encouragement of those who are fighting the Republican ring of that city. We presume the President had in mind the Republican Senator and Governor and their associates there who oppose Mayor Weaver and reform.

On two occasions the President addressed audiences of colored people, giving them excellent advice. In Durham, N. C., his remarks to the white students of Trinity College were clearly designed to commend the trustees of that institution for refusing to dismiss Professor Bassett, who had offended influential men of that State by unstinted praise of Booker Washington. Up to the time when we write, however, he has said nothing in his public utterances about the Southern statutes that disfranchise the negro. And yet this is a live topic of both national and local interest. It is one as to which he undoubtedly has well-de-

finer opinions. Is it his purpose to withhold them from the public? Not until the record of his tour is finished shall we know. So long as opportunities for speaking on this subject remain, we shall prefer to believe that he does not intend to reject all of them.

The Beautiful and the Picturesque

CHARLES DICKENS was a great man. Like all great men he was misunderstood by his contemporaries, and we are now only beginning to appreciate him. Where they saw in him only the satirist, we discern the prophet. Take his educational theories, for example. We can remember when people thought Dickens was holding up Squeers to ridicule. But we now see that it was not satire but anticipation. Learning by doing, the union of hand work and head work, which was the fundamental principle of the educational methods of Dotheboy's Hall, has become the foundation of twentieth century education. Over the doorway of our manual training schools should be carved the immortal words: "Spell w-i-n-d-e-r, and then go and wash it." And the portrait of Squeers—any artist can draw portraits from Dickens's descriptions—should be put with those of the other discoverers of the new education on the walls of the school room, not, of course, in a gold frame but as an integral part of the mural decoration.

Still more striking is the way Thomas Gradgrind anticipated the views of modern decorative artists. Listen to the school commissioner as he expounds—fifty-two years ago, mind you—the latest theories of mural esthetics:

"I'll explain to you, then," said the gentleman, after another and dismal pause, 'why you wouldn't paper a room with representations of horses. Do you ever see horses walking up and down the sides of rooms in reality—in fact? Do you?'

"Yes, sir!" from one half. "No, sir!" from the other.

"Of course, no," said the gentleman, with an indignant look at the wrong half. "Why, then, you are not to see anywhere what you don't see in fact; you are not to have anywhere what you don't have in fact. What is called taste is only another name for fact. . . .

You don't walk upon flowers in fact; you cannot be allowed to walk upon flowers in carpets. You don't find that foreign birds and butterflies come and perch upon your crockery; you cannot be permitted to paint foreign birds and butterflies upon your crockery. You never meet with quadrupeds going up and down walls; you must not have quadrupeds represented upon walls. You must use for all these purposes, combinations and modifications in primary colors of mathematical figures.'"

Miss Bensley in her article on another page of this issue uses much the same language:

"We perceive dimly that pictures on our floors are out of place, and the sale of the dog-bedecked rug and the rose-sprinkled carpet is declining. We still enjoy the terrier and the bouquet on our walls, but we no longer feel happy in walking on them. It ought to be as repulsive to us to see an imitation African lion on our walls as to see a real one walking about our rooms."

But, without disputing this theory of decorative art, it seems to us that the argument from it should lead in the direction of the framed painting rather than the fresco. If we are not to banish the picture entirely, surely it is more truthful to have it so framed and hung as to be obviously distinct and removable than as a panel purporting to be a window scene. Does not the Japanese show a higher artistic sense in hanging on his walls a new paper kakemono every few weeks than the Pompeian in painting frescoes to last two thousand years?

We live in the Peripatetic Period, and our art should, according to one of the principles of esthetics, be in harmony with the spirit of the age. According to another principle of esthetics, the dwelling room should express the individuality of the tenant, therefore it would be highly improper to let the last tenant or the land lord decorate our walls. No, we will have the flat repapered to suit our own taste every time, and hang upon it the pictures we like best, changing them every little while as we grow in artistic intelligence. Thorwaldsen wept when he carved his Christ because he was satisfied with it and he knew, therefore, that he had reached the limit of his powers. So we, if we find ourselves liking the same pictures, books and music from year to year, will know that we have ceased to grow. When the nautilus becomes satisfied with the pearly frescoes

of his latest chamber and so ceases to build new, he is ready to die.

Miss Bensley's illustrations are not well chosen for her purpose. In the Boston Public Library the wall paintings by Sargent are not so highly esteemed as the detachable pictures by Puvis de Chavannes. We do not give this as our humble opinion, but that of the only recognized infallible authority upon art and everything else—that is, Karl Baedeker. And as for the Sistine Chapel, we suggest that the average tourist would have a much better appreciation of Michelangelo's pictures if they had been hung on the line. He had to distort the limbs of the Prophets and Sibyls to fit them into the corners, and he has distorted the necks of ten generations of sightseers who wanted to see them. Most of them nowadays wander around the chapel gazing down into small mirrors as tho they, too, were sibyls, and the sound of polyglot apologies fills the air as they bump into each other.

It is a sort of degradation of the human figure to use it for architectural purposes. We do not like to see caryatides. They make us tired. Statues standing around doing nothing are much pleasanter spectacles. For the same reason people enjoy watching the idle rich who are living the ornamental life more than they do contemplating the slaves of industry. No doubt a good argument can be made for the strict construction of the Second Commandment. We may in time outgrow all forms of mimetic art and cultivate pure decorative art in abstract color and form. But in the meantime, is it not somewhat presumptuous in us to assume that our statuary and painting will be admired for thousands of years to come, as we do when we use bronze and marble, mosaic and plaster as the materials?

But what we started out to say is that, with a few qualifications, some of which we have expressed, we heartily agree with the purport of Miss Bensley's article, that the picture, especially the oil painting, has been given an artificial importance, and permitted to monopolize the attention of the public, which should be taught a wider meaning of art. There are other forms of the beautiful than the picturesque.

In the Orchard

NOTHING is more modest than an apple orchard in Winter—more sober than the bark, and more homelike than the general contour of the trees. When the buds begin to swell in Spring and the leaves to expand, there is still a homefulness that reminds you of Wagner's "Simple Life." There is no style about its growth, as there is about its neighbors', nor is there any conventionalism. The limbs come out carelessly, and the foliage is toned down to a quiet hue. When you see an apple tree you naturally say, "A good place for robins to build—and a good place for boys and girls to climb." And a robin's nest is almost certain to be found in nearly every apple tree of a small orchard—provided there be no family cat; and as for the boys and girls, they are there at least when the apples begin to color.

Nature always yields to the wit of brainy folks; and does it cheerfully. We call a natural orchard a wild one, because the trees come up out of rows and the fruits are not eatable, with rare exceptions. These exceptions we select, and multiply by art, destroying the rest. Those kinds which give 300 apples to a bushel we prefer to those that count 1,000 to the same measure. So we have gone on these three or four thousand years—but especially the last two hundred—selecting into orchards those few sorts that satisfy us; and there is no denying the fact that this selecting has done a good deal for us in the way of human evolution. Nature went on when she got a chance, making crab and thorn apples; but now she is adjusting her work to human requirements. The chances are greatly increasing that if you plant a handful of apple seeds you will get some fine sorts. There are at least six famously good seedlings of the Fameuse family—with probably many more not yet known; and if you will sow seed of the famous children of a famous parentage, your chances increase for something better in the third generation. But if you sow seeds of the old English pippins you will probably not get one valuable sort out of 500. Nature has a knack of making us do things very carefully and laboriously until we have learned to do

them thoroly well, and then she allows them to be accomplished automatically.

As May passes into June, and the petals no longer sift themselves over our shoulders, the selected apples that survive in the competition, partly from weight, and partly from instinct, turn over, and henceforth hang downward on the limbs. This is a curious process, and you should watch it as it goes on. During May every flower and germinal fruit lifts itself skyward, and the spray which you send from your pump falls delicately into the calyx. But if you spray later, the fine moisture will have to be driven upward to reach the same place. All the same we must keep at work to carry on a fair competition with other minute rivals, that would take from us our orchard crops.

There comes a time when the apple is tired of growing. The exquisite blossom filled the air with ozone. The insignificant fruit gradually took on texture and color. Great balls of succulent fruit swing in the boughs, but now nature announces that the work is done. The yellow ray of Summer atmosphere stimulated growth, but yields at last its dominance to the red ray of Autumn. The apple falls into the mood of general nature. It has nothing left to do now but to sweeten its juices and color its flesh and skin. We walk up and down the orchard rows, where the trees are growing scarlet with McIntoshes, or yellow with Golden Pippins. We count the barrels, and prepare for their storage. Everybody is rubbing his hands over abundant crops, and thinks the world runs for his own benefit. Never in the history of the world were brains more necessary. We have carried this evolution so far, and turned Nature so completely aside from her original purposing, that we cannot for one moment leave matters to themselves. It is a workful age. Yet as Autumn moves forward, anxiety and foresight give way to more quiet harvesting.

Picking apples is not the rough and uncouth job often made of it. It is one of the fine arts. Every apple should be handled like an egg. It is a good test of a boy to see if he can harvest the Spitzenbergs with delicacy and refinement. If he cannot, let him go to the

town and handle hardware. On the farm is no place for boobies and heedless folk. Here are all the sciences put into actual application, and all the arts are used which man and nature have together wrought. Not even the leaves should be rudely handled—certainly not burned when fallen and browned. They are the result of thought, and deserve quite as much care as the fruit itself. Nature makes them for elaboration of tree life, and for shading the bark in summer, dropping them then, to make the world's future soil. They are part of the real apple crop. The stupid man buys commercial fertilizer, but burns what God gives him without charge. This is a general truth that our relations to Nature have grown more delicate. The farmer is becoming the supreme artist—the creator.

Obliterate the orchard, abolish the apple, and it would be difficult to estimate the changes in human economy. It is curious to note that the two began together, or very nearly so, in evolution. So did civilization begin with the culture of better fruits; and we are now entering on a new and more wonderful era than any in the past. The grandest achievement of the present day is not in politics, nor in sociology, but in pomology. The new apples, that nod to us as we pass them by, are the glory of their makers. Burbank and Budd and Lyon and Stark and Munson, these men, and such as these, are really the masters of the age—the leaders of a new humanity. It is their enthusiasm which is making the real life of the twentieth century. The commercial world is just waking up to the fact that trading is not the supreme end of human industry; that creating is the first, and the highest achievement. The orchard stands as a monument of man's intellectual mastery of Nature.

So it is the orchard helps to make home. When the sober buds begin to swell, and the pink tips to show, you say, What in the world else can be so beautiful? Ah, if only we could have *one* apple tree in bud and blossom all the year around! Nature knows us better. She knows that we would soon become satiated, and would not even see that our prayer was granted. So she pulls aside the veil, and lets us see apple blossoms

only just two weeks of each year. Then comes that protracted period of growing, and contention with insects. At last in the quiet of late Autumn, having garnered the perfected work, we walk once more under the leafless limbs. Yet even now, tucked away at every available point, are the well wrapped buds of a new life—of a year that lives as yet only in promise, and depends for its full opening and realization on a wholesome antecedent life. The apple tree in this way is not unlike man. Man is in nothing apart from or outside of Nature. Old people do not care so much for Spring and Summer, but Autumn is their season. We get ripe as we grow old, and the red apples fit into our riper mood. The problem is whether we have the buds formed for another period of development.

A King for Norway

BUT why not a Norwegian Republic? Why maintain the form of a monarchy when the whole spirit of it is decayed and perished? Why not throw overboard the entire lumber of the divine right of kings, when their authority is lost? Why not shed the old fuss and feathers after the eagle has moulted?

Popular government requires no king, to rule during his lifetime, and then transmit his privilege to his son. The existence of a king is the denial of popular government, for the king is outside of it, not chosen by it and not by it removable. A king may properly go with inchoate, imperfect popular government, not yet universal, so long as the right of suffrage is limited to a class. If the rich may vote and so rule over the poor, then this class that possesses privilege may be ruled in turn by a king who possesses further privilege over them; but universal suffrage contradicts royalty.

And yet the form and something of the power of royalty persists after universal suffrage is secured. Thus not only European republics, like France and Switzerland, give the vote to all male citizens, but this is true also of Great Britain and Germany. And, strangely enough, the purpose of giving suffrage to the proletariat is to strengthen the monarchy, it being supposed that, while the strong middle class and the nobles

will, as in Magna Charta days, limit and resist kings, the lower classes will be faithful to the monarchy. So in Russia the mujiks believe their White Father to be their dear friend, and that it is only his subordinate nobles that oppress them. So they went, led by Father Gapon, to tell their Father their needs and sufferings, and be shot down like dogs. This will work for a time, but when you have educated your new rulers it will be found that they, too, are jealous of their rights.

Norway needs no king. There is in Norway no great ignorant mass unfit for suffrage. The people are independent in their minds, school-taught, fond of their political discussions, intelligent in public affairs, perfectly competent to rule themselves by Parliament and President, as does France or Switzerland. It will be a great pity if, reversing the trend of things, and with such a rare opportunity to make the ideal change, Norway fails to seize the chance. No one could stand in the way; not Sweden nor Denmark, her nearest neighbors, and hardly Russia or Germany, much as Czar and Kaiser would dislike it, and strongly as their influence goes against the republic.

It would be an example to Hungary could Norway drop the monarchy. There, as in Scandinavia, there is the likelihood of division. When Hungary shall throw off the alliance with Austria, and with it an Austrian King, and shall accept the universal suffrage that is likely to come, there should be a Republic of Hungary. We long to see it. We have given Liberty and Equality full rights on the two Continents of America; we long to see old Europe also won. There is no going backward. Monarchies turn republics, but republics do not turn monarchies. A Hungarian Republic, following a Norwegian Republic, would mightily influence the nations about.

While universal suffrage is popular government, and so the essential thing, yet the maintenance of the form of royalty with it is both abnormal and injurious. It is a drag on the will of the people. It stands in the way of the popular demand; as in Great Britain the King and House of Lords, ornamental nuis-

ances, block the House of Commons. It resists what the common people, the working people want, better rights in their labor; what the old Chartists asked for, "Eight hours' work, Eight hours' play, Eight hours' sleep, And eight shillings a day." It is such modified Socialism that Australia and New Zealand, which have escaped King and Nobles, are now seeking and finding; it is what we are achieving peacefully in the United States.

✱

Blackmail

THERE is more than one kind of blackmail. There is the Italian kind, and there is the political kind; but it is all blackmail. The threat is the same, the compulsion to pay; the difference is only in the nature of the threat.

Blackmail is compelling one who has money to give it over for nothing to another person who threatens to do an injury if the money is not given. A usual way is for a company of Italians to frighten one of their people, who has thriftily got rich, by sending him letters demanding a thousand dollars or so, and threatening to steal his child if he refuses. That is the brutal, undisguised blackmail, which may even threaten to kill, and sometimes does kill, one who may refuse to give the money. Our papers are full of such terrible cases.

But there is another kind of which we are beginning to hear a good deal in these days. There are rich companies as well as rich Italians, companies worth hundreds of millions, as well as Italians that are worth a few thousands. And there are so-called respectable men who are as criminal blackmailers as the Black-Hand Italians. We elect them to make our laws. They seek election just for this purpose, that they may blackmail rich companies, and our decent citizens are so busy, or so blind, that they do not see what these would-be legislators are after. We cultivate blackmail, as farmers cultivate weeds, by letting them grow, because too lazy to keep the ground clean.

We have had testimony before the New York legislative committee—and it has some truth—that a considerable por-

tion of the bills presented to the legislatures are "strikes," are introduced simply for blackmail. We have learned of hundreds of thousands of dollars spent by each of three specified insurance companies for legislative purposes. This is no news: it has been known for years, commonly talked of as gossip of the capitals, but not before confessed. Now we know it; it is admitted. We know—and we know something of the terrible extent of the evil, and who are the men who are the go-betweens and pay the money to the blackmailers. And the men who take it must be known about Albany and Harrisburg, and about their own homes. They are flourishing; they get rich, with no visible means of support. They are as bad as the Italian scoundrels whom we hunt as vermin and send to prison, if we can find them.

We find fault with the Italian father who consents to pay money in his fear that his child will be stolen. We say that if men would not pay money the blackmailers would cease their business. But we yet pity them while we blame them. We do not condemn them as we do the men whose victims they are. We can hardly make that distinction of pity in favor of the companies that allow themselves to be thus blackmailed. We are not sure but they may be as active to prevent good as bad legislation. To that extent they are not only victims, but also cultivators, inviters of blackmail. They mix bribery with blackmail. There is no closer duty resting on our officers of the law than that they seek out and actually punish the men who are guilty of thus misusing the funds paid for the protection of widows and orphans.

For it is far from clear that the money paid in bribery to legislators is mainly forced blackmail. It is not more easy to find the bills introduced to strike the companies than it is to find bills introduced by the companies for their profit. And it is these bills that pass. To provide board and lodging and sundry illegitimate supplies to insurance committees and others, at the enormous total expense proved, is something more and worse than paying blackmail. The argument of gold takes the place of the argument of reason. When the investigation

is ended it will be time for the District Attorney to act.

Just now there are propositions that insurance legislation be transferred from the State capitals to Washington. It is said and thought that this will purify legislation. We do not believe it would. We can imagine that it would be a great advantage to the companies if they could close their local legislative bureaus, and do all their legislative business with the National Senate and House of Representatives, and an Insurance Bureau at Washington. But we can imagine also the tremendous combined pressure which these hundreds of millions could put upon Congress. We can imagine that these rich companies might come to think that they owned Congress, whether thru personal financial favor of one sort and another, or by contributions of enormous sums to political campaign treasuries. Bribery would not be necessary. Nothing more would be needful than to give a man a chance in a syndicate at bedrock, and let the profit come to him, he hardly knows how. We have had several very disagreeable investigations in Congress, and very rich men get into the Senate. Before favoring the control of insurance by Congress we would have close attention given to the plan, with a view to finding out whether its purpose is to get rid of blackmail, or whether it is to make it easier for the companies to do what they will. The acquisition of four million dollars directly paid to one family by the company of which one of its members was president shows what is the greed and graft that has controlled what ought to be the most honest of all businesses.

Slander Without Malice

The ridiculous stories sent to this country by imaginative correspondents about the doings of "Princess Alice" in her Eastern trip had no malice in them, not the least, but they were really slanderous nevertheless. She did not take that "dare" from one of the party to leap into the tank on shipboard all in her clothes, and compel him to follow her; and it is not true that she received an offer of marriage from the Sultan of Sulu. They were spicy stories, like others of the kind, and they might very well

convey the impression that she was a dare-devil girl who invited *outré* notoriety. Such inventions, while not malicious, and in the nature of practical jokes, can very well prejudice people and be really slanderous. Another such is the story which we have seen, coming as a matter of gossip from Manila, to the effect that at a dinner given to Secretary Taft by the native governors and officials, after a sharp criticism by a leading Filipino, one of the American officers present was so angry, or drunk, that he threw a glass of wine in the speaker's face. This is not true, as we are informed by one of the very few Americans who attended that function; but doubtless the letter-writer believed it. Slander may be innocent of all evil intent, but yet

"Evil is wrought by want of thought,
As well as by want of heart."

Miss Roosevelt's Presents

Some officials and some newspapers have been suggesting and approving that Congress should pass a special bill admitting Miss Roosevelt's presents, which she has received on her Eastern trip, free of customs duties. The argument offered is that they were not given to her as personal tribute, but as representing the government of the United States; that they were not what she would have bought for herself, and were what she could not refuse to accept because she was the daughter of the President. To have refused them would have been very offensive and insulting. Further, a large proportion of them would be of no use to her, but are simply curious and interesting mementos. There is some force in these arguments. The objects have been admitted in bond and sent on to Washington, and will be held in bond until the duties are paid or are remitted. It is not clear to us that they should be remitted. There are other ways of getting over the difficulty, and one of the best would be, it appears to us, that these presents, which were official in character, should remain such by being presented or permanently loaned to the National Museum at Washington, in which case no duty would be paid upon them. Miss Roosevelt might very properly retain what she wishes for personal possession, which

would be probably a comparatively small proportion of them, and on those pay a duty like any other citizen. Special legislation in favor of an individual citizen, no matter how exalted the rank, should be avoided.

Football Abolished at Yale

On October 25th, 1855, exactly fifty years ago today, THE INDEPENDENT published the following welcome news under the title of "Civilizing":

"The Freshmen of Yale College this year decline to challenge the Sophmores to a football contest, by a majority of one-fifth of the class. The *Register* says that the reasons given for the discontinuance of the custom were, that the contestants were exposed to severe casualties; there was no display of skill, but simply a trial of brute force; that such rough and tumble sport was beneath the dignity of gentlemen; there was nothing in favor of it, save that it was an old and long established custom."

If the present agitation against football succeeds in abolishing the game, we will be exactly where we were fifty years ago.

The Kaleidoscopic Czar

One who can chase a rabbit track can follow the political movements of the Czar. One who can harmonize the combinations of the kaleidoscope can discover his connected policy; and yet thru all the turbulence and disputes and insurrections there must come one final result, and that is, more liberty for the people and more restraint to the despotisms. Under the very last report Mr. Witte is getting control, and it is even said that Mr. Trepoff, who promised to suppress all uprising with a bloody hand, is now in harmony with him. Mr. Witte has convinced his Majesty, so they say, and there is some reason to believe it, against the will of the Court Party, that it is necessary to grant a considerable measure of popular liberty, such as will free the press and guarantee the right of associations and public meetings. We accept the report, inasmuch as it directly contradicts previous reports, and we shall hold faith in it for a week, or at least a day, assured that the see-saw of Court Party and representative government, about the pivot of the Czar, is bound to end in more freedom at last.

Pebbles

"TRIED to skin me, that scribbler did!" "What did he want?" "Wanted to get out a book jointly, he to write the book and I to write the advertisements. I turned him down. I wasn't going to do all the literary work."

....A Bishop backed the Subway Dive
And opened it with psalms.
Teetotaldom cried, "Sakes alive!
He can't survive his qualms."

But Time a wonder brought to light
That showed the rogues they lied.
The Bishop rallied from the blight;
The Dive it was that died.—*Life*.

FLEA, FLY, FLUE.

A flea and a fly in a flue,
Were imprisoned; now what could they do?
Said the fly, "Let us flee."
"Let us fly," said the flea,
And they flew through a flaw in the flue.
—*Our Dumb Animals*.

....Among the papers read at the last meeting of the American Mathematical Society, none were more interesting than these three: "A geometric property of the trajectories of dynamics." "On the expressibility of the automorphic functions of the group $(0, 3, l_1, l_2, l_3)$ in terms of theta series," and "On the arithmetic nature of the coefficients in groups of finite monominal linear substitutions."—*Science*.

....We are chloroforming grandpa
In our laboratory snug,
For we've been to Dr. Osler,
Who has furnished us the drug.
Grandpa hates asphyxiation
And is kicking up a roar;
Tho he ought to die contented,
Since his useful days are o'er.

We are chloroforming grandpa.
'Tis a dire and fatal plunge,
But we're sure the old man needs it.
(Willie, run and get the sponge.)
Grandpa's such a hale old fellow,
If he wasn't put away
He would still continue working
Twelve or fourteen hours a day.

Little Johnnie (such a bright boy!)
Runs a railroad and a bank;
Baby Jim conducts a journal,
And a Senator is Frank.
Boys of sixteen, eighteen, twenty
Now direct the human race—
What's the use of having grandpa
Merely loafing round the place?

—*Life*.

Insurance

HENRY S. ROBINSON.

The Connecticut Mutual and Its New Vice-President

THE Connecticut Mutual Life Insurance Company, of Hartford, Conn., which was organized in 1846, came into great prominence under the strong leadership of the late Jacob L. Greene. When this company began business, life insurance was new and crude. Mortality tables were ill-digested and the public impression was quite general that insuring life was an impious business that "tempted Providence," because of seeking to interpose a guarantee or a protection against death. The Connecticut Mutual began with mutuality and has so continued until the present time. During its fifty-nine years of existence the Connecticut Mutual has brought comfort into thousands of homes that would have been doubly desolate upon the death of the breadwinner had it not been for the policies written by this New England company. The reputation of the Connecticut Mutual has always been high and it has constantly enjoyed the confidence of the people so that its business has continued persistent.

Mr. Henry S. Robinson, who has just been elected vice president of the Connecticut Mutual, and who now takes his place in the direct line of succession to the presidency, is the son of the Hon. Henry C. Robinson. He was born at Hartford, in which city he has always resided. He was a member of the Class of 1889 at Yale, and after graduation he studied law with his father, in whose office he remained for some time. Subsequently the young man had charge of the Trust Department of the Connecticut Trust and Safe Deposit Company, of Hartford, where he was very successful. Mr. Robinson established a fine record in his native city as a financier, finding large use for all of his powers of judgment and frequently drawing upon his legal equipment and training. Mr. Robinson in his new office succeeds John M. Taylor, who was promoted to the presidency of the Connecticut Mutual, immediately following the recent death of Col. Jacob L. Greene. The last published report of the Connecticut Mutual showed assets of \$65,224,841, and a surplus of \$4,828,696.

The Insurance Investigation

Mr. Richard A. McCurdy, President of the Mutual Life, was under further examination last week. He displayed at times surprising lack of familiarity with the details of the company's business, and balked at some of the questions asked by Hughes. One of the most spectacular revelations during the week just past was in regard to the maintenance for a period approximating ten years, during "the season," of a house in Albany by the Mutual Life where, in at least two instances, members of the Insurance Committee of the Legislature had been quartered, in one case for a period of twelve months. The expenses of this house, known as "The House of Mirth," including the payment of the caretaker, butler, and cook, were charged up to the Mutual's legal expense account. Enormous traveling expenses were shown to have been incurred by R. H. McCurdy during his inspection of agencies in the Middle Western States. These amounted to \$500 per week for several weeks.

Financial

Beef Trust Cases

The accused beef companies at Chicago have successfully attacked a part of the indictment upon which the Government has undertaken to convict them. Judge Humphreys decided, last week, that their objections to five of the ten counts were well founded. These are the counts charging the maintenance of a monopoly. The remaining counts charge conspiracy and combination in restraint of trade. Representatives of the Government say that the loss of the rejected counts does not injuriously affect their case. Objections to this part of the accusation having thus been sustained, the companies, on the 23d, renewed their attack by filing two pleas in bar. The second of these had been foreseen. In substance it is that the Government has no right to prosecute now by indictment, because the same issues were raised in the injunction proceedings before Judge Grosscup and were then finally disposed of by the decree of the Supreme Court; that is to say, that the Government chose to proceed by injunction and that the companies should be punished only for violation of the injunction. The first plea, however, caused some surprise. It is that under a resolution of Congress the companies were compelled by the Commissioner of Corporations, Mr. Garfield, to testify concerning their business; that the information thus exacted was furnished to the District Attorney and was used by him not only in securing the indictment but also in procuring other evidence; and that for this reason the companies cannot rightfully be prosecuted upon an indictment so obtained.

It is asserted in Boston that the shoe manufacturers are disturbed by indications that these same beef companies now exercise a dominating influence in a company or Trust which controls the output and price of sole leather, and that the price is to be advanced, following a considerable increase in the price of hides. In Chicago, the wholesale price of shoes has been increased by fifty cents a pair.

Commissioner Garfield has completed his investigation of the Standard Oil Company, which was authorized by a

resolution of Congress. Expert agents were employed, and the inquiry is said to have been a comprehensive and searching one.

....The Great Northern Railway Co. is about to issue \$25,000,000 of new stock, which will be offered to the present shareholders at par.

....The Pennsylvania Railroad Co. awarded contracts last week for 20,000 freight cars, which will cost about \$23,000,000. This is said to be the largest single purchase of cars ever made by a railroad company.

....The anthracite coal and transportation interests of Coxe Brothers & Co., the largest independent producers of coal in the anthracite district, have been acquired by the Lehigh Valley Railroad Co. for about \$19,000,000.

....Fisk & Robinson publish a synopsis of the annual report of the Buffalo & Susquehanna Railroad Co. for the last fiscal year, showing the extensions being made into rich coal districts and the purchases of coal lands made by subsidiary corporations. Earnings, both gross and net, show a considerable increase.

....The recent order of the New York, New Haven & Hartford Railroad Company for 25 electric locomotives (from the Westinghouse Works), to be operated by the single phase alternating current method, appears to warrant the inference that the company intends to move trains on its main line, at least between New York and New Haven, by electric power.

....The admirable address of Mr. J. Edward Simmons, president of the Fourth National Bank of New York, at the tenth annual convention of the Maryland Bankers' Association, relating to objectionable methods and dishonest practices in finance and public life, has been published in a handsome pamphlet.

....Dividends announced:

American Exchange National Bank, semi-annual, 5 per cent., payable November 1st.

American Telephone and Telegraph Coupons (gold), 5 per cent., payable November 1st.

Southern Pacific Co., various bonds, coupons, payable November 1st.

The Independent

VOL. LIX

NEW YORK, THURSDAY, NOVEMBER 2, 1905

No. 2970.

Survey of the World

Mr. Roosevelt's Southern Tour The President completed his tour in the South on the afternoon of the 27th ult., after a notably enthusiastic reception in New Orleans. He arrived at Mobile on the 23d, and was greeted there by an audience of 40,000 in Bienville Square. Judge Oliver J. Semmes (who remarked, on the preceding day, that the President in one of his books had called his father, Admiral Semmes, a pirate), presented to the distinguished guest a souvenir badge, commending his "broad views and judicious actions," and assuring him that the people of Mobile had "buried the past." Responding, the President said that one of his uncles had been an officer under Admiral Semmes on the "Alabama," that another had built the ship, and that the Admiral's daughter was the wife of "that distinguished ex-Confederate, who by his rule as Governor of the Philippines, has held aloft the record of American rule for integrity, efficiency and firmness." Some time later, while speaking of the navy, he said:

"Judge Semmes, in passing by the monument to your illustrious father, I felt the thrill of pride that all Americans must feel because the names of the combatants in that famous ship duel are commemorated in the names of the 'Kearsarge' and the 'Alabama' in the United States Navy now, and because if ever they have to go into action they will go in side by side, manned by Americans against a common foe."

His chief topic in this address was the Isthmian Canal. Originally he had been, he said, for the Nicaragua route, but he accepted the decision of Congress, it being evident that it must be the Panama Canal or no canal. He warned his audience not to be misled by interested clamor against the project.

For decades the construction of a canal had been opposed, and successfully, by great commercial interests. Certain things he had seen in a portion of the daily press led him to believe that the same obstructive influences were still active and were trying to put off the digging of the canal for ten or fifteen years. But they would surely fail. "The canal will be dug, and soon." Speaking of "crooked public servants," he remarked that he would take advice about appointing men, but, if he found they were crooked, he took no advice about removing them and punishing them to the fullest extent of the law.

His Address to the Negroes Having passed thru Montgomery in the night, the President arrived at Tuskegee on the morning of the 24th. His chief address there was delivered at Booker T. Washington's Normal and Industrial Institute. In the beginning he expressed surprise and delight at the exhibition of the Institute's work, saying that hereafter he should "stand for it more than ever." Addressing the negroes, he pointed out that it was to the interest of both the white people and the colored people that the negro be encouraged to make himself a citizen of the highest type of usefulness. Every available man in the South should be trained to be of the utmost use by the development of his intelligence, his skill, and his capacity for conscientious effort. Agriculture, mechanics, and household duties covered in a very large degree the field in which the negro could at present do most for himself and be most helpful to his white neighbors, for the professional and mercantile avenues to success

were overcrowded. Ignorance was the costliest crop that could be raised in any State. Every white man should help the negro to help himself. In his own interest and for his own protection the white man should strive for the education of the negro; it was his duty and to his interest to see that the negro was protected in property, in life, and in all his legal rights. The President warmly commended those who had done such heroic work in the South in arousing public opinion against lynching and lawlessness in all its forms. They lifted the cause of good citizenship thruout the Union. The good work at Tuskegee could not have been done without the loyal support of the white people round about. "During twenty-five years of effort to educate the black man here in the midst of a white community of intelligence and culture, there has never been an outbreak between the races, or a difficulty of any kind." If any misunderstanding between the races should arise in any community, the best way out of it would be by a prompt and frank conference between wise, decent, cool-headed men among the whites, and the wise, decent, cool-headed colored men. He urged the negroes to war against all crime, especially all crime by men of their own race. They should scrupulously observe all contracts, and lead clean, decent, modest lives, thus winning the respect of their neighbors of both races:

"The colored people have many difficulties to pass through, but these difficulties will be surmounted if only the policy of reason and common sense be pursued. You have made real and great progress. Moral and industrial education is what is most needed in order that this progress may continue.

"The race cannot expect to get everything at once. It must learn to wait and bide its time; to prove itself worthy by showing its possession of perseverance, of thrift, of self-control. The destiny of the race is chiefly in its own hands and must be worked out patiently and persistently along these lines. Remember also that the white man who can be of most use to the colored man is that colored man's neighbor. *It is the Southern people themselves who must and can solve the difficulties that exist in the South.* Of course, what help the people of the rest of the Union can give them must and will be gladly and cheerfully given. The hope of advancement for the colored man in the South lies in his steady, common sense effort to improve his moral and material condition, and to work in

harmony with the white man in upbuilding the commonwealth. The future of the South now depends upon the people of both races living up to the spirit and letter of the laws of their several States, and working out the destinies of both races, not as races, but as law-abiding American citizens."

In Alabama and Arkansas Returning to Montgomery, that afternoon, the President addressed a large audience at the State Capitol. "Think what it means for this nation," said he, "that there is no place in the Union where the President can feel more at home and can feel more that he is indeed the President of all the Union, of a united and indissoluble Union, than when speaking here under the shadow of the first Capitol of the Confederacy." The canal, relations with China, and the citizenship duties of the average man were his subjects. From Montgomery he went to Birmingham; the same day, and spoke there in Capitol Park, referring to the State's great progress since the war, in agriculture, and especially in the iron industry. His guard of honor was composed of two companies of veteran soldiers, one of Confederates, the other of Union men. In behalf of a Camp of Confederate Veterans, ex-Governor Johnston gave him a badge, saying:

"We believe you come nearer to standing for the ideals that have inspired our lives than any President we have had since the war. Had we been born north of Mason and Dixon's line, many of us in the war might have followed the flag of our fathers, the Stars and Stripes; but we are sure that had you been born twenty years earlier, and in Georgia, where you should have been born, you would have been the gallant leader of a brigade under Forrest or Stuart."

On the following day the President spent seven hours in or near Little Rock, Ark. At City Park he was introduced by Governor Jefferson Davis, who partly apologized for lynching, and partly defended it, emphasizing the heinous character of the crime by which, he said, lynchings were usually caused. The President responded to this with some energy, saying at the beginning that the worst enemy of the negro race was the negro criminal of the type which the Governor had mentioned:

"Now for the side of the white man. To avenge one heinous crime by another heinous

crime is to reduce the man doing it to the bestial level of the man who committed the bestial crime. The horrible effects of lynch law are shown in the fact that three-fourths of the lynchings are not for that crime at all, but for other crimes. And above all other men, Governor, you and I and all who are exponents and representatives of the law owe it to our people, owe it to the cause of civilization and humanity, to do everything in our power, officially and unofficially, directly and indirectly, to free the United States from the menace and reproach of lynch law."

At a banquet in the city, the President spoke for a modification of the criminal laws in the interest of the public, saying that the present laws gave guilty men too great an advantage, especially if they were rich. For three years he had been trying to get at certain offenders who had been indicted, but had avoided trial. That afternoon he started for New Orleans, and passed thru the whole length of Governor Vardaman's State, Mississippi, in the night.

To New Orleans and the Sea

The President's reception in New Orleans was of an extraordinary character. Never before had the streets been so gaily decorated. In a steamer, he inspected the entire waterfront, and then took part in a grand parade. At the place selected for his public address, the great audience was so excited that panic and loss of life seemed impending. Therefore he contented himself with a few words designed to preserve order. At a luncheon in the St. Charles Hotel, Governor Blanchard spoke of certain policies of the President as to which the Democrats of Louisiana wished him to have the support of Democrats in Congress. In reply, the President praised the State's representatives in the Senate and the House. If he had convinced them at any time that a measure was for the country's good, they had supported it. On the other hand, some worthy men "went against the realization of their most cherished objects" as soon as he had favored these. "One thing I won't do," said he, "is to make a bluff that I can't make good." And if he took a position after careful thought he was going to keep it, "no matter what outsider goes the other way." Commending the heroism of the people in their contest with yellow fever, he said he would have come

to New Orleans at any time during the Summer, if they had asked him to, and if he could have done any good. Among their martyrs had been his dear friend, Archbishop Chapelle. He spoke again of the Panama Canal and said the Government should do more for the erection and care of the Mississippi levees. Late in the afternoon he went on board the lighthouse tender, "Magnolia," which moved down toward the mouth of the river. At eleven o'clock he had a narrow escape from serious injury. The "Magnolia" was struck by the steamer "Esparta," upward bound, and a large hole was made in her hull. Mr. Roosevelt was thrown down in his stateroom, and his face was scratched by broken glass from his window. The hole in the hull was very near at hand. Going on deck, he took command, and the boat was speedily beached. Another tender took him down to the Gulf, where he was transferred to the cruiser "West Virginian," having passed, as he said, "a strenuous birthday," his forty-seventh. The cruiser made fast time to Norfolk, and was almost constantly in communication with points on the mainland by wireless telegraph, messages passing from the Gulf even to Washington, and from the Atlantic to Fort Leavenworth, Kan. At noon on the 31st the President arrived safely at Washington.

The Isthmian Canal

Secretary Taft sailed for Colon last week on the cruiser "Columbia," intending to remain on the Isthmus for a few days, his purpose being to become familiar with the situation. Being the responsible officer of the Government in charge of the Canal work, Congress will look to him for information and explanations. Chairman Shonts denies that there is any friction between him and the Secretary. He has not said, he adds, that he would resign if he could not exercise full power and be accountable only to the President.—An official statement shows that, of the \$10,000,000 appropriated for the use of the Commission, \$6,000,000 remained unexpended on June 30th. Since that date, however, about \$5,000,000 has been paid out, and there is now on hand barely enough to pay current expenses until the middle of Decem-

ber. Only a small sum has been spent for canal construction.—Isham Randolph, a prominent engineer and a member of the Consulting Board of Engineers, says in a letter which the Commission has published that the country may reasonably look for the passage of great ocean freighters through the canal before 1915. Thus far, he continues, the main source of labor supplies has been Jamaica, but this labor is of poor quality, its efficiency being only one-quarter of the average in the States. The introduction of the eight-hour system, he says, was a lamentable mistake, adding about 25 per cent. to the labor cost of the entire project.

Various Topics

A brief statement from Secretary Taft has been published, saying that he has no intention of resigning from the Cabinet to make a campaign for the Presidency, is satisfied with his present place, and prefers to keep it as long as he can.—Owing to a rumor that Speaker Cannon would oppose at the coming session the passage of the Esch-Townsend Railway Rate bill, a letter has been published in which he says that he stands by the action of the House, and, if re-elected Speaker, "will constitute the Committee on Interstate and Foreign Commerce substantially as it was during the last Congress."—It is due partly to recent testimony concerning political contributions by the great life insurance companies that a strong organization, called the Association to Prevent Corrupt Practices at Elections, has been formed in New York, under the leadership of ex-Mayor Seth Low. Prominent men in many parts of the State are members. The aim of the Association is to procure the enactment of a stringent and comprehensive Corrupt Practices law, providing for the full publication of election expenditures by individuals and organizations, forbidding corporations to contribute, naming proper objects of expenditure, providing punishment, and enabling citizens to push a judicial inquiry into the correctness and completeness of statements made.—In an address at the unveiling of a statue to J. Sterling Morton, of Nebraska, formerly Secretary of Agriculture, ex-President Cleveland, at the close of his

tribute to Mr. Morton's "lofty civic righteousness, simple and sure standards of public morality, and stern insistence upon official honesty," added the following:

"We have fallen upon days when our people are more than ever turning away from their old faith in the saving grace of character and flocking to the worship of money-making idols. Daily and hourly in the light of investigation and exposure, characterless lives are seen in appalling numbers, without chart or compass, crowded upon the rocks and shoals of faithlessness and breach of trust."

—It may be that no one of those accused of selling the Government's cotton crop estimates will be prosecuted. Frederick A. Peckham and Moses Haas, who were indicted with Edwin S. Holmes, Jr., have been discharged in New York by a Federal Commission, to whom application for a warrant for their removal to Washington had been made. Some expect that Holmes also will be released.

The Philippine Islands

For some time past, Datto Ali has been the only hostile Moro chief in Mindanao. He and his son, with ten of his followers, were killed last week by a detachment of the Third Cavalry, commanded by Captain McCoy. Forty-three prisoners were taken, all of them wounded. Captain McCoy lost three men in the fight. Five of the constabulary force were killed in an engagement with other Moros near Lake Liguasan.—Only a small part of the money paid for the friars' lands has been used for the benefit of the Catholic Church in the islands. The bulk of it has been taken away by the three orders (the Dominicans, Augustinians and Franciscans) and devoted to their uses elsewhere. Dispatches from Rome say that reports of a recent conference at Manila between Secretary Taft and the local Bishops have been received by the Pope. The Secretary, it is said, complained because this money had been taken from the islands, Pope Leo and Cardinal Rampolla having promised in 1902 that it should be used for the Church there. When the Bishops complained because of delay in restoring to them the Church property claimed and taken by Aglipay, he explained that they must apply to the courts. He was willing, the dispatches say, to hasten a settle-

ment of claims relating to the occupation of church property by our troops during the insurrection, but when they asked that the insular Government should assist in supporting the parochial schools, he explained that this was forbidden by the constitutional principles of the national Government.

The Program of the Hungarian Cabinet

Baron Fejervary still holds his position as Hungarian Premier, notwithstanding the fact that he has not succeeded in getting a majority in the Chamber to endorse him. He has prorogued Parliament until December 19th, and has now brought forward a new program of reforms for discussion. In case this is not approved by the Chamber when it reassembles, he will dissolve it and call a new election, in the hope that with universal suffrage in sight the present Magyar coalition will be overthrown. The new program of the Government makes some concessions on the language question. The regiments composed of Hungarians will be drilled in the Hungarian language, and the Hungarian officers are already being transferred to such regiments. He proposes to postpone any changes in the customs union of the two nations until 1917, when the establishment of a separate tariff may be expected. Many measures are proposed for the benefit of the farmers and working classes, such as compulsory insurance for working men and free and compulsory education. Small farm holdings are to be encouraged and the mortgage debt of small landed proprietors relieved by converting it. Still more important is the proposal for universal secret and direct suffrage in place of the present limited and disproportionate system, which gives the Magyars, really in a minority in Hungary, a dominant position. Apparently the unwillingness of the Emperor-King to accept this radical measure as a solution of the deadlock has been overcome. Its immediate effect is, however, to unite all the Magyar groups against the threatened attack upon their supremacy. Count Stefan Tisza, the leader of the Liberal party, which was defeated in the last election, is fighting the extension of the suffrage as vigorously as his opponents of the Coalition.

Mr. Kristoffy, who as a member of the Fejervary Cabinet originated the suffrage scheme, endeavors to prove by statistics that it would actually increase the Magyar vote. But Count Tisza points out that, while the total Magyar vote would be greater, their representation would be cut down, for the increase would be mostly in those districts where they have already a majority, while in other districts which they now hold they would be swamped by non-Magyar votes cast at the dictation of the Clerical or Socialist leaders. Universal suffrage would place a third or at least a quarter of the constituencies in non-Magyar hands. If the question is forced to a vote it would be likely to carry in spite of the present system of voting, since the Socialists and the minor races are so enthusiastic in favor of it, and some of the Liberals and even of the Nationalists are too democratic in their principles to oppose it. Very remarkable speculations are rife in regard to international complications. A pamphlet was published in Berlin entitled "The Hungarian Crisis and the Hohenzollerns," which recommended the overthrow of the Austrian Hapsburg dynasty and the substitution of a German Hohenzollern dynasty as the solution of the difficulty. The authorship of the pamphlet has been traced to Nemed Denes, private secretary of Baron Banffy, the ex-Premier, and he has been arrested for high treason. It is generally supposed that Baron Banffy may be implicated, altho he denies all knowledge of it. It is rumored that Emperor William of Germany, in his desire to conclude an alliance with Russia and check a possible Anglo-Russian *entente*, has proposed to the Czar the dismemberment of Austria-Hungary. He is also reported to be willing to give the Czar the assistance of German troops, if necessary, in putting down a rebellion of his subjects.

The Russian Magna Charta

If the concessions offered by the Czar are accepted by the people, the manifesto issued October 30th, 1905, marks the end of the Russian autocracy, and the document becomes the historic foundation of their future liberties. If it should turn out that the Government

has yielded too late to save itself, the revolution is not likely to go backward. The manifesto changes the Duma from a mere advisory body elected by a very restricted suffrage to a true legislative assembly based upon an extended suffrage and endowed with the power to control all laws and to supervise their administration. The other demands of the Zemstvoists for personal, religious, verbal and political liberty are also granted directly or implicitly. The manifesto is given below in full:

"We, Nicholas II., by the grace of God, Emperor and Autocrat of All the Russias, Czar of Poland, Grand Duke of Finland, etc., declare to all our faithful subjects that the troubles and agitation in our capital and numerous other places fill our heart with great and painful sorrow. The happiness of the Russian sovereign is indissolubly bound up with the happiness of the people, and the sorrow of the people is the sorrow of the sovereign.

"From the agitations may arise a great national disorganization and menace to the integrity and unity of our empire. The supreme duty imposed on us by our sovereign mission requires us to efface ourself and with all our reason and all our power to hasten the cessation of the troubles so dangerous to the State.

"Having directed the different authorities to take steps to prevent open manifestations of disorder, excesses and violence and to protect our peaceful subjects, who are anxious for the quiet accomplishment of the duty which lies upon us all, we have recognized that in order to assure the success of general measures for the pacification of public life it is indispensable to co-ordinate and unify the powers of the central Government.

"We, therefore, direct the Government to carry out our inflexible will in the following manner:

"1. To grant the population the immutable foundations of civic liberty based on the real inviolability of the person, and freedom of conscience, speech, union and association.

"2. Without deferring the elections to the State Duma (assembly) already ordered, to call to participation in the Duma, as far as possible in view of the shortness of time before the Duma is assembled, those classes of the population now completely deprived of electoral rights, leaving the development of the principle of electoral rights in general to the newly established legislative order of things.

"3. To establish it as an immutable rule that no law can come into force without the approval of the State Duma, and that it shall be possible for the elected of the people to exercise real participation in the supervision of the legality of the acts of the authorities appointed by us.

"The Government is to abstain from any interference with the elections to the Duma and is to keep in view our sincere desire for the realization of the ukase of December 25, 1904.

It must maintain the prestige of the Duma and confidence in its labors, and not resist its decisions so long as they are not inconsistent with the historic greatness of Russia. One must identify oneself with the ideas of a great majority of society, and not with the echoes of noisy groups and factions, too often unstable. It is especially important to secure the reform of the council of the empire on an electoral principle.

"I believe that in the exercise of the executive power the following principles should be embodied:

"1. Sincerity in the confirmation of civil liberty and in providing guarantees for its maintenance.

"2. A tendency toward the abolition of exclusive laws.

"3. The co-ordination of activity of all the organs of Government.

"4. The avoidance of repressive measures respecting proceedings which do not openly menace society or the State.

"5. Resistance to acts which manifestly threaten society or the State, such resistance being based upon the law and on moral unity with a reasonable majority of society. Confidence must be placed in the political tact of Russian society. It is impossible that society should desire a state of anarchy which would threaten the addition of all the horrors of civil strife and the dismemberment of the empire.

"We appeal to all the faithful sons of Russia to remember their duty toward the fatherland and to aid in bringing an end to these unprecedented troubles, and to apply all their forces in co-operation with us to restore calm and peace upon our natal soil.

"Given at Peterhof, October 17 (O. S.), 1905, in the eleventh year of our reign.

"NICHOLAS."

Count Witte in Charge

The demonstration of the power of the revolutionists by a general strike has resulted in determining, or at least hastening, the action of the Government. Without waiting even for the anniversary of his accession, November 3rd, the Czar has, by imperial manifesto, established a constitutional Government. Count Witte has been called to reorganize the old Council of State into a Cabinet of Ministers responsible for their acts to the Duma. The Countess Witte, a Jewess by birth, has been received at Court by the Empress. Count Witte will choose his ministry from such of the present administration as will loyally accept the new régime, and such reformers as are willing to support the Government. Many former conservatives and reactionaries are now under the pressure of circumstances proclaiming themselves liberal at heart. Even General Trepoff,

the head of the police force of the empire, who on account of his suppression of street rioting has been sentenced to death by the revolutionists, is now reported to have supported Witte in his efforts to induce the Czar to grant free institutions to his people. He has not, however, relaxed his efforts at maintaining order and by his firmness and forethought has prevented any serious uprisings in the large cities, thus confining the agitation to the "passive resistance" methods of the strike and boycott. He has 90,000 troops under his command in the capital and 35,000 in Warsaw and the streets are thoroly patrolled. He announced that no blank cartridges had been issued to the military, who were instructed to fire directly upon any crowd that offered resistance. The strike was evidently carefully planned and well managed by the Socialist Committees, and is remarkable because it included all classes. The employees in the offices of fifteen of the largest insurance, transportation and metallurgical companies of St. Petersburg handed to their employers notes, stating: "We have ceased to work on a political strike." The clerks in the banks, the actors and ballet dancers in the theatres, the lawyers in the courts, all joined with the workmen in the general strike. It is estimated that 20,000 men quit work in the capital as a political demonstration, but with remarkable unanimity abstained from violence. Communication between the cities was cut by the strike of the railway and telegraph employees, the street cars were stopped, and no newspapers appeared. Both in Moscow and St. Petersburg there was great scarcity of food, especially of milk and meat, and the streets were left in darkness, except for oil lamps and the military searchlights. Since the Czar has permitted the universities to hold political meetings, these have become the centers of agitation; and all classes have taken advantage of the immunity granted to the students. Thruout Friday and Saturday, day and night, thousands of people held meetings in the various class rooms, at which students were in a minority. The most violent speeches were made with impunity by the revolutionary leaders. At Moscow anti-revolutionary

mobs, known as the "Black Gang," were organized with the tacit approval of the conservatives, and these assaulted students and Socialists whenever they appeared upon the streets. They besieged the university, but the students barricaded the entrances with cobblestones from the courtyards, and defended themselves until rescued and taken home by an escort of dragoons. The water-works were closed down for three days, and water from foul pools and wells sold at high prices in the city, but on account of the suffering and danger from disease the strikers allowed the water supply to be again turned on. At Odessa, Warsaw, Lodz and Kharkoff there was more violence and many people were killed by the Cossacks, who charged the crowds. It is yet uncertain what will be the effect of the Czar's manifesto. The revolutionary Socialists consider the Liberals their enemies as much as they do the bureaucracy, and will not be willing to relinquish the power which they have proved that they possess, so the first duty of the new Premier may be to suppress the riotous demonstrations of those to whom he owes his position. The striking printers refused even to set up the manifesto, but as it became known in St. Petersburg the streets were filled all night with throngs of rejoicing people, singing the National hymn, "God Save the Emperor," where recently the "Marseillaise" had been more often heard. The people surrounded the Cossacks, patted their horses, and told them: "Go home, now. We no longer need you. We have liberty."

The Boycott in India

The boycott against British goods or the "Swadeshi movement," as it is called, is proving to be much more than a form of protest against the division of Bengal. It is being enthusiastically taken up by young Indian nationalists, who by press, meetings and local societies, are carrying the propaganda even beyond the Province of Bengal and are endeavoring to unite all classes in an attack upon the commercial interests of Great Britain. Their clamor for self-government and constitutional rights having had little effect upon the British official, now they are trying to see if the British trader is

not more vulnerable. Instead of holding congresses they are closing shops. Instead of passing resolutions, they are making them. Since they have not been able to get a protective tariff in favor of native manufactures, they hope to attain the same result by the boycott. Their organ—*New India*—states their objects very clearly in the following words:

"There are two ideas at the root of this boycott movement; one is economic, and the other political. One idea is that by this means we shall be able to impart a new stimulus to indigenous arts and crafts, and thus help the cause of our commercial and industrial regeneration; the other is that by this refusal to use foreign and specially British made articles, the people will learn to assert themselves against the present foreign despotism that rules them in the interest of an alien people, and gradually rise to a consciousness of their own strength and capacity for that passive resistance which is the only weapon with which a disarmed people may fight its armed rulers."

They prefer the use of the term "Consumers' League" to "boycott," and deprecate the cruder forms of revolutionary agitation. The students have taken the lead in the movement, and in Calcutta they celebrated the news of Lord Curzon's resignation by burning their English-made clothing in bonfires and swearing off from cigarettes. Importers have in some places been forced to countermand their orders for goods from England, and are not able to sell off their stocks at half-price. To wear coarse native cloth and to discard European collars, neckties and boots, is esteemed truly patriotic. Since there are not enough mills in India to meet this increased demand the prices of all kinds of native manufactures have gone up fifty per cent. or more, so as to automatically check the Swadeshi movement. English merchants are accused of assisting this by buying up the entire output of some of the mills in order to corner the market. It is still uncertain, whether the present feeling can be long kept to such a pitch as to result in the establishment of native mills to supply the demands. The visit of the Prince and Princess of Wales to India may be expected to allay to some extent the anti-British sentiment. They have left England and will land at Bombay on November 9th, just 30 years later than the visit of King Edward VII, then Prince of Wales. An extensive tour

has been arranged by which the Prince will visit every part of India before leaving March 19th, 1905.

Troubles in Turkey About a month ago an Armenian, giving the name of Johannes Afarian, and carrying an American passport, was arrested in connection with the plot to assassinate the Sultan, and a fortnight later, when Ghirkis Vartanian was arrested on the charge of murdering Apik Undjian, it was found that he, too, was an American citizen. The American Legation has little sympathy with revolutionary Armenians who protect themselves by carrying American citizen papers, but the summary way in which the Turkish officials dealt with these cases, and condemned both men to death on October 19, provoked a protest from Minister Leishman. In reply the Turkish Government claimed the men did not possess American citizen papers and had not presented them, which was in flat contradiction to the evidence in the hands of the Legation. Minister Leishman entered another protest, and the outcome is awaited with considerable interest. The two main questions at issue in this matter are whether Ottoman subjects, naturalized in America, forfeit their citizenship on their return to Turkey, and whether the American Legation can interfere in their being sentenced for criminal offenses. There is a Turkish law that no Ottoman subjects can become citizens of another nation without the consent of the Porte. Without this consent any naturalization is void. The American Government refuses to admit, however, that any law of a foreign country can prevent it from admitting whom it wishes to citizenship, and claims the right and duty to protect all its citizens, wherever they may be, without distinction of origin.—It is reported that the powers intend to present a joint ultimatum to the Turkish Government on account of its resistance to their financial control of Macedonia.—Reports of a Turkish reverse in Yemen have been received. The position of the troops is considered precarious, as they are hard pressed by the Arabs, and are in great need of supplies.

The Philippines Revisited

BY WILLIAM H. TAFT

[When Secretary Taft returned from the Philippines after his remarkably successful administration there, the first article he wrote for publication in America appeared in *THE INDEPENDENT*. Now on the return from his second trip we are pleased to publish his first article to the American people on the new conditions in the Philippines, as he found them. —EDITOR.]

WE Americans have grown so accustomed to rapidity of development in our own country, and to the display of great individual initiative and enterprise, that we are prone to expect results too rapidly in the Philippines. One must constantly check this tendency when judging of affairs in those islands. So, were I to express an opinion now upon the developments in the Philippines since I left there at the end of 1903, having in mind all the

things I should like to see accomplished, I should be unfair both to the Filipino people as a whole and to their Government. When one looks backward instead of forward, and compares the achievements to date in the Philippines with the state of affairs previously existing there, he finds reason for encouragement and is able to appreciate the better the net results of the new Government.

Despite some few provinces in which

special conditions, economic or political, or both together, have prevented any general improvement, it is impossible not to think that the most important features of the situation in the Philippines at present are the great increase in school enrollment and attendance, the great and general popular enthusiasm over education, and the significant results already achieved in our American schools there; a net improvement, over the archipelago as a whole, of the means of transportation, both by water and by land, for which the Government deserves credit to a degree which the charges of certain uninformed critics entirely conceal; a net improvement in most of the provinces, in methods

of sanitation and in the standard of living of the majority of the people—this last despite “hard times” in most provinces, too; and a general, steady improvement in the conditions of public order, in all the provinces save the few above referred to as exceptional. These things imply substantial gains; and, while I would not gainsay the fact that the Philippines are passing thru “hard times”—in fact, would rather point to these results as the more notable because achieved in the face of “hard times.” I believe these are things to be borne in mind whenever the pessimist, either Filipino or American, paints a picture of absolute misery and oppression in the Philippines.

No governmental policy could have averted or have wholly remedied the effects of the "hard times" that have come to the Philippines in large part thru providential causes. The war, the destruction of the draft animals by rinderpest, the cholera, locusts, and in some places a series of drouths, have been woes that trod on each other's heels, so fast they followed. Were there greater individual initiative among the Filipinos, and were ignorance and apathy less widespread among their masses, the effect of these visitations would not have been so great. The country seems unable readily to readjust itself to new conditions. There is a lack of resourcefulness, or lack of knowledge, on the part of its people. Even when we turn to the relatively small class of educated men, we find them too prone to waste valuable time in lamentations and to count upon some governmental measure of salvation, when in part the remedy for their ills lies in their hands as landholders in a

country rich in resources. Many of them find it easier to promote "agricultural associations" or other similar organizations, and draft a reform on paper, than they do to go earnestly to work, with the best means at hand, to repair the ravages in their own property, to study better methods of agriculture, and apply them with painstaking effort of the sort that brings results. These are among the reasons why I do not consider the present state of the Filipinos as being so utterly miserable as some of their number paint it. If you offer cash for the land of some of these men, who claim they are taxed on something they cannot get a profit from, you will find that they ask full value, or even more, for it. And, despite all the talk one hears, there is more ready money loose in the Philippines today, in all probability, than there ever has been before, while very certainly there is more money passing thru the hands of the lower-class Filipinos.

But I should be the last to deny that

the shoe is pinching in the Philippines, that there is economic depression there, and that measures of relief are needed. It was to this end that, while in the islands, I announced to the Filipinos that the Philippine Commission, which had had the matter under consideration for some time, would suspend the tax on land according to its assessed valuation for a period of three years at least. The general rule of land taxation in the

people to regard this measure as an imposition. In any permanent scheme of Philippine taxation there must be an impost on landed property, in some form or other. It will be necessary, before this three-year period of exemption expires, to study upon this subject and work out a plan.

The complaints against the internal revenue taxes imposed last year, while they have made themselves more ef-

Orient is of a tax upon rental or production. Hence, the plan which we inaugurated in the Philippines must be regarded, as it was regarded at the time of its enactment in 1901, as in the nature of an experiment. Now, whether or not this is the right principle of taxation to adopt in those islands, it certainly fell upon the hardest possible combination of circumstances for its trial. The fact that Spain had collected no revenue directly from land increased the tendency of the

fectively heard in the Philippine press, because of large tobacco and alcohol manufacturing interests involved, were nevertheless not in any sense so widespread as those against the land tax. Experience may demonstrate the wisdom of modification of some of the schedules, or of some of the subjects adopted for taxation, in the internal revenue law. But the principle of taxation of tobacco and alcohol is correct and will be permanently retained. For the time being,

the internal revenue imposts become of special importance, for they must supply to the provinces and municipalities (and herein the rapidly expanding work of the schools is involved) the revenues that they will lose thru the suspension of the land tax.

Future fiscal readjustment in the Philippines will also be bound up more or less with the question of the tariff

But I have been saying to my Filipino friends that they must not think that favorable action by Congress on this matter will prove to be a panacea for all their ills. I believe their natural market for sugar and tobacco is in the Asiatic region, in China, Japan and other countries. I regard the reduction of the tariff in our ports as chiefly important sentimentally and in raising the prices at

Parade in Manila in Honor of the American Visitors.

between the United States and the Philippines. I am hopeful that the recent trip will help toward legislation in Congress this winter reducing at least to 25 per cent. of the rates of the Dingley tariff the duties collected in our ports on Philippine sugar and tobacco. It should stimulate the sentiment for full free trade between the Philippines and the United States when the clause of the Treaty of Paris granting special favors to Spain in the ports of the Philippines will have expired.

which the Philippines will dispose of their sugar to China and Japan. To hold their own in the Oriental market at their doors, where the means of transportation, sources of supply and character of the products offered are increasing and improving every year, the Filipinos must get down to work and improve their own methods of cultivating and preparing their products for the market.

The Philippines are not the only country where the existence of "hard times" results in political agitation. This is one

reason why I am unable to deduce all the consequences that some would deduce from the fact that the presence of our party in the islands was availed of by many Filipinos to press forward petitions for independence, or the promise of independence, more or less immediate. In Manila, Iloilo, and Sebú, where there is and has been for some time economic depression, we heard a good deal of talk, usually general and elusive in character, regarding independence. The influence that prosperity has been apparent when we reached the hemp provinces, where high prices for traders, farmers and laborers alike, tho not always in equal degree, have resulted in great general improvement in the standard of living, the inauguration of public improvements out of local funds, and the existence of a state of relatively perfect order and peace. In those communities, the petitions and speeches at the banquets did not speak of independence, but of remedies for existing conditions in government which their makers thought worthy of bringing to the attention of our party.

I am well aware of the fact that other elements entered into the agitation for independence that has been going on for some time in the islands, and that took on added force coincident with this party's visit to the islands. Grievances against our government in the islands, whether well-founded or unfounded, will always be seized upon by a certain element which is only waiting for such opportunities for agitation. At such times other Filipinos of a less impatient or less superficial character, who, under ordi-

nary circumstances, will lend a hand to government, are more readily drawn into a campaign for independence. In other words, political discontent in the Philippines will always take the form of a campaign for independence, more or less immediate. These are facts in the situation confronting us as a power governing from outside, which we might as well frankly recognize, indeed, must recognize. The Filipinos (and there are many) who may be said to have opinions of their own, cannot at any time thus be stampeded for immediate independence. All this is wholly apart from the question as to the actual fitness of the Filipinos for independence today, or at an early date, or as to whether the demands of a few are to be accepted as the things which the many wish or ought to have.

During our second stay in Manila, a small faction of Filipinos of education appeared before the congressional delegation to present a petition for immediate independence, the United States first securing from the other powers a guarantee of "perpetual neutrality" for the Philippine Islands. Arguing as to the question of the country's preparedness, these Filipinos said in substance: "We have a 'directing class,' composed of five per cent. of our people, who have education and know how to govern; and we have a 'governable mass,' composed of the ninety-five per cent. of our people who have shown in the past that they know how to obey and are submissive and docile; therefore, we have all the essentials for a self-government country!"

WASHINGTON, D. C.

The Prodigal's Return

BY JAMES H. WILLIAMS

[Our readers need no introduction to Mr. Williams, the sailor labor leader and implacable foe of the crimps. Since his last "yarn," in which he described his latest experience as a stoker, he has been across the ocean. The following article gives his experience in the rôle of a stowaway. The portrait of Mr. Williams which we publish is a very good likeness and was taken especially for THE INDEPENDENT.—EDITOR.]

SAILORS are undoubtedly the greatest liars afloat, and the only prevaricators to whom they lower their colors ashore are captains, crimps and sea-writers.

"Mother," declared the young tar, who had just returned from a long voyage and was triumphantly recounting his adventures for the entertainment of his admiring relatives, "Mother, I've seen rivers o' rum and mountains o' sugar and flyin' fish!"

"No you hain't," flashed the good old lady with pardonable warmth; "don't you try to fool me like that! You might ha' seen rivers o' rum and mountains o' sugar, that much I'll allow, but you never seen no flyin' fish!"

Within the short space of six months

I have served in eight different ships and under four different flags. In that time I have plowed a furrow eighteen thousand nautical miles in length, and have been at different times a sailor, a stoker, a deserter, a beach-comber, and last and least honored of all, a stow-away.

May the spirit of "Tom Pepper" forgive me, but it's true!

Hellfire Jack and I left New Orleans together in the Dutch tramp "Vanderdeken" of Rotterdam, bound for Hamburg.

When we came to unpack I discovered to my dismay that I had left my precious discharge book, containing my well-cherished old "Lime Juice" discharges, behind in Mister Swindler's

James H. Williams.

boarding house in Tchoupitoulas street. I quickly made my loss known to the captain, and he in turn sternly charged Mister Decoy, the runner who had conveyed us on board, to be sure and send those discharges to the ship's address in Hamburg, as it would be almost impossible for me to ship from a European port without them.

Of course, Mister Decoy solemnly promised, and wrote down the address which the captain dictated, with great exactness and a great show of concern over my misfortune. He also accepted the proffered quarter for postage with evident reluctance and benevolent resignation. Then he went ashore and forgot me and my discharge book, and I went on my way to Hamburg with nothing to show for my career but the palms of my hands.

Such is the genesis of this story. That is why I became a stowaway.

At Hamburg the ship received no mail for me. Inquiries at the American, Dutch and British Consulates anent my precious discharges were unavailing. So I could not ship. At length, however, after sojourning three weeks in the Free City, and spending most of our time in the "Liverpool House," the "Horse Stable" and with Majuba Jimm (two m's, please), Jack and I managed to secure berths in a broken-down English tramp, which had arrived in distress from Rangoon, and was bound to North Shields for repairs.

After a brief but stormy and vexatious passage across the German Ocean, we landed on New Quay, the proud possessors of thirty shillings each, and a passing knowledge of water-front English. Thence Jack and I crossed the Tyne and soon established ourselves at the "Mariner's Arms," in South Shields.

Bleak November had now turned into dreary, dismal December, and the cold, misty weather which prevailed over the northeast corner of England was anything but charming.

Jack and I had long since worn out our homeward-bound welcome at the "Mariner's Arms," and become common beach-combers on the inhospitable shores of Merrie England.

Thus we spent six miserable weeks in

a vain attempt to go slaving again without avail.

Meanwhile we had pawned or peddled all our earthly belongings except what we stood in, and, with the proverbial resourcefulness of improvident seamen, had escaped starvation or vagrancy by a judicious system of "panhandling" that would have excited the admiration and envy of the Prince of Hoboes.

We diligently besought the guileless barmaids for coppers and small change, the kind-hearted homeward bounders for "tanners" and shillings, and the gullible Holy Joes at the Seamen's Institute for relief tickets and handouts, and usually we succeeded all round.

But this mode of existence was unspeakably distasteful and degrading to us both. So we made up our minds at length to seize the first opportunity to stow away and return as prodigals to our native land.

It was just at this juncture, when we had become thoroly discouraged and desperate enough for anything short of *hari-kari*, that the "Grand Tanker," one of those monstrous sectional creations for the transportation of oil in bulk, arrived in Shields, and she proved to be our salvation.

It was New Year's week and most of the "Grand Tanker's" crew were ashore on leave. Wherefore, substitutes were required for a few days to clean out the bottoms of her empty oil tanks, a process always necessary after the oil has been pumped out.

Having worked in oil tanks before and being familiar with the disagreeable task of scraping, I urged Jack to come along with me and earn some honest coin for our New Year's celebration.

So, like the prodigal in the parable, we duly hired ourselves to a foreign citizen for the task that other men rejected, and descended into the dark, noisome, gaseous, iron caverns, down to the very skin of the ship, and there working for three days with a gang of shiftless roustabouts in the stifling atmosphere among the filthy dregs of the false bottom, we cleaned and scraped fourteen of the sixteen big tanks in turn, receiving as compensation fifteen shillings each and our grub.

Thruout our three days of tedious

drudgery the temperature in those damp, iron caverns never rose much above the freezing point and the hours seemed unusually long and irksome.

At last on Saturday, New Year's eve, all hands were paid and a new crew signed for the ensuing voyage.

Most of the old hands resigned, but there still remained a number of vacancies in both the mate's and engineer's departments.

After leaving the ship's chart room with a tenacious clutch on our hardly earned shillings, Jack and I joined the eager crowd of outward bounders, who waited hopefully on the bridge for a favorable nod from the chief officer or second engineer, who were busy supervising the re-engagement of their old hands and selecting substitutes where vacancies existed.

Jack had spent the most of the previous night disguising himself for the desirable *rôle* of "Lime Juice" stoker, and his present appearance was irreproachable. He wore a suit of rough blue serge, a plaid muffler, narrow toed bluchers and a cheesecutter cap. He was to all appearances a thorogoin' British clinker, while his habitual imitation of the Liverpool swagger and his fiery countenance served to highten the pardonable imposition.

Thus faultlessly attired for the demands of the occasion, and adept in the mannerisms and general deportment of English firemen, Jack promptly elbowed his way to the front with impudent assurance, proudly displaying aloft the outside cover of an English discharge book, containing one bob-tail discharge for the passage from Hamburg to Shields, and except for the difference in our names, an exact counterpart of the one I held, but did not display, for the same service.

The books were practically useless to ship on when viewed from the inside, but the covers are all alike, so Jack ran his bluff entirely on his shape and an empty cover and won out as a bold man should.

In my own case, however, I had not the remotest prospect of being engaged. No amount of disguising could ever make me resemble a British subject, for my speech and disposition would betray me even if my appearance didn't. I

might possibly pass as a dago in the twilight of a cloudy day, but I could not impersonate a Britisher even in a coal bunker.

I knew that my case was hopeless so far as signing on went, yet I sincerely hoped for Jack's success, for I knew that if he went I should go too—signed or unsigned.

So I pushed into the midst of burly Britishers, with Yankee insolence, and made my way well forward to see what became of Jack.

At length the second engineer came out of the chart room door and gazed discriminately for a moment over the restive crowd of impatient candidates assembled on the bridge deck. Then he took a step forward and took a discharge book from the first man within reach. As he paused to examine it there ensued a general rush from the crowd. Instantly the brass-bound son of a shifting spanner found himself the tangible centre of a ferocious mob, all clinging, fighting, surging and swearing blasphemously, while clamoring uproariously, like the demented gamblers of the Stock Exchange, for the exalted privilege of a chance to go slaving in a stokehold.

At last I too became imbued with the spirit of the occasion, and began to fight and plunge and work my way forward as viciously as the rest, until at length, by dint of vigorous thrusting and wedging, and pushing and bolting, I managed to wriggle thru the desperate crush and gain the engineer's side. Then I rushed forward and shoved my bob-tail discharge book unceremoniously into his unresisting hands.

"Where do you belong?" asked the engineer, eyeing me suspiciously without opening the book.

"Massachusetts," I answered, somewhat defiantly, returning his look with interest.

"Can't take you," he said, decisively, returning the discredited leather mechanically, "You wouldn't go no further than Philadelphia."

There was obviously no room for argument. So I passed on, rejected but not disheartened, for I knew now that Jack had been accepted, and that I would soon be a profitless passenger on

my way to Philadelphia, in the very ship wherein I had been refused a berth.

As soon as Jack had attached his name and imaginary birthplace to the articles and secured his advance note for two pounds sterling, he rejoined me on the main deck, and together we went ashore to cash the advance note, which, of course, we regarded as common property, and celebrate the glad New Year and our own good fortune with the proceeds.

Mr. Dunlevy, the Irish Jew in East Holborn, gave vent to some characteristic misgivings when we approached him with the note. But at length he was persuaded to cash it in consideration of the usual rake-off of four shillings in the pound, out of sheer regard for the festive season of peace and good will, backed by the unanimous declaration of several of his older customers, who had also shipped in the "Grand Tanker," that Jack was "hol rite," "a bloody square chap, an' gud as gold."

By our three days' labor, and the proceeds of the advance note, Jack and I had raised ourselves from the penurious condition of water-front scavengers to the comparative opulence of forecastle nabobs.

So we began our happy New Year's celebration by paying our debts to our former benefactors.

New Year's day fell on Sunday, and Jack and I observed both the religious and secular anniversaries. "The better the day, the better the deed," was our motto for that day at least.

In the morning we attended divine service at the Institute, and dropped our grateful contribution in the bag. After dining sumptuously on roast beef and Yorkshire pudding, we made a tour of the water front, where we relieved several bankrupt homeward-bounders, who had formerly been our benefactors in our day of adversity.

We spent the evening distributing sundry tokens of regard among our friendly barmaids, and reminding them that the pendant sprigs of mistletoe among the bar decorations were still green, and that our hearts were still warm and youthful, and our heads still young and foolish.

So passed a very happy New Year,

rendered all the more bright and enjoyable by contrast with the dreary, somber Christmas which had preceded it.

The "Grand Tanker's" crew had been ordered to report on board "one hour after midnight of New Year's day," that is, at one a. m. January 2d.

The yawl which had been chartered to convey them out to the ship was to leave Tyne Docks at midnight. Not that their presence on board at such an unseemly hour was at all necessary, but merely as a precaution against delay.

The ship was to proceed to Sunderland, where she was to deliver her two remaining tanks of kerosene oil, with the flood tide that day. As it would not be high water at Sunderland until one p. m., the ship would not leave Shields until about noon. But outward-bound sailors are not to be depended on, especially after a holiday spree; therefore, it had been deemed wise to provide against any possible defection in their numbers by ordering the crew on board well in advance of the time set for the ship's departure.

Jack and I had also figured on the possibility of this same contingency, and it was the forlorn hope of a "pier head jump" in the "Grand Tanker" which induced me to accompany Jack down to the boat that night when he went off to the ship.

But here again my hopes were frustrated, for every man Jack of the ship's crew was on hand—drunk or sober—and responded to his name. So, having exhausted every possible effort in trying to secure an honest berth by personal endeavor, I bade Jack a hearty good night as he was about to climb down the dock ladder, and returned to my lodgings, determined to stow away and teach those brass-bound, boasting British officers that a Yankee sailor is not so easily outdone.

Next morning, as I crossed Market Square, the tower clock tolled six. I walked jauntily down the winding hill to the Mill Dam, and then climbed the steep brow into East Holborn. I stopped at the "Shipwright's Arms" and regaled myself with a pint of bitter, and then resumed my way to Tyne Docks, where I struck the King's Highway to Sunderland.

The distance from Tyne Docks to Sunderland is about eight miles, and I enjoyed it every step of the way. Altho the weather was somewhat bleak and lowering, there was no sign of frost or snow, and no immediate indication of rain. The roads were dry and firm and the rugged scenery through that fertile, undulating country amply repaid me for my morning walk, while at the same time I cherished a sort of secret satisfaction in the thought that I was doing the railway corporation out of a few more pence.

I passed thru the quaint little town of Gateshead and kept on down the turnpike road which leads to the seashore at Sunderland.

I breakfasted at Sunderland and then crossed the bay in a wherry to Langdon, where the oil reservoirs are located, to await the arrival of the "Grand Tanker."

Half an hour later I was joined by Hellfire Jack and several of his shipmates in the select bar of the Bath Hotel, where we shared several tankards of bitter and enjoyed a pleasant hour jolly-ing the three blithesome barmaids who graced the mahogany.

I kept well away from the ship during the day so as not to attract unfavorable attention from the officers. I met Jack again early in the evening and told him of my intention to stow away. He, of course, agreed to render me all possible assistance, but advised me to wait until the ship was on the point of sailing next day.

But I felt lonesome ashore and could not endure the suspense, so that night about ten o'clock I crawled aboard the "Grand Tanker" and climbed down the steep iron ladder into the forward tank room below the main deck and tried to secrete myself among the odds and ends of old rigging and canvas in the bo'sun's locker.

But like many another conceited mortal, who has deigned to scorn friendly advice, my own well laid plans went all "aglee," and I came near losing my passage, if not worse, by being impatient.

Groping blindly about in the pitch black darkness of the tank room I came suddenly in sharp contact with a long iron rod leaning loosely against the bulk-

head, and when it fell with a noisy clatter on the thin iron hood of an empty tank and the vibrant clang went ringing thru the ship, I knew that my present attempt at the game of stowaway was doomed to result in complete failure.

In this conjecture, at least, I was correct, for, with the resounding crash of the falling rod the over vigilant quartermaster awoke from his cat nap in the fidley top and hastened forward to investigate.

I heard his footsteps echoing and re-echoing thru the labyrinth of empty tanks below as he hurried along the iron deck to the forward hatch.

"Oo's there," he shouted down the companionway, but the only reply he got was the echo of his own voice ringing in the recesses of the dark cavern below.

"Coom oop oot o' that," he commanded in a still louder key, "coom oop noo, Hi noo yere there, coom oop noo til Hi see yer; yer caunt stop there noo; coom oop hon deck!" But my only reply was silence, for I knew that most men are cowards in the dark, and that nothing unnerves a man so much as the persistent silence of an invisible enemy.

Moreover, there were certain advantages in my position. Above I could distinctly see the figure of the quartermaster outlined in the bright starlight, while below I was completely hidden from him in the friendly darkness, and my very presence in the tank room was only a conjecture.

If he came down I could easily elude him and scramble up the ladder, or, if necessary, knock him down in the darkness and escape before he knew what struck him.

The bold quartermaster evidently figured out the situation about the same way I did, for after blustering in the hatchway a few minutes longer he loudly proclaimed his intention of procuring a lamp to see "'oo the blood 'ell was down there." Then I heard him retreating noisily along the main deck and I knew it was time for me to act.

I was familiar with oil tank regulations and well knew that the quartermaster dare not light a match. I also knew that only portable electric lamps could be used about the decks and that he would have to go away aft to the

bridge to procure one, for the lamp room was locked and the lamp-trimmer, who kept the key, was fast asleep.

As soon as the vigilant quartermaster had gotten well away from the hatch I scrambled up the ladder to the main deck, and keeping in the shadow of the foremast, climbed nimbly to the fore-castlehead. Grasping one of the shore fasts I easily slacked myself ashore and emerged from behind one of the lumber piles on the dock just in time to observe the faithful quartermaster hurrying forward with a bullseye lamp to investigate the spook in the tank room. I mentally wished the honest fellow a cordial good night and went off to charter a room at the White Swan, and reflect over the folly of my evening's adventure, while planning for a more prosperous attempt on the morrow.

Next morning I met Jack at the Bath Hotel and we had a good laugh over my night adventure in the tank room. However, we agreed on a more sensible plan for my next attempt.

The ship was to sail at 1:30 p. m. that day, January 3rd, and, of course, it was only natural that I should go on board and see my shipmate off, just as a score of other people were doing. When Jack came ashore in the noon hour I accompanied him back to the ship and walked boldly forward to the firemen's fore-castle, and that was the last seen of me until late in the afternoon of the next day, when the serried bluffs of the Irish coast were disappearing like a range of blue clouds beyond the horizon astern.

Then I crawled from my hiding place under the bottom bunk behind the ventilator shaft and revealed my presence to my astonished shipmates.

Going aft to the bridge I reported myself to the astonished second officer, who was in charge of the watch at the time. He recognized me at once.

"What did you come here for, Williams?" he asked, with a shrewd smile.

"To get home," I answered, a little bit exultantly, "a British ship brought me to England and a British ship must take me back."

"That's all right," he said, not unkindly; "you can work, I suppose?"

"Yes, sir."

"Got any clothes?"

"I've got 'em on," I answered.

"Can you fire?"

"Yes, sir," I said, a little eagerly.

"Well," he said finally, "go to the engineer and he'll give you some work; you'll freeze working on deck. I'll give orders for the steward to get out an extra 'whack' for you."

So I was dismissed from the bridge, an unsigned member of the "Grand Tanker's" crew, fully entitled to my bite and bed and a "work up" passage to Philadelphia.

A stowaway on shipboard is always treated, both fore and aft, according to his merits. If he is a seaman his presence is always welcomed on board and he will always find a spare bunk and a place round the mess kid, for there is hardly a merchant ship afloat that is fully manned, and none whereon a spare hand is not appreciated at times.

But, as a rule, the unfortunate "ranick" who steals his passage contracts for a hard time at both ends of the ship. They don't need him forward and they won't have him aft. He usually leads a dog's life while en route, and is apt to be handed over to the authorities to be summarily dealt with according to the legal rigmarole of the next port.

For the first two days I was kept employed about the engine room at odd jobs which no one else could find time to attend to. Then came a chance for me to show my real usefulness and thereby justify my appearance in the fore-castle and at the messboard.

Among the fireroom crew of the "Grand Tanker" was another old esteemed shipmate of mine besides Hellfire Jack, a good-natured, capable stoker named Jerry Slicer, who had sailed with me in the "Sierra Morena" some time before. I had met Jerry while ashore at South Shields, where he was for some time on the sick list with a serious inflammation of the eyes. When his eyes had improved somewhat under constant medical treatment and home care, he had ventured to ship again, hoping that the improvement would continue and result in a complete cure.

But as soon as he came in contact with the glowing Inferno of the roaring furnaces, the old affection broke out again

more virulent than ever, and poor Slicer was in grave danger of losing his eyesight completely. He was an honest fellow, however, and disdained to lay up and throw his share of the work on the rest of the crew.

Here was my opportunity to earn my passage, and, perhaps, something more. So I persuaded Jerry to lie up and let me take his fires, which he very reluctantly consented to do, while I went down below and fed the roaring fire devils, watch in and watch out, for fourteen days and nights.

Our passage across occupied seventeen days and was an exceedingly tough experience all the way.

The weather was bitterly cold nearly all the way over, and the prevailing nor'-west winds were unusually strong and long lived.

The "Grand Tanker" was equipped with two immense longitudinal, double-end boilers, with twelve fires. There were but two men in a watch, so, as may be imagined, we found but little time in the stokehold for cooling off.

I don't suppose a stowaway has any right to growl, but on behalf of thousands of others duly entitled to that unchallenged privilege, but afraid to exercise it, I wish respectfully to offer here a few suggestions for the enlightenment of my late host and generous entertainer, the great Standard Oil Co. of America—and everywhere else—regarding the unnecessary and onerous hardships carelessly imposed upon the loyal seamen who work so hard to grind out the stupendous dividends annually absorbed by the Oil Trust.

Nearly all the trans-Atlantic oil tanks are of great length and immense carrying capacity, and, in most cases, the tanks are all built forward of the engine room and boiler space, which last are located right aft, as near the stern as practicable. This is done both to economize space and prevent the heat from communicating with the tanks and thus creating an explosion.

It is about three hundred feet from the fidley to the forecastle door, and you have

to run the whole length of two flying bridges to get forward.

My old shipmate, the late lamented Spike Riley, often remarked that sudden heat and sudden cold would kill the devil.

Well, I'll guarantee that if his Satanic Majesty ever came up to the fidley top after a four hours' session with the "Grand Tanker's" fires and made his way forward in a zero climate, he would wish to be restored to Hades for the balance of his immortal life.

And after you got forward you were no better off in an unfurnished bunk, with ice and frost glistening alongside of you on the iron plates.

I only wish the Standard Oil Co. had to sleep in its own bunks.

On the 18th of January we passed Cape May and went crashing through the ice-bound Delaware to Point Breeze. The captain reported at the Quarantine Station that he had a stowaway on board, but I was permitted to proceed to Philadelphia in the ship.

The local immigration inspector was waiting for me at Point Breeze, and after a personal confab in the sub-office he concluded that I was as good an American as he wished to meet.

The following day I was taken before the chief inspector on Walnut street and officially landed as a citizen of the United States.

When we came out of the immigration office into the Polar rigors of Walnut street, Captain Grump turned and looked commiseratingly at me thru my only dun-garee suit.

"Is that all the clothes you have, Williams?" he asked, sorrowfully.

"Yes, sir," I answered.

Then he thrust his willing hand into his plentiful pocket—and kept it there.

When I met Stuttering Charley at the "Blue Anchor," I drew out my handkerchief and flopped three dollars and a half, two shillings and a "tanner" onto the bar.

"W-w-w-djoo git a-all that, J-Jim?" he asked, with a happy grin.

"The boys made a tarpaulin muster for me on board the ship," I answered.

"Two hot ones, please, bartender."

NEW YORK CITY.

Eclipse of the Sun on 30th of August, 1905. The Sphinx and Pyramids in the Foreground.

The Eclipse of the Sun in Egypt

BY ETHEL FOUNTAIN HUSSEY

[The Eclipse Expedition of the Lick Observatory to Assouan was in charge of Prof. W. J. Hussey, whose observations on double stars have placed him in the front rank of American astronomers. He is now continuing his work at the Detroit Observatory of the University of Michigan. Mrs. Hussey, who accompanied her husband to Egypt, gives the following account of the methods and difficulties of astronomical work in the tropics.—EDITOR.]

THE moon's shadow on the 30th of August, 1905, swept a slender arc across three continents, touching, indeed, a fourth, when the sun set black at Mecca, a sullen portent to the warring Arabs. To three points in this long arc the Lick Observatory in California sent expeditions; the largest to Spain, where totality was of longest duration, and two auxiliary ones to the frontiers of the apparition, Egypt and Labrador. The equipments of the latter were, with one exception, identical, and they were duplicated also in Spain, their purpose being to secure comparative data for coronal changes, and, if possible, conclusive evidence upon the much discussed existence of intramercurial planets.

Now that the event is past we know that the fates were not kind in Labrador, where the sky was absolutely overcast; that in Spain clouds hindered and fortunes varied; that the Lick expedition at Alhama de Aragon obtained spectroscopic results of value, but that the comparative data hoped for on the coronal and intramercurial plates are but partially secured. In Egypt only was the sky entirely clear, and the atmosphere, tho white with high dust and tremulous with heat, was unvexed by wind or cloud.

On the 30th of July, anticipating by a month the day for which we were journeying nine thousand miles, we first caught sight of the pharos of Alexandria, blinking in the early dawn from a long, lean finger of sand running far into the sea. The European town did not suggest an entrance to Aladdin's country, nor did the English officer who met our ship resemble Aladdin, but the things which began to happen made us suspect at once the neighborhood of magic. Our luggage did not hesitate at the customs; our freight was franked to its destination eight hundred miles up the Nile. By order of the Egyptian Government we were

passed upon the railways, and courtesies of delightful sort followed, one upon another, from our entry into this fascinating land to our regretful leaving of it. Not without apprehension had we braved an African Summer and the uncertainties of the borderland out of season, but when we alighted from the clap-boarded, blue-windowed, double-roofed train at Assouan, expectantly looking about for a mud town in the desert, we found the feluccas of the Hotel Savoy waiting to take us across to gardens of palm and rose and oleander on the Island of Elephantine. All this by pre-arrangement of the disguised Aladdin who made the long, dusty journey from Cairo with the English and American expeditions to see them well launched upon their enterprise and to prepare the way for those who were to follow. Every astronomer who visited the Land of the Pharaohs this Summer of 1905 has grateful memories of Captain Lyons, R. E., Director-General of the Survey Department, and of the young engineers detailed to our service, speaking the Arabic, knowing the Arab, devising all things to our aid. But long were the list, if one were to enter upon it, from those in places of power to those we met in the common way, who gave each some service that we can never repay.

Sites are chosen in the Savoy grounds, and life settles quickly into routine. The eclipse camp becomes a litter of homely things; the astronomer in its midst is carpenter, mason, mechanic and engineer. He is, like any modern scientist, a man who toils with his hands, who takes hold of tools, who is undismayed before recalcitrant machinery. When at last the big forty-foot tube of the Lick equipment rises to its tower, the brown Egyptians exclaim with pride, "*Ku-waiyis! Very goot! Very nice!*" They comprehend it not in the least, but they

like the spectacle. It is a very big gun. Our colleague, fluent in Arabic, explains the coming darkness of the sun. They listen as politely as if told that the Nile will run up stream, and are as little moved. "You do not believe me!" he exclaims. "We believe in Allah," an-

Russian and the two English stations use horizontal cameras into which the sun's image is reflected by revolving mirrors; the American, refracting lenses either mounted equatorially and controlled by clockwork, or directed thru fixed tubes upon a moving plate carriage.

The Forty Foot Tube of the Lick Equipment with Black Line Tent, Assouan (Elephantine Island).

swers Achmed, the overseer. "But it is sure to come," persists the astronomer, naming the hour. "Effendim is learned," says Achmed, courteous, but unconvinced; "will you say that your word is greater than Allah?" Nevertheless there revives among the villagers the tradition of a dragon that once destroyed the sun, and a feeling of unease spreads about. Across in Assouan a rumor obtains that we have come with our batteries to stop the dragon, but they doubt if we succeed.

All the installations consist chiefly of various kinds of telescopic cameras, since, because of their permanence, photographic impressions of so fleeting a phenomenon as an eclipse are of infinitely more value than visual. The

The Germans are represented by a small but beautifully made photographic altazimuth without clock control.

Three days before the eclipse the assistants arrive who are to operate the instruments. The place is eager with interest; the novices go into training for their simple but critical performances. The scientists keep gay countenance, saying nothing of midnight consultations over trial plates for focus. Every man watches and tests his apparatus lest at the final moment some mischief-working crack appear, for the hot air, dry with leagues of desert, warps the very soul out of wood.

All seems ready and the security of preparedness possesses the camp. Visitors come by boat and train; Govern-

ment officials and foreign representatives, followed by gorgeous khadammin in voluminous trousers of gold embroideries, whom we innocently take for Turkish grandees, until we perceive that they are brought from Cairo to carry their masters' kodaks. The hour arrives. At three twenty-six thirty-three by the bulletin, the contact of moon with sun begins. Some, with smoked glasses and binoculars, drift about the gardens seeking vantage points of observation. Others of us climb to the spacious roof, where the heat strikes our faces and seizes upon us like a material thing. In covered wicker chairs we sit, half watching the scene of wonderful beauty, half listening to the talk of clever wits from opposite sides of the world.

penetrated the hallways, listening with apprehension until voices within answered reassuringly. Now, as the green twilight settles in unearthly beauty over the hills, the river and the square-walled town, I figure the scene by the date palms where the batteries point to the sun. I can see each attendant in his place; the pendulum swings, and the man who is to count sits with his eye upon it; the observers in the dark-tent watch the boiling image of the sun's rim as it comes steadily up the plate-carriage in its appointed place; the signaller without, listening to the chronometer beat, calls, "Twenty seconds—Ten seconds—Ready!"—then, as the last bright spot of light hanging, hanging on the moon's black edge, winks suddenly

The Great Telescopic Camera Reflector of Mr. Reynolds, Birmingham, England. Assouan Eclipse of August 30th, 1905.

I am of divided mind. For I see another scene, a long, long way from this careless roof: a basement room caulked tight against any ray of light, stifling with heat, and filled with the fumes of chemicals used in backing the large photographic plates. I waited at the door of that room not an hour ago, half-choked, myself, with the ether that

out—"Go!" Shutters flash, and the counter's steady voice rings, "One—two—three—four—five—six." Not as men, but as parts of a machine, they carry thru the program of that short two minutes and a half with finer precision than has marked the best rehearsals.

Meanwhile, to us on the house-top, to the Egyptian in his fields, to the Arab

in the desert, the portent has come. With faces away from the sun we drink in the vision of a different earth. Somber, the Hill of the Dome of the Winds looks in from Libya on the old, old Nile encircling us. East and south stretch the low bare hills toward Arabia, carved as from worn jade. And in a crescent of palm-beach, where a moment ago blazed Assouan, stands now a town of emerald and obsidian.

It is as if we had dropped to an underworld. Such twilight they have in the Book of the Dead.

The long, high wail of a

partition is not what the eye perceives. It is more, and less. But it is, to the scientist, what he can count upon, what he can carry away. And now, when to the casual the work seems done, comes the cru-

native woman cuts the air and a surge of sound comes across from the town. I turn to the west, following the long

cial part of it all. The gay guests are gone, leaving their congratulations upon a complete success, which the astronomer knows lies still an enigma in the dark room waiting, an illusive quarry, the release of the subtle alchemies. There are many possible exigencies yet to be overcome, not all of

A Native Camel Driver Under the Shade of a Sheltering Palm.

cone of shadow to its crown. Had I, too, like Achmed, doubted? Gem-like it hangs, pearl white, infinitely remote, a radiance, yet a source of gloom!

What the camera catches of this ap-

which are confined to the developing bath. The British expeditions carry their plates to Cairo, the Russians home to St. Petersburg. The Germans leave for Italy, the Americans stay on at As-

souan. The camp is cleared, the assistants depart, and upon the chief alone devolves the critical work of development. That this shall be done on the spot is almost imperative, owing to the size and extreme sensitiveness of the plates, and risk of injury from light or other source in carriage before they are fixed. One astronomer lost all of his negatives by breakage just after the last total eclipse in America.

Nineteen negatives represent to the

tions must be handled in heavy trays, and kept cool with ice, which is brought daily from Cairo, nearly seven hundred miles. The thermometer is in constant use, and every bath is watched with vigilant care. Distilled water is used in the developing solutions, and all other water must be brought in urns from the filters, for the Nile is the source of it, chocolate thick. And for everything ice, tho it introduce impurities, tho it alter potencies, is *sine qua non*.

Egyptian Water Carriers.

Lick Observatory Expedition the outcome of its long journey, its hard work, and the generous expenditure of its financing. But when beside the outlay that each plate has cost one places the fact that by no means can it be replaced, its value leaps past the appraiser's province. It is no light-hearted process, then, this unwrapping, one by one, these sensitive sheets of glass in the darkness, working by feeling rather than sight, the dim red light screened further under yellow paper. The dark room is improvised, without sinks or running water. The solu-

Much of each night passes in experiment, for not a solution is put upon an eclipse plate until tested upon trial negatives. And if one of these comes up unsatisfactorily, which of the three or four or half dozen chemicals has gone defaulting? Or if the test is satisfactory, how will the eclipse plate, differently sensitized, respond? Light is here of an intensity unknown in humid atmospheres; heat stops not with the going down of the sun. They league together like subtle enemies to work insidious mischief in unproven ways. Chemicals melt, and hid-

den agents flash into sudden and unaccounted activity, or die out and leave no sign.

So thru nights of suspense and days of heat and little refreshment the exacting work goes on. Ten large-scale plates of the sun's corona are developed, of exposures varying from half a second for the intense bright rim of the photosphere to sixty-four seconds for the faint outlying streamers of the corona. No detailed study of these is made at the eclipse camp, the one object being to bring out on each plate all the detail it will yield and fix it there against the chance of accident from light or chemical change, or any menace except the inevitable danger of breakage or loss in transit. Comparative study to reveal and interpret the significance of details is all to follow.

The value of the eight large plates along the ecliptic in the vicinity of the sun is also still unknown. They are in duplicate sets of four each, and their object is to secure the image of all bodies which

may be in the region, of brightness sufficient to print within the time available for exposure, with the hope that if there be any intramercorial planet it may be thus detected. There would not, in probability, be any difference in the photographic image of such a body and that of a faint star. Therefore, for purposes of comparison, negatives of this same region were secured at the Lick Observatory six months earlier when the earth was between it and the sun. Only careful study of the Egyptian photographs in connection with those at Mt. Hamilton will reveal what the former have upon them of interest. An object must be found upon two duplicate negatives of Assouan and not upon the comparison plates at the Lick Observatory, in order to be announced as a discovery. As the Egyptian plates have not yet reached California, any announcements concerning new planets, based thereon, are obviously premature, and are unauthorized by any scientist connected with the expedition.

ANN ARBOR, MICH.

What I Know About Editors

BY A SOUTHERN NOVELIST

WHAT some editors know about some writers will never be told. It would be so shocking, so disillusioning that it would injure the editorial business. Fancy the effect upon the average reader, to say nothing of the "gentle" reader, if he should learn that his favorite author was a skinflint who sold his noblest sentiments, his most heart-rending passages to the highest bidder, even if he evaded a less profitable contract to do so?

And what a writer discovers about editors depends as much upon the kind of man he is, himself, as it does upon the character of the editor. For a competent editor has what may be termed a universal character. Besides being honest, he can be shrewd, and in addition to a purely literary sense he must recognize the value of what is merely "popular." He can drive a hard bargain with

an exceedingly gifted writer when he finds that back of genius stands a man with the groceryman's instinct for trading his "immortal" literature. Or, he will stand aside with a complimentary air while a lady novelist has "connip-tion" fits to show off her temperamental qualifications, and then exhibit exactly the right kind of sympathy to insure her best literary results. In short, he is all things or nearly anything to the various, and usually, abnormal, types with whom he has to deal. The one incredibly Christian fact peculiar to him is that he shows his best side to unsuccessful writers. There are many would-be authors, who have not and never will write a sentence fit for publication, who treasure innumerable compassionate, encouraging letters from long-suffering editors. I have a sacred package of them myself which are cherished more than the let-

ters I receive now, because they are really kinder.

So much about editors in general. My own experiences have added many interesting, even diverting details to the subject.

I was born in the South during that period of embarrassed silence which lasted for nearly twenty years after the Civil War. (This fact has more to do with my literary experiences than will appear to the unthoughtful; for, had I been born in New England, and bred so independent of what is commonly termed learning, I should never have written anything, or come to know editors by their hearts instead of their heads.) We no longer enjoyed the poetic license of living according to our inspirations. Men who had distinguished themselves in the halls of Congress, were then obliged to be content with nothing better than a midnight hand in the training of our new black citizens. It was to all appearances a dull season in which to grow on imagination, a time for discretion rather than demonstration in life or language, and education was an intellectual diversion which we could no longer afford. But with us, culture depends less upon formal study than it does, say in the North, where I have observed some very well-informed people who lacked that whimsical, native liberty of mind which has always enabled us to pass judgments fearlessly upon whatever comes our way in art or living. This temperamental assurance is the one nest-egg of genius among us which hatches out warriors or writers according to the demands of the situation. Thus, the men who were guests most frequently at my father's house during earlier days had been soldiers, and now they were "men of letters," who never offered their wares for sale; critics, whose literary judgments suited one another; poets, whose verses made them immortal in that small, proud Southern community. They read selections from "Noctes Ambrosianæ," exchanged witty comments upon Falstaff or offered an original essay upon Faust which was received with more applause and laughter than if it had been a purely scholarly appreciation of Goethe's masterpiece.

Brought up in this atmosphere of literary barbarism, I had more confidence in my youth than many eminent writers ever acquire. At a very early age indeed I composed my first "piece." It was written in a lofty, obituary style, and was gently but firmly declined by nearly every important editor in this country. I was mystified, but not discouraged. Their gentleness misled me. I thought that I was upon the very threshold of fame and had only to add a few adjectives in order to be admitted. This impression was confirmed when the editor of our county paper accepted a little note-book essay which I offered. It was a collection of arborial sentences, connected by a sort of worm-fence logic, and there was a bird singing upon every top rail. The editor called attention to it in a piebald simile, meant to be complimentary. He said in substance that the grand old county had "given birth to another genius," (it had already produced upward of ten thousand!); and I believed him. No one ever felt Fame knocking more loudly at his door than I did that summer morning when I saw my first article in print and had an editor's word for it that I was a "genius." I had to learn in sackcloth and tears that the average country newspaper editor knows as little as possible about geniuses, and that it is a title he is generously unscrupulous in conferring.

The next thing I attempted was a "romance." I had never had a lover, never read a novel, nor studied the art of literary composition, but I will say for that story what cannot be said for many better ones—it was *vital*. While the hero suffered all the pangs of unrequited affection, the heroine was up and doing. Her scorn for him cannot be measured by any modern standard in romantic ethics. She almost tore the clothes from his back in the energy of her refusal. At last she married him, not for love, but because he was about to die of a broken heart. Could any motive have been more chaste? As a reviewer of fiction now for many years, I never knew of a similar instance in the love life of any heroine.

I was so discouraged by the baffling kindness with which this story was again and again returned to me that I abandoned the literary career, married,

and might have lived happy ever after had not a Woman's Rights convention come to town about the time I weaned my first baby and had recovered sufficient strength of mind to see the humor of the situation. In this region we are taught from earliest infancy that we are superior to men, which precludes the comparatively debasing idea of equality upon which suffrage is granted. We would no more think of asking to share a man's ballot box upon a political occasion than we would wish to share his pipe upon a social occasion. And when I realized that these well intentioned, but obtuse women, nearly all from the North or West, held their meeting in the South for missionary reasons, my pen went a-sparking after them. I offered a report of the convention to the editor of a great daily and it was promptly accepted. I took the hint. Since then I make a literary business of observing what is actually going on, of giving it a proper perspective in relation to the things that have been tried and proved, and of shedding as much wit upon it as I can command. When an article is rejected, (I have never reached those charlatan heights where even the worst things an author writes have an unquestioned market value), I know that I have failed in one of these three requirements.

I soon received an invitation to call upon the first really great editor known to me. And, remembering the advice he gave me that day, how no character-drawing was ever veracious without the caricaturing line being made carefully distinct, I copy out a pen picture of him. He was the roundest man I had ever seen. His short legs stuck out frivolously from his spherical body like a brownie's. His head, face, eye, all were so round that his very expression was orbicular. And his nose was the most exquisitely feminine thing I ever saw outside of a lady's countenance. Never have I known a kinder friend or a more painstaking editor. He became a sort of stepfather to me in the literary world, coached me along conventional lines, and got many stories out of my prim mind which were written according to the grammar of the best writers and speakers.

But I was destined to be a free lance or nothing in my chosen profession. At

last opportunity seized me by the hair of the head. I saw a severely ethical, but unjust, criticism of the South in a New York journal, and I wrote a sword-pointing protest to the editor. The letter was published. I have written many since of a similar character that were not published and that have never borne fruit to any appreciable extent in that particular editor's mind. I find that the hardest-headed persons to enlighten upon Southern conditions are the Northern editors. But they should be forgiven; they are mentally and morally incapable of receiving certain kinds of alien information. They have some narrow-minded convictions about "facts" which limit their understanding. It is impossible to teach them that with us facts are merely the transient symptoms of things much more difficult to define. Thus, I have never been able to convince one of them that a lynching is a distorted and regrettable evidence of virtue in this region. They have not sufficient imagination to believe what we tell them because it does not square with their old abolition note-books. Their prevailing mental aberration is the one straight line which runs its short paragraph course between cause and effect. They know nothing of that mightier form of human experience common to Southerners in their worst and best moods which corresponds to the branch of mathematics where two and two may make five.

These letters, however, led to a series of articles which I fondly believed to be defensive, and interpretative of the South and her people. But they have not always been received here in a reciprocal spirit. One indignant Southerner declared that he believed me to be a "short-haired—Yankee—old maid." This was the most undeserved compliment I have ever received. And there were other charges less embarrassing. But I have never had the sense of martyrdom, never contemplated "moving to New York and into a more sympathetic atmosphere," as so many writers from this section have done. These are my people, and I would rather have a "monkey and parrot" time all my life with my own kind than live keyed up for one year to Northern standards of ideals and intelligence. That is my objection to what is so often praised as their

"sympathy." It is too intellectual—I leave it to the "intellectuals" while I remain in a region where we have a sort of emotional sympathy and understanding of one another even in our bitterest rages.

After passing the primitive stage in literary composition I have had more dealings with Northern editors than any others. The oldest and most brilliant one I know would have been a hot-blooded Southerner if unkind fate had not made him a New England abolitionist. He has our irrepressible sort of temperament, and the same capacity for intolerance, only, true to his type, he is ethical in the expression of his prejudices, while we are savagely natural in demonstrating our virtues. All his errors are founded upon righteousness, so that, being the most kind, Christian and moral of men, he advocates theories of living that are fatal to the preservation of race virtue. I have found him a fiercely faithful friend and critic, but what aggravates me is the fact that he would be kinder if I were a negro—not because I was a negro, but because he thinks the negro stands more in need of kindness; which is a sentimental error of the mind founded upon abolition inaccuracies of judgment.

But the editor who has had most to do with my own destiny in the literary world is a much younger man. My first impression was that he was the most patient person in existence. As a matter of fact, he is only the most indifferent. He will allow a contributor to fall into convulsions of rage, set the paper on fire with the blaze of his heroic emotions, play all day to the peanut gallery of his sympathies and never turn a hair any more than if he were watching a kitten chasing its tail. But he knows every emotion, sentiment or wit wick in his subscribers, and how to light them. So far as I can make out this is the only use he makes of his own. They compose his reference book to other people's human nature. And, finally, in common with every other editor, he knows what he does not want better than he can tell what he wants. If I had to name the feature in my dealings with gifted editors, who go by their telepathy with the pulse-beat of the times, it would be this—how to discover what they want when they cannot even stammer the hiero-

glyphics of what they want. When I miss my cue with this particular editor, he can only say of the rejected article, "It does not appeal," or, "there is something wrong with it." And the point is there always is "something wrong" if he says so. He cannot write himself, but he has such a keen sense of proportion that if I leave out the wings and tail feathers of the smallest idea, he misses the flight sensation, he complains more or less incoherently of the barn-yard domesticity of my little eaglet. It is a feeling with him, not an intelligence. The character of his mind is such, indeed, that he will require ten years more of deep-sea thinking to reduce it to a working formula. Then, he is likely to become a prominent and difficult person to deal with in the political world, but he will no longer be so good an editor. For it is not wise thinking that will keep him in telepathic touch (that is to say, editorial touch) with his kind, but it is his primitively alert instincts and intuitions, the most ancient and reliable medium of communication ever found between man and man.

The first book that I reviewed for a Northern periodical was "An English Woman's Love Letters," and, doubtless, I am the only person alive who still believes that a faded packet of feminine love letters, left over from real life, was the basis of that extraordinary story. But in spite of my egregious sentimentality in holding to the book's veracity, this review won for me a permanent place on the magazine; and I passed under the rod of one of the most gifted men in the American world of literature. This was not so chastening an experience as might have been expected considering my ignorance of the technicalities of literary art. For I soon learned to plagiarize from that editor's own mind whatever I lacked in primness of expression, or remoteness of conception. I followed him with tip-toeing wits into regions of thought quite foreign to my own. He had the generative mind. And I had only to cast my own back into silence, not the primitive, unintelligent first silence, but that still nirvana of old philosophies, in order to know exactly what he would think on a given subject. And I said it, occasionally with

an irreverent giggle at the end, which never failed to startle him. My experience with this editor leads me to believe that if one has the subjective mind, it is easy to win the copyright of approval in such cases, and the victim will never suspect the echo-formula.

With another New York editor I have been less fortunate. He has the scientific mind, a boundless intellectual liberty, coupled with a pluperfect sense of literary propriety. Personally, he is a "good fellow," graciously related to me by the most kindly disposition; but I have not the remotest kinship with his mind. I can never tell what he is thinking, and writing for him is like walking in the dark. As near as I can determine so bad a case, he is too simple and serenely sensible in his manner of thought. His own emotions do not reach as high as his intellectual faculties, and he is a distractingly straight line, without beginning or end, to one whose mind is wine-colored with the blood of life.

I have had little to do with the great magazine editors. Apparently they proceed upon the understanding that if I will leave them alone, they will leave me alone. Once I ventured to offer one of them a story. He declined it with great delicacy, and by way of compensation he told me what he called a "god-awful" joke. It was not a very good joke, but I have always cherished it, because for all I know it is like their hemstitched poetry, the only kind current among magazine editors. And once I received what I took to be a wedding invitation, but which proved to be a steel engraved request from the editor of a popular monthly, asking for an article upon some subject that would be "helpful" to women. (Being "helpful" to women is this editor's very flourishing literary business. For the sum of one dollar a year he furnishes them a kind of

monthly chart which tells them how to live and how to be lived by; how to love and how to marry; how to be a wife or a widow. And he throws in two shirt waist designs each season. Thus leaving nothing to be accomplished by their own wits and ingenuity.) The topic I selected was vital, but unfortunate, and the article was returned to me with the high-bred air of a polite lady who wished to end a too hastily invited acquaintance. Since then I have discovered that this kind of coquetry is common among enterprising editors. One of them will write a "heart to heart" letter to a struggling author inviting her in the name of common interests to send him a story. The flattered recipient overestimates his blandishments. It really is not a heart to heart letter at all, but it is the manner that particular editor has of inspiring the poor trembling thing to do her best. She feels that the story is almost a personal matter between them, that it is already sanctified by the prenatal regard of the noble editor. But she never was more mistaken in her life. Sometimes he keeps a clerk to write those letters as a matter of business, even when he is away in Europe.

And, finally, in my relation to editors, I never permit them to regard me merely in the light of a "contributor"—even a "valued contributor." I insist upon being somebody, primarily, whose chief object is not to write, but to win out of living every human advantage possible. It is difficult to make them understand this, or to believe in the sincerity of such a profession. But once accepted upon this basis, they like it. It rests them, gives them the comfortable feeling of being off their editorial guard, and they become hearty, honest friends who are to be trusted in emergencies quite beyond their professional relationship.

Revolution in Poland

BY WILLIAM ENGLISH WALLING

[Our readers will recall the articles on labor and reform topics that Mr. Walling has contributed to our columns during the past two years. Mr. Walling left his residence at the University Settlement of this city last spring to spend this winter abroad studying the working class and democratic movements thruout the principal countries of Europe. He has promised to send us an occasional article when he comes across anything that would be of interest and importance to our readers.—EDITOR.]

AFTER the June massacres at Lodz, I decided to make an immediate and first-hand investigation of the Polish Revolution. I knew that the revolt in Poland was better organized and more determined than that of the rest of Russia and an almost general uprising seemed at hand. I was armed with confidential letters from New York, London and Paris to Revolutionists of every variety and I was also provided with private introductions to several prominent bankers, manufacturers and editors of Warsaw and Lodz.

I stopped first at Krakau (Cracow) in Austrian Poland to interview the chiefs of the Polish Socialist Party (P. P. S.), perhaps the best managed and the most aggressive of the revolutionary organizations. These former exiles of Switzerland, London and Paris I found to be cultivated men of the world, men of education, doctors of philosophy, and even, in some cases, persons of considerable means. They might be fanatics at heart, but they showed neither bitterness nor dogmatism in their talk. They seemed simply what they claimed to be—men who had devoted their whole lives to an organized and certainly not unintelligent effort to secure an "Independent and Democratic Polish Republic." Of their sincerity there can be no question—too many have died in Siberia and on the scaffold. Of their sanity only the course of events in Poland can decide. It is they and their like at any rate who by innumerable secret meetings of the people and a perfect flood of prohibited literature of every form have for twenty years prepared the revolution "in the shadow."

Years ago these men came to see that a practical revolution in Poland must be "of, for, and by the working people"—adapting the current social theories of the European workers, they became a Socialist party. Their immediate program is comparatively moderate and does not differ materially from that of the Australian labor unions. But to achieve this moderate program they have developed (along with the Jewish revolutionary organization, "The Bund"), into the most secret, violent and widespread revolutionary party the world has known. "The 'Mafia' or the 'Carbonari,'" I was assured, "are not a circumstance in comparison." "All we need," I was told on every side, "is arms and the psychological moment—we have the men, we have the organization, but we have not got the guns." For these men then the time of political discussions, programs and conspiracies, was passed and the time for action had arrived. At first I thought this might be a mere sentiment limited to the professional revolutionists. But I found much the same impatience for action among representatives even of the conservative classes at Warsaw and Lodz.

The revolution in Poland passed out of "the shadow" a year ago, when thousands of workmen paraded the streets of Warsaw with shouts for the victory of Japan and the downfall of the Czar. Since that time no element of the people has failed to give material and open support to the revolt. The Poles are a factious people. There was no sign of unity before the beginning of these recent outbreaks. There were as many forms of resistance as there were forms of Russian oppression—

movements of Catholics, of Jews, of working people, of students, of manufacturers and of landlords, each with tactics and a program of their own. But all are verging to a common plan of action under the pressure of the present crisis. Liberty of language and religion, freedom of speech and organization, local authority for Poland rather than independence, legislation for the workers, the right to strike—are either advocated or not categorically denied. And all are united in attributing the growing spirit and hopefulness of the nation and the evident weakening of the Russian bureaucracy and police principally to the organized and wholesale revolt of the working population. All elements of the people are contributing in various degrees and according to their power. But it is primarily a movement of the mass. A people is in war against its government—using all the means of war that are in the reach of an unarmed populace against sabres, rifles and machine guns. It is a fight against heavy odds. The killed and wounded among the people have already mounted up into the thousands, the prisoners and exiles to many thousands. There can be comparatively few city families that have not already lost relatives in the conflict.

Are not the people then crushed and beaten in this unequal warfare? Far from it. To the Polish spirit of liberty has been added only a deep and fiercely blazing feeling of revenge. Taking advantage of the existing network of secret organizations among the people, this spirit has animated them with a fire that is actually beginning to force back the Government in the face of all its brutal power.

If former revolutions in Poland have failed, if the revolts of working people of St. Petersburg, Riga, and Odessa have been bloodily suppressed, this revolution *en masse* of the organized, educated and hereditarily revolutionary masses of the Polish people is actually winning a gradual triumph. This is the situation:

Warsaw is "pacified," and so are Lodz, Bialystok and the other industrial centers. The Government has to its credit thousands of killed and wounded, very largely revolutionary working men.

Among the thousands of Jews and Christians sent to prison and exile in the last few months is a considerable proportion of the brains and spirit of the movement. But, aside from this appalling list of workers killed and families brought to misery, the Government has nothing to show.

Now, let us examine the Revolutionists' reckoning. To begin with, their losses are not what they seem—what do a few thousand mean, when the whole mass of the city population of Poland, several millions strong, is in a revolutionary ferment? Those who were not formerly revolutionists have rather been converted by the Governmental bloodshed. And as to the leaders, they could not have been all caught a few days ago, for on one day seventy Jews were arrested; on the next, 350 Polish workmen at Warsaw, and on the next, 400 at Lodz. Moreover, the directing brains of the movement have many years since crossed the border, where they are in daily touch with everything.

The Revolutionists have not failed to carry out a few executions themselves. At Krakau I was shown a list of some ninety executions of police, officers, and spies in which scarcely a half dozen perpetrators were captured. The list is growing and doubtless amounts to hundreds by now. "The most promising sign is that the people have learned to do it themselves," I was told. And indeed every day while I was at Warsaw and since that time the official gazette has chronicled these executions. As for example:

"Planton Soldaka, gendarme, was stationed on the Vistula Railroad platform. At eleven o'clock, shortly before the train from N— pulled in, two young men approached him engaging in conversation. Suddenly one of them pulled a revolver from beneath his coat and shot three times. All the shots took effect, killing him instantly. The perpetrators disappeared leaving no clue behind as to their identity."

In Warsaw alone such recorded attacks have averaged two or three a day.

The agents of "White Terror" are themselves terrorized by the people. The working class sections are free from police at nights—their place being taken by military patrols—which I found discreetly marching in a most unusually

"open" order for fear of bombs. A considerable part of the police has been killed, a larger part has resigned. The whole system of spies has been shaken—executions by workingmen's vigilance committees are too numerous to mention. Finally, thinking that the revolutionists had secured a complete list of their secret service men, the Warsaw authorities were forced to replace a considerable part by men unfamiliar with and unequal to the task. The other day in a suburb of Warsaw there appeared the following poster addressed to the workingmen:

"Taught by sad experience, the police promise not to disturb workers' meetings, wherever such take place, if the workers on their part promise not to attack the police or make attempts on their lives."

And indeed the police of Warsaw are allowing every Saturday open air meetings attended by thousands of Jews—to one of which I was invited—against all the precedents and regulations of the Russian régime.

The war against the police, then, has achieved a certain measure of success. The police control of the population is largely in the hands, not of the Government, but of secret vigilance committees of the people. This is the first victory—like the rest only partial and costly enough—but a victory nevertheless.

Another victory was won last November. The Government decided to mobilize the reserves of the Polish cities and it picked out a small city, Radom, to begin with. There followed a series of manifestations, street processions with red flags, revolver attacks on the troops, bomb attempts and killing of recruiting officers, not only in Radom, but in every section of the country. Many thousand reservists fled over the border. At Radom, it is claimed of thousands eligible, scarcely 700 were enrolled, and of 300 Jews just 13. When the enrolled were on the way to Manchuria things were scarcely easier for the Government. One regiment hardly out of Poland burned its colors, destroyed a railway station and drove away its officers. Arrived at Samara on the main line it burned the cars, tore up the rails and blocked the railway for three days. The

warning of Radom was sufficient. The other cities have not been mobilized and the workers of Poland have won another great victory. They are freed from the tax of blood.

The last triumph of this unarmed people at war, at the same time with its government and with an invading army of 150,000 men, is the conquest of comparative industrial freedom. Fired by the St. Petersburg massacre and inspired by the hope of forcing the political crisis, last January the workers of the whole nation went out on strike—an event perhaps unparalleled in history. At the outset the strike was orderly, disciplined and calm. The brutality of the Cossacks and police soon led, however, to the fiercest bloodshed and riots. The strikers, having failed to precipitate an immediate political crisis, began after a few days to return to work. But a large part remained out, not for political effect, but for higher wages, shorter hours and removal of governmental interference in the shops. On the first of May, and the middle of June, again the workers showed the solidarity and power of their organization by general political strikes—promptly terminated in each case, according to premeditated design, after a day or a day and a half. But again many economic contests followed—the workers having felt and proven their discipline and power. And again the Government interfered, expressly forbidding the employers to make any concessions to the workers.

For a third time the Government met a crushing defeat. The manufacturers threatened to close their factories unless they were allowed a free hand in dealing with their employees. In the last six months they have granted an almost universal increase in wages and shortening of hours. The police and the arbitrary and autocratic official, the so-called "factory inspector," have been told to go. Polish industry is no longer conducted by the Government, but by the employers and the employed.

"The revolutionary committee is our government now," I was told by the manager of one of the largest factories in Poland. And his explanation—as that of all others with whom I talked—made it appear that he spoke the practical truth,

WARSAW, POLAND.

Commodore Biddle's Visit to Japan— Another Recollection

BY THE REV. H. VALETTE WARREN

[The article of Mr. Burton's has called forth these further interesting reminiscences from Mr. Warren, who, after his return from the voyage, studied for the ministry, and after serving churches in Ohio, Illinois and Michigan, is now honorably retired and a member of the Rock River, Ill., Presbytery.—EDITOR.]

I HAVE read with much interest the copy of *THE INDEPENDENT* for August 1st, containing an article on Commodore James Biddle's visit to Japan, in 1846, which has awakened in my mind stirring memories. *THE INDEPENDENT* suggests the probability that the writer, Mr. Edward S. Burton, is the only survivor of that expedition. I have a shipmate's pleasure in knowing that he still lives, altho I cannot recall his personality. I also was a part of that event as was also my brother, Capt. Benjamin Warren, who later served his country with the Sixth Regiment, M. V. I., of Baltimore fame; also with the Twenty-sixth M. V. I., with General Butler at New Orleans, and who is now at my elbow to compare his recollections with my own.

Commodore Biddle's visit to Japan was the beginning of the most important movement of the century among the nations, altho its significance has been obscured by the success of the fortunate one who followed him with enlarged powers and far greater resources at his command.

The caption of the article, "Commodore Biddle's Failure to Enter Japan" does injustice to Commodore Biddle. He never attempted to enter Japan, hence there was no failure. He did all he was ordered to do. He was sent by the President of the United States, James K. Polk, to take a letter to the Mikado, proposing to open friendly relations between the two countries, and to ask for a reply. This he did in the face of much reluctance, evasion and delay. From all other effort he was precluded by the strictest orders to do nothing that might give offence. These limitations governed the Commodore's action, when he was grossly insulted on the Japanese junk, an incident to which reference is made in Mr. Burton's article.

Because vigorous retaliation was not offered, by men who had all-sufficient power, they inferred that Americans were not a vindictive people. Distrust was ameliorated and the way opened for pacific action.

There is need of a clearer understanding in regard to the motives of our Government in seeking to establish friendly relations with Japan. Public opinion seems persistent in the idea that the one object was to open commercial relations. That is, it was a hunt for pelf.

A few facts will reveal a far worthier aim. It ought to be known by this money-crazy generation that the men of sixty years ago gave the first knock on the closed door of Japan from purely humanitarian motives.

As far back as 1831 a Japanese junk was blown far to sea and finally stranded near the mouth of the Columbia River, where her starving crew were rescued and fed and soon after carried to Macao, where they were kindly cared for by American people. In 1837 a merchant ship, the "Morrison," was fitted out to return these people to their home. On arriving at Yeddo this unarmed vessel was forbidden to land a single person, batteries were opened upon her whenever she attempted to approach a landing and she was compelled to return whence she came. Instead of "gratitude for the return of natives" playing a part in our negotiations the reverse was the fact. For a native to leave the realm or to return from abroad was to incur the penalty of death. For shipwrecked men and their rescuers there was one fate.

It was this attitude of the islanders toward foreigners that led our Government to take measures for the protection of seamen who might be stranded on the perilous coast of the Island Empire. This effort was made not a day too soon. Before that year ended sixteen shipwrecked Americans were seized,

treated with great cruelty, and imprisoned seventeen months, before they were released on demand of Commander Glynn of the U. S. ship "Preble." The visit of the "Columbus" had impressed some of the high officials with a sense of the power of the United States to avenge such injuries, and with little doubt, saved their lives.

Our growing commerce on the Pacific, clearly foreseen, led our Government to attempt lessening the dangers that ever attend the mariner, and to this end an effort was made to change the barbarian coasts, where helpless men were caged and carried about like wild beasts, to a haven of refuge and safety.

During their entire stay at Yeddo Bay, the "Columbus" and "Vincennes" were inclosed in a cordon of boats, many hundreds of them, lashed stem to stern, forming a compact mass which was never broken except for the passage of an official boat or our own flag, as it was carried by our boat's crews in passing to and fro between the two ships. A guard of four boats always followed our boats when they were afloat.

The nightly illumination of this encircling and gaily bannered flotilla was a scene to be remembered. Brilliant lanterns of bright colors, thousands of them, gave the appearance of a city illuminated for some joyful occasion. The scene was beautiful beyond description when viewed from the masthead of the "Columbus."

A broad belt of lights encircling the vessel, each individual light heaving and dancing with the movement of the waves and the whole reflected by the water's constant motion, made night on the bay like the witchwork of fairyland. Our old sailors said one might sail the seas for a lifetime and never see its equal.

One word about the old "Columbus." She was a noble ship, the crown and pride of our navy at that time. She carried ninety guns and could add ten more in time of need. Amidships eight sixty-eight pounders, carrying both round shot and shell, the biggest guns then afloat, attested the formidable nature of her destructive power. Wherever she went she excited admiration. Time after time have I seen passing

boats pause from their progress, while their occupants gazed in silent wonder on her beautiful lines and vast proportions. The intelligent Japanese were by no means oblivious to her magnificence, and, by inference, to the skill and wealth that had created her. She gave a rhetorical power to our President's letter that words could not express, thus helping to secure at a later date the open door. This, her last cruise, was a notable one. There was an idea strangely prevalent that if a ship did not spring a leak, have a hole knocked in her bottom, get dismasted, attacked by pirates or cast away on a desolate island, she had no cruise worth mentioning. It was far otherwise with us. The "Columbus" sailed eastward around the world, doubling the Cape of Good Hope and Cape Horn, crossing the Equator six times, and reckoning a sailing distance of 68,949 miles by log, weathering many a gale and prolonged stress of storm, without losing a spar bigger than a studding-sail boom, nor an anchor, nor a man by accident, never starting a leak, nor scraping a rock or sand-bar with her keel, from New York to Norfolk, where she was stripped and laid up until the outbreak of the Civil War, when she was towed from her berth, scuttled and sunk by the Confederates, and not by the United States Government, as Mr. Burton narrates. What would I not give to see her once again!

The "Columbus" had a body of tried and skillful officers. Commodore Young, late of the Navy, was one of her midshipmen. Commodore Drayton was a lieutenant, Captain J. M. Wainright, who died fighting like a gladiator on the deck of the "Harriet Lane," in Galveston Harbor, was our sailing-master and a most efficient officer. Admiral Thomas

Commodore Biddle died in the October following his return home, and Captain Thomas W. Wyman, who was second in command, passed away at Florence, Italy, a few months afterward. Very few of that ship's company of eight hundred and fifty men lived to know the effect of the first prod, which they had given, on a sleeping nation whose awakening has astonished the world.

Literature

"A Servant of the Public," and Others

WHEN Anthony Hope writes a novel, he does not begin by laying the scene, but he gathers up the whole continent, island or archipelago, in some drawing-room corner of which his characters live, move and have their being, and he squeezes it down into a few sentences of magnificent generalities. This gives his story a curiously complete setting, and all the atmosphere there is. Here is the introduction he gives in his last novel¹ of a set of men and women who play a prominent part, and he consistently carries out the idea he advances in it of the phases of evolution necessary to produce lords and ladies "among a nation of shopkeepers."

"The social birth of a family, united by a chain of parallel events with the commercial development of a business, is a spectacle strange to no country but most common among the nation of shopkeepers; it presents, however, interesting points and is likely to produce a group of persons rather diverse in character. Some of the family breathe the new air readily enough; with some the straw of the omnibus (there was straw in omnibuses during the formative period) follows in silken skirts into the landau. It takes, they say, three generations to make a gentleman; the schools ticket them—national or board, commercial or grammar, Eton or Harrow. Three generations, not perhaps of human flesh, but of mercantile growth, it takes to make a great concern."

And the "concern" is the financial cornerstone of the family's social standing. The process is described accurately, and the odor of it is mainly betrayed by different members of the household. But the heroine of the story is an actress. The delicate way she is at last bought in and married by the "manager," for purely business reasons is the sequel of the story; but the finest bit of literary interpretation Mr. Hope has ever done is when he shows why this creature, who has a dramatic conception of virtue and innocence and all manner of womanly loveliness, without being able morally to be any of these things, is so attractive to men who rejoice to love her, but could not bear the

ignominy of marrying such an illusion of womanliness and goodness. It is not really the woman they love, but the power she has to intoxicate them with suggestions. They mistrust her from the beginning, and they often loathe, but to the last her power to create the excessive, pleasurable emotion in them remains the same. They can no more resist her than the drunkard can resist the wine which he fears. This is Mr. Hope's view of the relationship which often exists between an actress and men who are bound in honor to good women who have not learned this charlatan use of femininity. And it is a pretty close estimate of the case. It explains why so many such actresses figure in fiction and in social life. They came in through the open door of noble hatred which better women bear them. The modern spirit of "fair play" renders it "bad form" to turn the virtuous back upon these successful rivals. They let the actresses in just as they serve cocktails to their husbands at dinner. It is not wise, but it is founded upon a profound contempt for the actress and her transient powers of fascination.

Another novel with an actress showing her pretty heels in it, appeared serially in *The Critic* this year². It is called "a clever satire on our best society;" but it is only a satire in the sense that the "best society" is itself a satire upon all that is sincere, virtuous and peaceful in life. It is a good impression of the composite features of the artful thing, taken by an author who went into it with his literary sense exposed like a sort of psychological negative. The sane reader, who has not come under such baleful influences, wonders how so many different kinds of people can be so intellectually astute over trifles. There are no serious elements in the story, nothing big enough upon which to found sorrow or happiness, yet every one suffers as much as if each were living a life of awful consequences. Their

² OUR BEST SOCIETY. New York: G. P. Putnam's Sons. \$1.50.

destinies turn upon an afternoon tea, or a bridge party. And doubtless this is the irony of it, that there should be such a waste of earnestness and emotions on the part of remarkably capable men and women. The book will attract the "initiated" because the author has caught the real keynote, the right social use of phrases and innuendoes.

*The Counsels of a Worldly Minded God-Mother*³ is a book of which the literary style, and the weather-worn sagacity remind us of the "Highroad," a last year's novel written by a "managing" mother. The author advises her god-daughter upon all the essentials of life, such as how to walk, how to talk entertainingly, how to become a "vulgar success" in the social world. She teaches that slumming is bad form, and that charity should begin at home, that is, in your own social set. She is opposed to clubs, holds that they are essentially a masculine institution just as sewing circles are feminine. "Women are constantly flocking together nowadays in a sort of forlorn fashion, like birds whose nests have been torn down." And she goes on to complain:

"There are so many orders: the daughters of this and the granddaughters of that, the descendants of the other and the dames of something else. A woman must be a fool or a foundling not to be able to establish a claim to some of them."

She believes in marriage. "Marriage must be pretty bad or old maidhood is worse." And she is something of a termagant in regard to the divorce evil. Much that she writes is trite, but it is said brightly, with that air of wisdom which women acquire with so little justification. Nearly all women have the missionary instinct, even the most worldly. It is a universal mannerism of maternity in them. But it would be interesting to know how much good actually results from the kind of public spirited maternity illustrated by this volume.

And when women are not showing their missionary instinct, they are giving their "experiences" either with a handkerchief pressed tragically to their eyes, or with the air of saints who have matured before the proper time. *The Diary of a Bride*⁴ is an illustration to the point. It also shows the peculiar limitations of

women during this period. They are self-centered, or "John"-centered. Their wisdom never extends beyond their own new relationship. This author bride tells how superior her husband is to other women's husbands, a thing which brides have always done since before the kingdoms of this world began. She gives the same bedroom slipper account of how she made him comfortable and how she gained time between whiles to write about him in this book. In short, it belongs to that class of garden stories which were so popular a few years ago. Only the flower bed is a little blue pagoda cottage, and the thing which the fair gardener plants, waters, feeds and tends is her dear, dear husband. The way she does it will not interest any one except brides or engaged girls who have romantic notions about the horticulture of husbands.

And when woman, that is, the serious, "up and doing" modern woman, is not exercising her missionary instinct or giving her experiences, she takes up the hot end of some social, industrial or economical problem and harrows the reader's feelings with ague accounts of suffering humanity. No sensible solution is ever suggested, because the minds of women are not formulated for such work. The idea is to discuss the fortunate, not primarily to save the unfortunate. Mrs. Mitchell Keays' last novel⁵ belongs to this class. We begin it, and feel the gloom approaching thru the usual factory "hell-hole"; we turn over leaves to the middle of the book, hoping that the crisis may have passed, the millennium began, and that everybody is living happily. But no, the people who were joined together in peace and love are being forced apart by this curious female interpretation of morality. And the agony increases steadily till the curtain falls upon the last scene, where the mangled and bruised and bleeding rich man gets an opiate view of "fair play." Mrs. Keays is the author who wrote the most serious and also the most absurd novel dealing with the divorce evil which appeared last year.

Buddhist and Christian Gospels

MR. EDMUNDS, who proclaims himself to be "translator of the Dhammapada," meaning thereby that he recently added one more to the already well known translations of this popular work, and "member of the Oriental society of Philadelphia," whatever that may be, also boasts in his title that he has in the present work* been the first to compare Gospel texts with (or, as he expresses it, from) the original Pâli texts. Considering that this subject has attracted the attention of Pâli scholars for many years and that systematic expositions of parallels have been made in many books, this claim does not appear to be quite ingenuous, tho it is rather misleading than false. Perhaps pseudogeusia would best describe the character of the whole title. But to the matter itself. We have here another of the various collections of parallels which may be traced between the incidents in the life of Christ and His teachings and those in the life of Buddha and the teachings attributed to the latter. That many of these are striking and interesting has long been recognized, that among the so-called "parallels" many have only a very superficial resemblance has been repeatedly shown. To the student of either religion it has been for years a moot point whether one set of these parallels can have been due to the other, and if so, which is the original. In the first flush of ignorant surprise at discovering the existence of the parallels the same mistake was made as when a scheme of parallels was drawn up between verses of the Gospels and verses of the Hindu Bhagavad Gita, a Brahmanic (but not Buddhistic) Gospel containing many analogs to the New Testament. With that readiness to ascribe the Christian Gospels to some other source than that hitherto accepted which distinguished several German scholars half a century ago, all the parallel verses were indiscriminately referred to India and the life of Christ and all characteristic Christian doctrine were held to be only a rough imitation of

Hindu models. But with more learning came more wisdom. A large part of the "borrowed" material was shown to belong to later rather than earlier Buddhistic teaching, and the parallels were in other regards proved to rest upon the loosest possible resemblance. One of the greatest authorities on Pâli, Oldenberg, has recently stated that in his opinion there is in the light of modern scholarship no evidence for this old-fashioned claim of borrowing. Mr. Edmunds's position is formally given as being still undetermined: "No borrowing," he states, "is alleged on either side." Nevertheless this more modern view has not entirely banished what may, perhaps, be suspected to be an older predilection, for on page 28 we read: "If there is a borrowing it is on the Christian side; the *Lalita Vistara* is a book of Indian antecedents." This latter statement is true enough. The antecedents, generally speaking, are Indic, but in its present form the *Lalita Vistara* is a book subsequent to the Christian Gospels, and there is on historical grounds far more reason to suspect that the *Lalita Vistara* (where are found some of the most striking "parallels") borrowed from Christian sources than that the makers of the Gospels ever drew from this life of Buddha. The general admission, however, that "no borrowing is alleged," is an improvement on the view of Leydel and the logic of Lillie, so well characterized by Professor Aiken in his recent book on the same subject as "specious attempts to lay the Gospels under obligation to Buddhist teaching."

The Japanese editor of Mr. Edmunds's Parallels makes no claim to prove inverted history. His chief concern lies in finding the common elements in the Pâli and Chinese Scriptures, and in this lie, it must be admitted, the real originality and greater value of the whole book.

To those, however, who take less interest in the common source of Agamas and Nikayas, the collocation of Scriptural and Buddhistic ideas will remain the main theme of this volume. It gives a very complete list of parallels which have already been drawn, discussed, and reiterated many times, together with some which had far better been omitted altogether, since their inclusion betrays a lack of that discrimination which is de-

* BUDDHIST AND CHRISTIAN GOSPELS—Being Gospel Parallels from Pâli Texts. Now First Compared from the Originals by *Albert J. Edmunds*, edited with Parallels and Notes from the Chinese Buddhist Trinitaka by M. Anesaki, Professor of the Science of Religion in the Imperial University of Tokyo. Chicago: Open Court Publishing Co.

sirable in works of a historical nature. After all that has been said by competent scholars against such loose collocation, there remain even in the present collection too many badly strained parallels. Thus, at the very beginning, the general Buddhistic theory of conception as due to a spiritual "genius" united with the male and female factors is set down as a parallel to the specific case of Luke i:35, "The Holy Ghost shall come upon thee." After this we have the oft-cited parallel of Christ's fast and the fast of Buddha, as if, especially in the Orient, a fast *per se* were a parallel worth mentioning. Then, Mark x:19, a résumé of the Ten Commandments is invested with the dignity of a parallel to the ethical code common to Jew and Brahman as much as to Christian and Buddhist. Such parallels are of the universal order, to be found in many other religions, and are distinctly misleading when included in a group of strictly Christian and Buddhistic equivalents. One last parallel will show how exaggerated is the list made by Mr. Edmunds. Mark xv:22 reads: "And they bring him unto the place Golgotha, which is, being interpreted, the place of a skull." As a parallel to this, Mr. Edmunds cites from the Buddhist "Book of the Great Decease" these words: "Now at that season the twin sal-trees were all one mass of blossom with untimely blooms." The reader turns in surprise to the rubric under which these "parallels" are enlisted and finds the explanation, "Death in the open air!" Why should such parallels be limited at all? There must be many more to be ferreted out quite as striking as "death in the open air." What is lacking in Mr. Edmunds's collection is the historical tact which should deter even the most ardent collector from enlisting two such different descriptions as parallels. What is intrinsically a serious and suggestive study tends to become a ridiculous *jeu d'esprit*. The value of such investigation and discovery is about on a par with that of the German scholar who, reading to his students from an Egyptian papyrus an interesting family scene, could not refrain from commenting: "Thus, gentlemen, you see that even in ancient Egypt there were children." But it is at least a gain to have this collection with only a murmur left from the loud

outcry of "loan-Christianity" with which it was first made public. Perhaps if the book appears in another edition the author will even suppress his commendation of Arthur Lillie, one of the most superficial writers on the subject of "loans." It is not without significance that those who are foremost in their claims of borrowing on the part of Christianity are those who have least standing as scholars; while it remains true that no authoritative Sanskrit or Pâli scholar maintains the thesis of Leydel. There are indeed instances where we know that Buddhism has affected Christianity or may shrewdly suspect it. But how slight is the contact where the fact is indisputable! Buddha is now, by mistake of the early Church, a Catholic saint, and on the later Christian tradition it is possible that the diluted Buddhism known west of the Indus may here and there have left a mark, tho it would be difficult to say where; but there is absolutely no ground for believing that Christianity as a whole, or in any save a very negligible part, has been influenced by Buddhism.

Three Books on Sociology

Dr. Dealey, assisted by Dr. Ward, has compressed and rearranged the matter of Ward's formidable volume, *Pure Sociology* into a text-book for schools and colleges.¹ But it is something more than a mere condensation and summary, since new matter has been included to fill in certain gaps and to fit it for its new province. The many excursions into kindred sciences which are so frequently met in the larger work have been eliminated, and a simpler and more coherent study is the result. It is a book for which there is a need, and it is sure of a welcome.

Dr. Ross² assembles a number of his previously published essays with much new matter into a systematic inquiry as to the nature of the science of sociology. Considering the scope and task of sociology, he decides that the science must deal not merely with achievements, according to Ward, nor with the modes

¹ A TEXT BOOK OF SOCIOLOGY. By James Quale Dealey and Lester F. Ward. New York: The Macmillan Co. \$1.30.

² THE FOUNDATIONS OF SOCIOLOGY. By Edward Alsworth Ross. [The Citizen's Library.] New York: The Macmillan Co. \$1.25.

and forms of association, according to Simmel, nor with the action and interaction of group upon group, according to Gumplowicz and Bauer, but with social phenomena as a whole—of all phenomena “which we cannot explain without bringing in the action of one human being on another.” Sociology is thus the trunk of a tree, the special social sciences being its members. It is, however, not an oak, but a banyan, and all of its limbs find root with it in the common soil of human nature.

In an illuminating chapter on “Social Laws,” the author makes short shrift of many of the sweeping generalizations which have been offered from time to time by sociologists, particularly Spencer. While many of these generalizations are valid as regards a particular society or a particular time, they fail dismally as interpretations of universal social phenomena. Spencer’s “laws” of integration, of differentiation and of equilibration are shown clearly enough to be founded on partial and imperfect observances.

The chapter on the “Value Rank of the American People” was first published in *THE INDEPENDENT*, and so does not need discussion here. “Recent Tendencies in Sociology” form the subject of a very interesting survey and striking criticism of the speculations of sociologists following Spencer. Le Bon, with his “crowd psychology,” is admitted to have made a valuable contribution to the science, tho he erred in exalting the transitory mood of the mob into an enduring social force. Tarde, in differing from Spencer, and holding that it is the heterogeneous that is unstable, and that socializing processes on the whole make for similarity, takes firm ground; while Gumplowicz, with his “consciousness of resemblance,” and Giddings, with his “consciousness of kind,” also add to our recognition of the factors of social grouping. Something more is needed, however, to explain the oppositions as well as the affiliations of men. A term wider than “consciousness of kind” is needed to account for repulsion as well as attraction in the so-

cializing process. Loria is somewhat roughly handled for basing his work on class selfishness and class struggles, while Giddings is commended because “at a time when his brethren are precipitately striking their colors to the economic materialists, he sturdily flies the flag of intellectualism.” In many places thruout this book the author insists upon great discounts from the too sweeping economic interpretation of history and of social processes.

In minimizing the economic factor, however, he is not always fortunate. Most of the instances he uses as illustrations of a non-economic motive in association are resolvable back to an economic basis. It is the secondary, rather than the primary, influence in these cases which he has observed, and which has led him to his conclusions. Tho the work as a whole is brilliant and captivating, it is not wholly free from capriciousness.

Dr. Blackmar³ keeps closer to earth, and his matter is descriptive and informative rather than speculative. With wide knowledge, and with a strong sense of proportion, he covers the whole field of the science in brief and pithy paragraphs. As a book for providing students with a first acquaintance with the fundamental facts and principles of sociology, logically arranged and on the whole simply told, it is worthy of very warm commendation.

Sir Raoul. By James M. Ludlow. New York: Fleming H. Revell Co. \$1.50.

“The Captain of the Janizaries” has outlived many hundreds of historical novels and *Sir Raoul* should prove equally successful and permanent. The historical setting is the Fifth Crusade, which was originally organized to sweep the Moslems from the Holy Lands, but ended by sacking the Christian city of Constantinople. The author has written comparatively few books, for on what he has written much time has been spent. The historical facts in the present book are buoyed up by a very readable love story. The hero is deceived by a dissimulation on the part of his lady-love. This leads him to deeds that deprive him of knighthood, and force him to seek shelter in a robber band. The writer has

³ *ELEMENTS OF SOCIOLOGY.* By Frank W. Blackmar. [The Citizen’s Library.] New York: The Macmillan Co. \$1.25.

skillfully given Sir Raoul a chance to redeem himself in a dramatic scene in which he rescues Renée, the heroine, from drowning. Sir Raoul wins a great honor by his prowess in the Crusades, and the pair, after many adventures, settle at last in their Saxon home. Dr. Ludlow has Tintoretto for his illustrator. The picture representing the second attack on Constantinople, which we reproduce, is quite appropriate, but to use a section of Tintoretto's Siege of Zara to illustrate a very different scene 142 years earlier and to say it depicts "Ludwig, Bacheux and I, abreast," is an act of dubious propriety.

American Book Plates. A Guide to Their Study, with Examples. By Charles Dexter Allen. New York: The Macmillan Co. Price, \$2.50.

The much heralded new edition of Allen's *American Book Plates* is disappointing. There was a welcome ready at the hands of collectors of books plates for a revision of the original work of Allen, but as published it is not as good as the original edition, since this volume lacks the beautiful copper plates that embellished the first edition. The pages have been printed from the old electrotrope, the same pagination and all,

From Ludlow's *Sir Raoul*. Copyright, 1905, by Fleming H. Revell Co.

line for line, illustration for illustration, and error for error. So far as the book indicates, Mr. Allen has learned absolutely nothing about book plates since 1894. There is no indication that he even knows of the Bowdoin book, the Dixon book on American plates, nor of the admirable Leiningen-Westerburg book on German book plates. Mr. Allen does not add to his bibliography. Does he intend to imply that there has been nothing written on *ex libris* themes since 1894? It is a great mistake to refer to the present book as a new edition; it is nothing of the sort, but merely a reprint which adds nothing whatever to the sum of that which was already known.

Explorations in Turkestan. With an account of the Basin of Eastern Persia and Sistan Expedition of 1903 under the direction of Raphael Pumpelly. 4to pp. xii, 324. Carnegie Institution, Washington.

This is Publication No. 26 of the Carnegie Institution. It shows the style of the work of this new and great Institution, for which Mr. Carnegie gave \$10,000,000, and the object of which is to aid investigation that costs money, and to secure publication of such important studies as are not of pecuniary value to the author, and might not otherwise easily find a publisher. It is a full quarto in good readable print, and on good paper, the lines running the full width of the page, and illustrated with 174 half-tones and maps and geological sections.

The preliminary expedition, of which an account is given in this volume, was conducted by Prof. Raphael Pumpelly, of Harvard University, accompanied by Prof. William M. Davis, of the same institution; Mr. Raphael W. Pumpelly, and Mr. Ellsworth Huntington, a research assistant of the Carnegie Institution. Their purpose was to open very important problems as to the early history of the human race. Many hold that the earliest traces of civilization are to be found in the central trans-Caspian region, about Samarkand and Merv. This is an extraordinary region in its physical characteristics. It has no water outlet to the ocean. It is supposed that at an early period the Caspian and the Aral Seas were connected with the Black Sea. Were the Dardanelles closed

the Black Sea would be like the Aral and Caspian, shut off from the ocean. For thousands of years there has been a gradual desiccation of an enormous region, extending from the Caspian to Manchuria, watered only by the snows of the surrounding mountains. The seas have gradually shrunk in size, the sands have invaded the cultivable land, and rivers have been lost in the sands. Over great regions there are the tumuli, which show the earlier existence of lost cities, while the lack of rain preserves the objects within them from destruction. The problems to be investigated have to do with the relation of human remains to the geological succession of glaciations and upheavals, as shown by beaches, moraines and other indications of surface-geology, as they are related to the position of the tumuli.

The present volume is preliminary and mostly geological; but the human remains, which well belong to other volumes, have been kept closely in mind. The opening of the mounds is likely to carry us back to a period back of all recorded history. By digging in the mound of Susa, in Persia, de Morgan found that forty feet of depth carried him back six thousand years, and he asks what is the age of the sixty feet of deposit below. The trans-Caspian region was overrun by the earliest Aryan and Turanian peoples; and the successive periods of desiccation drove out populations in every direction to overrun more fertile regions to the south and west. Many hold that here is to be found the key to the chief problems of anthropology.

Of the "artifacts" (objects of human manufacture) found in the mounds, only very superficially examined in this trip of 1903, but a very few are here figured—only three bits of rude figured pottery, a pierced stone maul, and one large stone head. The latter stands exposed on a stele in the plain near the Lake Issik Kul, and is extremely interesting. It looks extraordinarily like the heads of statues of the Chaldean King, Gudea, who lived 2,800 years B. C., with its short round head, all shaved, and its prominent eyebrows. We are very glad that the Carnegie Institution has found so enthusiastic and competent a man as Professor Pumpelly to carry on this explora-

tion, and from the brief reports already received, we expect very valuable results as to the beginnings of human civilization and the origin of domesticated animals from the further explorations.

An Eye For An Eye. By Clarence S. Darrow. New York: Fox, Duffield & Co. \$1.50.

Mr. Darrow's new book is one that will hold the reader's interest from cover to cover. The author is a prominent Chicago lawyer, who has already written some successful shorter stories. The plot of *An Eye For An Eye* is made doubly interesting by the fact that it is true. The author has given new names and told in his own way the story of the famous Chris Mery case, in which the accused had killed his wife with a poker. For the first few pages the reader's heart is hardened against a man who could do so atrocious a deed, whatever the circumstances might be. Gradually, however, as the murderer tells his story to his most intimate friend on the eve of the hanging, the reader's sympathy is aroused, and in the last few pages cries out against the injustice of the sentence. The story is one of life among the poor, where the all absorbing question is mere existence. The condemned man has had difficulties and discouragements to meet that would take the heart out of the strongest man. The final deed is done in a moment of exasperation, and is as quickly regretted. It is the unfailing optimism of the prisoner and his ability to discover a silver lining in the blackest of clouds that wins our sympathy.

Andrew Marvell. By Augustus Birrell. The English Men of Letters Series. New York: The Macmillan Company. 241 pages. 75 cents.

Had Mr. Augustine Birrell's study of Andrew Marvell appeared elsewhere than in the *English Men of Letters Series* it would surely have been entitled *Andrew Marvell and His Times*, for there is much more in these two hundred and forty pages of the period in which Andrew Marvell lived than there is of his poetry and prose, and there is but little indeed of the personality of Hull's most famous Member of Parliament. Mr. Birrell is not in the least at fault for the proportion of his book. No non-official

Member of the Restoration Parliaments is better known than Marvell. His name comes to mind whenever the Pensioner Parliament is mentioned or when there is any reference to the Parliamentary and municipal history of Hull. The story of his incorruptibility is known wherever the history of the British House of Commons is read. Yet little is known of Marvell's life in London in the years when he was a servant of the Commonwealth as Milton's assistant when the author of "Paradise Lost" was Latin Secretary; or of his life during the eighteen years when he was one of the representatives of Hull in the House of Commons.

There is scarcely a mention of Marvell in contemporary letters or diaries—none that has been of much service to Mr. Birrell; and altho there are numerous proofs that Mr. Birrell's research has been most insistent, he has not been able to trace where Marvell lived in London, and is not absolutely certain that Marvell was ever married. Mary Marvell, Andrew Marvell's widow, was cited in a law suit after Marvell's death in 1678, and when Marvell's poems were published in 1681, there was included in the volume published by Robert Boulter a certificate from Mary Marvell that all the poems were the work of Marvell. This is all that is known of Marvell's wife; but Mr. Birrell regards it as sufficient to put an end to the story of Capt. Edward Thompson, who edited and published Marvell's works in 1776, that Mary Marvell was a cheat and no more than the lodging house keeper where Marvell had last lived.

Marvell was migratory during his years in London. Thru the greater part of his life he was, to use Mr. Birrell's phrase, "an elusive and unrecorded character." "We know all about him, but very little of him," elsewhere writes Mr. Birrell. But what there is to be known about his early life—his school days in Hull, his career at Trinity College, Cambridge, and his years as tutor in General Fairfax's family at Nunapleton, Yorkshire—is remarkably well told by Mr. Birrell. Nor in the absence of details as to Marvell's life as a Member of Parliament has Mr. Birrell had to resort to padding. Marvell's poems, and particularly those which are

best known from their place in the anthologies, stand by themselves and need no background. A background is, however, eminently necessary to an understanding of Marvell's satires, and his work as a political and ecclesiastical controversialist, also of his place in the Pensioner Parliament; and the background that Mr. Birrell has furnished will by reason of its freshness and new light be read with pleasure even by those who are deeply versed in the memoirs and histories of the Restoration. The sketch of the development of Nonconformity is particularly good; while Mr. Birrell's sympathetic statement of what Nonconformity stood for in social life in the years that followed the Restoration must be pleasant reading for Free Churchmen in England today. There was no generally available biography of Marvell. A biography was much needed; and Mr. Birrell's monograph on the Garden Poet and the incorruptible Parliamentarian will meet the needs of both those who are drawn to Marvell as one of the earliest of nature poets, and those who admire Marvell for the place he won in the cult of Liberty in the middle of the seventeenth century.

The Religious Controversies of Scotland.

By Rev. Henry F. Henderson, M.A. New York: Imported by Charles Scribner's Sons. \$1.75 net.

For two hundred years Scotland has been the home of religious controversy *par excellence*, and the Wee Frees of these latter days have held the land of heather to her reputation. Scotchmen are a bit fond of contention any way, and they take their religion very hard, and will have every point of doctrine argued out before the entire congregation, and decision rendered by Church courts composed one-half of laymen. No State Church is so democratic as that of Scotland, and in none has theological debate been more habitual, more strenuous and more picturesque. Mr. Henderson tells the story of the doctrinal strifes of the land of the Presbyterians, from the "Marrow Men" and Simson the Arminian, to Robertson Smith, Marcus Dods and Alexander Balbain Bruce, with fair portraiture of the virtues and short-comings of each heretic and reasonable jus-

tice to their accusers. He has kept his material in good proportion, giving especial prominence to the controversies over Hume and Edward Irving, in which instances Scottish religious controversy rose to a matter of universal interest. One is sometimes tempted to humor in the fascinating story, yet these tireless battlers have fought out many a truth before their Presbyteries, and have added not a little to the freedom of faith. Mr. Henderson has produced a reliable and succinct account of religious affairs hitherto described only singly and episodically in general works.

The Christian Doctrine of the Lord's Supper. By Rev. Robert M. Adamson, M.A. New York: Imported by Charles Scribner's Sons. \$1.50.

It is sorrowful truth that the Christian feast of brotherhood and fellowship has been the point about which masters of doctrine most have quarreled, and this is the fact which inspired in the pious Hooker the wish that "men would more give themselves to meditate with silence what we have in this sacrament, and less to dispute the manner how." Nevertheless, behind these disputes have been real apprehensions of essential spiritual truth, and the history of the various phases of doctrine in regard to the Lord's Supper, as well told by Mr. Adamson, is not without practical interest. The author presents a brief outline of all the principal views, with full references to the literature of the subject, and his own constructive statement shows him to be a fair-minded, scholarly, truly religious man, of evangelical antecedents and sympathy. Particularly valuable is the chapter on "The Lord's Supper in Devotional Literature," into which much important material has been gathered.

Life More Abundant. By Henry Wood. Boston: Lothrop, Lee & Shepard Co. \$1.20 net.

The purpose of Mr. Wood in this volume is to explain and justify the methods and results of modern Biblical Criticism, and to declare the unimpaired worth of the Holy Scriptures, even tho critical results be admitted to the full. In fact, however, the author does not show accurate understanding of histori-

cal criticism, which is not at all a process of "reading between the lines," and drawing out all manner of spiritual truth by means of symbolism and allegory. No higher critic finds in the first chapter of Genesis, for example, the excellent and elevated truths which Mr. Wood discovers there. It is inexcusable error to write that the field of lower criticism "concerns the dates, authenticity, and genuineness of the subject matter, and accuracy of translation and rendering." (p. 137.) That is precisely what lower or textual criticism is not, and a fair statement of what higher criticism is. One should, therefore, beware of using Mr. Wood as an authoritative exponent of modern Biblical science.

The Christian Faith. Personally given in a System of Doctrine. By Olin Alfred Curtis. New York: Eaton & Mains. \$2.50 net.

Professor Curtis holds the chair of Systematic Theology in the Drew Theological Seminary, and his treatise presents orthodox Methodist opinion on all the principal subjects of Christian doctrine. He is persuaded that he has caught an "important vision of the Christian Faith as an organic whole of doctrine," but the defects of his vision of some of the parts make one dubious both of the correctness and importance of the vision of the whole. For example, we regard it as exactly perverse to "start with the pre-existent Son of God," in endeavoring to understand Christ Jesus. It is certainly beyond scripture to assert that Jesus in His earthly life was omniscient. On subjects where the author expounds distinctive Methodist doctrine, such as that of Personal Holiness, he is more satisfactory.

Israel's Historical and Biographical Narratives, from the Establishment of the Hebrew Kingdom to the End of the Maccabæan Struggle. By Charles Foster Kent, Ph.D. New York: Charles Scribner's Sons. \$2 75.

This is the second volume of the Students' Old Testament, of which the first volume was reviewed in these columns a year ago. Besides the chief historical books, Samuel, Kings and Chronicles, the author has included here Ezra and Nehemiah, portions of Isaiah and Jeremiah, Esther, and the books of Maccabees.

We have, therefore, the history of Israel from Samuel and Saul to the Maccabees, as told by the Hebrew writers themselves. The entire material is newly translated, with important corrections and additions to the common biblical text made from the Greek versions. It is arranged chronologically, in paragraphs, with appropriate headings and indications of the documentary source, and where two or more documents, as, for example, Kings and Chronicles, describe the same event, they are printed in parallel columns. Brief notes on difficult or obscure passages furnish practically a commentary, and, with the excellent introductions to the several books and collections of narratives, all that is really necessary to the intelligent reading of these important monuments of the Hebrew spirit. As a practical manual for the study of the Old Testament and of Hebrew history this work is of great value, and it is difficult to see how more of the results of modern biblical science in regard to the historical portions of the Old Testament and the information necessary to enable one to test these results for himself, could be presented more clearly, more compactly and at less expense than in this work of Professor Kent. It is a valuable reference book for the library, no special technical knowledge being necessary for its use.

Outlines of Christian Apologetics. By Hermann Schultz, Ph.D. Authorized translation by Alfred Bull Nichols. New York: The Macmillan Co. \$1.75.

Professor Schultz, who died in 1903, was one of the ablest and most highly regarded of the German Protestant teachers of systematic theology. He lectured for over twenty-five years at Göttingen, and was a favorite with several generations of American students, maintaining his freshness and originality to the last. In the manner of many of the older German professors he dictated "paragraphs," brief summaries of his thought, to be explained more fully in his lectures. These *Leitsätze* of his courses in Apologetics were published as a *Grundriss*, or Outlines, in 1894, and considerably expanded in the second edition of 1902. The enlarged work has

been recognized, in Germany as an important contribution to a neglected division of theological science, and the excellent translation of Professor Nichols will help to supply the want of good English treatises defending the Christian view of the world against the objections commonly raised against it. The point of view is pronouncedly and bravely modern. No attempt is made to maintain an outworn doctrine of inspiration nor an impossible view of the miraculous. The limitations of apologetics, the tasks it cannot do, are admitted freely. The book is written for men of culture, men of scientific training. It should prove widely helpful, for it cannot be doubted that there are very many who have been forced to give up their former conceptions of the supernatural, of revelation and miracle, of the personality of God, who yet feel the reality of religious faith, and to such Professor Schultz's discussions of these fundamental religious conceptions should prove enlightening.

Thomas Harrison, Regicide and Major-General. By C. H. Simpkinson. New York: E. P. Dutton & Co. \$1.50.

Thomas Harrison is one of the most interesting of all the strenuous zealots who fought and labored in Oliver Cromwell's day. The variety of his experiences, and the forcefulness of his strange and sometimes fantastic character make his life and work an entertaining theme. He was in the battles of Marston Moor, Naseby and Worcester, to say nothing of minor conflicts; during Cromwell's absence in Scotland he was military master of all England; leader in the Fifth Monarchy party and violent in his opposition to Cromwell's arbitrary rule, he was imprisoned by the very men with whom he fought, and at the Restoration of the Stuarts he suffered death on the scaffold rather than seek safety in flight. In Mr. Simpkinson's biography, this unique character, both attractive and repellent, receives a treatment that is at the same time scholarly and sympathetic. Harrison's conceit, his fanciful theories on saintly government, and his extravagant claims to special enlightenment from on high are not allowed to obscure the larger features of the man and his labors.

The story of his share in the armed conflict, in the death of the king, in the attempted settlement under the Commonwealth and in the work of the Fifth Monarchy party is told with skill and good judgment. The book is written in a direct and simple style, which makes it admirably adapted to the public for which it is intended. The value of the work is enhanced by an appendix containing Major-General Harrison's letters.

Complete Index to the Expositor's Bible. By S. G. Ayres, B.D. New York: A. C. Armstrong & Son. \$1.00.

The first volumes of the Expositor's Bible appeared eighteen years ago, and it is seven years since the last of the series was issued. An index volume at this date is, therefore, somewhat belated. Nevertheless these commentaries are used widely, and are likely to be popular for some years to come and the full and painstaking index of Dr. Ayres will be of good service in either public or private libraries where anything like a complete set is to be found. The introductions to the Old and New Testament sections, by Professors Bennett and Adeney respectively, set forth recent opinions in Biblical criticism. It is doubtful if prevailing scholarly opinion is so favorable to conservative views as these introductions and the preface of Dr. Robertson Nicoll would incline one to think. The best work in the Expositor's Bible is that of Dr. George Adam Smith, on Isaiah and the Minor Prophets, if, indeed, his writings in this series are not the best modern expository works in the English language. Unfortunately the volumes of the Expositor's Bible are quite uneven, and some of them are very little enlightening or inspiring.

Catherine de Medici and the French Reformation. By Edith Sichel. New York: E. P. Dutton & Co. \$3.00.

The leisurely reader, already tolerably familiar with French history in the sixteenth century, will find much that is entertaining in Edith Sichel's studies in that period of civil wars and political intrigue. The essays show considerable painstaking research into the letters and memoirs of the time and give lively

glimpses of the leading characters. This intimate knowledge of contemporary opinion and comment lends no little charm to the chapters on Catherine de Medici, Diana of Poitiers, the Princess de Condé, Jeanne de Navarre and the court life under Henry II and Francis II. The occasional attempts at historical philosophy and the interpretations of large historical movements, however, are not so successful. For example, the author explains the failure of Protestantism in France and Italy by the theory that the people of those countries were "more or less materialist by nature." This is the old assumption of the superior spirituality of Teutonic people—an assumption gratifying to vanity but now given by scholars a secondary place in favor of the political and economic interpretation of the Protestant revolt.

The Children of Good Fortune: An Essay on Morals. By C. Hanford Henderson. Boston: Houghton, Mifflin & Co. \$1.30 net.

What is conduct, and what makes it right or wrong, are very old questions. The answers of Dr. Henderson's essay in morals, that conduct includes all human activity and is good when it conduces to the highest human welfare and bad when it leads to something less, are also old answers. They are practically the answers of Aristotle, and Dr. Henderson's ethics are predominantly, not always consistently, Nicomachean. His doctrine is that self-culture to the highest degree is the highest good. The view of life that its supreme duty is the attainment of the greatest possible efficiency lends itself to stimulating discourse, in which Dr. Henderson's pages abound, but as an ethical system it leaves much to be desired. It is a message for the children of good fortune only; it has nothing for the slave, the cripple, or the incompetent. Dulness with Dr. Henderson is a sin. This is not Christian ethics, and we find the author saying that self-sacrifice is unsound morally. Neither is it Hebrew ethics, and many will prefer Amos and Kant, the modern Amos, as interpreters of that which speaks to them in duty who will, nevertheless, find in this essay much that is profitable for instruction in the attaining of good fortune.

Pebbles

NUPTIALS—A wedding which occupies more than a column on the society page.—*Cornell Widow*.

....*He*: "You are the breath of life to me."
She: "Well, suppose you hold your breath awhile."—*Sphinx*.

....*The Clergyman*: "My little man, do you go to church every Sunday?"
Bobbie: "Yes, sir. I'm not old enough yet to stay away."—*Life*.

....A few years ago Henry James reviewed a new novel by Gertrude Atherton. After reading the review Mrs. Atherton wrote to Mr. James as follows:

"DEAR MR. JAMES: I have read with much pleasure your review of my novel. Will you kindly let me know whether you liked it or not?"

Sincerely,

"GERTRUDE ATHERTON."
—*Everybody's Magazine*.

....We spoke to Mr. Chase in his chair, in front of his livery stable, the 17th—on the morning of the 18th he was found dead in bed. He was one of the oldest residents of Englewood, was a good citizen, had overcome much fastened upon him by environment, was entitled to great credit. His old neighbors will miss George from his accustomed place.—*The Daily Rambler, Englewood, Ill.*

....There are n derelict steamers afloat in a circular sea of radius r . The water in the sea is moving northward in a current whose velocity varies inversely as the perpendicular distance from the north-south tangent to the sea on its west beach. Find the probability that a ship crossing the sea on a random diameter will encounter e derelicts during the voyage.—*The American Mathematical Monthly*.

...."The evening wore on," continued the man who was telling the story.

"Excuse me," interrupted the would-be wit; but can you tell us what the evening wore on that occasion?"

"I don't know that it is important," replied the story-teller. "But if you must know, I believe it was the close of a Summer day."—*Cincinnati Commercial Tribune*.

....The friendship existing between Father Kelly and Rabbi Levi is proof against differences in race and religion. Each distinguished for his learning, his eloquence and his wit; and they delight in chaffing each other. They were seated opposite each other at a banquet where some delicious roast ham was served and Father Kelly made comments upon its flavor. Presently he leaned forward and in a voice that carried far, he addressed his friend:

"Rabbi Levi, when are you going to become liberal enough to eat ham?"

"At your wedding, Father Kelly," retorted the rabbi.—*Sacred Heart Review*.

Editorials

Free Russia

FREE Russia it is, and free Russia it must and will be, not by the grace of Czar, who has not will or wit enough to found the grace upon; nor by the grace of Witte, who has wit and will enough, and who yields with becoming grace to the superior forces which underlie court and army; but by the volcanic subterranean eruption of unsuspected forces that shake thrones and dynasties, formless, but mighty. It is the people, the disregarded common people, the *corpus vile* of the State, the hands that toil, hitherto "food for powder," it is the vulgar, grimy people that shovel coal and tend looms, the boys and girls at school, who have snatched the pen and written the Constitution for Russia, and not the feeble fingers of Nicholas, nor even the resolute brain of Witte.

Do we recall the time when, years ago, the youth Nicholas was visiting Japan, and a Japanese fanatic attacked him with a sword, and he had not the strength and courage to defend himself, and his stout cousin of Greece grappled with the madman and saved the life of the future Czar? There was no madness in the Samurai swords that were waiting to meet his armies later in the onset of war, only cool, merciless decision. And when war came, feeble as their Czar were the armies he sent to the field, and the fleets that were swept from the seas. Well would it have been for his fame if the madman's hand had not failed.

Perhaps it is too late now for Witte's Constitution to save the throne. It is the only chance, but the revolution may reject Czar and Premier and Constitution together, and give us a carnival of blood, and a rule, later, of the people. Much as we, who love democracy, might like the achievement, this may not yet be desirable. Rulers must be fit to rule. Russia has had her experience of a ruler who could not rule. Probably it is best that, for the present, Witte, who is a strong, brave man, fit to be the savior and ruler of his people, should dominate the situation and rule, under a Constitution, Czar and people.

For thus far there has emerged no other man in all Russia fit to rule. For a little instant Father Gapon came forward to lead a forlorn hope, but he was a little man, and was soon snuffed out. Not one other man has appeared to lead the people on Russian soil. There were such men ready at the time of the French Revolution; there were such men in Hungary when almost she achieved her independence; but we hear only of juntas for Russia, hid away from all danger in Geneva or London, who send from safe distance inconspicuous men to fling a bomb or scatter leaflets. There have been students and professors and lawyers enough, and even here and there a prince, who could write resolutions and vote their adoption, but nobody who could turn a *zemstvo* into a regiment. What is needed in Russia is not a Tolstoy to talk, but a man who can organize, lead and fight. It is a poor people that cannot raise such men. They talk of a republic in Russia, and they stir up a hundred disturbances in as many towns, but it all amounts to nothing. When the common sailors in the Black Sea mutinied there was no leader to profit by it. Not a general of the army has bid his soldiers follow him. So Trepoff holds the situation, and there is no need for the Czar to sail for Denmark; and Witte's Constitution, with the Czar held down on a firmer seat, but with the people free to hold him there, is the best solution that can be seen. Really Russia does not want a republic, is hardly fit for it.

And it looks as if no republic would be allowed, even if the people could find a leader. Over the border, sword in hand, fist mailed, stands William. He wants no republics near his throne. He wanted none in Norway. It is believed that he has offered the use of his army to protect the Czar if he is threatened by revolution. Is that the meaning of his late truculent address to his soldiers, or is he threatening France and England? A very different man is he from Nicholas, quite competent to overrule him, and he would hardly shrink from

the terrible task, if occasion there were, to follow Napoleon to Moscow. But that might revolutionize Europe.

He will not be asked. The submission of the Czar is complete. The proclamation is brief, direct and adequate. It promises everything short of a republic. It gives full freedom of the press and the person, and it extends the suffrage for members of the Duma, and it makes the consent of the Duma necessary to enact any law. It is all that could now be asked, for the power will be with the people. Witte is the savior of the nation as well as of the throne. He knows what all Europe has known but Russia, that the people must rule themselves. He has seen the success of popular government in Germany, in France, in England, in the United States. He has seen how a free people can manage their own affairs here in this country, and very fitting and gracious is it that his first word is an appeal to the United States to give sympathy to him and his nation. To no other country has America been less sympathetic than to the tyranny that sent exiles of liberty to Siberia. To no other country will our sympathy be warmer and for none will our hopes be more fervent than for free Russia, land of noble men, land of immense possibilities, to be the most magnificent nation on earth, stretching from the Western to the Eastern ocean, even as we stretch from the Eastern to the Western, but across a broader continent, and endowed with greater possibilities to affect a vaster population of its own, and the uncounted millions of its Southern neighbors. Prophecy cannot anticipate the magnificent future of free Russia, or of the fame of her one great man—Witte.

The Situation in Philadelphia

As the election in Philadelphia draws nigh, fresh disclosures point not only to the wickedness of the ring that has ruled and robbed the city, but also to the intimate association of that ring with those who have controlled the government of the State. The report of Major Gillette and Mr. MacLennan, expert engineers (the first of whom uncovered the frauds committed by Capt. Oberlin M. Carter at

Savannah) shows how great have been the ring's profits upon the filtration and boulevard contracts for work not yet finished. To Boss Durham and his partners the city has paid \$18,750,000 for work of poor quality, altho good work on the same projects could have been done for \$12,400,000, this sum including a profit of 20 per cent. for the contractor. This is not surprising, however, for previous investigation, in connection with the indictment of Engineer Hill, had shown how the ring controlled the bidding, and how frauds of many kinds had been committed.

It is entirely reasonable for the investigators to hold the ring morally responsible for the deaths of 1,200 citizens from typhoid fever, owing to recent fraudulent delays, but there should be added even a greater number of deaths from that disease, due to the inhuman conduct of Boss Durham six years ago, when, as he boastfully said, he prevented for one year a beginning of the work of purifying the water supply, in order that power to award contracts might be exercised by men of his own choice. Two or three thousand graves would be a heavy load on his conscience if such a thing were among his possessions.

Durham held a State office. He was Superintendent of Insurance, and enjoyed the confidence of Governor Pennypacker, who was brought to Philadelphia two weeks ago to abuse Mayor Weaver at one of the ring's political meetings, the purpose of which was not only to win support for the ring's city ticket, but also to promote the election of J. Lee Plummer to the office of State Treasurer. In the Legislature, Mr. Plummer voted for the Ripper bills, which were designed to deprive Mayor Weaver of his power over heads of departments whom the ring was accustomed to use, and also for bills designed to impede the prosecution of the keepers of vile dens in which vice was protected in return for the manufacture of fraudulent votes, of which the ring had use for about 80,000.

Those who are familiar with the history of Pennsylvania State Bosses, and especially with the career and financial operations of the late Senator Quay, know how useful for their purposes the State Treasury has been, with its \$12,-

000,000 apportioned among favored and friendly banks. It was unfortunate for Mr. Plummer and his supporters that one of these banks should be wrecked in the closing weeks of his campaign, and that the suicide of its cashier should be followed by discoveries which make a new and highly interesting chapter in the history of that Treasury "plum tree" which Pennsylvania politicians have been accustomed to "shake."

It is a small bank in Allegheny, to which the Treasury had granted a deposit of \$1,000,000. One Andrews, formerly an assistant and pupil of Senator Quay, obtained from this bank funds for financing a short railway in New Mexico. Andrews is the Territory's delegate at Washington, and he hoped to be elected Senator if New Mexico should become a State. It will be remembered that Mr. Quay's strenuous efforts in behalf of statehood for this Territory were ascribed by some to his friendship for Andrews. But now the bank is ruined, the cashier is dead by his own hand, securities are missing, politicians' notes have been hastily covered up, and the Receiver is suing Andrews for a considerable sum. The relation of the bank to the State Treasury is plain enough; its relation to influential politicians, even some of those in Philadelphia, will probably be established. Those who stand by Mayor Weaver and expect to defeat the ring's city ticket, hope also that Plummer will be defeated thruout the State and that the Treasury will be placed in good hands.

It is unfortunate for the cause of reform that the term of Philadelphia's District Attorney does not expire this year. The present District Attorney's affiliations and attitude have made it difficult for the Mayor to proceed promptly and effectively in the courts against the leaders of the ring. He admitted some time ago that for two years he had been counsel for James P. McNichol and also for the contracting firm in which an interest amounting to eleven-twelfths is held jointly by McNichol and Boss Durham. This is the firm to which nearly all the filtration and boulevard contracts were awarded. He was preparing to defend McNichol in any suits for damages which the Mayor might bring against him. He

is associated in business with the uncle of another contractor who was recently arrested, and his family has been largely interested in real estate benefited by one of the new boulevards whose course was curiously shifted about in order that it might avoid the property of enemies and enhance the value of the property of friends. Therefore it is not surprising that he has persistently declined to initiate proceedings against persons whom the Mayor desires to prosecute in behalf of the city, and that he is regarded as an obstruction in the pathway of reform.

Voters in New York who are hesitating about giving their support to Mr. Jerome should learn from this how important it is that the District Attorney in a great city should not be the creature and servant of a Boss or of an organization which corrupt politicians control.

It is something more formidable than the opposition of a District Attorney, however, that the reformers will strive, successfully, we think, to overcome at the approaching municipal election. It is the deep-seated partisan prejudice of a great number of citizens who are Republicans on national issues and who dislike to turn against the local Republican organization, altho it is dominated by thieves masquerading as Republicans, as Secretary Root said.

The opposition of a financial and professional element affiliated with the United Gas Improvement Company is something, of course, and it must be reckoned with. The labor unions that have formally given their support to the ring ticket must be taken into account. But the attitude of these elements can safely be disregarded if the great mass of average Republican citizens are convinced that thieves who call themselves Republicans ought not to have their votes. In the continuous appeal of the Philadelphia newspapers to citizens of this class there sometimes appear to be indications of doubt as to the conversion of a sufficient number of these partisans to insure victory, even after the elimination of 50,000 fraudulent votes. We hope there is no warrant for such doubt, and that a great majority against the thieves will bear witness to the intelligence and honesty of the people of Philadelphia.

An Irish Bull in the China Shop

MR. G. BERNARD SHAW is a professional shocker. He busies himself with shaking up the social kaleidoscope in the hope that the pieces will fall into a more harmonious pattern. When he exported himself from Dublin to London some twenty-nine years ago he proclaimed himself "an atheist, an anarchist and a vegetarian," arranging these titles, as he explained, in climacteric order, for his attack upon the roast beef of Old England aroused more wrath than his attacks upon church and society. To be rich, popular and respected was, in his opinion, the depth of degradation.

Now, by the irony of fate all these are being thrust upon him. Thru a *mésalliance* with an heiress, he has become rich. Thru the caprice of American theatre-goers he has become popular. These things are, in a way, unavoidable, but with a consistency which nothing in his books would have led us to suspect, he is determined to prevent himself from being respected. As a fanatic, with a following, Shaw would be a dangerous man, but he has too many different ideas to be a fanatic and he makes so many turns that the most agile of disciples could not follow him. The skill he shows in shaking off his followers would make him an ideal hired girl. The cult of "Candida" was barely established in New York when he overthrew it with a parody upon his own play. He manifests the same contempt for a patronizing public that Diogenes did to Alexander.

We have become accustomed to seeing iconoclasts turned into conservatives by being feted, but that is too conventional a rôle for Shaw to play. He is not one of those writers who use their eccentricity as a jimmy for breaking into fashionable society, and then fall asleep in an easy chair. No, he must live up to his reputation as an Ishmaelite. Now that he is no longer a novelty he must continually increase the voltage of his wit in order to shock the public.

His recent outbursts of bad manners show that he is getting hard pushed. He was reported not long since of having said in an address that he could write a better play than Shakespeare. After a scandalized public had discussed this

long enough, he denied the statement in *The Times*, and complained of having been incorrectly reported. What he had said was, not that he could write a better play than Shakespeare, but that he had written many better ones.

And amid the general chorus of eulogy following the death of Sir Henry Irving, he struck a discordant and therefore conspicuous note of harsh criticism, accusing him, quite falsely as it appears, with having solicited knighthood. Now, as Americans, of course, we sympathize in a measure with Mr. Shaw's displeasure at Irving's conduct. He should have shown himself noble enough to disdain nobility. He should have taken Krupp and Gladstone as examples rather than Thompson and Tennyson. As a man becomes great titles drop from him like useless trappings. If he becomes great enough even the "Mr." is left off. Why then should he assume the "Sir"? When a man of the people, who has won his way to the front rank by his own merit, thus acquires a tainted title, he becomes confounded with degenerate scions of noble sires. As Mr. Shaw says, it is inevitable that butlers should be men of better quality than barons, "because the English are extremely particular in selecting their butlers, while they do not select their barons at all, taking them as the accident of birth sends them."

But we are willing to believe, as we are assured by his friends, that Henry Irving did not seek the title for personal gratification, but reluctantly accepted it as a sign of the removal of the stigma which has always in England attached to his profession. But it is a principle of the Shavian philosophy never to credit a man with a good intention when his acts are susceptible of a bad interpretation.

However, if there is any good interpretation that can be placed upon Mr. Shaw's recent tirade against "Comstockery" we fail to see it. It is all the more ludicrous because the supposed action which called it forth, the removal of "Man and Superman" from the open shelves of the New York libraries, was not taken on the ground of obscenity, but of its destructive sociological doctrines. Apparently the mine had been

laid by Mr. Shaw and his stage manager, Mr. Arnold Daly, when the latter was in England last summer, but the mine was exploded prematurely by a misunderstood signal by cable and so partially failed of its purpose, that of getting free advertising for the launching of "Mrs. Warren's Profession," Shaw's most unpleasant play. When "John Bull's Other Island" proved a financial failure, Mr. Daly hurried forward this play to recoup his losses, and provoked newspaper discussion of its morality. Its suppression in New Haven last Saturday, whether designed or not, also had the same effect of giving to the play a *succès de scandale*. It is a shame that Mr. Daly, who has done so much, both as actor and stage manager, to promote the intellectual drama, should stoop to such low commercial methods to boom a play.

As for the play itself we do not dispute the defence that it is not so bad as many others. Women of Mrs. Warren's profession, which as Kipling says is the most ancient profession in the world, are familiar characters on the stage and in much more attractive guises, from classic "Camille" to Clyde Fitch's "The Woman in the Case." Every comic opera, every bill board can supply more fuel to the prurient imagination than all the Shaw plays, for in them there are no love scenes capable of arousing any passion, unless perhaps it may be disgust. There is no offensive language used, no *double entente*. On the contrary his offense consists in speaking too plainly and in dealing seriously with topics which on the stage are usually regarded as jokes. His plays shock not because they are immoral, but because they are not immoral in the conventional way. We have no reason to dispute his alleged moral purpose, but we desire to call attention to the fact that the drunken Helot method of temperance agitation is very liable to work the wrong way. Besides is it necessary to administer an emetic to a whole community in the hope of curing those who are sick?

As for Mr. Shaw's charge that we are more prudish than the English, it is sufficient to observe that the play in question cannot be given publicly in England, and also that Maeterlinck's "Monna Vanna," which was prohibited by the censor of

plays in London, is now being given in New York every night without protest from Mr. Comstock or anybody else, and without attracting the evil-minded. But Maeterlinck is a different man from Shaw, and a poetical drama is different from an acted epigram. Mr. Shaw's standing as a prophet in his own country is indicated by the way the London papers allude to him: "Mr. Shaw, an Irish novelist and an American dramatist."

As to "Comstockery," to use Mr. Shaw's angry creation, it needs a definition. Mr. Shaw uses it to mean prudery. Properly it means the suppression of public indecency, which is Mr. Anthony Comstock's business. It is not a pretty business, for it has not to do with nice things, but it is a useful and honorable one. Mr. Comstock does the same sort of work that scavengers do, and street sweepers, good and creditable work when well done. We are rather proud of our "white-wings" when they parade the streets. And our policemen and constables and sheriffs—yes, and our judges—are in precisely the same kind of work, cleaning out the filth of society. So is Governor Folk and Mr. Jerome and Mayor Weaver, all engaged in scavenging; and to their credit; and Mr. Comstock's work is in the same line—cleaning out filth—for none of which we hope Mr. Bernard Shaw will be responsible.

Going to Sleep

NATURE in the total as well as Nature in all the parts needs sleep and recuperation. Any one who is in intelligent sympathy with the seasons and the years will understand that the trees and the plants cannot carry on such intense toil without periods of recuperation. October is curious for this, that everywhere Nature is putting away her tools, quieting down her forces and getting ready to hibernate. The very air looks sleepy; and while we continue our own work, we do it with less vim and racket than in planting and plowing seasons.

To a careless observer this restful mood comes on almost of a sudden. He has not noted that there are tired sorts of trees in midsummer. Plants are like

folk; some are born tired. The butter-nut does not leaf out until nearly June, and down come its nuts in mid-September; then it throws its leaves with a careless air, and goes to sleep for nearly eight months. Your thorn bushes have hardly blossomed before they lazily turn their leaves brown, and drowse it thru the whole Summer. There are many of these born-tired shrubs and trees, that barely blossom, and then go at once to seed. All the rest of the year they are like Buddha under the Bo tree. Some people mistake this mood in themselves for piety; it does not commend itself to an Occidental mind.

The Virginia creeper has a happy way of wrapping itself in crimson and bidding the world good night. A group of sumac bushes is not very interesting in the Summer, but in September all of a sudden it glorifies the knoll on which it stands with a robe of scarlet and purple.

It is a sleep robe made of the outing cloth that it has itself woven. What can be more intensely beautiful than the hill-sides with these tired shrubs, and the valleys full of goldenrod and asters that barely keep a semblance of life down into October? Some people admire the Autumn-flowering altheas and hydrangeas. They forget that these bushes have slept not only thru the whole Winter, but thru the succeeding Spring and Summer, and have waked up only at the last end of the year. The witch hazel blinks its eyes half way open just as the snow begins to fly, and then goes to sleep again.

The apple tree is our ideal. It is the all-round most complete thing in the vegetable world. It is a trifle deliberate in leafing out in Spring. It never does anything in a hurry. It waits for the plum and the cherry to get thru blossoming. But when their admirers have said enough in honor of the white petals, the big-hearted apple tree quietly opens its great bunches of pink, white and red. The oriole flashes thru it with a cry of joy. What a paradise is this for birds. The bees go home loaded with honey. The dullest human is turned into a poet. The whole homestead is buried in perfume. Ozone, honey, beauty and grace, poetry and prophecy, all these are the work of the

apple tree. Then begins its Summer work. It takes from the air; it takes from the soil; it weaves poisonous gases into beautiful florescence; it breathes out purified oxygen for human beings. And all day, all night the apples grow and gather, and grow from what is gathered, until the tree has done its glorious work. In October, loaded with magnificent fruit—a free gift of the whole apple soul, woven into a harvest of golden and crimson fruit, it deserves rest. Ah, dear old apple orchard; no wonder it is the one spot associated with home, which we longest remember. Your rest is well deserved. The leaves grow sere, but do not hasten to fall until November blasts shake them off for a genuine Winter's sleep.

Everything sleeps, and everywhere sleep is beautiful. When the plants shut their eyes their dreams turn to color. Green is invariably toned into yellow or red. You have seen how the dogwood becomes crimson for the cold months, but it is in a modified degree, the same with all vegetation. There is a perceptible change of young growth toward red or brown. You will see this most markedly in the case of basswood twigs and those of the soft maple. So a sleeping tree or bush has a certain charm to a student, because then the chemistry of nature is working out some problems that are not thought of in Summer. Never are the arms of a tree seen to be so rounded, so muscular, so purposeful as when asleep. They tell of what they have done, and pledge a future of fine achievement. What a job of it Nature has had in this business of the survival of the fittest—and she is yet at it. Fifty years from now there will be new varieties of trees to plant, and some old favorites will be discarded.

Do the trees dream? Is there an unconscious self to a plant, as there is to us? How else will they know just when to wake up? How shall a maple tree know just when to send its sap upward, and meet the spiles, and the bucket that we swing on its side? How shall a hyacinth bulb feel the tap of a sunbeam in April, down under two feet of snow, where the thermometer is below freezing? But they probably are dreaming, and probably have subconscious selves

that are working out problems of just that sort. Everything will come around about right because there are lots of truths packed away in everything that Nature has done—and not in man only.

Birds rest after the nesting period. Everything but the robin stops working some time in August—the robin and a few of the seed eaters and fly catchers, that come late. I do not see that the robin ever stops working; but he does stop his morning orisons about mid-summer—just as the world begins to go down hill. The catbird does not go South until October, but from the 1st of August he neither spins nor sings—just meditates and rests. Once in a while he wakes up for an hour; calls you out of your balcony, and chats cheerfully in catbird prose. The oriole is a fearfully busy fellow when he is about, but almost to a dot he quits work on the 1st of September—and grape growers are glad of it. It is a curious arrangement, whereby the birds divide the year into two working periods—one in the North and one in the South—with two contemplative periods sandwiched in. After all, is not their method of life more rational than ours? Their nests are beautiful; their home surroundings sweet and wholesome, but they do not spend all their lives building a conventional house—which they must keep clean. A new year, a new house; which is a good idea. We have overdone the work of making ourselves a lot of trouble.

Rest is a marvelous and a universal provision of nature. It cannot be overlooked—safely. It is voiced in recuperation, and recreation. We wake out of it with renewed LIFE—that wonderful something that defies the philosophers' definitions. What has gone on during sleep? Not merely a cessation of work, but a something very positive. We are made over again in every fiber of the physical being and in the mental as well. The spirit of rest should brood over our homes one-eighth of each day, and one-seventh of each week. A rest day is worth more than prayers and sermons. That is why Sabbath is a universal law; it is natural. But it only belongs to and can be appreciated by those who obey: "Six days shalt thou labor and do all thy work."

Public Defense of the Accused

A THORO-GOING reform of the present procedure of defense in criminal trials, long advocated by scientific criminologists, especially by the Italian, Enrico Ferri, and urged by European Socialists in their manifestoes, and just now by Mr. Parmelee, a probation officer connected with the criminal courts of this city, is deserving of serious attention in the United States at the present time.

Theoretically, the District Attorney is an officer of the court, charged with the duty of securing the acquittal of the innocent, no less than with the obligation of securing the conviction of the guilty. Practically, he has become altogether a public prosecutor. And practically there is not a District Attorney in any commonwealth who does not assume that every indicted prisoner at the bar is guilty, and bend all his energies to securing conviction.

Theoretically also, the duty of the State to defend as well as to prosecute is recognized in various other specific ways. The judge is presumed to be impartial, and to guard the prisoner's rights as zealously as he regards the interests of the public. And if the accused is not represented by counsel at his own expense it is the duty of the court to assign counsel at the expense of the State. Practically, however, able and reputable members of the bar will not accept such assignments if they can escape, and practically their personal relations with the bench are of such a nature that judges will not compel them to perform this ill-paid duty. Consequently, public defense falls to lawyers of the less reputable class, who have little more interest in prisoners and their legal rights than the District Attorneys have.

The abuses that have multiplied under these unsatisfactory arrangements are great. They work inevitably to the advantage of dangerous criminals, and to the disadvantage of innocent men unfortunate enough to be accused of crime. Professional criminals, aware that the State has a perfect case against them accept counsel assigned by the commonwealth, and, by advice, enter the plea of guilty, thereby securing relatively light sentences. Innocent men, unable to em-

ploy high-priced counsel, are subjected to systematic pressure by court-assigned shysters to plead guilty. In instances, more numerous than the public suspects, this pressure is yielded to by innocent men discouraged and mentally broken by confinement, anxiety, and endless postponements of trial.

Even worse, in some respects, for the public morals and safety, is the systematic exploitation of sensational cases like the Molineux case, for example, by both prosecuting attorneys and lawyers for the defense, who, one and all, look for a personal advantage rather than for a speedy administration of justice. The prosecution, on its part, delays trial month after month in the hope of obtaining evidence that does not exist, and the defense, on its part, secures delays and new trials if things have gone against the accused.

But worse than all else is the rank injustice of giving to the rich man and to the poor man an unequal standing before the law. The rich man can employ the ablest talent that money can buy. The poor man is at the mercy of a system which in practice has been found to be entirely inadequate to protect the innocent, and, by its nature, advantageous to professional wrongdoers.

The reform urged by Ferri and Mr. Parmelee would consist in the establishment of the office of Public Defender, in all respects on a basis of equality with the Public Prosecutor, thereby abandoning the fiction that the District Attorney can be anything but a prosecutor. This plan has the merit of resting on the facts of human nature as they are, while the present system, ignoring psychological realities, rests on assumptions that are purely visionary. An ambitious man in public office, however conscientious he may be, advances his own reputation and interests by making his office a conspicuous success. As the success of the Public Prosecutor is measured by convictions, so would the success of the Public Defender be measured by acquittals after open trial, rather than by settlements of cases on pleas of guilty. The two offices would be squarely pitted against each other, and in their rivalry the State and the prisoner would find substantially equal advantages and disadvantages. The chance that real justice would be

secured in the end would be a good deal larger than it is now. Moreover, delays and postponements would be materially lessened. The Public Defender would try to force a case to trial when the Public Prosecutor was holding back for new evidence, and the Prosecutor, in his turn would be loath to postpone at the instance of the Defender. The court would have to decide, as theoretically as it decides now; the actual decision would no longer rest, as now, with the Public Prosecutor.

Our whole system of criminal law and procedure is a disgrace to civilization. Nothing in modern society is more in need of root and branch reform. It does not maintain equality before the law. It does not protect the innocent. It does not bring the guilty to punishment, or protect society against its dangerous classes. The theory of punishment that we have inherited from barbaric ages, and the theories of prison reformers who believe that criminals are reformable, are almost equally absurd. But among all these shortcomings and absurdities, there is no feature of the system more thoroly wrong and stupid than the existing relations of prosecution and defense in criminal trials.

Students' Criminal Folly

WE have often spoken of the coarse violence which students in their wise-fool age call fun, or hazing, but which is lawless brutality. We have urged that college faculties do not excuse it, and that police and courts show it no mercy. We would have its victims refuse to submit to it, and defend their persons as they would against the violence of a street hobo.

But there is another kind of student folly, equally criminal, but in which the victim takes a consenting part. We refer to the initiations into silly societies, in connection with which the initiate is required to do ridiculous and illegal things and is subjected to shameful indignities. A case at Kenyon College has just resulted in the death of the student to be initiated.

He was tied—and he allowed himself to be tied—on a railroad track. Doubtless those who tied him intended to remove him before a train came along. But they did not know the schedule, and
